"True," he replied; "and to add to his pleasure, I wish to bear testimony to him that spiritual love is far superior to carnal. For we all know that there is no converse worth the mention that does not comprise affection. Now affection on the part of those who feel admiration for character is commonly termed a pleasant and willing constraint; whereas many of those who have a merely physical concupiscence reprehend and detest the ways of those they love. But suppose they are satisfied on both scores; yet the bloom of youth soon passes its prime, and as this disappears, affection also inevitably fades away as fast; but the soul becomes more and more lovable the longer it progresses toward wisdom. Besides, in the enjoyment of physical beauty there is a point of surfeit, so that one cannot help feeling toward his favorite the same effect that he gets toward food by gratification of the appetite. But affection for the soul, being pure, is also less liable to satiety, though it does not follow, as one might suppose, that it is also less rich in the graces of Aphrodite; on the contrary, our prayer that the goddess will bestow her grace on our words and deeds is manifestly answered. Now, no further argument is necessary to show that a soul verdant with the beauty of freeborn men and with a disposition that is reverent and noble, a soul that from the very first displays its leadership among its own fellows and is kindly withal, feels an admiration and an affection for the object of its love; but I will go on to prove the reasonableness of the position that such a lover will have his affection returned. First, who could feel dislike for one by whom he knew himself to be regarded as the pattern of nobleness, and, in the next place, saw that he made his favorite's honor of more account than his own pleasure, and beside this felt assured that this affection would not be lessened under any circumstances, no matter whether he suffered some reverse or lost his comeliness through the ravages of illness? Moreover, must not those who enjoy a mutual affection unavoidably take pleasure in looking into each other's faces, converse in amity, and trust and be trusted, and not only take thought each for the other but also take a common joy in prosperity and feel a common distress if some ill fortune befall, and live in happiness when their society is attended by sound health, but be much more constantly together if one or the other become ill, and be even more solicitous, each for the other, when absent than when present? Are not all these things marked by Aphrodite's grace? It is by conducting themselves thus that men continue mutually to love friendship and enjoy it clear down to old age. But what is there to induce a favorite to make a return of affection to a lover who bases his feeling solely on the flesh? Would it be the consideration that the lover allots to himself the joys he desires but gives the favorite only what excites the deepest contempt? Or that he conceals, as best he can, from the favorite's relatives the ends that he is bent on attaining? As for his using entreaty rather than coercion, that is all the stronger reason for detestation. For any one who applies force merely discovers his rascality, but he who uses persuasion corrupts the soul of the one upon whom he prevails. Once more, how will he who traffics in his beauty feel greater affection toward the buyer than he who puts his produce up for sale and disposes of it in the open market? For assuredly he will not be moved to affection because he is a youthful companion to one who is not youthful, or because he is handsome when the other is no longer so, or because he is untouched by passion when the other is in its sway. For a youth does not share in the pleasure of the intercourse as a woman does, but looks on, sober, at another in love's intoxication. Consequently, it need not excite any surprise if contempt for the lover is engendered in him. If one looked into the matter, also, he would descry no ill effect when people are loved for their personality, but that many shocking results have come from companionship lost to shame. I will now go on to show also that the union is servile when one's regard is for the body rather than when it is for the soul. For he who inculcates right speech and conduct would merit the honor given by Achilles to Cheiron and Phoenix;[1] but the man who lusts only after the flesh would with good reason be treated like a mendicant; for he is always dogging the footsteps of his favorite, begging and beseeching the favor of one more kiss or some other caress. Do not be surprised at my plain speaking; the wine helps to incite me, and the kind of love that ever dwells with me spurs me on to say what I think about its opposite. For, to my way of thinking, the man whose attention is attracted only by his beloved's appearance is like one who has rented a farm; his aim is not to increase its value but to gain from it as much of a harvest as he can for himself. On the other hand, the man whose goal is friendship is more like one possessing a farm of his own; at any rate he utilizes all sources to enhance his loved one's worth. Furthermore, the favorite who realizes that he who lavishes physical charms will be the lover's sovereign will in all likelihood be loose in his general conduct; but the one who feels that he cannot keep his lover faithful without nobility of character will more probably give heed to virtue. But the greatest blessing that befalls the man who yearns to render his favorite .a good friend is the necessity of himself making virtue his habitual practice. For one cannot produce goodness in his companion while his own conduct is evil, nor can he himself exhibit shamelessness and incontinence and at the same time render his beloved self-controlled and reverent. My heart is set on showing you, Callias, on the basis of olden tales, also, that not only humankind but also gods and demi-gods set higher value on the friendship of the spirit than on the enjoyment of the body. For in all cases where Zeus became enamored of mortal women for their beauty, though he united with them he suffered them to remain mortal; but all those persons whom he delighted in for their souls' sake he made immortal. Among the latter are Heracles and the Sons of Zeus and tradition includes others also. And I aver that even in the case of Ganymede, it was not his person but his spiritual character that influenced Zeus to carry him up to Olympus. This is confirmed by his very name. Homer, you remember, has the words,

'He joys to hear';

that is to say, 'he rejoices to hear;' and in another place, 'harboring shrewd devices in his heart.'

This, again, means 'harboring wise counsels in his heart.' So the name given Ganymede, compounded of the two foregoing elements, signifies not physically but mentally attractive; hence his honor among the gods. Or again, Niceratus, Homer pictures us Achilles looking upon Patroclus not as the object of his passion but as a comrade, and in this spirit signally avenging his death. So we have songs telling also how Orestes, Pylades, Theseus, Peirithous, and many other illustrious demi-gods wrought glorious deeds of valor side by side, not because they shared a common bed but because of mutual admiration and respect. Moreover, take the splendid feats of the present day; would not a person discover that they are all done for glory's sake by persons willing to endure hardship and jeopardy, rather than by those who are drifting into the habit of preferring pleasure to a good name? Yet Pausanias, the lover of the poet Agathon, has said in his defense of those who wallow in lasciviousness that the most valiant army, even, would be one recruited of lovers and their favorites! For these, he said, would in his opinion be most likely to be prevented by shame from deserting one another,—a strange assertion, indeed, that persons acquiring an habitual indifference to censure and to abandoned conduct toward one another will be most likely to be deterred by shame from any infamous act. But he went further and adduced as evidence in support of his position both the Thebans and the Eleans, alleging that this was their policy; he stated, in fine, that though sharing common beds they nevertheless assigned to their favorites places alongside themselves in the battle-line. But this is a false analogy; for such practices, though normal among them, with us are banned by the severest reprobation. My own view is that those who assign these posts in battle suggest thereby that they are suspicious that the objects of their love, if left by themselves, will not perform the duties of brave men. In contrast to this, the Lacedaemonians, who hold that if a person so much as feels a carnal concupiscence he will never come to any good end, cause the objects of their love to be so consummately brave that even when arrayed with foreigners and even when not stationed in the same line with their lovers they just as surely feel ashamed to desert their comrades. For the goddess they worship is not Impudence but Modesty. We could all come to one mind, I think, on the point I am trying to make, if we were to consider the question in this way: of two lads, the objects of the different types of love, which one would a person prefer to trust with his money, or his children, or to lay under the obligation of a favor? My own belief is that even the person whose love is founded on the loved one's physical beauty would in all these cases rather put his trust in him whose loveliness is of the spirit. In your case, Callias, I deem it meet that you should thank Heaven for inspiring you with love for Autolycus. For his ardor for glory is manifest, inasmuch as he undergoes many toils and many bodily discomforts to ensure his being proclaimed victor in the pancratium. Now if he were to believe that he is going not merely to shed luster on himself and his father but also to acquire through his manly virtue the ability to serve his friends and to exalt his country by setting up trophies of victory over its enemies, and for these reasons draw the admiring glances of all and be famous among both Greeks and barbarians, do you not suppose that he would esteem and honor highly any one whom he looked upon as the best partner in furthering these designs? If, then, you would be in his good graces, you must try to find out what sort of knowledge it was that made Themistocles able to give Greece liberty; you must try to find out what kind of knowledge it was that gave Pericles the name of being his country's wisest counselor; you must reflect, further, how it was that Solon by deep meditation established in his city laws of surpassing worth; you must search and find out what kind of practices it is that gives the Lacedaemonians the reputation of being pre-eminent military commanders; for you are their proxenus, and their foremost citizens are always being entertained at your house. You may regard it as certain, therefore, that our city would be quick to entrust itself to your hands, if you so desire. For you possess the highest qualifications for such a trust: you are of aristocratic birth, of Erechtheus' line, a priest serving the gods who under the leadership of Iacchus took the field against the barbarian;3 and in our day you outshine your predecessors in the splendor of your priestly office in the festival;4 and you possess a person more goodly to the eye than any other in the city and one at the same time able to withstand effort and hardship. If what I say appears to you gentlemen to be too grave and earnest for a drinking party, I beg you again not to be surprised. For during practically all my life I have been at one with the commonwealth in loving men who to a nature already good add a zealous desire for virtue."

The rest of the company now engaged in a discussion of the views propounded by Socrates; but Autolycus kept his eyes fixed on Callias. And Callias, addressing Socrates, but looking beyond him and returning the gaze of Autolycus, said: "So you intend acting the procurer, do you, Socrates, to bring me to the attention of the commonwealth, so that may enter politics, and the state may always look upon me with favor?"

"Assuredly," was the reply, "that is, if people see that you set your heart on virtue, not in pretence, but in reality. For false reputation is soon exposed when tried by experience, whereas true manly virtue,—barring the interposition of

Providence,— confers ever more and more brilliant glory when put to the test of actual deeds.”

IX. Their conversation ended here. Autolycus got up to go out for a walk (it being now his usual time); and his father Lycon, as he was departing to accompany him, turned back and said: “So help me Hera, Socrates, you seem to me to have a truly noble character.”

After he had withdrawn, a chair of state, first of all, was set down in the room, and then the Syracusan came in with the announcement: “Gentlemen, Ariadne will now enter the chamber set apart for her and Dionysus; after that, Dionysus, a little flushed with wine drunk at a banquet of the gods, will come to join her; and then they will disport themselves together.”

Then, to start proceedings, in came Ariadne, appareled as a bride, and took her seat in the chair. Dionysus being still invisible, there was heard the Bacchic music played on a flute. Then it was that the assemblage was filled with admiration of the dancing master. For as soon as Ariadne heard the strain, her action was such that every one might have perceived her joy at the sound; and although she did not go to meet Dionysus, nor even rise, yet it was clear that she kept her composure with difficulty. But when Dionysus caught sight of her, he came dancing toward her and in a most loving manner sat himself on her lap, and putting his arms about her gave her a kiss. Her demeanor was all modesty, and yet she returned his embrace with affection. As the banqueters beheld it, they kept clapping and crying “encore!” Then when Dionysus arose and gave his hand to Ariadne to rise also, there was presented the impersonation of lovers kissing and caressing each other. The onlookers viewed a Dionysus truly handsome, an Ariadne truly fair, not presenting a burlesque but offering genuine kisses with their lips; and they were all raised to a high pitch of enthusiasm as they looked on. For they overheard Dionysus asking her if she loved him, and heard her vowing that she did, so earnestly that not only Dionysus but all the bystanders as well would have taken their oaths in confirmation that the youth and the maid surely felt a mutual affection. For theirs was the appearance not of actors who had been taught their poses but of persons now permitted to satisfy their long-cherished desires. At last, the banqueters, seeing them in each other's embrace and obviously leaving for the bridal couch, those who were unwedded swore that they would take to themselves wives, and those who were already married mounted horse and rode off to their wives that they might enjoy them. As for Socrates and the others who had lingered behind, they went out with Callias to join Lycon and his son in their walk.

So broke up the banquet held that evening.

## SOCRATES' DEFENSE TO THE JURY

It seems to me fitting to hand down to memory, furthermore, how Socrates, on being indicted, deliberated on his defense and on his end. It is true that others have written about this, and that all of them have reproduced the loftiness of his words,—a fact which proves that his utterance really was of the character intimated;—but they have not shown clearly that he had now come to the conclusion that for him death was more to be desired than life; and hence his lofty utterance appears rather ill-considered. Hermogenes, the son of Hipponicus, however, was a companion of his and has given us reports of such a nature as to show that the sublimity of his speech was appropriate to the resolve he had made. For he stated that on seeing Socrates discussing any and every subject rather than the trial, he had said: "Socrates, ought you not to be giving some thought to what defense you are going to make?" That Socrates had at first replied, "Why, do I not seem to you to have spent my whole life in preparing to defend myself?" Then when he asked, "How so?" he had said, "Because all my life I have been guiltless of wrong-doing; and that I consider the finest preparation for a defense." Then when Hermogenes again asked, "Do you not observe that the Athenian courts have often been carried away by an eloquent speech and have condemned innocent men to death, and often on the other hand the guilty have been acquitted either because their plea aroused compassion or because their speech was witty?" "Yes, indeed!" he had answered; "and I have tried twice already to meditate on my defense, but my divine sign interposes." And when Hermogenes observed, "That is a surprising statement," he had replied, "Do you think it surprising that even God holds it better for me to die now? Do you not know that I would refuse to concede that any man has lived a better life than I have up to now? For I have realized that my whole life has been spent in righteousness toward God and man,—a fact that affords the greatest satisfaction; and so I have felt a deep self-respect and have discovered that my associates hold corresponding sentiments toward me. But now, if my years are prolonged, I know that the frailties of old age will inevitably be realized,—that my vision must be less perfect and my hearing less keen, that I shall be slower to learn and more forgetful of what I have learned. If I perceive my decay and take to complaining, how," he had continued, "could I any longer take pleasure in life? Perhaps," he added, "God in his kindness is taking my part and securing me the opportunity of ending my life not only in season but also in the way that is easiest. For if I am condemned now, it will clearly be my privilege to suffer a death that is adjudged by those who have superintended this matter to be not only the easiest but also the least irksome to one's friends and one that implants in them the deepest feeling of loss for the dead. For when a person leaves behind in the hearts of his companions no remembrance to cause a blush or a pang, but dissolution comes while he still possesses a sound body and a spirit capable of showing kindliness, how could such a one fail to be sorely missed? It was with good reason," Socrates had continued, "that the gods opposed my studying up my speech at the time when we held that by fair means or foul we must find some plea that would effect my acquittal. For if I had achieved this end, it is clear that instead of now passing out of life, I should merely have provided for dying in the throes of illness or vexed by old age, the sink into which all distresses flow, unrelieved by any joy. As Heaven is my witness, Hermogenes," he had gone on, "1 shall never court that fate; but if I am going to offend the jury by declaring all the blessings that I feel gods and men have bestowed on me, as well as my personal opinion of myself, I shall prefer death to begging meanly for longer life and thus gaining a life far less worthy in exchange for death.” Hermosenes stated that with this resolve Socrates came before the jury after his adversaries had charged him with not believing in the gods worshipped by the state and with the introduction of new deities in their stead and with corruption of the young, and replied: “One thing that I marvel at in Meletus, gentlemen, is what may be the basis of his assertion that do not believe in the gods worshipped by the state; for all who have happened to be near at the time, as well as Meletus himself,—if he so desired,— have seen me sacrificing at the communal festivals and on the public altars. As for introducing ‘new divinities,’ how could I be guilty of that merely in asserting that a voice of God is made manifest to me indicating my duty? Surely those who take their omens from the cries of birds and the utterances of men form their judgments on ‘voices.’ Will any one dispute either that thunder utters its ‘voice,’ or that it is an omen of the greatest moment? Does not the very priestess who sits on the tripod at Delphi divulge the god’s will through a ‘voice’? But more than that, in regard to God’s foreknowledge of the future and his forewarning thereof to whomsoever he will, these are the same terms, I assert, that all men use, and this is their belief. The only difference between them and me is that whereas they call the sources of their forewarning ‘birds,’ ‘utterances,’ ‘chance meetings,’ ‘prophets,’ I call mine a ‘divine’ thing:[1] and think that in using such a term I am speaking with more truth and deeper religious feeling than do those who ascribe the gods’ power to birds. Now’ that I do not lie against God I have the following proof: I have revealed to many of my friends the counsels which God has given me, and in no instance has the event shown that I was mistaken.”

Hermogenes further reported that when the jurors raised a clamor at hearing these words, some of them disbelieving his statements, others showing jealousy at his receiving greater favors even from the gods than they, Socrates resumed: “Hark ye; let me tell you something more, so that those of you who feel so inclined may have still greater disbelief in my being honored of Heaven. Once on a time when Chaerephon made inquiry at the Delphic oracle concerning me, in the presence of many people Apollo answered that no man was more free than I, or more just, or more prudent.”

When the jurors, naturally enough, made a still greater tumult on hearing this statement, he said that Socrates again went on: “And yet, gentlemen, the god uttered in oracles greater things of Lycurgus, the Lacedaemonian law-giver, than he did of me. For there is a legend that, as Lycurgus entered the temple, the god thus addressed him: ‘I am pondering whether to call you god or man,’ Now Apollo did not compare me to a god; he did, however, judge that I far excelled the rest of mankind. However, do not believe the god even in this without due grounds, but examine the god’s utterance in detail. First, who is there in your knowledge that is less a slave to his bodily appetites than I am? Who in the world more free,—for I accept neither gifts nor pay from any one? Whom would you with reason regard as more just than the one so reconciled to his present possessions as to want nothing beside that belongs to another? And would not a person with good reason call me a wise man, who from the time when I began to understand spoken words have never left off seeking after and learning every good thing that I could? And that my labor has not been in vain do you not think is attested by this fact, that many of my fellow-citizens who strive for virtue and many from abroad choose to associate with me above all other men? And what shall we say is accountable for this fact, that although everybody knows that it is quite impossible for me to repay with money, many people are eager to make me some gift? Or for this, that no demands are made on me by a single person for the repayment of benefits, while many confess that they owe me a debt of gratitude? Or for this, that during the siege,[1] while others were commiserating their lot, I got along without feeling the pinch of poverty any worse than when the city's prosperity was at its height? Or for this, that while other men get their delicacies in the markets and pay a high price for them, I devise more pleasurable ones from the resources of my soul, with no expenditure of money? And now, if no one can convict me of misstatement in all that I have said of myself, do I not unquestionably merit praise from both gods and men? But in spite of all, Meletus, do you maintain that I corrupt the young by such practices? And yet surely we know what kinds of corruption affect the young; so you tell us whether you know of any one who under my influence has fallen from piety into impiety, or from sober into wanton conduct, or from moderation in living into extravagance, or from temperate drinking into sottishness, or from strenuousness into effeminacy, or has been overcome of any other base pleasure." "But, by Heaven!" said Meletus: "there is one set of men I know,—those whom you have persuaded to obey you rather than their parents." "I admit it," he reports Socrates as replying, at least so far as education is concerned; for people know that I have taken an interest in that. But in a question of health, men take the advice of physicians rather than that of their parents; and moreover, in the meetings of the legislative assembly all the people of Athens, without question, follow the advice of those whose words are wisest rather than that of their own relatives. Do you not also elect for your generals, in preference to fathers and brothers.,—yes. by Heaven! in preference to your very selves,—those whom you regard as having the greatest wisdom in military affairs?” “Yes,” Meletus had said; for that is both expedient and conventional.” “Well, then,” Socrates had rejoined, “does it not seem to you an amazing thing that while in other activities those who excel receive honors not merely on a parity with their fellows but even more marked ones, yet I, because I am adjudged by some people supreme in what is man’s greatest blessing,— education,— am being prosecuted by you on a capital charge?”

More than this of course was said both by Socrates himself and by the friends who joined in his defense. But I have not made it a point to report the whole trial; rather I am satisfied to make it clear that while Socrates’ whole concern was to keep free from any act of impiety toward the sods or any appearance of wrong-doing toward man, he did not think it meet to beseech the jury to let him escape death; instead, he believed that the time had now come for him to die. This conviction of his became more evident than ever after the adverse issue of the trial. For, first of all, when he was bidden to name his penalty, he refused personally and forbade his friends to name one, but said that naming the penalty in itself implied an acknowledgment of guilt. Then, when his companions wished to remove him clandestinely from prison, he would not accompany them, but seemed actually to banter them, asking them whether they knew of any spot outside of Attica that was inaccessible to death.

When the trial was over, Socrates (according to Hermogenes) remarked: “Well, gentlemen, those who instructed the witnesses that they must bear false witness against me, perjuring themselves to do so, and those who were won over to do this must feel in their hearts a guilty consciousness of great impiety and iniquity; but as for me, why should my spirit be any less exalted now than before my condemnation, since I have not been proved guilty of having done any of the acts mentioned in the indictment? For it has not been shown that I have sacrificed to new deities in the stead of Zeus and Hera and the gods of their company, or that I have invoked in oaths or mentioned other gods. And how could I be corrupting the young by habituating them to fortitude and frugality? Now of all the acts for which the laws have prescribed the death-penalty— temple robbery, burglary, enslavement, treason to the state—not even my adversaries themselves charge me with having committed any of these. And so it seems astonishing to me how you could ever have been convinced that I had committed an act meriting death. But further, my spirit need not be less exalted because I am to be executed unjustly; for the ignominy of that attaches not to me but to those who condemned me. And I get comfort from the case of Palamedes,1 also, who died in circumstances similar to mine; for even yet he affords us far more noble themes for song than does Odysseus, the man who unjustly put him to death. And I know that time to come as well as time past will attest that I, too, far from ever doing any man a wrong or rendering him more wicked, have rather profited those who conversed with me by teaching them, without reward, every good thing that lay in my power."

With these words he departed, blithe in glance, in mien, in gait, as comported well indeed with the words he had just uttered. When he noticed that those who accompanied him were in tears, "What is this?" Hermogenes reports him as asking. "Are you just now beginning to weep? Have you not known all along that from the moment of my birth nature had condemned me to death? Verily, if I am being destroyed before my time while blessings are still pouring in upon me, clearly that should bring grief to me and to my well-wishers; but if I am ending my life when only troubles are in view, my own opinion is that you ought all to feel cheered, in the assurance that my state is happy."

A man named Apollodorus, who was there with him, a very ardent disciple of Socrates, but otherwise simple, exclaimed, "But, Socrates, what I find it hardest to bear is that I see you being put to death unjustly!" The other, stroking Apollodorus' head, is said to have replied, "My beloved Apollodorus, was it your preference to see me put to death justly?" and smiled as he asked the question.

It is said also that he remarked as he saw Anytus passing by: "There goes a man who is filled with pride at the thought that he has accomplished some great and noble end in putting me to death, because, seeing him honored by the state with the highest offices, I said that he ought not to confine his son's education to hides. What a vicious fellow," he continued, "not to know, apparently, that whichever one of us has wrought the more beneficial and noble deeds for all time, he is the real victor. But," he is reported to have added, "Homer has attributed to some of his heroes at the moment of dissolution the power to foresee the future; and so I too wish to utter a prophecy. At one time I had a brief association with the son of Anytus, and I thought him not lacking in firmness of spirit; and so I predict that he will not continue in the servile occupation that his father has provided for him; but through want of a worthy adviser he will fall into some disgraceful propensity and will surely go far in the career of vice." In saving this he was not mistaken; the young man, delighting in wine, never left off drinking night or day, and at last turned out worth nothing to his city, his friends, or himself. So Anytus, even though dead, still enjoys an evil repute for his son's mischievous education and for his own hard-heartedness. And as for Socrates, by exalting himself before the court, he brought ill-will upon himself and made his conviction by the jury all the more certain. Now to me he seems to have met a fate that the gods love; for he escaped the hardest part of life and met the easiest sort of death. And he displayed the stalwart nature of his heart; for having once decided that to die was better for him than to live longer, he did not weaken in the presence of death (just as he had never set his face against any other thing, either, that was for his good), but was cheerful not only in the expectation of death but in meeting it.

And so, in contemplating the man's wisdom and nobility of character, I find it beyond my power to forget him or, in remembering him, to refrain from praising him. And if among those who make virtue their aim any one has ever been brought into contact with a person more helpful than Socrates, I count that man worthy to be called most blessed.

# INTRODUCTION

## Xenophon and His Socrates

Christopher Bruell

The following remarks are intended to lend support to the view that Xenophon's account of Socrates deserves more respectful attention from those interested in Socrates than it often receives today. The demonstration of such a proposition is too great a task in this context. But I will try to create a predisposition in its favor (or on behalf of open-minded consideration of it) in two ways: first, by considering in a very general way what might be responsible for the current neglect of Xenophon's account; and, then, by giving a brief summary of the contents of the Memorabilia, the longest of Xenophon's four Socratic writings and the one to which this volume is devoted.

Far more obviously than Plato, Xenophon calls attention in his writings to his own relationship with Socrates. He claims frequently, Plato only once, to have been present at the Socratic conversations he reports. He often comments, in his own name, on Socrates' words and deeds and on his life as a whole, something Plato never does; and he sometimes talks of the impression they made on him in particular. In accord with this, he calls his longest Socratic work "Memorabilia," that is, "Recollections," his recollections of Socrates; there is no parallel to this in the Platonic dialogues. One might add that whereas the dialogues, with the possible exception of the Laws (and the Epinomis), are devoted entirely to Socrates—Plato himself being mentioned only three times, almost in passing—Xenophon's works include not only the Education of Cyrus, devoted to the founder of the Persian empire, but also the Anabasis of Cyrus, whose real hero, the rescuer of almost ten thousand Greeks from extreme peril in the heart of the Persian empire, is Xenophon himself.

All of this would seem to justify an expectation on our part of finding in Xenophon's works an account of his association with Socrates. But this expectation, if not entirely disappointed, is fulfilled in a surprising way. Xenophon recounts only two episodes in what must have been a complex friendship of some duration. The first was a conversation that took place in the presence of Crito's son, Critobulus, a lazy, fun-loving, and spendthrift youth, whom Socrates, despite or perhaps in part because of these qualities, liked to spend time with:

"Tell me, Xenophon," he said, "didn't you hold Critobulus to be one of the moderate rather than the rash human beings, and one of those with forethought rather than senseless and reckless?"

"Certainly," said Xenophon.

"Well, hold now that he is hotheaded and heedless in the extreme. He would even make somersaults into daggers and leap into fire."

"And what did you see him doing," said Xenophon, "that you have formed such judgments about him?"

"Did he not dare to kiss the son of Alcibiades, who is most fair and in his bloom?" he said.

“But if that is the reckless deed,” said Xenophon, “in my opinion, I, too, would endure this risk.”

“You wretch!” Socrates said. “And what do you think you would suffer after kissing someone beautiful? Would you not immediately be a slave rather than free, spend a lot for harmful pleasures, be in great want of leisure for attending to anything noble and good, and be compelled to take seriously what even a madman would not take seriously?”

“Heracles!” said Xenophon. “What a terrible power you ascribe to a kiss.”

“And do you wonder at this?” said Socrates. “Don’t you know that poisonous spiders not even half an obol in size crush human beings with pain and drive them from their senses merely by touching them with their mouths?”

“Yes, by Zeus!” said Xenophon. “For spiders inject something through their sting.”

“You fool!” said Socrates. “Do you think that when those who are beautiful kiss they don’t inject anything, just because you don’t see it? Don’t you know that this beast that they call beautiful and in bloom is so much more terrible than spiders that, while spiders inject something when they touch, it (even when it does not touch, but if one just looks at it) injects even from quite far away something of the sort to drive one mad?… But I counsel you, Xenophon, whenever you see someone beautiful, to flee without looking back.”

Xenophon often comments favorably on the effectiveness of Socratic exhortations. For some reason, he refrained from doing so in this case.

The second episode is recounted not in the Socratic writings proper, but in the Anabasis. Xenophon had received a letter from a friend inviting him to accompany the friend on an expedition being organized by Cyrus, the younger brother of the then Persian king. Xenophon took the letter to Socrates and consulted with him about the trip. Socrates was worried that association with Cyrus might get Xenophon into trouble with Athens, since Cyrus was thought to have given enthusiastic assistance to Sparta in its recent war with Athens. So Socrates advised Xenophon to go to Delphi to consult with the god about the trip. Xenophon went to Delphi, and he put a question to Apollo: to which of the gods should he sacrifice and pray in order to make the journey he intended to make in the noblest and best manner and to come back safely, having acted in a noble manner. When Xenophon returned to Athens with Apollo’s answer, Socrates blamed him for not having asked first whether it was better for him to make the trip or not; instead, Xenophon had made the chief decision himself and had asked only about the means. As a result, Socrates was compelled to advise Xenophon to proceed with the trip in accordance with the god’s instructions.

The account of his association with Socrates that Xenophon conveys through these stories is somewhat surprising in any case. It is all the more surprising for its apparent inconsistency with the impression conveyed by the features of his Socratic works we have mentioned: the stories seem to indicate that Xenophon did not place very great weight on his relationship with Socrates, even that he took it lightly. But perhaps that impression was in need of qualification or correction.

More precisely, what the stories indicate is that Xenophon was not entirely receptive to Socrates' advice. Beyond that, as his life as a whole also serves to suggest, Xenophon did not regard the Socratic life—the philosophic life pure and simple—as a model for him to follow in every respect. It is safe to assume that he expected the same to be true of many of his readers as well.

This consideration may help to explain another feature of Xenophon's Socratic works: the almost total absence from them of philosophic protreptic, exhortations to philosophize of the sort found in abundance in the Platonic dialogues. In their place, we find—in Xenophon's Symposium—a witty and lighthearted but no less telling critique of the Socratic circle, or at least of some of its most conspicuous members. (The very terms "philosophy," "philosophers," "philosophize," occur very infrequently in the Socratic writings.) Xenophon had a precise understanding of what the absence of philosophic protreptic entails. In the fourth book of his Memorabilia, he presents a caricature of such a protreptic. It is a caricature because its object, the boy to be converted to philosophy, is about as unfit for philosophy as a nature can be. Nevertheless, the presentation of this defective case provides some basis for figuring out what a non-defective protreptic might require. An appeal to the potential convert's concern for justice, followed by a thoroughgoing critique of his conscious or unconscious conviction that he knows what justice is, would appear to play a very large role here. Now Xenophon refers rather frequently in his Socratic works to the Socratic examination of justice; but he gives us relatively few examples of it. More generally, he does little to bring the Socratic treatment of justice to life before our eyes and ears: there is no Xenophontic counterpart to Plato's *Republic* or *Gorgias*.

Perhaps with such differences in mind, an admirer of Xenophon from former times distinguished between the sublimity of Plato and the "natural and simple genius" of Xenophon, "comprehended by so few and so little relished by the vulgar." It is tempting to understand this comment in the light of a somewhat mischievous remark of Montesquieu: "Human beings, rogues individually, are en masse very decent people: they love morality; and ... I would say that this is seen admirably well in the theater. One is certain to please the people with the sentiments that morality avows, and one is certain to shock them by those it reproves." But one must think of the higher, the more sublime, rather than the low manifestations of the disposition described by Montesquieu—of Glaucon and Adeimantus rather than Babbitt. If philosophy itself is the true opposite of vulgarity, then prior to falling in love with philosophy in the proper way, the future philosophers themselves cannot be entirely free of vulgar concerns and tastes; a philosophic protreptic would therefore have to appeal to those concerns, if only for the sake of leading its addressees beyond them; and in doing so, it would inevitably partake of the vulgarity it seeks to cure. Xenophon's abstaining, or his having his Socrates abstain, from any serious protreptic effort thus has the perhaps incidental advantage of enabling him to present a Socrates remarkably free of vulgarity of this sort. To put this another way, Xenophon does not bend very much to make the better part of his readers like the Socrates he presents—and, for this very reason, they may, if they come to like him at all, like him all the more.

But Xenophon does make accommodations to a different version of vulgarity, going much farther in this respect than Plato does. In seeking to convince not only the better part but also the vast majority of his readers that Socrates' conviction on a capital charge was absurd, Xenophon uses arguments of a sort that any sufficiently clever lawyer might use if confronted with such a jury. In particular, he goes as far as he can to present Socrates as an ordinary fellow who neither thinks nor does anything out of the ordinary, and as a lover of the demos and his fellow man, and a great benefactor of those who associated with him. That is, Xenophon bids his reader—or accepts the predisposition of many of them—to judge Socrates according to a standard he elsewhere identifies as a vulgar one: "The majority, as it seems, define as good men those who are their benefactors". He goes even farther by having his Socrates, in his ordinariness, profess a number of kindred opinions—for example, the view that certain mercenary relations deserve the name of friendship. Xenophon's Socrates says to an acquaintance on a certain occasion, "On account of the present bad state of affairs, good friends can now be purchased quite cheaply." Xenophon's better readers cannot help noticing such vulgarity; and, remote as we believe we are today from the needs that dictated its use, they cannot help being offended by it. Too refined to tolerate Xenophon's obvious vulgarity, they are not refined enough to observe the quiet evidence of his delicacy and good taste.

The Memorabilia is divided into thirty-nine chapters, which fall into a number of parts. I will go through these sections more or less in order, feeling free, however, to skip around from time to time. In the first two chapters, Xenophon takes up directly, and refutes, the twofold charge on which Socrates was convicted and put to death. The refutation of the impiety charge requires, in Xenophon's view, at least the apparent denial that Socrates was concerned with natural philosophy—that is, with the investigation of the nature of all things, in particular the state of the cosmos and the necessities by which each of the heavenly things comes into being. And while Xenophon gives a number of indications, both in the Memorabilia itself and in his other Socratic writings, that Socrates was indeed engaged in natural philosophy, together with information regarding the manner of his philosophic activity, the bulk of the Memorabilia is silent on this subject. It shows us Socrates not in his philosophic activity proper but in his relations with students, relatives, companions of various sorts, fellow citizens, and others, expressing views on personal as well as economic and political matters. Or it shows us something of what it means to be a philosopher by showing how philosophy affects a number of matters and relations with which we too are concerned. And it was perhaps Xenophon's interest in the question of philosophy as a way of life—as well as his cautious reluctance to say very much about Socrates' philosophic activity proper—that gave his recollections or Memorabilia this form.

The refutation of the corruption charge requires Xenophon to take up not only Socrates' own undoubted law-abidingness but his effect on his young companions. Socrates himself was of the opinion that those of his companions who accepted what he himself approved of would be good friends to him and to each other throughout their lives. Xenophon gives us some evidence, in the Symposium especially, for doubting whether this was always the case—at least as far as some of those most eager to accept what Socrates approved of were concerned. On the other hand, some partial non-accepters, if Xenophon himself is a representative of this class, might have been quite good friends to Socrates. This question reminds us of Xenophon's other great hero, Cyrus. After conquering all of western Asia and elevating his friends almost to the peak of power, wealth, and honor, Cyrus paused to reflect on his own situation. He thus came to the realization that he had no enemies so dangerous to him as those very friends; and he took precautions commensurate with the danger. But even if Socrates' expectation was always borne out, were those who were good friends to him and to each other always good friends to the city as well? Xenophon admits that Socrates made his companions more attached to him than to their nearest and dearest: would this not have held true also with regard to their attachment to the city? According to another suggestion that Xenophon conveys through his Education of Cyrus, Socrates was put to death for alienating the affections of the young.

Even if we leave this question aside, a problem would still be caused by the facts that the Socratic circle could not have been limited to those fully willing and able to accept what Socrates approved of, and that not every non-accepter or partial accepter could be expected to be a Xenophon. At the minimum, Socrates' companions must have included, at most if not all times, some youths who were still only potential philosophers and who, therefore, could not yet fully accept what they did not yet fully understand. Beyond that, could even Socrates know in advance which among the gifted and well-disposed youths had all that the philosophic life requires?

Do the proper disposition and the necessary intellectual gifts always coincide? Could Socrates always avoid associating even with clearly unpromising cases? Did he always wish to avoid this?

The troubles these questions point to, both individually and taken together, were bound to crop up and did crop up—most conspicuously in the cases of Critias and Alcibiades, notorious political criminals who were, at one time or another, closely associated with Socrates. In his treatment of these cases, Xenophon dutifully tries to follow the line laid down by his Socrates: Critias and Alcibiades became bad only after leaving Socrates' company and even, partially at least, as a result of leaving it; their criminality is bound up entirely with their rejection of Socrates' teaching and example—it is certainly not due to any quasi acceptance of that teaching. Xenophon goes so far as to divide Socrates' companions into two classes: the bad ones like Alcibiades and Critias (only those two names are given in this context) and the good ones like Crito and Hermogenes (seven of these names are given), men who did not abandon Socrates and who, throughout their lives, never did or were even accused of doing anything bad. But this line of argument succeeds a little too well. It makes us wonder why Socrates would ever have wanted to associate with the "baddies" to begin with. That is, it leads us toward raising the questions we have already raised. Xenophon gives, in his Symposium, a beautiful illustration of the problem by contrasting Hermogenes, one of the aforementioned "goodies," with a man named Charmides, who must be classed with the "baddies," since he was later to become a quasi partner in crime of Critias. Both Hermogenes and Charmides were guests at the banquet described in the Symposium, along with Socrates, Critobulus, and others. It will suffice to mention one episode of a more fully drawn characterization and comparison. Sometime after the drinking had commenced, Critobulus was flaunting his extreme infatuation or love for the boy Socrates had criticized him for kissing, in the conversation recounted earlier. Hermogenes took offense and took Socrates to task regarding Critobulus' disgraceful condition: "I think it is out of character, Socrates, for you to overlook the fact that Critobulus has been made so senseless by love." Socrates defended himself by saying that Critobulus' condition predated his own association with him. In fact, Critobulus was already far gone in love when his father, Socrates' companion Crito, turned him over to Socrates to see whether Socrates could help. "And he is already much better: hitherto he stared at the boy stone-like, like those who look at Gorgons, and stone-like, he never left him. But now I have already seen him blink!" Charmides had been listening to this exchange, which concluded with some Socratic remarks about the dangers of kissing. "Why is it, Socrates," he asked, "that you scare us, your friends, away from the beautiful, while you yourself I saw in the grammar school—yes, by Apollo—when you were both searching for something in the same book, head against head, bare shoulder against the bare shoulder of Critobulus?" To which Socrates replied, "So that is why I have felt pain in that shoulder for more than five days and seem to have some sting in my heart, as if bitten by a beast. But now, Critobulus, I declare publicly, before these many witnesses, that you are not to touch me before your beard is as full as the hair on your head." To come back to the Memorabilia, Xenophon indicates there that Socrates had a rather high regard for Charmides. The wish to associate with natures like his would, by itself, account for Socrates' willingness to teach politics, as Xenophon grants, even in the course of his response to the corruption charge, that he did.

The six chapters that follow suggest a reason for the apparent inconsistency noted by Charmides between Socrates' words and deeds: Socrates was exceptionally continent and could therefore safely permit himself temptations others could not. This part of the Memorabilia is devoted to showing how Socrates, through conversation and example, benefited his companions especially with regard to their becoming pious and continent. It features a number of exhortations to continence with respect to bodily pleasures—including the one addressed to Xenophon himself. Moreover, as Xenophon tells us, Socrates showed himself still more continent in his deeds than in his speeches. So impressive, not to say oppressive, is this continence that we are led increasingly to wonder what it is for. To put the problem as one of the exhortations does, continence is the foundation of virtue: it is not virtue itself. Returning for a minute to Xenophon's Symposium, we see that one of the ways in which the guests at that elegant banquet entertained themselves was by stating, each in turn, what he was most proud of and then defending his boast or claim. The occasion, needless to say, did not require that those boasts be entirely serious. Socrates, for example, claimed to be proud of his skill as a pimp. But Antisthenes, one of Socrates' most ardent admirers and an extremely poor man, claimed to be proud of his wealth. When his turn came to defend this apparently absurd boast, he explained that he meant the wealth he possessed in his soul, wealth he had acquired from Socrates. As his longish statement makes clear, he understood by this "wealth" nothing so much as the extreme Socratic continence. Later in the evening, Socrates found an occasion to chastise Antisthenes playfully. He accused Antisthenes, who claimed to love him, of loving his beautiful body rather than his soul. In the same context, the fact emerged that Socrates did his best, by the use of one pretext or another, to avoid conversing with Antisthenes. In the Memorabilia, Xenophon stresses what Socrates, in the Symposium, called his bodily beauty: his continence and kindred qualities. Nevertheless, in various ways, he allows us glimpses of other things.

For example, Socrates had a number of conversations with a sophist named Antiphon, which Xenophon includes in the section we are discussing. "Do you think," Socrates asked on one of these occasions, "anything is more responsible for my not being enslaved to stomach or sleep or lust, than that I have other things more pleasant than these that delight not only in their use but also by providing hopes that they will benefit always?" And on another he said, "Accordingly, Antiphon, just as another is pleased by a good horse or a dog or a bird, so I myself am even more pleased by good friends, and if I possess something good I teach it, and I introduce them to others from whom, I believe, they will receive some benefit with a view to virtue. And reading in common with my friends, I go through the treasures of the wise men of old which they wrote and left behind in their books; and if we see something good, we pick it out; and we hold that it is a great gain if we become beneficial (or friends) to one another." Hearing this, Xenophon says, he thought Socrates to be blessed.

In the two chapters that follow this section, Socrates gives advice to individuals who have difficult relatives to deal with. In each case, Socrates has a connection with the parties concerned and thus a personal stake in the good behavior he urges. One of the addressees is Socrates' eldest son, Lamprocles, who is angry with his mother and is therefore acting, or in danger of acting, improperly toward her. In order to put his wife's harshness in some perspective, Socrates asks Lamprocles, "Which do you think is more difficult to bear, the ferocity of a beast or of a mother?" "For my part, I think that of a mother, at least one such as this." "Then has she ever yet done you any harm by biting or kicking, such things as many have suffered already from beasts?" "But, by Zeus, she says things that one wouldn't for all one's life wish to hear."… "Do you think it is harsher for you to hear what she says than it is for the actors when they say the most extreme things to one another in the tragedies?" Lamprocles responds that the actors easily bear the harsh words they have to listen to since they know they are spoken with no ill will. "And you, knowing very well that, when your mother speaks to you, she not only intends no harm but also wishes for you more good than for anyone else—knowing this you are angry?" The conversation of which these exchanges are a part is the only example given by Xenophon (or Plato) of an attempt on Socrates' part to educate his own children. In presenting the two chapters containing Socrates' conversations about relatives, Xenophon abstains from any introductory comments and thus avoids speaking of Socrates' deeds generally as distinguished from his speech.

The next seven chapters concern friendship. According to Xenophon, the Socratic conversations or speeches reported in this section were useful with regard to the acquisition and use of friends, encouraged self-examination as to the amount of one's worth to one's friends, and gave instruction as to what sort of friends are worth acquiring. Socrates also attempted to bring relief to those of his friends who were in some difficulty or other. Where the difficulty was caused by ignorance, he attempted to cure it using his judgment; when it was caused by want, by teaching his friends to assist one another. To give one of the examples Xenophon furnishes of these efforts, a friend of Socrates was being eaten out of house and home because the wars, both civil and foreign, that had severely curtailed his income had also added to his burdens a large number of female relatives to support. Socrates' advice was simple: why don't you put them to work making something that can be sold? But in order to get that advice accepted, he had to relieve his friend of the foolish scruple or notion that free women (society ladies, one can say) ought not to engage in commercial activity. Once Socrates had succeeded in enlightening him, the advice was accepted and acted upon with great success. The ensuing harmony in the friend's home was, as he later reported to Socrates, disturbed only by the ladies' complaint that now the man was the only idle member of the household. Here, too, Socrates was able to be of help: "Then you aren't telling them the speech of the dog. For they say that, when the animals could speak, the ewe said to her master, 'You do an astonishing thing in giving us, who provide you with wool and lambs and cheese, nothing other than what we ourselves get from the earth, while you give the dog, who provides you with nothing of the sort, a share of your very own food.' And that when the dog heard this he said, 'Yes, by Zeus, for I am the one who in fact saves you sheep so that you are neither stolen by human beings nor seized by wolves, since indeed if I were not to guard over you, you would not even be able to graze out of fear that you might perish.'" Thus, according to Socrates, even the sheep acquiesced in the more honorable treatment for the dog. As this chapter reminds us, Xenophon and his Socrates were willing to use the term "friend" rather loosely. It could thus be applied to a number of different sorts of people with whom Socrates had relationships of various kinds. This fact, together with the attention given in the section on friendship to the question of what sort of friends are worth acquiring, makes us wonder what sort of friends Socrates himself thought most worth acquiring. An answer has already been indicated in Socrates' remarks to the sophist Antiphon and elsewhere. A more explicit statement comes later on in the Memorabilia when Xenophon explains what Socrates meant when he said, as he often did, that he was in love with someone: manifestly, he was not longing for those whose bodies were in bloom but those whose souls were naturally fit for acquiring virtue, that is, those who were quick at learning whatever they turned their minds to and remembered what they learned and desired all the sorts of learning relevant to the noble management of household and city and, in general, the good use of human beings and human affairs.

The emphasis in the friendship section as a whole on utilitarian considerations makes us wonder, in turn, about the possible elements of Socratic friendship other than utility, even utility of the sort pointed to in the remarks to Antiphon. The answer to this question is not without its relevance to the answer to the other one: what sort of friends Socrates thought worth acquiring. And in this connection, we might note that after explaining as he does what Socrates meant when he said he was in love with someone, Xenophon seems to go out of his way to show how much time Socrates spent with a certain brainless beauty. (We can also recall here his liking for Critobulus.) In one of the friendship chapters, Socrates distinguishes between friendships acquired through the use of "love charms" and those acquired through conferring benefits. Later on in the Memorabilia, he admits to being a master in the use of such charms. Or, as he says in the chapter in which they are first mentioned, he is erotic and therefore strives mightily, with his whole being, to be loved by those he loves, longed for by those he longs for, and to have those he desires to be with, desire to be with him.

Xenophon gives four examples in the friendship section of Socrates' attempts to relieve the difficulties of his friends. There are indications, as we have to some extent already seen, that some or all of these efforts took place against the background of the awful suffering brought to Athens, to the vast majority of Socrates' fellow citizens, by the latter part of the Peloponnesian War and its aftermath. Xenophon gives us no report of a Socratic attempt to relieve the distress of his city, unless one or more of the conversations reported in the seven chapters he places next constitute such an attempt. Socrates speaks in these conversations to actual or potential or aspiring military and political leaders of the city—in one case giving advice with regard to the current distress, in another urging a capable man not to shrink from playing a (greater) public role. In his general introduction to the conversations in question, however, Xenophon claims no more for them than that they benefited the individuals addressed—individuals whom he characterizes as "those longing for the noble things," that is, for public honors—by making them take the care or make the effort appropriate to such longing. These conversations explore, in an extremely thorough way, what political or military leadership calls for and therefore, in particular, whether what it calls for is of benefit to the leader himself. Socrates seems to indicate that some doubts are in order on that score; surely, he himself never sought political leadership. Yet in a conversation that took place in an earlier section, he had chastised a companion of his who wished to live an entirely unpolitical life—the life of one who is a foreigner in every land—so as to avoid the burdens that come with sharing political responsibility. The companion believed that he was following a path that led to happiness precisely because it avoided both ruling on the one hand and slavery on the other. Socrates said on that occasion, "If the path avoids human beings as well, just as it avoids both ruling and slavery, you might have a point," and he pointed out the dangers to which the weak in general and foreigners in particular are exposed. The only real choices are ruling or being ruled or voluntarily serving the rulers. Or, as Socrates put it when asked on another occasion why he had married the most difficult of all women past, present, and future, "I have acquired her because I want to make use of and associate with human beings, knowing well that if I can endure her, I will keep company with all other human beings with ease."

The seven chapters that follow the section on politics do not seem to belong to a single group. The most significant are probably the first two, where we are told what Socrates said about certain characteristic themes. For example, Socrates called kings and rulers not those who possess the scepter or those chosen by any chance group or by lot or those who have gotten where they are by force or fraud but those who know how to rule. This remark admits of a number of different interpretations. Left to his own devices, Socrates would enlarge on it in the most innocent way. But if someone objected that it is possible for a tyrant not to obey the knowers, those who speak correctly, Socrates said, "How indeed would it be possible for him not to obey since a penalty is laid down if someone doesn't obey the one who speaks well; for in whatever matter one doesn't obey the one who speaks well, he will no doubt err, and in erring be penalized." If someone persisted in the objection, saying that it is possible for the tyrant to kill the one who thinks well, Socrates said, "But do you think that one who has killed the best of his allies is free from penalty, or that he suffers some chance penalty? For do you think the one who does. this would be preserved, or rather, that he would quickly perish?" And, in general, as Xenophon tells us later on, Socrates treated those who objected to what he said differently from those who listened in silence, "if someone contradicted him on some subject…, he led the whole argument back to its hypothesis… Thus the truth became manifest to the objectors themselves. But whenever he went through an argument on some subject by himself, he kept to the path of the opinions most generally agreed upon, considering that manner of argument to be the safe one."

Seven of the last eight chapters of the Memorabilia are devoted to Socratic education. They show first how Socrates attracted the attention of certain types of potential students and then how he led one student in particular through the successive stages of Socratic instruction. While the demonstration of Socratic instruction undoubtedly tells us much about Socrates as an educator, as well as about his views on various matters, in reading it one must take into account the fact that the individual Xenophon chooses to be the model student in this demonstration is Euthydemus, the brainless beauty referred to earlier. Xenophon begins his treatment of Socratic education by telling us that Socrates did not approach everyone, that is, every type of person, in the same way. And he distinguishes for us a certain number of types. At the top are the good natures, whose characteristics we have already mentioned. In the next place come those of some natural gifts who, on account of these, think they have no need of education and look down on it. Skipping to last place, we find those who believe that they have already received the best education and pride themselves on their wisdom. Euthydemus belongs to this class. To use the distinction mentioned earlier but introduced in the text in the context of the demonstration of Socratic instruction, Euthydemus is the non-objector par excellence. In one of the chapters of this section, he is replaced as Socrates' interlocutor by the world-famous sophist Hippias. Hippias had come upon Socrates when the latter was pointing out to some people how difficult it is to find a teacher of justice, while teachers of shoemaking, carpentry, smithing, or horsemanship are so ready to hand. Their conversation began in this way. Hippias said, “You are still saying the same things, Socrates, that I heard you saying long ago.” And Socrates replied, “What is more terrible than this, Hippias, not only do I always say the same things, but I say them about the same subjects. You, perhaps, due to your great learning, never say the same things about the same subjects.” “By all means, I try always to say something new.” “Even about the things you understand? For example, if someone asks you how to spell Socrates—how many letters and which ones—do you try to say different things at different times? Or to those who ask regarding numbers whether twice five is ten, don’t you give the same answer now as you did before?” As Xenophon shows in this way, the change of interlocutors did not significantly affect the quality of discussion.

The last chapter of the Memorabilia returns to the theme of Socrates’ condemnation and death and reports some of Socrates’ reflections as those events approached. He was clearly attached to life, which he felt he had lived to the fullest; but, especially given his age, he seemed to feel that it was not a bad time for him to die. We might be disturbed by the manner of his death—by its injustice, which it was after all part of the intention of the Memorabilia to establish. In his Apology of Socrates, where Xenophon takes up again parts of the last chapter of the Memorabilia from a somewhat different point of view, he shows what he and his Socrates would have thought of such a reaction. Among those present at the trial was Apollodorus, whom Xenophon characterizes as “an ardent lover of Socrates and otherwise a naive fellow.” After Socrates’ condemnation, Apollodorus said to him, “But for me, Socrates, the hardest thing to bear is that I see you dying unjustly.” Socrates, stroking Apollodorus’ head, said, “Dearest Apollodorus, would you have preferred to see me dying justly?” And, for only the second time in Xenophon’s Socratic writings, where he has caused us to laugh more than a few times, Socrates laughed.

## Translator's Note

Amy L. Bonnette

In translating Xenophon I have aspired to attain the greatest accuracy and consistency possible in consonance with clear English usage. I admire the sentiments voiced by an older generation of translators who freely expressed their great respect for Xenophon. Edward Spelman's introduction to his translation of Xenophon's Anabasis in offers us a brief account of Xenophon and his works, in that tradition.

> Xenophon was an Athenian; his Father's Name Gryllus. All that we know of him 'till he attended Cyrus in his Expedition, is, that he was a Disciple of Socrates. If, to have been a disciple of that great Man was an Instance of his good Fortune, the Improvement he made of that Education is an Instance of his Merit; and, indeed, nothing less than the happiest Disposition, the best Education, and the greatest Improvement of both, could render Xenophon that universal Man we find him in his Writing: his Cyropaedeia shews him to have possessed, in a sovereign degree, the Art of Government; his Expedition of Cyrus shews him a compleat General; his History, an entertaining, an instructive, and a faithful Historian; his Panegyric of Agesilaus, an Orator; and his Treatise of Hunting, a Sportsman; his Apology for Socrates, and his Account of his Manner of conversing, shew that he was both a Friend and a Philosopher; and all of them, that he was a good Man. This appears remarkably in his preserving Byzantium from being plundered by his Soldiers, who, having gained no other Reward of the dangerous Expedition they had been engaged in, but their Preservation, were not only strongly tempted to plunder that Town by the hope of making their Fortunes, but justly provoked to it by the disingenuous Behaviour of the Lacedaimonian Governor; yet these two lawless Passions, Avarice, and Revenge, the Authority, and Eloquence of Xenophon quite subdued.

Sarah Fielding's introduction to her translation of the Memorabilia, which she entitled the Memoirs of Socrates, gives sound general reasons for approaching Xenophon's work with respect, however odd that work may sometimes appear to us.

> That the memoirs of Socrates, with regard to the greatest part, are held in the highest estimation, is most certain; and if there are some passages which seem obscure; and of which the use doth not so plainly appear to us at this distance of time; and from the dissimilarity of our customs and manners; yet, perhaps, we might not do amiss, in taking Socrates himself for our example in this particular, as well as in many others; who being presented by Euripides, with the writings of Heraclitus, and afterwards asked his opinion of their merit: "What I understand, said he, I find to be excellent; and therefore believe that to be of equal value, which I do not understand." And, certainly . . . this candour is more particularly becoming us in the perusal of the works of ancient authors; of those works which have been preserved in the devastation of cities, and snatched up in the wreck of nations: which have been the delight of ages; and transmitted as the great inheritance of mankind, from one generation to another; and we ought to take it for granted, that there is a justness in the connexion, which we cannot trace; and a cogency in the reasoning, which we cannot understand.

Today, translators have an even more compelling reason for treating Xenophon's works with the care that they deserve: we have a renewed access to Xenophon's thought through the writings of Leo Strauss, which look beyond the disarming simplicity of Xenophon's prose in order to reveal how his works can help us to understand life's most important questions, and hence why it is worth the considerable effort it takes to read them adequately. Reading of this sort requires careful attention to detail, and it was with the reader's need for such attention in mind that I undertook this translation. I have been particularly aware of the need to mark important terms in Socratic philosophy by rendering them consistently with the same English words, or by noting when a deviation from this practice is required. Similarly, I have tried to preserve the order of Xenophon's arguments and his careful wording of lists.

In spite of the care taken, I must repeat the standard translator's warning that for those who wish to make an adequate study, reading this translation is no substitute for reading the original. At best a translation may provide a degree of access for those who cannot avoid such a compromise for now. To begin with, much of Xenophon's great charm is bound to be lost in the transition from ancient Greek to English. Moreover, as readers familiar with ancient Greek will know, a strictly literal translation into English is not really possible. To mention only one difficulty, English depends more heavily on word order to convey meaning, and therefore some sacrifice of Greek sentence structure is a necessity. In spite of the obstacles, the most competent translator would notice every subtlety in the original and then adequately reproduce it. I am aware of instances in which I have failed in this regard, and I suspect that there are many more that have entirely escaped me. In Sarah Fielding's words, "It may perhaps be objected, 'That candour alone is not sufficient for the present occasion;'—to which it can only be answered, That something was to be done;—and, that no pains hath been spared, to do it as well as possible."

B. G. Teubner Press has kindly granted me permission to use Karl Hude's fine reading and compilation of the manuscripts as the basis of this translation. As is the case with most of the ancients, we do not have any single manuscript of the Memorabilia that we know to be perfect. Although many variations are not very important—spelling changes or evident omissions, for example—occasionally differences arise that may significantly alter the meaning of the text. When this occurs or when Hude adopts a later editorial correction of the manuscripts, I inform the reader in a footnote. The endnotes are of a more secondary nature, indicating alternate translations of words or passages, offering historical information, or providing references to other works for comparison.

Only I can be held responsible for the inevitable errors in what follows, but much that is worthwhile in it has been the result of consultation with others. This project was a collaborative effort with Christopher Bruell, who offered extensive guidance throughout and made substantial revisions to the draft. In addition, my work has benefited greatly from attending his seminars. I am also very much indebted to James Nendza for patiently correcting a number of errors, particularly in the early stages of the translation. I thank in addition Wayne Ambler, Robert Bartlett, and In Ha Jang, for suggesting many improvements; Michael Grenke and Joseph Lane for their research on the notes; Sandra MacDonald and Joanne Scibilia for their administrative advice and assistance; and Kay Scheuer and Marian Shotwell for ensuring the manuscript was in shape for publication. I am grateful also to Boston College and its Department of Political Science for sponsoring this project and extending me the use of their fine research and computer facilities, and to the Earhart Foundation for generous funding, which made the work possible.

Finally, I would like to point the reader to works I have found particularly useful in studying this text. Those who know some Greek may be assisted by J. R. Smith's annotated edition of the Memorabilia, C. M. Gloth and M. F. Kellogg's valuable index of words in the Memorabilia, and F. G. Sturz's impressive four-volume Latin lexicon to Xenophon (which may be helpful even to those without much knowledge of Latin for its cross-references to the rest of Xenophon's works). As I indicated above, Leo Strauss is responsible for reviving the study of Xenophon as a philosopher in this century, after a relatively brief period of neglect among scholars. He wrote two books dealing with Xenophon's Socratic writings: Xenophon's Socrates (treating the Memorabilia, Symposium, and Apology of Socrates) and Xenophon's Socratic Discourse: An Interpretation of the "Oeconomicus." Since these works themselves can be rather difficult, the assistance offered in Christopher Bruell's review "Strauss on Xenophon's Socrates" is indispensable. It can be of help also to read the books just mentioned in conjunction with Strauss's other work on Xenophon, including On Tyranny: An Interpretation of Xenophon's Hiero and "The Spirit of Sparta or the Taste of Xenophon," which is a particularly revealing piece on Xenophon's Constitution of the Lacedaimonians. Of additional interest-are two posthumously published pieces: an article entitled "Xenophon's Anabasis," which provides valuable information on Xenophon's manner of writing, and a series of lectures on the "problem of Socrates," treating the varying portraits of Socrates found in Aristophanes, Xenophon, and Plato. It is instructive to compare the approach taken in the latter with that of A. E. Taylor in his book Socrates. In addition, I should mention Bruell's chapter introducing Xenophon as a political philosopher in the third edition of Leo Strauss and Joseph Cropsey's *History of Political Philosophy*. Obviously, this is by no means a comprehensive list of the many fine scholarly works on Xenophon. For an extensive bibliography one may consult Donald R. Morrison's *Bibliography of Editions, Translations, and Commentary on Xenophon's Socratic Writings*, 1600-*present*. I offer merely what I have found to be a sound path on which to begin to appreciate this marvelous book, and fruitful places to return to along the way.

## Chapter 1

I often wondered by what possible speeches those who indicted Socrates persuaded the Athenians that he deserved death from the city. For the indictment against him was something like the following: Socrates commits an injustice by not believing in the gods in which the city believes and by bringing in new and different divine things; he commits an injustice also by corrupting the young.

To begin with, then, what possible evidence did they use to show that he did not believe in the gods in which the city believed? For he visibly sacrificed often at home and often at the common altars of the city; and it was not difficult to see him using divination. For it had been widely bandied about that Socrates said that the divine thing gave him signs; and, in my opinion, it is especially for this reason that they accused him of bringing in new divine things.

But he brought in nothing newer than others who consult birds of omen, sayings, portents, and sacrificial victims because they believe in divination. For seekers of divination suppose not that the birds or those they meet by chance know what is advantageous for them, but that the gods signal what is advantageous through them; and Socrates held the same.

However, while the majority say that they are both turned back and turned forward by the birds and by those they meet, Socrates spoke just as he judged, for he said that the divine thing gave him signs. And he told many of his companions to do some things and not to do others on the grounds that the divine thing had given a sign. And it was advantageous for those who obeyed him, while those who did not obey regretted it.

And yet who would not agree that he wished to appear to his companions as neither a simpleton nor a boaster? But he would have been held by opinion to be both these things if it had been apparent that in fact he was lying when he told them that things appeared to him as though from a god. It is clear, then, that he would not have foretold these things unless he trusted that he was speaking the truth. But who would trust anyone in these matters other than a god? And trusting in gods, how could he hold that there are no gods?

Moreover, he also did the following with regard to his friends. He advised regarding the necessary things that they also act as he held best. But concerning things whose outcomes were not clear, he sent them to seek divination about whether they should be done.

And he said that those intending to manage households and cities nobly are in need of divination in addition. For, with regard to becoming skillful as a builder, a smith, a farmer, a ruler of human beings, a reviewer of such work, an arithmetician, a household manager, or a general, he held that things of this sort are all matters of learning and attainable by means of human judgment.

But what is most important in these things, he said that the gods reserve for themselves—and none of these things is clear to human beings. For, to the one who has nobly planted a field, it is not clear who will reap from it; nor to the one who has nobly built a house is it clear who will inhabit it; nor to the skilled general is it clear whether to lead the army is to his advantage; nor to the skilled statesman is it clear whether to preside over the city is to his advantage; nor to the one marrying a beautiful woman in order to be happy is it clear whether he will be grieved because of her; nor to the one who has obtained by marriage relatives who are powerful in the city is it clear whether he will be deprived of his city because of them.

And he said that those who think that there is nothing divine in matters of this sort and that they are wholly within the realm of human judgment are crazy. And he said that those are crazy also who consult divination concerning matters the gods gave to human beings to decide by learning—for example, if one should inquire into whether it is better to take on a chariot someone who understands or does not understand how to drive, or whether better to take on a ship someone who understands or does not understand how to pilot, or into things that can be known by counting, measuring, or weighing. He believed that those who seek to ascertain such things from the gods do what is unlawful. And he said that what the gods permit to be done by those who have learned, one should learn, but that what is not clear to human beings one should try to ascertain from the gods through divination, for the gods give signs to those toward whom they are gracious.

Moreover, he was always visible. For in the early morning he used to go on walks and to the gymnasia, and when the agora was full he was visible there, and for the remainder of the day he was always where he might be with the most people. And he spoke for the majority of the time, and it was possible for anyone who wished to hear him.

But no one ever saw Socrates doing, or heard him saying, anything impious or unholy. For he did not converse about the nature of all things in the way most of the others did—examining what the sophists call the cosmos: how it is, and which necessities are responsible for the coming to be of each of the heavenly things. But he even showed that those who worry about things of this sort are foolish.

First, he examined whether they came to worry about such matters because they held that they already knew the human things sufficiently, or whether they believed that they were acting properly in disregarding the human things and in examining the divine things.

And he wondered whether it was not visible to them that it is impossible for human beings to find these things out, since he thought that even those who most pride themselves on speaking about them do not hold the same opinions as one another but are disposed toward one another like madmen.

For, among madmen, some have no terror even of what is terrible, while others are frightened even by what is not frightening; and some are of the opinion that it is not shameful to do or say anything whatsoever, even in a crowd, while others are of the opinion that one should not even go out among human beings; and some honor neither temple nor altar nor any other divine thing, while others behave piously toward even rocks and chance pieces of wood and beasts; and, among those who are anxious about the nature of all things, some are of the opinion that being is one thing only, and others that it is an infinite multitude; and some that everything is always moving, and others that nothing ever moves; and some that everything comes to be and perishes, and others that nothing ever comes to be or perishes.

And he examined also the following about them. Just as those who learn human matters believe that they will do what they learn both for themselves and for anyone else they wish, so, too, those who seek out the divine things hold that after they understand the necessities responsible for each thing coming to be they will make winds, rains, seasons, and anything else of the sort they need whenever they wish. Or they do not even hope for such a thing, but it is enough for them merely to understand in what way each of the things of this sort comes to be.

These, then, are the sorts of things he said concerning those who involved themselves in such matters. But he himself was always conversing about human things—examining what is pious, what is impious, what is noble, what is shameful, what is just, what is unjust, what is moderation, what is madness, what is courage, what is cowardice, what is a city, what is a statesman, what is rule over human beings, what is a skilled ruler over human beings, as well as about the other things, knowledge of which he believed makes one a gentleman (noble and good), while those who are ignorant of them would justly be called slavish.

Now, in the sphere of things in which it was not visible how he thought, it is no wonder that the jurors erred in judging him. But isn’t it a wonder that they didn’t take to heart what everyone knew?

He once presided in the demos, having become a member of the Council and having sworn the councilors’ oath, which contains “giving counsel according to the laws.” At that time the demos desired to put to death all nine generals—Thrasyllus and Erasinides and those with them—with one vote, contrary to the laws. He did not want to put the question to vote, although the demos grew angry with him and many powerful individuals threatened him as well. But he thought more highly of keeping his oath than of gratifying the demos contrary to what was just and protecting himself against those who threatened him.

For in fact he held that the gods attend to human beings not in the way that the many held. For they think that the gods know some things and do not know others. But Socrates believed that the gods know all things—what is said, what is done, and what is silently deliberated—and that they are present everywhere and give signs to human beings about all human matters.

And so I wonder at how the Athenians were ever persuaded that Socrates was not moderate concerning the gods, since not once did he say or do anything impious concerning the gods, but he said and did regarding the gods the sorts of things that if someone were to say or do them he would be and be held to be most pious.

## Chapter 2

It appears to me a wonder also that some were persuaded that Socrates corrupted the young. To begin with, in addition to what has been said, he was the most continent of all human beings in matters of sex and appetite. Then, he had the greatest endurance with regard to winter, summer, and all labors. Moreover, he had educated himself to have such measured needs that, although he possessed very little, he quite easily had what was enough for him.

How, then, being himself of this sort, would he have made others impious, lawbreaking, gluttonous, incontinent with regard to sex, or soft with regard to labor? Instead, he rid many individuals of these things, after making them desire virtue and providing them with hopes that if they attended to themselves they would be gentlemen (noble and good).

And yet, he never promised at any time to be a teacher of this. But by visibly being so himself, he made those who spent time with him hope that by imitating him they would come to be of the same sort.

Furthermore, he did not himself neglect his body or praise those who did. He disapproved of excessively working out after overeating, but approved of sufficiently working off as much as the soul received with pleasure. For he said that this state was sufficient for health and did not hinder attending to one's soul.

Moreover, he certainly was neither fussy nor boastful, whether about clothing, shoes, or any other way of life. Nor did he make his companions lovers of wealth. For he rid them of the other desires, on the one hand; and on the other, he did not demand wealth from those who desired him.

He held that, in refraining from this, he was attending to his freedom. And he called those who take pay for their association enslavers of themselves, because of its being necessary that they converse with those from whom they took their pay.

He marveled if someone professing to teach virtue would demand money and not hold it the greatest gain to have acquired a good friend, but would be afraid that one who had become a gentleman (noble and good) would not show the greatest gratitude toward one who had done him the greatest good deeds.

Now Socrates never professed to teach anything of the sort to anyone. But he trusted that those of his companions who were receptive to what he himself approved of would be good friends to him and to one another for their whole life. How, then, could such a man corrupt the youth? Unless, that is, attending to virtue is corruption.

"But, by Zeus," the accuser said, "he made his companions look down on the established laws, by saying that it is foolish for the rulers of the city to be established in office by lot, when nobody would want to use a pilot chosen by lot or a builder or a flutist or anyone for any other task of the sort, although far less harm is caused when mistakes are made in them than when they are made concerning the city." He said that speeches of this sort induced the young to have contempt for the established regime and made them violent.

I, for my part, think that those who train themselves in good sense and hold that they will be competent to teach the citizens what is advantageous are least likely to become violent, since they know that enmities and risks attend the use of violence, while through persuasion the same results come about without risk and with friendship. For those treated violently hate as though they have been robbed, but those persuaded are friendly as though they have been gratified. Violence, accordingly, does not come from those who train themselves in good sense. Instead such practices belong to those who have strength without judgment.

Furthermore, one who dares to use violence would need no few allies, but one who is able to persuade needs no one. For even when alone he would believe himself able to persuade. And it least of all happens that such people resort to murder. For who would wish to kill rather than to deal with someone alive and obedient?

“But,” said the accuser, “after they became Socrates’ associates, Critias and Alcibiades harmed the city the most. For Critias was the most thievish, violent, and murderous of all in the oligarchy, and Alcibiades the most incontinent, insolent, and violent of all in the democracy.”

If those two harmed the city in some way, I, for my part, will not defend them. But I will describe how their companionship with Socrates was.

For these two men were by nature the most honor-loving of all the Athenians. They wished that all affairs might be conducted through themselves and that they might become the most renowned of all. They knew that Socrates lived in a most self-sufficient manner on the least amount of wealth, was most continent in regard to all the pleasures, and in arguments dealt as he wished with all who conversed with him.

Since these two saw these things and were of the sort I mentioned before, would anyone say that they yearned for his association because they desired the life of Socrates and the moderation that he had, or because they held that if they associated with him they would become most competent in speech and action?

For my part, I believe that if a god had offered them either to live their whole life just as they saw Socrates live, or to die, these two would have chosen rather to die. And they made this clear by their actions. For as soon as these two believed themselves superior to their companions, they immediately bolted from Socrates and engaged in political affairs, which was precisely the reason they had yearned for Socrates.

Now perhaps someone might say in response that Socrates should not have taught his companions political affairs before he taught them to be moderate. I, for my part, do not deny this. But I see that all teachers both show themselves to students—how they themselves do what they teach—and convince them by speeches.

I know that Socrates too showed himself to his companions to be a gentleman (noble and good) and that he conversed most nobly about virtue and the other human things. And I know that these two also were moderate as long as they were companions of Socrates—not because they were afraid they would be penalized or beaten by Socrates, but because they thought at the time that this was the superior way to act.

Now perhaps many of those who claim to philosophize would say that one who is just would never become unjust, nor would the moderate one become insolent, nor would anyone who had learned anything else that can be learned ever lose that knowledge. But I, for my part, do not reach the same judgment about these matters. For I see that, just as those who do not train the body are unable to do bodily work, so also those who do not train the soul are unable to do the work of the soul. For they are able neither to do what they should nor to refrain from what they should.

Indeed this is why fathers, even if their sons are moderate, nevertheless keep them away from wicked human beings, as if association with the good is training in virtue, while association with the wicked is its destruction. There is witness for this also among the poets, one of whom says, “You will learn noble things from those who are noble; but if you mingle with those who are bad, you will utterly destroy even the intelligence that you have,” and another says, “Yet a good man is bad sometimes and noble at other times.”

I, too, am a witness to these things. For I see that, just as those who do not practice forget verses composed in meter, so also forgetfulness occurs in those neglecting the speeches that teach. And when someone forgets the speeches that admonish, he has forgotten also what the soul experienced when it desired moderation. As he has forgotten this, it is no wonder that he forgets moderation as well.

I see also that those who have been drawn to the love of drink and those who have become involved in love affairs are less able to attend to what they should and to refrain from what they should. For many—even those who are able to be sparing with wealth before they fall in love—are no longer able once they have fallen in love. And once they have lavishly spent their wealth they no longer refrain from gains they used to refrain from because they held them to be shameful.

Why, then, could not one who was previously moderate be again immoderate, and one previously able to do just things be again unable? For in my opinion, at least, all things that are both noble and good are matters of training, and not least of all moderation. For the pleasures growing in the same body together with the soul persuade the soul not to be moderate but instead to gratify themselves and the body as quickly as possible.

Both Critias and Alcibiades, while they kept company with Socrates, were able to overpower their ignoble desires by using him as an ally. But when the two were free of him, Critias, after he went into exile in Thessaly, kept company there with human beings who dealt in lawlessness rather than justice. Alcibiades, in turn—who, because of his beauty, was hunted by many stately women and, because of his power in the city and among the allies, was pampered by many human beings who were able to flatter, as well as honored by the demos, with whom he easily held the first place—neglected himself, just as athletes in gymnastic contests who easily win first place neglect their training.

Things of this sort befell these two, and they were also inflated because of their birth, conceited due to being rich, puffed-up by power, and fussed-over by many human beings; and, having been corrupted by all these things, they were also away from Socrates for a long time. Why is it a wonder if they became arrogant?

If the two of them struck false notes in some way, then, the accuser blames Socrates for this; but does Socrates deserve no praise in the accuser's opinion for the fact that when they were young and likely to be most lacking in judgment and continence he rendered them moderate?

Surely other matters are not decided in this manner. For what master of the flute or master of the cithara or other teacher who has made his students competent is blamed if they appear worse after they have gone to others? And what father, if his son is moderate when he spends time with one person but later becomes wicked when he is in the company of another, blames the first? Does he not rather praise the first all the more insofar as his son appears worse when he is with the second? But fathers themselves are companions of their sons, and they are not blamed when their sons strike false notes if they themselves are moderate.

It would have been just to decide likewise about Socrates too. If he himself were to do something low, he would have been suitably held by opinion to be wicked. But if he himself were continually moderate, how could he justly be blamed for the badness that was not in him?

Moreover, even if he himself were to do nothing wicked but were to praise those whom he saw taking low actions, he would have been justly censured. Now then, when he perceived that Critias was in love with Euthydemus and was attempting to use him the way those do who enjoy bodies for sex, he tried to deter [him] from this by claiming that it is illiberal and unbecoming for a man who is a gentleman (noble and good) to beseech his beloved—to whom he wishes to appear very worthy—in the manner of beggars, acting the suppliant and begging that he grant things that are also not at all good.

Since Critias did not listen to things of this sort and was not deterred, it is said that Socrates said—with many others present as well as Euthydemus—that in his opinion Critias had a swinish passion in desiring to move against Euthydemus like piglets against stones.

As a consequence Critias also hated Socrates, so that he still bore it in mind against him when as a member of the Thirty he became legislator along with Charicles; and he wrote into the laws that one is not to teach an art of speeches, threatening him and not having any way to attack him, but bringing to bear against him what the many censure the philosophers collectively for and slandering him before the many For I myself never heard this from Socrates; nor did I perceive anyone else who claimed that he heard it.

But the matter became clear. For when the Thirty were killing many citizens—and not the worst of them—and turning many to the commission of injustice, Socrates said somewhere that it would be a wonder, in his opinion, if someone who became a herdsman over a herd of cattle and made the cattle fewer and worse didn't agree that he was a bad cattle-tender, and still more a wonder if someone who presided over a city and made the citizens fewer and worse were not ashamed and didn't think himself a bad president over the city.

When this was reported to them, Critias and Charicles called Socrates, showed him the law, and forbade him to converse with the young. Socrates asked the two of them whether inquiries were permitted if he was in some way ignorant about the orders given. The two of them said that they were.

“Then, for my part,” he said, “I am prepared to obey the laws. But so that I don’t inadvertently break the law in some way out of ignorance, I wish to learn clearly from you whether, when you bid that one refrain from the art of speeches, you do so holding that this art goes with what is spoken correctly or with what is spoken incorrectly. For if it goes with what is spoken correctly, it is clear that one must refrain from speaking correctly. But if it goes with what is spoken incorrectly, it is clear that one must attempt to speak correctly.”

And Charicles, becoming angry with him, said, “Socrates, since you are ignorant, we give you the following orders that are easier to learn: don’t converse with the young at all!”

And Socrates said, “Now then, lest there be any ambiguity as to whether I am doing something other than the orders given, define for me up to what age one should hold that human beings are young.”

And Charicles said, “For as long as they are not permitted to be members of the Council on the grounds that they are not yet sensible. So don’t you converse with those younger than thirty years!”

“If I am buying something,” he said, “and the seller is less than thirty, may I not ask how much he is selling it for?”

“Yes, this sort of thing,” said Charicles, “but in fact, you, Socrates, are accustomed to ask questions most of whose answers you know. So these you are not to ask.”

“And should I also then not answer,” he said, “if some youth should ask me whether I know, for example, where Charicles lives, or where Critias is?”

Charicles said, “This sort of thing, yes.”

But Critias said, “However, you will have to refrain, Socrates, from the following: from shoemakers, builders, and smiths; indeed I think that they are already worn out from being bandied about by you.”

“Then,” said Socrates, “should I not also refrain from what follows upon these—both the just and the holy and the other things of this sort?”

“Yes, by Zeus,” said Charicles, “and from herdsmen! Or else be on your guard that you, too, do not make the cattle fewer.”

And from this it became clear that they were angry with Socrates because his speech about the cattle had been reported to them.

So the sort of companionship Critias had with Socrates and how they were disposed toward each other has thus been told.

For my part, I would say that no one receives any education from someone who does not please him. Critias and Alcibiades did not associate with Socrates—for as long as they did associate with him—because he pleased the two of them. But right from the start the two of them had set out to preside over the city. For even while they were still companions of Socrates they did not attempt to converse with any others more than with those most deeply engaged in political affairs.

For it is said that before Alcibiades was twenty years of age he had the following sort of conversation about laws with Pericles, who was his guardian as well as the one presiding over the city.

"Tell me, Pericles," he said, "would you be able to teach me what law is?"

"By all means," said Pericles.

"By the gods, teach it then," said Alcibiades, "for when I hear certain ones praised as law-abiding men, think that someone who does not know what law is would not justly obtain this praise."

"But you do not desire anything hard, Alcibiades, in wishing to know what law is," said Pericles. "For all things are laws that the assembled multitude has approved and written, pointing out what should and should not be done."

"Do they hold that one should do good things or bad things?"

"The good, by Zeus, lad," he said, "and not the bad."

"What if it is not the multitude, but the assembled few who write what one should do, as is the case wherever there is oligarchy? What is this?"

"Everything," he said, "is called law that the overpowering part of the city, upon deliberation, writes that one should do."

"So even if a tyrant who overpowers the city writes for the citizens what they should do—this too is law?"

"Even what the ruling tyrant writes," he said, "this too is called law."

"But what is violence and lawlessness, Pericles?" he said. "Is it not when one who is stronger compels one who is weaker—not by persuasion but by the use of violence—to do whatever is in his opinion best?"

"In my opinion, at least," said Pericles.

"And whatever the tyrant writes and compels the citizens to do without persuading them—this is lawlessness?"

"In my opinion," said Pericles. "For I take back what I said about what the tyrant writes without persuasion being law."

"And what the few write, without persuading the many but overpowering them, shall we say that this is violence or shall we not say it?"

"Everything, in my opinion," said Pericles, "that one compels someone to do without persuading him, whether he writes it or not, is violence rather than law."

"And whatever the whole multitude writes without persuasion, when it overpowers those having wealth, would be violence rather than law?"

"Alcibiades," said Pericles, "we too were quite clever indeed at things of this sort when we were your age. For we too practiced such things and made precisely the sort of sophisticated arguments that you, in my opinion, are now practicing."

And Alcibiades said, "Would that I could have been your companion at that time, Pericles, when you were at your cleverest."

As soon as they supposed themselves to be superior to the other citizens, they no longer came to Socrates. For he did not please them anyway; and if they did come to him they were annoyed by being refuted regarding their errors. Rather, they became engaged in the city's affairs, which was why they had in fact come to Socrates.

However, Crito was an associate of Socrates, as were Chairephon, Chairecrates, Hermogenes, Simmias, Cebes, Phaidondas, and others who kept company with him, not in order to become public speakers or lawyers, but in order that, by becoming gentlemen (noble and good), they might be able to deal with their household, domestic servants, relatives, friends, city, and citizens, in a noble manner. And none of these, either when young or old, did anything bad or received blame.

"But," said the accuser, "Socrates taught his companions to abuse their fathers by persuading them that he made them wiser than their fathers, and by claiming that by law someone who has convicted him of insanity is permitted to hold even his father in bonds, using this as evidence that it would be lawful for one who is more ignorant to be held in bonds by one who is wiser."

Socrates thought that someone who holds another in bonds on account of ignorance would also himself justly be held in bonds by those who understand what he himself does not. And for such reasons he often examined how ignorance differs from madness. And as for the mad, he thought that it would be an advantage, both to themselves and to their friends, for them to be held in bonds; and as for those who don't understand what they should, it would be just for them to learn from those who do understand.

"But," said the accuser, "Socrates caused not only fathers but also other relatives to be in dishonor among his companions, saying that it is not relatives who benefit those who are ill or on trial, but the physicians in the one case and those who understand how to plead a case at trial in the other."

The [accuser] said that he said, also regarding friends, that it is of no benefit that they be well intentioned unless they will also be able to benefit; that he claimed the only ones deserving of honor are those who know what they should and are able to explain it; and that, by persuading the young that he himself was the wisest and most competent to make others wise, he so disposed his companions that in their eyes the rest were nothing compared to him.

I, for my part, know that he in fact said these things about fathers and other relatives and friends. In addition, he said that when the soul (the only thing in which good sense comes to be) departs from the body of the human being most closely related to them, they remove and carry the body off as quickly as possible.

And he said that, even while each person is alive, he himself removes and permits another to remove from his own body (which is what he loves most of all) whatever is useless and of no benefit. At least they remove their own nails and hair and calluses. And they permit the physicians to remove these things by cutting and burning accompanied by labor and pain; they even think that they should thank and pay them for it. They also spit saliva from their mouths as far away as they can, because when it is in them it does them no benefit but, much to the contrary, harm.

He said these things, then, not to teach one to bury one's father while still alive or to cut oneself up in pieces. But by displaying that what lacks sense lacks honor, he urged attentiveness to being as sensible and beneficial as possible, so that if someone wished to be honored—whether by a father, brother, or by anyone else—he would not neglect them, in reliance on the fact that he was related to them, but attempt to be beneficial to those by whom he wished to be honored.

The accuser said that he also would pick out the most wicked passages from the poets held in the highest opinion and, using them as witnesses, teach his companions to do be doers of mischief and skilled at tyranny—such as the verse from Hesiod "No work is disgraceful, but idleness is disgraceful." According to the accuser he said that in this the poet bids one to refrain from no work, however unjust or shameful, but to do even these for gain.

But since Socrates thoroughly agreed that being a worker is both beneficial for a human being and good, and that being an idler is harmful and bad, and that working is good and idleness bad, he said that those who do something good both work and are good workers, but those who play dice or do something else wicked and unprofitable he called idlers. Seen in this light, the verse "No work is disgraceful, but idleness is disgraceful" would be correct.

And the accuser said that he often recited the passage from Homer about Odysseus:

> If he should meet with some king and an outstanding man, standing beside him he restrained him with gentle words: "Amazing fellow, it is not fitting for you to be afraid as if you were a coward, but you yourself be seated and seat the rest of the people." But if he saw a man who was one of the demos and found him shouting, he struck him with his scepter and upbraided him by word: "Amazing fellow), sit still and listen to the words of others who are your betters. You are unfit for war and feeble, never of any account either in war or in council."

And the accuser said that he explained these verses as meaning that the poet praised the beating of members of the demos and the poor.

But that is not what Socrates meant: for [if he had] he would have thought also that he himself must be beaten. Instead he said that the ones who should be checked by every means, even if they happen to be very rich, are those who are not beneficial either in speech or in deed, nor competent to bring aid if it should be needed either to army or to city or even to the demos itself—especially if they are even bold in addition.

However, Socrates was visibly the opposite of these things, since he was both well disposed toward the demos and a lover of human beings. For though he had many who desired him, both fellow countrymen and foreigners, he never demanded any pay for his company but ungrudgingly assisted all from what he had. Some of them, after taking a small portion from him for free, sold it to others for a great sum and were not well disposed to the demos as he was, for they did riot want to converse with those who had no wealth to give.

But, as for Socrates, he furnished the city adornment vis-à-vis the rest of human beings far more than Lichas (who is renowned in this regard) did for the city of the Lacedaimonians. For while Lichas had dinner parties for strangers who were staying in Lacedaimonia during the festival of the Gymnopaedia, Socrates throughout all of his life spent his own possessions benefiting all those who wished in the most important matters. For he sent his companions away after rendering them better.

In my opinion, Socrates—since this was the sort he was—deserved honor from the city rather than death. One would find this out by examining the matter also according to the laws. For, according to the laws, the penalty is death if someone is visibly stealing or taking clothes or purse-snatching or breaking into a home or selling free people into slavery or robbing temples. But he above all human beings refrained from these things.

Moreover, he was never the cause of a war ending badly or of civil strife or of treason or of any other bad thing for the city.

Nor, in private life, did he ever deprive any human being of goods or involve anyone in bad things. Rather, no one ever even accused him of the things mentioned.

How, then, could he be subject to the indictment? Instead of not believing in the gods, as was charged in the indictment, he was visibly serving the gods more than the other human beings were. And instead of corrupting the young, as the one who brought the indictment accused him, he was visibly ridding his companions of desires when they had wicked ones, and turning them toward desiring the noblest and most magnificent virtue, that by which both cities and households are well managed. And since this is what he did, how is it that he did not deserve great honor from the city?

## Chapter 3

I shall now write down as much as I recall of how in fact, in my opinion, he used to benefit his companions, partly by showing himself in deed as the sort of person he himself was, and partly by conversing also. On the one hand, then, with regard to the gods, he was visible acting and speaking just as the Pythia tells those who ask how they should behave concerning sacrifices or paying service to ancestors or anything else of the sort. For the Pythia replies that they would behave piously by behaving in accordance with the law of the city. And Socrates himself both behaved in this way and so advised the others; and he held that those behaving in some other way were working to no purpose and frivolous.

And he used to pray to the gods that they give him the simply good things, on the grounds that the gods have the noblest knowledge about what sort of things are good. And he held that those who pray for gold or silver or tyranny or anything else of the sort pray no differently than if they should pray for a game of dice, a battle, or any of the other things as to which it is visibly unclear how they will turn out.

He did not believe that, by performing small sacrifices from his small possessions, he fell short of those performing many and large sacrifices from their many and large possessions. For he said that for the gods, too, it would not be noble if they were gratified more by the large sacrifices than by the small ones—for what gratified them would frequently be what came from the wicked rather than from the good; and life would not be worth living for human beings if what came from the wicked were more gratifying to the gods than what came from the good. Rather, he held that the gods are most gratified by the honors from those who are most pious. And he praised also this verse: "According to one's capacity offer sacrifices to the immortal gods." Also regarding friends and foreigners and one's way of life generally, he said that "to act according to one's capacity" is noble advice.

If he was of the opinion that he received some sign from the gods, he could no more be persuaded to act contrary to the signs than if someone should persuade him to take a blind guide who did not know the way on a trip instead of one who could see and did know the way. And he denounced the folly of others who did something contrary to the signs from the gods because they were on their guard against losing their reputation among human beings. He himself looked down on everything human in comparison to counsel from the gods.

He educated both his soul and his body in a regimen such that one using it would live confidently and securely and would not lack resources regarding the expense it required—unless there were some divine intervention. For he was so frugal that I do not know if anyone could work so little as not to take in what was enough for Socrates. For he used as much food as he could eat with pleasure, and he came to it so prepared that his desire was the relish for his food. And every drink was pleasant to him because he did not drink unless he was thirsty.

And if he ever wanted to go to dinner when he had been invited, he quite easily guarded against what for most takes the most work: guarding against filling oneself beyond satiety. And he advised those unable to do this to be on their guard against things that persuade one to eat when not hungry and drink when not thirsty. For, in fact, he said that these are the things that ruin stomachs, heads, and souls.

He said jokingly that he thought that Circe too made [men into] pigs by entertaining [them] with many such things at dinner; and that Odysseus was spared becoming a pig due to Hermes' warning, as well as to his own continence and his refraining from touching things of this sort when he was satiated.

These were the sorts of things he used to say with a playfulness accompanied by seriousness. On the other hand, he advised that one steadfastly refrain from sex with those who are beautiful. For he said that it is not easy when one touches these sorts to be moderate. In fact, after he perceived once that Critobulus the son of Crito had kissed the beautiful son of Alcibiades, he asked Xenophon in Critobulus' presence:

"Tell me, Xenophon," he said, "didn't you hold Critobulus to be one of the moderate rather than the rash human beings, and one of those with forethought rather than senseless and reckless?"

"Certainly," said Xenophon.

"Well, hold now that he is hotheaded and heedless in the extreme. He would even make somersaults into daggers and leap into fire."

“And what did you see him doing,” said Xenophon, “that you have formed such judgments about him?”

“Did he not dare to kiss the son of Alcibiades, who is most fair and in his bloom?” he said.

“But if that is the reckless deed,” said Xenophon, “in my opinion, I, too, would endure this risk.”

“You wretch!” Socrates said. “And what do you think you would suffer after kissing someone beautiful? Would you not immediately be a slave rather than free, spend a lot for harmful pleasures, be in great want of leisure for attending to anything noble and good, and be compelled to take seriously what even a madman would not take seriously?”

“Heracles!” said Xenophon. “What a terrible power you ascribe to a kiss.”

“And do you wonder at this?” said Socrates. “Don’t you know that poisonous spiders not even half an obol in size crush human beings with pain and drive them from their senses merely by touching them with their mouths?”

“Yes, by Zeus!” said Xenophon. “For spiders inject something through their sting.”

“You fool!” said Socrates. “Do you think that when those who are beautiful kiss they don’t inject anything, just because you don’t see it? Don’t you know that this beast that they call beautiful and in bloom is so much more terrible than spiders that, while spiders inject something when they touch, it (even when it does not touch, but if one just looks at it) injects even from quite far away something of the sort to drive one mad? And perhaps ‘loves’ are called ‘archers’ because those who are beautiful inflict wounds even from afar. But I counsel you, Xenophon, whenever you see someone beautiful, to flee without looking back. And I counsel you, Critobulus, to go into exile for a year. For perhaps in that length of time your sting might just barely heal.”

So indeed he also thought that those who were not out of danger regarding sex ought to have sex with the sort whom the soul would not accept unless the body were in great need, and who would provide no trouble when it was in need. But, with regard to these matters, he himself was visibly so prepared as to refrain more easily from those who are most beautiful and most in bloom than do others from those who are most ugly and most out of bloom.

Concerning, then, meat and drink and sex, he was equipped in this way, and he thought that he would have no less sufficient pleasure and far less pain than those who involved themselves greatly in these matters.

## Chapter 4

If any, making a judgment on the basis of what some people write and say about him, hold that Socrates was best at turning human beings toward’ virtue but incompetent to lead them to it, let them test whether he was competent to make his companions better after they examine not only what he asked in refuting those who thought they knew everything, in order to chasten them, but also what he passed his day saying to those who spent their time with him.

I shall say first what I heard him say once when he was conversing about the divine with Aristodemus, nicknamed “the Small.” Upon observing that the latter neither sacrificed to the gods when he was not engaged in a battle, nor consulted divination, but even ridiculed those who did these things, he said, “Tell me, Aristodemus, are there any human beings you admire for wisdom?”

“Certainly,” he said.

And he said, “Tell us their names.”

“Well, for epic poetry it is Homer whom I especially admire, for dithyrambs, Melanippides, for tragedy, Sophocles, for sculpture, Polycleitus, and for painting, Zeuxis.”

“Who, in your opinion, is more deserving of admiration, makers of senseless and motionless images or makers of animals with sense and activity?”

“Far more, by Zeus, makers of animals, if indeed these come to be not in some chance way, but by design.”

“As between things the purpose of whose existence is obscure and things whose existence is visibly beneficial, which do you decide to be works of chance and which of design?”

“It is fitting that the things whose coming into being is beneficial are works of design.”

“So then, does it seem> to you that the one who made human beings from the beginning included for their benefit the means by which they have each of the perceptions; eyes so that they can see what can be seen, and ears so that they can hear what can be heard. Moreover, of what benefit would smells have been to us unless noses were included? And what perception would there have been of sweet and sharp and all the pleasures of taste, unless the tongue had been put in as a judge of these things?

“In addition to these things, don’t the following also resemble in your opinion works of forethought: that sight, since it is weak, is gated by eyelids, which are thrown open whenever there is any need to use sight but closed shut during sleep; that eyelashes have been implanted as strainers so that winds cause no harm, and that eyebrows jut out like a cornice over the eyes so that sweat from the head does no ill; that our hearing receives all sounds without ever being filled up; that the front teeth of all animals are such as to cut and the molars are such as to grind what is received from the front teeth; that the mouth through which animals bring in what they desire is positioned near the eyes and noses, but, since what is passed off is disagreeable, its paths are diverted, and it is carried away as far as possible from the senses. Are you perplexed as to whether these things, which have been made with such forethought, are works of chance or design?”

“No, by Zeus,” he said, “but when one examines them in this way at least these things very much resemble the contrivance of some wise craftsman who loves animals.”

“And what about implanting an erotic desire for begetting offspring, an erotic desire for rearing them up in the females who bring them forth, and a very great longing for life and a very great fear of death in those who are reared?”

“By all means, these too resemble contrivances of someone who planned that animals exist.”

“And do you, in your own opinion, have some sense?”

“If you ask a question, at any rate, I will answer.”

“Do you think that no sensible being exists anywhere else? And that, even though you know that the composition of your body has grasped a small portion of the great amount of earth that exists, and a little bit of the great amount of water that exists, and that your body no doubt has been composed with you containing a small portion of each of the other great things. Are you, then, of the opinion that intelligence alone exists nowhere and that you by some good chance seized hold of it, while—as you think—those surpassingly large and infinitely numerous things are in such an orderly condition through some senselessness?”

“By Zeus, for I do not see those in authority, as I see the craftsmen of what comes to be here.”

“Nor do you see your own soul, which is in authority over your body: so that, in this way, at least, it is possible for you to say that you do nothing by design but everything by chance.”

And Aristodemus said, “I, for my part, Socrates, do not look down upon the divine, but I believe that it is too magnificent to need my service in addition.”

“Accordingly,” he said, “the more magnificent a thing is that deems it worthwhile to serve you, so much the more should it be honored.”

“Know well,” he said, “that, if I held that gods worried at all about human beings, I would not neglect them.”

“Why then, don’t you think that they do worry? To begin with, of all the animals, it is only human beings that they made stand upright. And upright posture makes one able to see more before one, gaze more at the things above, and suffer less that is bad. And they implanted sight, hearing, and a mouth. And then, while they gave feet to the other animals who walk, these permit them only to travel; on human beings they also included hands, which produce most of those things whereby we are happier than they.

“Moreover, although all animals have a tongue, they made only the tongue of human beings such as to articulate the voice, by touching the mouth now here and now there, and to signal to one another all that we wish. And, in addition, what about their giving sexual pleasures that are limited to a certain time of year for the other animals, while they provide these to us continually up until old age?

“Nor was it enough for the god to attend only to the body, but—and this is the greatest thing—the soul he implanted by nature in human beings was also the best. For, to begin with, what ether animal’s soul perceives the existence of gods, who put in order the greatest and noblest things? What tribe other than human beings serves gods? What sort of soul is more adequate than the human to guard against hunger or thirst or cold or heat or to aid against sickness or to train so as to increase strength or to labor with a view to learning or more adequate to remember what one hears or sees or learns?

"For is it not very clear to you that human beings live their lives like gods in comparison to the other animals, since by nature they are best both in their body and in their soul? For someone having the body of a cow and the judgment of a human being would not be able to do what he wished. Nor would beings possessing hands but lacking prudence derive any advantage. But you don't think that the gods attend to you, even though you have obtained both of these most valuable things? But what will they have to do, so that you will hold that they worry about you?"

"When they send—as you say that they send to you—counselors regarding what one should and should not do."

"When," he said, "they indicate something to the Athenians who make inquiries through divination, aren't you of the opinion that they are making indications to you as well; or when they give signs by sending marvels to the Greeks, or to all human beings? Or do they select out only you and put you aside in neglect?

"Do you think that the gods would have implanted in human beings the opinion that they are competent to do good and bad, if they were unable to do it; and that human beings, deceived the whole time, would never have perceived this? Don't you see that the most ancient and the wisest of human things—cities and nations—are the most pious toward the gods, and that the most sensible ages in life are the most attentive to the gods?

"My good fellow," he said, "observe that even the intelligence existing in you manages your body as it wishes. You, then, should think also that the sense in everything arranges all the things as is pleasing to itself, and not that your eye is able to reach over many stadia, but that the eye of the god is unable to see everything at the same time; nor that your soul is able to worry both about matters here and about matters in Egypt and in Sicily, but that the good sense of the god isn't competent to attend to all things at the same time.

"If, then, by serving the gods, too, you should try out whether they want to give you some counsel concerning what is not clear to human beings—just as by serving human beings you recognize those who want to serve in return, and by gratifying you recognize those who gratify in return, and by taking counsel you observe those who are sensible—you will recognize that the divine is so great and of such a sort as to see all things at the same time and to hear all things and to be present everywhere, and that they attend to all things at the same time."

In my opinion by saying these things he made his companions refrain from the unholy, unjust, and shameful things, not only when they were seen by human beings, but even when they were in solitude, since they believed that nothing they might do would ever escape the notice of gods.

## Chapter 5

Now if surely continence, too, is both a noble and good possession for a man, let us examine whether in saying the following sorts of things he prompted any movement toward it. "Men, if we were at war and wished to elect a man under whom we would be most apt to be saved ourselves and to overpower our enemies, would we elect someone whom we perceived to be not equal to resisting his stomach or wine or sex or labor or sleep? How indeed could we think that such a one would either save us or conquer our enemies?

"And if we wished at the end of life to entrust someone with educating our male children, attentively guarding our maiden daughters, or preserving our wealth, would we believe that the one who is incontinent is trustworthy in these matters? Would we entrust an incontinent slave with cattle, storerooms, or supervision of work? Would we want to accept such a person as a servant or purchaser even if we got him for free?

"Moreover, if we would not accept even a slave who is incontinent, is it not worthwhile to guard against becoming a person of this sort oneself? For in fact the incontinent one is not harmful to others on the one hand and beneficial to himself on the other—as it is opined that the greedy enrich themselves by seizing the wealth of others—but rather he does mischief to others and still worse to himself, if at any rate to ruin not only one's own household but also both body and soul is to do the greatest mischief.

"Who would be pleased to have a person of this sort as a companion, knowing that he enjoys sauce and wine more than friends and cherishes women prostitutes more than comrades? Ought not every man, believing that continence is the foundation of virtue, be equipped with this first in his soul?

"For who, without this, would either learn anything good or train himself in a manner worth mentioning? And who would not be shamefully disposed with regard to both his body and his soul when he is enslaved to pleasures? In my opinion, by Hera, a free man should pray not to obtain a slave of this sort, and one enslaved to such pleasures should beseech the gods to obtain good masters. For only in this way would such a person be saved."

In saying things of this sort he displayed himself to be still more continent in his deeds than in his speeches; for he overpowered not only the pleasures that come through the body but also the pleasure that comes through wealth, holding that the one who accepts wealth from one he meets by chance establishes a master over himself and subjects himself to a slavery as shameful as any.

## Chapter 6

It is worthwhile in his regard also not to omit his conversations with Antiphon the sophist. For Antiphon, wishing to draw his close companions away from him, once approached Socrates when they were present and said the following.

"Socrates, I, for my part, thought that those who philosophize should become happier. But you, in my opinion, have reaped from philosophy just the opposite.

You live, at any rate, a way of life such as no slave would abide from a master. You eat and drink the poorest food and drink, you wear a cloak that is not only poor but the same one during summer and winter, and you are continuously without shoes or tunic.

"Moreover, you do not take in wealth—a thing that both delights in its acquisition and makes those who possess it live more freely and pleasantly. If, accordingly, you too dispose your companions as do teachers of other work as well, who show their students to be their imitators, you should hold that you are a teacher of unhappiness." And Socrates replied to this:

"In my opinion, Antiphon, you have supposed me to live so painfully that I am persuaded you would rather die than choose to live as I do. Come now, let us examine what you have perceived to be hard in my life.

"Is it that those who accept money are under necessity to produce what they are paid for, but that by not receiving it I am under no necessity to converse with whomever I do not wish? Or do you deem my way of life poor in the belief that I eat less healthy things than you do, or things that provide less strength? Or is it that my regimen is harder to procure than yours because it is more rare and costly? Or that what you furnish yourself is more pleasant for you than what I furnish myself is for me? Don't you know that the one who eats most pleasantly has the least need of relish, and the one who drinks most pleasantly least desires drink that is not at hand?

"Regarding cloaks, you know that those who change them do so for reasons of cold and heat, and that they put on shoes so that they will not be prevented from walking due to what pains their feet. Now then, have you ever perceived me more than another remaining inside because of the cold, fighting with someone over a spot in the shade because of heat, or not going wherever I wish because of pain in my feet?

"Don't you know that when those whose bodies are naturally weakest practice they become stronger at what they practice and more easily bear it than the strongest who does not practice? And don't you think that, by always practicing patient endurance of the things that chance to befall my body, I bear all things more easily than you who does not practice?

"Do you think that anything is more responsible for my not being enslaved to stomach or sleep or lust than that I have other things more pleasant than these that delight not only in their use but also by providing hopes that they will benefit always? Moreover, this at any rate you know: that those who do not think that they are doing well do not experience delight, but those who believe that they are nobly progressing, either in farming or seafaring or whatever else they chance to be working at, are delighted on the grounds that they are doing well.

"Then, do you think that the pleasure from all these things is as great as that from believing that one is becoming better and acquiring better friends? I, for my part, spend my life holding these things. And if indeed it should be necessary to benefit friends or city, is there more leisure to attend to them in my present way of life or in the one that you deem blessed? And who would go on a campaign more easily, a person unable to live without a costly way of life, or one for whom what is at hand is enough? And who would surrender more quickly to a siege, the person needing what is hardest to find, or the one who has enough when he makes use of what is easiest to obtain?

"You seem, Antiphon, like one who thinks that happiness is luxury and extravagance. But I, for my part, hold that to need nothing is divine, that to need as little as possible is nearest to the divine, and that what is divine is best, and what is nearest to the divine is nearest to what is best."

Again Antiphon once said to Socrates in a conversation: "Socrates, I, for my part, hold that you are just, but not in any way wise. And in my opinion you even recognize this yourself. At any rate, you demand no money in exchange for associating with you. And yet if you thought that your cloak or your house or any other of your possessions were worth money, you would not only not give it to anyone for free but you wouldn't even take less for it than it is worth.

"Surely it is clear that if you thought as well that associating with you were worth anything, you would exact no less money for this too than it is worth. Just, then, you may be, in that you do not deceive on account of greed, but not wise, since what you understand is worthless."

And Socrates replied to this: "Antiphon, among us it is held that youthful bloom and wisdom are nobly bestowed, or shamefully bestowed, in like fashion. For if someone wishes to sell his youthful bloom for money to whoever wishes it, they call him a prostitute; but if someone makes a friend of one whom he recognizes to be a lover who is both noble and good (a gentleman), we hold that he is moderate. Similarly, those also who sell wisdom for money to whoever wishes it they call sophists just as if they were prostitutes; but we hold that whoever makes a friend by teaching whatever good he possesses to someone he recognizes as having a good nature—this one does what befits a gentlemanly (noble and good) citizen.

"Accordingly, Antiphon, just as another is pleased by a good horse or a dog or a bird, so I myself am even more pleased by good friends, and if I possess something good I teach it, and I introduce them to others from whom, I believe, they will receive some benefit with a view to virtue. And reading collectively with my friends, I go through the treasures of the wise men of old which they wrote and left behind in their books; and if we see something good, we pick it out; and we hold that it is a great gain if we become friends with one another." When heard these things, formed the opinion that he himself was blessed and that he led those who heard him to gentlemanliness (nobility and goodness).

And again Antiphon once questioned him about how he could believe that he made others fit for political affairs, since he himself did not engage in political affairs—if indeed he understood how. He said, "In which case, Antiphon, would I more engage in political affairs, if I engaged in them alone, or if I should attend to there being as many as possible competent to engage in them?"

## Chapter 7

Let us examine whether, also by turning his companions away from boasting, he turned them toward being attentive with respect to virtue. For he was always saying that there is no more noble path to a good reputation than by becoming good at the thing for which one wishes to have a good reputation. And he taught in the following way that he was speaking the truth.

‘For let us ponder,” he said, “what someone should do who wishes to have a reputation as a good flute player when he is not. Should he not imitate the good flute players in the externals of their art? And first, since these both possess beautiful equipment and lead about many followers, he too should do these things. Then, since many people praise them, he too should furnish himself with many who praise him. Moreover, he should never take up the work or he will immediately be proved ridiculous, and not only a bad flute player but also a human being who is a boaster. And indeed, since he has gone to great expense without any benefit at all, and in addition has a bad reputation, will he not live a laborious, profitless, and ridiculous life?

“In like manner, let us reflect on what would happen to someone who is not a good general or pilot but wishes to appear to be one. Would it not be painful if, desiring to be opined as competent to do these things, he was not able to persuade—but would he not be even more wretched if he did persuade? For it is clear that one who does not understand how to be a pilot or a general—if established in the office—would utterly destroy those whom he least wished to destroy and would himself come out of it in a shameful and bad way.”

Likewise, he declared it unprofitable to be opined as rich, courageous, and strong when one is not these things in fact. For he said that these people are assigned tasks beyond their power, and if they are opined to be competent, they would not obtain sympathy when they are unable to do them.

And he called no small cheat anyone who would deprive another of money or equipment, taking it by persuasion, but he called by far the greatest cheat the one who, although not worthy, deceives others through persuasion that he is competent to lead the city. And so, in my opinion, he turned his companions away from being boasters by saying things of this sort in conversation.

# BOOK II

## Chapter 1

In my opinion, also by saying such things, he turned his companions toward training themselves to be continent in their desire for meat and drink, and in regard to lust, sleep, cold, heat, and labor. When he recognized once that one of his companions was too undisciplined in such respects, he said, “Tell me, Aristippus, if you should have to take and educate two youths, one so that he would be competent to rule, and the other so that he would not even lay a claim to rule, how would you educate each? Let us examine it, if you wish, beginning from sustenance, as it were from the elements.”

And Aristippus said, “Indeed, in my opinion, sustenance is the beginning. For no one would even be alive unless he were sustained.”

“So then, the wish to take food, when the time comes, is likely to be present in both?”

“It is likely,” he said.

“So which of them would we accustom to choose doing what is urgent over gratifying his belly?”

“The one being educated for ruling, by Zeus, so that the city’s affairs not be left undone in the course of his rule,” he said.

“So then,” he said, “the ability to endure being thirsty when they wish to drink should also be added to the same one?”

“Certainly,” he said.

“And to which would we add continence in regard to sleep, so as to be able to go to bed late or rise early or stay awake all night should there be any need?”

“This too should be added to the same one,” he said.

“And what about being continent in regard to sex,” he said, “so as not to be prevented on this account from taking action should there be any need?”

“This too should be added to the same one,” he said.

“And what about not fleeing from one’s labors but willingly enduring them? To which of them should we add this?”

“This too should be added to the one being educated to rule,” he said.

“What about learning whatever learning there is that would be serviceable for overpowering one’s adversaries? In which would it be more fitting to include this?”

“Far more, by Zeus, in the one educated for rule,” he said. “In fact, there is no benefit from the other things without such learning.”

“So then, in your opinion, is the one educated in this way less likely to be captured by his adversaries than the rest of the animals? For surely some animals are baited by appetite—some even that are quite shy are nevertheless captured when drawn to the bait by the desire to eat—while others are ensnared by drink.”

“Certainly,” he said.

“So then, do still others, like quail and partridges, fall into nets due to lust, when they are carried toward the sound of the female by the desire and hope for sex, ceasing to take dangers into account?”

He assented to this as well.

“So then, is it shameful, in your opinion, for a human being to suffer the same things as the most senseless of beasts? As for instance adulterers who enter the women’s quarters, knowing that the adulterer risks both suffering what the law threatens and being ensnared and being dealt with insolently once caught; and even though bad and shameful things of such magnitude hang over the adulterer, and though there are many who would release him from his sexual desire in safety, he is carried nevertheless into risky situations—isn’t this already the mark of someone who is altogether unhappy?”

“In my opinion, at least,” he said.

“And isn’t it a mark of great neglect, in your opinion, that the many are untrained for cold and heat, although the majority of the most necessary activities for human beings take place under the open sky, like those of war and of farming, and not the least important of the others?”

He assented to this as well.

“Then, in your opinion, must the one who is going to rule train himself to bear easily these things too?”

“Certainly,” he said.

“So then, if we put those who are continent in all these things in the order of those fit for rule, shall we put those unable to do these things in the order of those who will not even lay a claim to rule?”

He assented to this as well.

“So, what about this? Since in fact you know the order of the tribe of each of these two individuals, have you before now ever examined in which of these orders you would justly put yourself?”

“Indeed I have,” said Aristippus. “And in no way at all do I put myself in the order of those who wish to rule. In fact, in my opinion, it is quite senseless that it not be enough for a human being to furnish himself with what he needs, although this is a lot of work, but instead to take on the additional task of procuring also for the rest of the citizens what they need. And, while doing without many of the things he wishes for himself, after having presided over the city he undergoes a penalty unless he accomplishes everything the city wishes. How is this not great senselessness?

“For cities in fact think they deserve to deal with their rulers just as I deal with my house servants. For I think I deserve having my servants furnish me with provisions in abundance, while themselves laying hold of none of them; and cities think that their rulers should procure for them as many goods as possible, while themselves refraining from all of them. And so the ones I, for my part, would set among those fit for rule, after educating them in this manner, are those who wish to have many troubles themselves and to provide such troubles to others. I put myself, however, in the order of those who wish to live as easily and as pleasantly as possible.”

And Socrates said, “So do you wish that we examine also this: which live more pleasantly, the rulers or the ruled?”

“Certainly,” he said.

“To begin, then, with the tribes we know, in Asia the Persians rule, while the Syrians, Phrygians, and Lydians are ruled; and in Europe the Scythians rule, while the Maiotians are ruled; and in Libya the Carthaginians rule, while the Libyans are ruled. So which of these do you think lives more pleasantly? Or of the Greeks—among whom you belong yourself—which live more pleasantly in your opinion, those who overpower or who are overpowered?”

“But I, for my part, do not put myself in the order of slaves either,” said Aristippus. “Rather, in my opinion, there is a certain middle road between these, which I try to travel, neither through rule nor through slavery, but through freedom; and this road especially leads to happiness.”

“Well,” said Socrates, “if this road that carries you neither through rule nor through slavery doesn’t go through human beings either, perhaps you would be saying something. If, however, while you are among human beings you will think you deserve neither to rule nor to be ruled and you won’t serve the rulers willingly, I think you see that the stronger both collectively and privately understand how to make the weaker lament and to deal with them as slaves.

“Or are you unaware that the stronger cut down grain and trees after others have sown and planted them; and that they besiege in every way those who are weaker but do not want to serve them, until they persuade them to prefer slavery to being at war with those who are stronger? In addition, don’t you know that in private life the courageous and powerful reap profit from those who lack courage and are powerless, whom they enslave?”

“But in order not to suffer these things,” he said, “I, for my part, in fact don’t confine myself to any regime but am a stranger everywhere.”

Socrates said, “Quite a clever trick, what you’re saying now! For, ever since Sinis, Sciron, and Procrustes died, is no one any longer unjust to strangers? But now those who live as citizens in their fatherlands even lay down laws so they won’t suffer injustice, and acquire other friends to aid them in addition to the so-called necessary ones, and throw up defenses around their cities, and acquire arms to ward off those who are unjust, and, in addition to these things, equip themselves with other allies from outside—and still, those who possess all these things nevertheless suffer injustice.

“But you, who has none of these things and who spends a good deal of time on the highways where people suffer injustice the most and who is weaker than any of the citizens in whatever city you reach and who is the sort of person most attacked by those who wish to do injustice, nevertheless, you think that because you are a stranger, you won’t suffer injustice? Or do you take heart because cities announce to you that it is safe to come and go? Or is it also because you think that you would be the sort of slave who is not profitable to any master? For who would want to have a human being in his household who does not want to labor, while taking delight in a very costly way of life?

"But let us also examine this: how masters deal with household servants who are of this sort. Don't they moderate their lust by hunger, prevent their stealing by shutting them out from wherever there is anything to take, keep them from running away by putting them in bonds, and drive away their laziness with the compulsion of blows? Or what do you do when you observe that one of your household servants is of this sort?"

"I punish him with everything bad," he said, "until I compel him to serve as a slave. But, Socrates, how do those educated in the kingly art—which you, in my opinion, hold to be happiness—differ from those who suffer bad things out of compulsion, at least if they are going to suffer hunger, thirst, cold, sleeplessness, and all the other toils willingly? I, for my part, don't know what difference it makes whether the same skin is willingly rather than unwillingly beaten, or, in general, whether the same body is willingly or unwillingly besieged with all things of this sort, except that the one who gladly endures what is painful lacks sense as well."

"What then, Aristippus?" Socrates said. "Isn't it your opinion that the willing sufferings differ from the unwilling ones in ways such as these: someone who is willingly hungry could eat whenever he should wish, and someone who is willingly thirsty could drink, and likewise regarding the other things; but it's not possible for someone suffering these things under compulsion to cease from them whenever he wishes? Secondly, the one who suffers hardship willingly delights in thinking with a view to a good hope, like those who hunt beasts toil with pleasure in hope of a catch.

"And while those sorts of rewards for one's labors are of little worth, what about those who labor so that they may acquire good friends or that they may subdue their enemies, or so that by becoming powerful in their bodies and souls they may manage their own house nobly and treat their friends well and do good deeds for their fatherland? Surely one should know that these both labor for such things with pleasure and take delight in living, since they admire themselves and are praised and emulated by others.

"Moreover, easy and immediate pleasures suffice neither to produce good condition in the body, as the gymnastic trainers say, nor to produce any understanding worth mentioning in the soul; but acts of attention exercised with endurance enable one to attain noble and good works, as the good men say. Hesiod too says somewhere, 'It is easy to choose badness even in abundance; the road is smooth, and it lies very near. But immortal gods have placed sweat before virtue. The path to it is long and steep and rough at first. But if ever one arrives at the peak, then the going is easy, although it was hard.' Epicharmus is a witness, as well, in the following: 'The gods sell us all good things at the price of our labor.' And in another place he says, 'Wicked one, do not yearn for soft things, lest you have hard ones.'

"And Prodicus the wise declares a similar view of virtue in his treatise about Heracles—the very one he displayed most widely—when he says something like the following, insofar as I recall. For he says that when Heracles was starting to enter adolescence from childhood—when youths, since they are already becoming their own rulers, make clear whether in life they will take the road through virtue or that through vice—going out to a quiet spot, he sat down perplexed as to which of the roads he should take.

"And two tall women appeared to him to be approaching. One of the two was becoming to look at and freeborn in nature. For adornment her body had purity, her eyes modesty, her bearing moderation, and she had white clothing. The other had been fed to the point of being fleshy and soft. She was prettied up so that her complexion seemed to appear whiter and rosier than its reality, and so that her bearing seemed straighter than its nature. Her eyes were wide open, and she was wearing the clothes in which her bloom would be most conspicuous. She looked down at herself frequently, looked around to see if anyone else was looking at her, and frequently looked at her own shadow.

"When they came nearer to Heracles, the one spoken of first went on in the same manner, but the other, who wished to reach Heracles first, ran to him and said, see, Heracles, that you are perplexed as to which road you should take in life. If you befriend me, I will lead you to the most pleasant and easiest road; you will not miss the taste of any delight, and you will live your life without experience of the hard things.

" 'First, you will worry neither about war nor about business. Instead, you will roam about examining what delightful food or drink you might find, what delight you might see or hear, what pleasant things you might smell or touch, which favorites would especially delight you in associating with them, and how you might sleep most comfortably, and how you might obtain all these things with the least trouble.

"'And if ever any suspicion should arise that the sources of these things will be scarce, have no fear that I might lead you to procure these things for yourself by means of labor and hardship of body and soul. Instead, you will use whatever methods others use to accomplish these things and refrain from nothing gainful. For I, for my part, furnish my companions with the license to derive benefit from wherever they may.'

"And Heracles, after hearing these things, said, 'Woman, what is your name?'

"'My friends call me Happiness,' she said, 'but those who hate me nickname me Vice.'

"At this point the other woman approached and said, 'I too have come to you, Heracles, since know those who begot you and that nature of yours, having observed it in your education. Therefore, I have hope: for you, that if you should take the road toward me, you will become an exceedingly good worker of what is noble and august; and, for me, that I will appear still far more honored and more distinguished for good things. I shall not deceive you with preludes about pleasure. But I shall truthfully describe the disposition the gods have made of the things that are.

“‘For without labor and attentiveness the gods give humans none of the things that are good and noble. But if you wish the gods to be gracious to you, you must serve the gods; if you want to be cherished by your friends you must do good deeds for your friends; if you desire to be honored by some city, you must benefit the city; if you think you deserve to be admired by all Greece for your virtue you must attempt to be the cause of good for Greece; if you wish the earth to bear you fruit in abundance, you must serve the earth; if you think you must become rich from cattle, you must be attentive to the cattle; if you set out to increase yourself through war and wish to be able to make your friends free and subdue your enemies, you must learn the warlike arts themselves from those who understand them, as well as practice how one must use them. And if you wish to be powerful also in your body, you must accustom your body to serve your judgment, and you must train with labors and sweat.’

“And Vice interrupted her and said—as Prodicus tells it—‘Reflect, Heracles, how hard and long is the road to the delights that this woman describes for you. But I shall lead you to an easy and short road to happiness.’

“And Virtue said, ‘Wretch! What good thing do you have? Or what pleasant thing do you know, not wanting to do anything for the sake of these things? You do not even await the desire for pleasures but rather fill yourself up with everything before desiring it, eating before you are hungry, drinking before you are thirsty. In fact, in order to eat pleasantly you contrive gourmet cooks; in order to drink pleasantly you furnish yourself with costly wines and in summer run around seeking ice; and in order to sleep pleasantly you furnish yourself not only with soft bedclothes but couches and rockers for your couches. For you desire sleep not because of your labor but because you have nothing to do. And you compel [yourself to have] sex before you are in need, contriving all sorts of things and treating men as women. Insolent at night and asleep during the most useful part of the day, this is the way you educate your friends.

“‘Although you are immortal, you have been cast out from among the gods and are dishonored by good human beings. You have not heard the most pleasant of all sounds, praise of yourself. And you have not seen the most pleasant of all sights, for you have never seen any noble work of your own. If you should say anything, who would trust you? If you should need anything, who would supply you? And what person of good sense would dare to be among your worshippers, who are powerless in their bodies when young and senseless in their souls when they become older, who are comfortably sustained^ without labor through youth, and pass a miserable and laborious old age, who are ashamed by what they have done and weighed down by what they are doing, and who run through pleasures in their youth and lay up the hard things for old age.

“ ‘But I am a companion of the gods, and a companion of good human beings. No noble work, divine or human, comes into being without me. I am honored most of all among gods and among those human beings by whom it is fitting to be honored; for I am a cherished coworker for artisans, a trusted guardian for masters of households, a well-disposed assistant for household servants, a good helper for the labors of peace, a reliable ally for the works of war, and an excellent partner in friendship.

“ ‘Among my friends the enjoyment of food and drink is pleasant and trouble free, for they refrain from these until they desire them. More pleasant sleep is available to them than to those who do not toil. And when they lose sleep they are not annoyed, nor on this account are they remiss in taking the actions they should. The young delight in praise from their elders, while the old exult in honors from the young. They recall their former actions with pleasure and are pleased when they do well in present ones, being, because of me, dear to gods, cherished by friends, and honored by fatherlands. And whenever their allotted end comes, they do not lie without honor and forgotten but thrive remembered in hymns sung through all time. When you have worked hard at such things, Heracles, child of good parents, it is possible to possess the most blessed happiness.’

“Prodicus managed the education of Heracles at the hands of Virtue more or less in this way. He, however, decorated his judgments with wording even grander than I used just now. So it’s worthwhile for you, Aristippus, with these things in mind, to try to worry somewhat also about the future things of your life.”

## Chapter 2

When he perceived once that his eldest son, Lamprocles, was angry with his mother, he said, “Tell me, child, do you know any human beings who are called ungrateful?”

“I do indeed,” said the youth.

“Have you observed, then, what they do that makes people call them this name?”

“I have,” he said, “for they call ungrateful those who have been well treated but do not return the favor when they can.”

“So then, are the ungrateful numbered among the unjust in your opinion?”

“Yes, in my opinion,” he said.

“Now have you ever yet examined whether, in the same way as opinion holds it to be unjust to enslave friends but just to enslave enemies, it is also unjust to be ungrateful to friends but just to be ungrateful to enemies?”

“Yes, indeed,” he said. “And, in my opinion, someone who is well treated, whether by a friend or by an enemy, is unjust if he does not try to return the favor.”

“So then, if this is in fact the case, would ingratitude be something purely and simply unjust?”

He agreed.

“Accordingly, the better someone is treated without repaying the favor, the more unjust he would be?”

He assented also to this.

“Now whom,” he said, “could we find receiving from any source benefactions greater than children receive from their parents? Their parents cause them to come from nonbeing to being, so as to see as many noble things and to share in as many good things as the gods provide human beings. And what is more, these things are in our opinion so completely worthwhile that more than anything we all flee from leaving them behind; and cities have fashioned the death penalty against the greatest injustices on the grounds that there is no fear of a greater bad thing to stop the injustice.

"Moreover, surely you don't suppose that human beings beget children on account of sex, since the streets as well as the houses are full of those who will release one from this. And it is visible that we examine also from what sort of women we might get the best offspring, and it is with these we come together to produce offspring.

"And the man in fact sustains the woman who will produce offspring for him, and he provides his future children in advance with all things that he thinks will benefit them for life, and these things in the greatest abundance of which he is capable. While the woman, after she conceives, bears this burden, weighed down, taking risks concerning her life and sharing the sustenance by which she too is sustained; and after she carries it to term with much labor and brings it forth, she sustains and attends to it, even though she has not been previously well treated by it, and even though the newborn does not recognize the one by whom it is well treated; nor can it even signal what it needs, but she by guessing attempts to fill it with what affords both advantage and delight, and she sustains it for a long time, enduring labor both day and night without knowing what gratitude she will receive for these things.

"And it is not enough for them only to sustain the children, but also, when in their opinion their children are competent to learn something, the parents teach them whatever they themselves have that is good for one's life. And they go to expense to send them to someone else when they think that one will be more competent to teach certain things. And they attend to doing everything so that their children might become as good as possible."

The youth said in reply to this, "But even if she has done all these things and very many others besides, no one could endure her harshness."

And Socrates said, "Which do you think is more difficult to bear, the ferocity of a beast or of a mother?"

"For my part," he said, "I think that of a mother, at least one such as this."

"Then has she ever yet given you any harm by biting or kicking, such things as many have suffered from beasts?"

"But, by Zeus," he said, "she says things that no one, upon his whole life, would wish to hear."

"And you," said Socrates, "how many hard-to-endure troubles do you think you provided her, both by your voice and by your deeds from your childhood on, when you were peevish both day and night; and how much grief did you cause when you were sick?"

“But,” he said, “never did I either say or do anything to her that made her ashamed.”

“What then?” he said. “Do you think it is harsher for you to hear what she says than it is for the actors when they say the most extreme things to one another in the tragedies?”

“But I think they bear it easily since in the case of these speakers they do not think that the one who refutes does so in order to inflict a penalty, nor that the one who threatens does so in order to do any harm.”

“And you, knowing very well that, when your mother speaks to you, she not only intends no harm but also wishes good for you more than for anyone else—knowing this, you are angry? Or do you hold that your mother intends you harm?”

“Surely not,” he said. “That I do not think.”

And Socrates said, “And so, though her intention toward you is good and she attends to you as best she can so that you will regain health when you are sick and so that you will lack nothing you need, and, in addition to these things, she prays to the gods for many good things on your behalf and fulfills her vows—you assert that she is harsh. For my part, I think that if you cannot bear such a mother you cannot bear the good things.

“And tell me,” he said, “do you think you should serve anyone else, or are you prepared to try to please no human being, nor to obey either a general or other ruler?”

“By Zeus, for my part, I think one should,” he said.

“And so,” said Socrates, “you wish to please your neighbor too so that he will kindle your fire when you need it and become an accomplice for your good and come to your aid with good intent from close by should you happen to falter?”

“I do, for my part,” he said.

“What about a travel companion, a shipmate, or someone else you might meet? Would it make no difference to you whether he becomes friendly or hostile? Or do you think that one must also be attentive regarding good intent from these?”

“I do, for my part,” he said.

“Then you are prepared to be attentive toward these, but you don’t think you must serve your mother who loves you most of all? Don’t you know that the city, as well, attends to and brings to trial no other form of ingratitude but overlooks those who are well treated and do not return the favor. But if someone does not serve parents, the city sets down a penalty against him and, after deeming him unfit during scrutiny, will not allow him to rule on the grounds that the sacrifices he offers on behalf of the city would not be piously offered, nor would anything else he did be nobly or justly done. And, by Zeus, if someone even fails to decorate the tombs of his parents after they have died, the city reviews this too when it subjects its rulers to scrutiny.

“So you, child, if you are moderate regarding the gods, you will beseech them to forgive you if you have in any way neglected your mother, lest they too not want to treat you well because they hold that you are ungrateful. And regarding human beings, you will watch out lest when they perceive you neglecting your parents they all dishonor you and then you find yourself bereft of friends. For should they suppose that you are ungrateful to your parents, no one would hold that the favor will be returned him after he has treated you well."

## Chapter 3

Once, when he perceived that there was a quarrel between Chairephon and Chairecrates, who were brothers to each other and acquaintances of his, he said upon seeing Chairecrates, "Tell me, Chairecrates, surely you too do not belong to the sort of human beings who hold that wealth is more useful than brothers, even though wealth lacks sense while a brother has it, and wealth is in need of assistance while a brother is able to assist, and, in addition to these things, you possess rather a lot of wealth but only one brother;

"This also is a wonder: if someone should believe that brothers are a loss to him because he does not possess their property too, but not believe that his fellow citizens are losses because he does not have theirs too. But, in the latter case they are able to calculate that it is better for one to hold enough property while dwelling securely with many than to have risky possession of all the property of the citizens while living a solitary way of life. Yet when it comes to their brothers, they are ignorant of this same fact.

"In addition, while those who can buy household servants do so in order to have partners in work, and while they acquire friends on the grounds that they need allies, at the same time they neglect their brothers, as though friends come to be from citizens but not from brothers.

"And yet, to have been born from the same parents is a great foundation for friendship, as is to have been reared together, since even in the beasts a certain longing comes to be for those they were reared with. And, in addition to these things, other human beings also honor those with brothers more than those without, and attack them less."

And Chairecrates said, "Socrates, if the quarrel is not a great one, perhaps one should bear with the brother and not flee from him for the sake of petty matters. For, just as you too say, a brother, who is the sort he should be, is a good thing. When, however, he is deficient in every way and completely the opposite, why should someone attempt the impossible?"

And Socrates said, "Chairecrates, is Chairephon able to please no one, just as he is unable to please you? Or is he in fact quite pleasing to some?"

"It is for this very reason, Socrates," he said, "that he deserves my hatred—that he is able to please others, but, wherever he is in my presence, he is everywhere a loss, rather than a benefit, both by deed and by speech."

"Is it the case, then," said Socrates, "that just as a horse is a loss for someone who lacks understanding but attempts to deal with it, so too a brother is a loss whenever someone without understanding tries to deal with him?"

“But how could I,” said Chairecrates, “lack understanding of how to deal with a brother, since I understand both how to speak well of someone who speaks well of me and how to treat well someone who treats me well? However, I would be able neither to speak well of nor to treat well someone who tries to annoy me in speech and in deed; nor will I even try.”

And Socrates said, “You make wondrous statements indeed, Chairecrates. In the case of a dog, if one were serviceable for your flocks and fond of your shepherds but harsh toward you when you approached him, you would neglect to get angry and try to render him gentle by treating him well; yet, in the case of your brother, you assert that he would be a great good if he were as he should be toward you; and while you agree that you understand how to act and speak well, you do not attempt to contrive a way for him to be as good as possible for you.”

And Chairecrates said, “I am afraid, Socrates, that I do not have great enough wisdom to make Chairephon be as he should toward me.”

“And yet in my opinion,” said Socrates, “one need contrive nothing at all complex or new with regard to him, but with what even you yourself understand I think he could be won over to think highly of you.”

“Hurry up and tell me,” he said, “if you have perceived that I understand some love charm that I am unaware that I know.”

“Tell me,” he said, “if you wished to prevail upon some acquaintance of yours to invite you to dinner whenever he makes sacrifices, what would you do?”

“It is clear that I myself would make a start of the practice by inviting him when make a sacrifice.”

“And if you wished to turn one of your friends toward attending to your property when you go out of the country, what would you do?”

“It is clear that I would attempt to attend to his property first whenever he goes out of the country.”

“And if you wished to have a stranger receive you whenever you go to his country, what would you do?”

“It is clear that I would also receive him first whenever he should come to Athens. And if I wished him to accomplish eagerly for me the business for which I came, it is clear that I myself would have to do this too for him first.”

“Then have you been hiding all along the fact that you understand all the love-charms among human beings?” he said. “Or do you hesitate to make the first move lest you appear shameful if you treat your brother well first? And yet a man is thought, at any rate, to deserve the most praise if he anticipates his enemies in treating them badly and his friends in doing them good deeds. Accordingly, if, in my opinion, Chairephon were more capable than you of leading toward this friendship, I would have tried to persuade him to make the attempt first to make you his friend. But now, in my opinion, it is rather you, if you would take the lead, who would accomplish this.”

And Chairecrates said, “You say something strange and not at all in character, Socrates, when you bid me to lead the way although I am the younger. In fact, among all human beings the opposite is held, that the elder is to lead in everything, both in speech and in deed."

"How do you mean?" said Socrates. "For isn't it held everywhere that the younger is to stand aside in the street when an elder meets him, and when sitting to stand up, and to honor him with the soft couch, and when speaking to yield? Do not hesitate, my good fellow," he said, "but attempt to make the man gentle and very soon he will listen to you. Don't you see how honor-loving and freeborn he is? For while you would capture wicked human sorts only if you should give them something, you would especially prevail upon noble and good (gentlemanly) human beings by dealing with them in a friendly manner."

And Chairecrates said, "What, then, if he does not become any better when I do these things?"

"What else," said Socrates, "other than that you will risk displaying yourself as a good person who loves his brother, and him as a common person undeserving of good treatment? But I do not think that any of this will come to pass. For I hold that, as soon as he perceives that you are challenging him to enter this contest, he will be very eager to win the victory by surpassing you in good treatment, both in speech and in deed.

"For at present," he said, "you two are disposed just as a pair of hands that the god made for helping each other to grasp, but that give up on this and turn toward hindering each other, or like a pair of feet which have been made by divine dispensation for working with each other but neglect this and get in each other's way.

"Wouldn't it be great ignorance and unhappiness to use for harm things made for benefit? And yet, in my opinion, the god made a pair of brothers to be even more beneficial to one another than a pair of hands, a pair of feet, a pair of eyes, or any of the other things he begot as brethren for human beings. For hands could not do at the same time things that are more than a fathom apart, if they should need to; feet could not go to places even a fathom apart at the same time. And eyes, which are thought to reach over the greatest distance, could not among things still nearer see those in front and behind them at the same time. But when a pair of brothers are friends they can act at the same time for each other's benefit, even though they are separated by a great distance.

## Chapter 4

I also heard him once conversing about friends; he said such things as, in my opinion at least, might be especially beneficial to someone regarding the acquisition and treatment of friends. For he said that he heard from many people that a sure and good friend is the best of all possessions. But he said that he saw the many attending to anything rather than the acquisition of friends.

For he said that he saw them attentively acquiring houses, fields, slaves, grazing animals, and furniture, and trying to preserve what they had, but as for a friend—which they say is the greatest good—he said that he saw the many worrying neither about how to acquire nor about how to preserve the ones they had.

But even in the case of illnesses of friends and household servants, he said that he saw some bringing doctors to their household servants and attentively furnishing them with other things for their health, while taking little heed of their friends; and, should both die, he saw them vexed about their household servants and believing their death a loss, while thinking themselves no worse off for the death of their friends; and he saw them allowing none of their other possessions to be left unattended or unguarded, while neglecting their friends who were in need of attention.

Again, in addition to these things, he said that he saw that the many knew the number of their other possessions even when they had very many of them, while, though they had few friends, they were not only ignorant of their number but even when they attempted to count them for those who inquired, they included some among their friends whom they later excluded. This was the extent to which they worried about their friends.

And yet on comparison, which of the other possessions wouldn't a good friend appear far superior to? For what horse or what ox team is as useful as a good friend? What slave is so well intentioned and constant? Or what other possession is so universally useful?

For the good friend orders himself to remedy every deficiency of his friend, both in private equipment and in collective actions: should there be a need to treat someone well, he lends support, and if any fear disturbs him, he comes to his aid—sometimes helping him with expenditures, other times helping him with actions, and sometimes helping him persuade, other times using force, delighting them the most when they do well, and setting them right the most when they falter.

Whatever services the hands do for each, whatever eyes can foresee, whatever the ears hear beforehand, and whatever the feet carry out—a friend falls short of none of these in doing good deeds. And frequently a friend suffices for doing for his friend the things that one could not have done, seen, heard, or carried out for oneself. But nevertheless, while some try to care for trees for the sake of their fruit, most are lazy and remiss in their attention to that possession that bears the most fruit and is called a friend.

## Chapter 5

I once heard another speech of his too, which in my opinion turned the listener toward reviewing how much he himself was worth to his friends. For when he saw that one of his companions neglected a friend oppressed by poverty, he questioned Antisthenes in front of the one neglecting him, as well as many others.

"Antisthenes," he said, "are friends worth certain amounts just as household servants are? For I suppose among household servants, one is worth two mina, another not even a half-mina, another five mina, and another even ten. And Nicias the son of Niceratus is said to have purchased an overseer for his silver mines at the cost of a talent. I am examining this," he said, "whether, just as household servants, so friends too have a worth."

"Yes, by Zeus," said Antisthenes. "I, at any rate, would wish to have a certain person my friend rather than two mina, while another I would not value at even a half-mina, another I would choose before ten mina, and another I would value as my friend above all wealth and labor."

"So then," Socrates said, "if indeed these things are so, one would do well to review how much he himself happens to be worth to his friends, and to try to be worth as much as possible in order that his friends will be less likely to betray him. For in fact," he said, "in the light of what I, for my part, frequently hear—from one that a man who was a friend betrayed him, from another that a man he thought was his friend chose a mina over him—I examine with regard to all such cases whether, just as whenever someone sells a wicked household servant and disposes of him for whatever price he fetches, so also it might be a temptation to dispose of a wicked friend when it is possible to get more than he is worth. Good household servants I don't much see being sold nor good friends being betrayed,"

## Chapter 6

In my opinion he gave instruction also with regard to testing what sort of friends are worth acquiring when he said things of the following sort. "Tell me, Critobulus," he said, "if we should need a good friend, how would we attempt to conduct our investigation? Should we seek first for one who is the ruler of his appetite as well as of his love of drink, lust, sleep, and laziness? For one overpowered by these couldn't do what he should either for himself or for a friend."

"No, by Zeus, he surely couldn't," he said.

"So then, should one stay away from one who is ruled by these things, in your opinion?"

"Certainly," he said.

"What about the one who is a spendthrift and not self-sufficient," he said, "but always in need of what belongs to his neighbor; and who, if he gets something, cannot pay it back, but when he doesn't get it, hates the one who does not give? Wouldn't he, too, be a harsh friend in your opinion?"

"Certainly," he said.

"So then, one should stay away from him too?"

"One should indeed stay away," he said.

"What about the one who is able to make wealth but desires a great deal of it, and for this reason drives a hard bargain and is pleased to get, but does not wish to pay back?"

"In my opinion," he said, "this one is even more wicked than the previous one."

"What about the one who, because of his erotic desire for making wealth, provides himself with leisure for nothing other than what he can derive some gain from?"

"One should stay away from him, too, in my opinion; for he would be of no benefit to the one dealing with him."

“What about someone who is factious and wants to provide his friends with many enemies?”

“By Zeus, one should flee from him, too.”

“And if someone has none of these bad qualities but endures being well treated while not worrying at all about doing good deeds in return?”

“This one would be of no benefit either. But, Socrates, what sort shall we attempt to make our friend?”

“Someone, I think, who, as opposed to these, would be continent in the bodily pleasures and, while easy to live with and easy to bargain with, would happen also to be contentious) not to be deficient in the good treatment of those who do him good deeds, so that he is profitable to those who deal with him.”

“So how would we test someone for these qualities, Socrates, before we deal with him?”

“We test sculptors not by making a judgment on the basis of their speeches,” he said, “but he whom we see has done beautiful work on past sculptures we trust to do well also on those in the future.”

“Are you saying,” he said, “that it is also clear that a man who visibly treats his previous friends well would do good deeds for those who become his friends later as well?”

“Yes, for regarding horses, too,” he said, “when I see someone using nobly the ones he had previously, I think that he would use others nobly as well.”

“Well then,” he said, “how should one make oneself a friend of the one who is, in our opinion, worthy of friendship?”

“To begin with,” he said, “one should examine what comes from the gods, whether they advise making him one’s friend.”

“So what about the one whom in our opinion we should make our friend and whom the gods do not oppose?” he said. “Are you able to say how he should be hunted?”

“By Zeus,” he said, “not by following on his heels, as the hare is hunted, nor with deception,, as the birds are, nor with violence, as one’s enemies are. For it is troublesome to capture an unwilling friend, and it is hard to hold him bound down like a slave. Those who are treated in this way become enemies rather than friends.”

“But how are friends hunted?” he said.

“They say that there are certain incantations, which those who understand them chant to make friends for themselves of whomever they wish; and that there are love charms, too, which those who understand them use on whomever they wish to become beloved by them.”

“Where then might we learn these things?” he said.

“You have heard in Homer what the Sirens chanted to Odysseus,

which begins somewhat as follows: ‘Come here, much-praised Odysseus, great glory of the Achaeans.’ “

"Did the Sirens," he said, "hold fast other human beings too, Socrates, by chanting this incantation with the result that the enchanted didn't depart from them?"

"No, but they chanted in this manner to those who love the honor accorded to virtue."

"Are you all but saying that one should chant to each person praises of the sort that he who hears them will not hold that the one praising him is ridiculing him?"

"For one would thus be more hateful and drive human beings away from oneself, if one were to praise a person who knows he is short, ugly, and weak by saying that he is beautiful, tall, and strong."

"Do you know any other incantations?"

"No, but I have heard that Pericles understood many that he chanted to the city to make it love him."

"But how did Themistocles make the city love him?"

"Not by chanting incantations, by Zeus, but by attaching some good to it."

"In my opinion, Socrates, you are saying that if we are going to acquire some good friend, we ourselves must become good at speaking and taking action."

"Did you think," said Socrates, "that it is possible even for someone who is wicked to acquire good friends?"

"Well," said Critobulus, "I have seen poor orators who are friends with good public speakers, and those comrades of men who are masterful generals who are not competent to be generals,"

"Then also, regarding the subject of our conversation," he said, "do you know any who, while not being beneficial themselves, are able to make those who are beneficial their friends?"

"By Zeus, surely not," he said. "But if one who is wicked is unable to acquire gentlemanly (noble and good) friends, then I have the following concern: whether one who has become a gentleman can readily become friends with gentlemen."

"What disturbs you, Critobulus, is that frequently you see men who perform noble actions and refrain from what is shameful, instead of being friends, engaged in factious strife against one another and dealing with one another more harshly than would human beings of no worth."

"Yes," said Critobulus, "and not only do private individuals do this but also the cities that are most attentive to the noble things and least admit the shameful are frequently in a state of hostility with one another.

"When I take these things into account I am quite dispirited concerning the acquisition of friends. For I do not see either that the wicked can be friends with one another. For how could ungrateful, neglectful, greedy, untrustworthy, or incontinent human beings become friends? So, in my opinion at any rate, the wicked are by nature complete enemies rather than friends to one another.

"Moreover, as you say, the wicked would never harmonize with the good in friendship: for how could those who do what is wicked become friends with those who hate such things? And if, in addition, those who train themselves in virtue both engage in factious strife over who will have first place in the cities and hate one another out of envy, who will still be friends? And among what human beings will there be good intentions and trust?"

"But these matters are somewhat complex, Critobulus," said Socrates. "For by nature human beings have, on the one hand, inducements to friendship: for they need one another and have pity and confer benefits as coworkers and, perceiving this, are grateful to one another; and, on the other hand, inducements to hostility: for when they hold the same things to be noble and pleasant, they fight over them, and when they differ in their judgments, they set themselves at variance; and both rivalry and anger are inducements to hostility; and the erotic desire to acquire an excess is ill willed, while envy is hateful.

"Nevertheless, slipping through all these things, friendship unites those who are both noble and good. Because of their virtue, they choose to possess moderate property without labor rather than through war to be lord of all things; and they are able without pain to share their food and drink, though they are hungry and thirsty, and to be continent so as not to pain those it isn't fitting to, though they are pleased by sex with those in bloom.

"In the sphere of wealth as well, not only are they able to share it lawfully, refraining from being greedy, but they also are able to come to one another's assistance. They are able to arrange also their rivalry not only painlessly but even advantageously for one another and to prevent their anger from going so far as to become a source of regret. And envy they remove altogether, since they render their own goods the property of their friends and hold those of their friends to be their own.

"Why, then, isn't it plausible that in the sphere of political honors, as well, the gentlemen (the noble and good) will be partners not only harmless but even beneficial to one another? For those who desire to be honored and to rule in the cities in order to have license to steal wealth, to do violence to human beings, and to experience pleasure would be unjust, wicked, and unable to live in harmony with anyone else.

"But if someone wishes to be honored in a city so that he himself will not be done injustice and can bring just aid to his friends, and so that in ruling he might attempt to do his fatherland some good—on what account would such a one be unable to live in harmony with another of the same sort? Will he be less able to benefit his friends when the gentlemen (noble and good) are with him? Or will he be less able to do good deeds for his city when he has gentlemen as his coworkers?

"But it is clear even in athletic contests that if the best were permitted to make a pact to go against the worse, they would win all the contests and get all the prizes. Now, there they don't allow them to do this; but since in political affairs, where the gentlemen (noble and good) are best, no one prevents one from doing good deeds for the city together with whomever one wishes, how can it be unprofitable to engage in political affairs after acquiring the best friends, using them as partners and coworkers in one's actions rather than as antagonists?

“Furthermore, it is clear that if one is at war with someone else, he will need allies, and more of them if it is gentlemen (noble and good) he is placed against. And yet those who want to be allies must be well treated so that they’ll want to be eager; but it is far better to treat well the best who are fewer in number, than the worse who are more numerous, for the wicked require many more good deeds than the good.

“But take heart and try to become good, Critobulus,” he said, “and when you have become so, attempt to hunt after those who are both noble and good. And, because I am erotic, perhaps even I might be able to assist you in some way in the hunt for those who are both noble and good. For—whatever human beings I desire—loving them, I set out with complete intensity to be loved by them in return, and, longing for them, to be longed for in return, and, desiring to be together with them, to have them desire in return to be together with me.

“I see that you, too, will need these things whenever you desire friendship with certain people. So don’t conceal from me those you wish to become friendly with. For because I am attentive to please whoever pleases me, I think that I am not inexperienced in the hunting of human beings.”

And Critobulus said, “And yet, Socrates, I have long desired to learn these subjects of learning, especially if this same understanding will suffice for me with a view both to those who are good in their souls and to those beautiful in their bodies.”

And Socrates said, “But, Critobulus, it isn’t within the scope of my understanding to make the beautiful endure one who puts his hands on them. I am persuaded as well that it was for this reason that human beings fled from Scylla: because she would put her hands upon them. But because the Sirens put their hands upon no one but chanted to all from afar, people say that all endured them and were enchanted on hearing them.”

And Critobulus said, “If you have something good for the acquisition of friends, teach, on the understanding that I will not put my hands on them.”

“Nor your mouth?” said Socrates. “You will not put it on their mouth?”

“Take heart,” Critobulus said, “for I will not put my mouth on anyone’s mouth, either—unless he is beautiful.”

“There you go, Critobulus,” he said, “saying the exact opposite of what is advantageous. For the beautiful do not endure such things, while the ugly admit them with pleasure even, holding that they are being called beautiful (noble) on account of their soul.”

And Critobulus said, “On the understanding that I shall kiss those who are beautiful, and tenderly kiss those who are good, take heart and teach me what pertains to the hunting of friends.”

And Socrates said, “Whenever, then, you wish to become the friend of someone, Critobulus, will you allow me to give him the following information against you: that you both admire him and desire to be his friend?”

“Accuse me of it,” said Critobulus. “For I know of no one who hates those who praise him.”

‘Then if accuse you in addition,” he said, “of having good intentions as well toward him, because you admire him, you won’t be of the opinion that you’re being slandered by me?”

“To the contrary,” he said, “I myself have good intentions toward those I suppose to have good intentions toward me.”

“These things, then,” Socrates said, “I will be permitted to say about you to those you wish to make your friends. If, in addition, you will give me license to say of you that you are attentive to your friends and take delight in nothing so much as good friends; that you exult in the noble deeds of your friends no less than in your own and that you take delight in the good things that come to your friends no less than in those that come to you, while you do not grow weary of contriving to bring it about that these things will come to your friends; and that you have formed the judgment that the virtue of a man consists in winning the victory over his friends in treating them well and over his enemies in treating them badly—I very much think that I would be serviceable to you as a helper in the hunting of good friends.”

“Why,” Critobulus said, “are you telling this to me, as if it weren’t up to you to say whatever you wish about me?”

“By Zeus, it is not, as I once heard from Aspasia. For she said that good matchmaking women are clever at bringing human beings together into marriages by reporting the good things with truth, but that they do not want- to lie when they praise. For those who have been deceived hate each other and the matchmaker at the same time. Since I have been persuaded that this is in fact correct, I, for my part, believe that in my praise I am not permitted to say of you anything that is not true.”

“So is this the sort of friend you are to me, Socrates,” Critobulus said, “one who would assist me if I myself have something serviceable for acquiring friends; but, if I don’t, you wouldn’t want to say something you fabricated for my benefit?”

“How, in your opinion, Critobulus, would I benefit you more,” Socrates said, “by praising you falsely, or by persuading you to try to become a good man?

“And if the answer is not visible to you in this way, examine it on the basis of the following. If I should praise you falsely by claiming that you are a good pilot because I wish to make you the friend of a ship-owner, and he entrusts his ship to you because he is persuaded by me even though you do not understand how to pilot, do you have any hope that you would not destroy both yourself and the ship? Or if I should falsely persuade the city collectively that it should entrust itself to you on the grounds that you are a master general, juror, and statesman, what do you think you and the city would suffer because of you? Or if privately I should falsely persuade some citizen that he should entrust his belongings to you on the grounds that you really are skilled in managing a household and attentive? If you should be put to the test, wouldn’t you be harmful and appear ridiculous at the same time?

"Instead, the most efficient, safest, and noblest path to being thought to be good at whatever one wishes, Critobulus, is to try to become good at it as well. And when you examine the matter you will find that all those things that are called virtues among human beings are augmented by learning and by practice. I, at any rate, Critobulus, think that we should." But if you judge the matter in some other way, teach me."

And Critobulus said, "But I would be ashamed, Socrates, to contradict these things, for I would be speaking neither nobly nor truly."

## Chapter 7

Moreover, he tried to cure the perplexities of his friends—those that were due to ignorance, by his judgment, and those due to want, by teaching them to assist one another according to their capacity. I shall tell what I know of him in these matters as well. For when he saw once that Aristarchus was downcast, he said, "You seem to be burdened by something, Aristarchus. You should share your burden with your friends. For perhaps we might even lighten it somewhat for you."

And Aristarchus said, "Indeed, Socrates, I am in great perplexity. For, since the city is in civil strife and many have fled to the Piraeus, so many of my abandoned sisters, nieces, and female cousins have come to me that there are fourteen free persons in my house. But we don't get anything from our land, for the adversary prevails over it, nor from our houses, for there is a scarcity of human beings in the town, and no one is buying furniture. Nor can one borrow money anywhere; but, in my opinion, one is more likely to find it by seeking for it on the street than to get it by borrowing. Now it's a hard thing, Socrates, to look on as one's relatives are perishing, but it's impossible to sustain so many in such circumstances."

And so, when Socrates heard these things he said, "Why is it that Ceramon, who sustains many, not only is able to provide himself and them with provisions but also makes such a surplus that he is even rich, while you who sustain many fear that you will all perish from want of provisions?"

"Because, by Zeus," he said, "he sustains slaves, while I sustain those who are free."

"And which do you think are better," he said, "the free by your side or the slaves by Ceramon's?"

"For my part," he said, "I think the free by my side."

"So then, isn't it shameful," he said, "that he is well-off from those who are worse, while you are in perplexity although you have those who are much better?"

"By Zeus," he said, "for he sustains artisans, while I sustain those who have been freely educated."

"Are artisans, then," he said, "those who understand how to make something useful?"

"Most certainly," he said.

"And so, is barley meal useful?"

“Exceedingly.”

“And what about loaves of bread?”

“No less so.”

He said, “What about cloaks for men and women, and tunics, and mantles and vests?”

“These are all exceedingly useful as well,” he said.

“Then, do those by your side understand how to make none of these?” he said.

“Surely all of them, I think.”

“Next, don’t you know that from a single one of these things, from making barley meal, Nausicydes sustains not only himself and his household servants but in addition many pigs and cows, and he makes such a surplus that he often performs public services at his own expense for the city as well; by making loaves of bread Cyrebus continually sustains his whole household and lives lavishly; while Demeas of Collytus is continually sustained by the production of mantles, and Menon by the making of wool, and most of the Megarians by the manufacture of vests?”

“By Zeus,” he said, “the human beings they have are barbarians whom they have bought so as to compel them to produce what is appropriate for them to produce. The ones I have are free and my relatives.”

“Then,” he said, “do you think that, because they are free and your relatives, they should do nothing other than eat and sleep? Among others who are free do you see those who live in this manner living better lives, and do you deem them happier than those who are attentive to whatever they understand that is useful for one’s life? Or do you perceive that idleness and inattentiveness are beneficial to human beings for learning what it is fitting to understand, for remembering what they learn, for being healthy and strong in their bodies, and for acquiring and preserving what is useful for their life, while being at work and being attentive are not useful for these?

“And did they learn what you say that they understand, on the assumption that these things are not useful for one’s life and that they would not be making any of them, or, on the opposite assumption, that they would be attentive to these things and derive benefit from them? For how is moderation fostered more in human beings: through their being idle or through their being attentive to the useful things? And how would they be more just: if they are at work, or if they idly deliberate about their provisions?

“But in fact as it is now, I think, you do not love these women, nor do they love you; for you believe that they are causing you a loss, and they see that you are annoyed on their account. From this situation, there is a risk of greater enmity coming into being and their former gratitude diminishing. But if you preside over them so that they are at work, you will love them when you see that they are beneficial to you, and they will cherish you when they perceive that you are delighted with them; and since it will be more pleasing to recall former good deeds, you [pi.] will augment the gratitude stemming from them and as a result be more friendly and more like a family to one another.

“Now, if they were going to work at something shameful, death would be more choice-worthy than that. But, as it is, they apparently understand how to do what opinion regards as most noble and most becoming for women. And all work most easily, most quickly, most nobly, and most pleasantly at what they understand. So, don’t hesitate to introduce to these women what will profit you as well as them,” he said, “and, as is suitable, they will heed you with pleasure.”

“By the gods,” Aristarchus said, “in my opinion you speak so nobly, Socrates, that—although I would not permit myself to borrow before, because I knew I wouldn’t be able to pay it back after spending whatever I got—now it is best, in my opinion, to endure doing this in order to raise the capital for the work.”

As a consequence of these things, capital was procured, and wool was bought. And the women worked while they ate breakfast and until they ate dinner, and they were merry instead of down-cast. And instead of looking suspiciously at each other, they saw each other with pleasure; the women loved him as a protector, and he cherished them as beneficial. At last, coming to Socrates, he described with delight all these events as well as the fact that they were blaming him for being the only one in the house who ate although he was idle.

And Socrates said, “Then you aren’t telling them the speech of the dog. For they say that, when the animals could speak, the ewe said to her master, ‘You do an astonishing thing in giving us, who provide you with wool and lambs and cheese, nothing other than what we ourselves get from the earth, while you give the dog, who provides you with nothing of the sort, a share of your very own food.’

“And that when the dog heard this he said, ‘Yes, by Zeus, for I am the one who in fact saves you sheep so that you are neither stolen by human beings nor seized by wolves, since indeed if I were not to guard over you, you would not even be able to graze out of fear that you might perish.’ It is said that then even the flocks acquiesced in the dog’s being preferred in honor. And so you, too, tell these women that you are, in place of a dog, their guardian and attendant, and that it is due to you that, being unjustly treated by no one, they live securely and pleasantly by their work.”

## Chapter 8

Once he saw another old comrade after not having seen him for some time and said, “Where do you appear from, Eutherus?”

“At the end of the war, Socrates,” he said, “I returned from abroad; just now, however, I’m coming from this very place. For, because we were deprived of our possessions abroad and because my father did not leave me anything in Attica, I am now compelled to procure my provisions by the work of my body here at home. And, in my opinion, this is better than to beg for something from human beings, especially since have nothing to borrow against.”

"And how long," he said, "do you think your body will be competent to produce your provisions by its wages?"

"By Zeus," he said, "not for long."

"And yet," he said, "when you become older, it is clear that you will need spending money, but no one will want to pay wages for the work of your body."

"You speak truly," he said.

"So then," he said, "it is better at this point to apply yourself to the sorts of work that will suffice for you also when you are older; and to approach one of those possessing a good deal of wealth who needs someone to help him attend to it; and to be benefited in return when you benefit him by overseeing work and by helping him gather in his harvest, as well as by helping him guard his property."

"It would be hard, Socrates," he said, "for me to endure slavery."

"And yet those who preside in cities and attend to the public property are held not to be more slavish on this account but more

free."

"Generally, Socrates," he said, "I don't much permit myself to be liable to be called to account by anyone."

"And yet, Eutherus," he said, "it is not very easy to find work for which one could not be blamed. For it is hard to do anything in such a manner that one makes no error, and it is hard, even if one does something without error, to avoid meeting up with a senseless judge; indeed, even in the work you say you do now, I wonder if it is easy to come through without reproach.

"So you should try to flee those who are fond of blaming and pursue those with good judgment, and to endure doing the sort of business you are able to do, while guarding against doing those you are not able to, and—whatever you are doing—to attend to doing it as nobly and eagerly as possible. For, in this manner, I think you would least be blamed, find the most aid in your perplexity, and live most easily, with the least risk, and in a way most sufficient for your old age."

## Chapter 9

And I know that once he also heard from Crito that life was hard in Athens for a man who wished to mind his own business. "For, as it is," he said, "people bring me into the law courts, not because they have been done an injustice by me, but because they hold that I would find it more pleasant to pay money than to have trouble."

And Socrates said, "Tell me, Crito, do you sustain dogs so that they will keep the wolves away from your flocks?"

"Yes, indeed," he said. "For it profits me more to sustain them than not."

"Then wouldn't you sustain a man, too, who would want and be able to keep away from you those attempting to do you injustice?"

"I would do so with pleasure," he said, "if I did not fear that he might turn against me."

“But why don’t you see,” he said, “that it is far more pleasant to derive benefit by gratifying a man such as yourself than by making an enemy of you? Know well that there are men of this sort here who would very much love the honor of dealing with you as a friend.”

And after this, they found Archedemus, who was quite competent at speaking and taking action, but impoverished. For he was not the sort who would make a gain from all things, but he loved the good and said that it was very easy* to take from sycophants. So, whenever Crito collected food, oil, wine, wool, or any other farm product useful for one’s life, he took some aside and gave it to him. And whenever he performed sacrifices, he would invite him, and he attended to him in all matters of this sort.

And Archedemus, who held Crito’s household to be a resource for him, treated him with great respect. And immediately he found out many injustices and many enemies of one of the sycophants who were after Crito, and summoned him to a public trial, in which it had to be decided what he should suffer or pay back.

And this one, who was conscious of many wicked deeds, did everything to be rid of Archedemus. But Archedemus did not let him go until he let Crito alone and gave him wealth.

And after Archedemus accomplished this and other things of the sort, then—in the same way as when a shepherd has a good dog, and the other shepherds wish to stand their herds near him so that they can enjoy the benefit of his dog—many of Crito’s friends begged him to provide Archedemus as a guard for them, too.

Archedemus, for his part, was pleased to gratify Crito, and not only was Crito in peace but his friends were as well. And if one of those whom he had made his enemies reproached him that he flattered Crito because he was benefited by him, Archedemus said, “Which, then, is shameful—to receive benefactions from good human beings and to bestow them in return and thus to befriend this sort, while being at variance with the wicked; or rather to make enemies of the gentlemen (noble and good) by trying to do them injustice, while working together with the wicked and trying to befriend them and to deal with them instead of the gentlemen?” As a result of this, Archedemus was one of Crito’s friends and was honored by the other friends of Crito.

## Chapter 10

I know that he also had a conversation of the following sort with Diodorus, who was a comrade of his. “Tell me, Diodorus,” he said, “if one of your household servants runs away, do you attend to recovering him?”

“And, by Zeus, I call on others for help,” he said, “proclaiming a reward for his safe return.”

“What about if one of your household servants is sick,” he said, “do you attend to him and call on physicians to help, so that he doesn’t die?”

“Exceedingly so,” he said.

“And if one of your acquaintances who is far more useful than your household servants is at risk of perishing because of need,” he said, “don’t you think that it is worth your while to attend to his coming through safely?

“And yet you know indeed that Hermogenes is not lacking in judgment, and that he would be ashamed not to benefit you in return if he derived benefit from you. And I think it is worth the value of many household servants to have an attendant who is willing and of good intention, constant, competent to do what he is bid, and not only competent to do what he is bid but able to be useful of his own accord and to think and plan ahead.

“The good household managers, moreover, say that one should buy at the time when it is possible to buy for a little something worth a lot. In fact, because of the present state of affairs one can acquire good friends very cheaply.”

And Diodorus said, “You speak nobly indeed, Socrates. And bid Hermogenes to come to me.”

“By Zeus, not I,” he said, “Nor do I hold that it would be nobler for you to invite him than to go to him yourself; nor that it is a greater good for him that these things be done than for yourself.”

Thus indeed Diodorus went to Hermogenes. And without spending much he acquired a friend, who made it his work to examine what he might say or do to benefit and delight Diodorus.

## BOOK III

### Chapter 1

That he benefited those who yearned for noble things by making them attentive to what they yearned for—this is what I shall now describe. Once, when he heard that Dionysodorus had come to the city professing to teach how to be a general, he said to one of his companions whom he perceived wished to obtain this honor in the city:

"It is surely shameful, young fellow, for one who wishes to be general in the city to neglect learning how to be one, when it's possible for him to do so. Indeed he would be penalized far more justly by the city than someone who takes up the work of making statues when he has not learned how.

"For, since the whole city entrusts itself to the general in the risks of war, it is plausible that if he acts correctly great good things will come to pass, and if he acts incorrectly great bad things will come to pass. Wouldn't someone be justly penalized, then, if he neglected to learn how to be general, while being attentive to being elected one?" By saying such things he persuaded this one to go and learn.

But when he came back after learning, he poked fun at him by saying, "Men, just as Homer said that Agamemnon was majestic, doesn't this fellow too appear more majestic, in your opinion, since he has learned how to be a general? In fact, just as one who has learned how to play the cithara is a cithara player even if he is not playing, and one who has learned how to be a physician, even if he is not practicing, is nevertheless a physician, so too this fellow will continue as a general from this point on, even if no one elects him. But the one who does not understand is neither a general nor a doctor, not even if he has been elected by all human beings.

"But, you," he said, "tell us from what point he began in teaching you generalship, so that, in case even one of us should become a squadron commander or company leader, we would have an improved understanding of what pertains to war."

And he said, "He began from the very same point at which he also ended. For he taught me tactics and nothing else."

"And yet," Socrates said, "this is indeed only one of the many parts of generalship. For the general also should be fit to equip his army for war, fit to procure provisions for his soldiers, fit to contrive, fit to work, attentive, fit to endure, shrewd, both friendly and fierce, both straightforward and devious, both fit to guard and thievish, lavish, rapacious, fond of giving, greedy, cautious, ready to attack, and there are many other things both in his nature and in his understanding that the one who is going to be a good general must have.

"It is noble also to be a tactician. For a well-ordered army far surpasses a poorly ordered one, just as stones, bricks, wood, and clay are not useful when thrown down without being put in order; but when the things that don't rot or wear away, the stones and the clay, are put in order on the top and bottom, with the bricks and wood in the middle, as they are put together in building, then a possession worth a lot comes into being—a house."

"But," the youth said, "you have said something quite similar, Socrates. For in war, too, one must order the best troops in the front and rear, and the worst in the middle, so that they will be led by the ones and pushed by the others."

"Fine," he said, "if, that is, he taught you also how to distinguish the good from the bad. But if not, how does what you learned benefit you? For if he bade you to order the most noble silver (money) in the front and rear and the worst in the middle, without teaching you how to distinguish the noble from the counterfeit, it would not benefit you."

"But, by Zeus," he said, "he didn't teach this. So we would need to determine for ourselves who is good and bad."

"Why, then, don't we examine how we might avoid erring in these matters?" he said.

"That is my wish," said the youth.

"And so," he said, "if we had to seize some money, would we order correctly if we set those most in love with money in front?"

"In my opinion, at least."

"What about those who are going to be at risk? Shouldn't those most in love with honor be ordered in front?"

"These, at any rate," he said, "are the ones who want to take risks for the sake of praise. Nor indeed is it unclear who they are but, since they are highly visible everywhere, it would be easy to select them."

"But did he teach you tactics only," he said, "or also where' and how one should use each of these orderings?"

"Not much," he said.

"And yet many are the contingencies in which it is fitting neither to put in order nor to speak in the same manner."

"But, by Zeus," he said, "he did not make these things clear."

"By Zeus," he said, "then go back and question him again. For if he has this understanding and is not shameless, he will be ashamed after having taken your money to send you away in such a wanting state."

## Chapter 2

And once when he happened to meet someone who had been elected general, he said, "For what purpose do you think Homer addressed Agamemnon as 'shepherd of the people'? Isn't it because, just as shepherds should attend to it that the ewes will be safe and have their provisions and that the purpose for which they are sustained will be achieved, so also the general must attend to it that the soldiers will be safe and have their provisions and that the purpose for which they go on campaign will be achieved? And they go on campaign so that through overpowering their enemies they'll be happier.

“Or why ever did he praise Agamemnon by speaking in this way: ‘He is both, a good king and a strong spearman’? Isn’t it that he would be a strong spearman, not if he contended well alone against the enemy, but if he were responsible for this for the whole army as well; and a good king, not if he presided nobly over his own life alone, but if he were also responsible for the happiness of those over whom he was king?

“For indeed the king is elected not in order to attend to himself nobly, but so that those also who elected him will do well because of him. And all go on campaign in order to have the best possible life, and for this purpose they elect generals, so that they will be their leaders for this.

“So the one who is general should furnish this to those who elected him general. In fact it’s not easy to find anything else more noble than this, or more shameful than its opposite.” And by examining in this way what the virtue of a good leader is, he stripped away the rest but left the making of whomever he leads happy.

## Chapter 3

I know that he also conversed once in the following way with someone who had been elected to command the cavalry.

“Young fellow,” he said, “would you be able to tell us why you desired to be cavalry commander? Surely it was not for the sake of riding first among the horsemen. In fact it is the mounted cavalry’s bowmen who are thought to deserve this position. At any rate, they ride in front even of the cavalry commanders.”

“You speak truly,” he said.

“Moreover, it was not for the sake of being recognized either, since madmen too are recognized by all.”

“You speak the truth also about this,” he said.

“Was it rather because you think that you would hand the cavalry back to the city having made it better, and if some need for the cavalry should arise you think that in leading them you would be the cause of some good for the city?”

“Yes, indeed,” he said.

“It is indeed noble, by Zeus,” Socrates said, “if you are able to do these things. The rule to which you have been elected is, I suppose, over both horses and riders?”

“It certainly is,” he said.

“Come then, tell us this first, how you intend to make the horses better.”

And he said, “But I don’t think this is my work. Each, rather, must attend privately to his own horse.”

“How, then, will the cavalry be of any benefit to you,” said Socrates, “if some provide you with horses that have such bad feet or bad legs or are so weak or so ill sustained that they cannot follow, and others with horses so ill trained that they won’t stay where you order them, or who kick so much that it is not possible even to put them in order? How will you be able to do the city any good in leading such horses?”

And he said, “You speak nobly, and I shall try to attend to the horses as far as I am able.”

“What about the horsemen?” he said. “Won’t you attempt to make them better?”

“Indeed I will,” he said.

“Will you first, then, make them more skilled at mounting their horses?”

“One certainly must,” he said, “for in fact should one of them fall off, he would thus more likely be saved.”

“What about if they should have to run some risks somewhere? Will you bid them draw the enemy onto the sand, which is where you are accustomed to ride horses, or will you try to conduct your practices on the sorts of terrain where the wars will take place?”

“That certainly would be better,” he said.

“What about this? Will you pay any attention to their hitting as many as possible from their horses?”

“This too certainly would be better,” he said.

“Did you intend also to sharpen the souls of your horsemen and arouse their anger against the enemy, things that make them more stouthearted?”

“If not, at least now I shall try,” he said.

“Have you worried at all about how to get your horsemen to obey you? For without this neither horses nor good and stouthearted horsemen are any benefit.”

“You speak truly,” he said. “But how would someone most turn them in this direction, Socrates?”

“This you surely know—that in every matter human beings most want to obey those they believe to be best. In fact, when sick they obey most whomever they believe to be most skilled as a physician, and on a ship those who sail obey most whomever they believe most skilled as a pilot, and in farming they obey most whomever they believe to be most skilled in farming.”

“Yes, indeed,” he said.

“It is plausible, then, also in horsemanship,” he said, “that the rest will most want to obey whoever most visibly knows what should be done.”

“So, Socrates,” he said, “if I am clearly the best among them, will this be enough for them to obey me?”

“If, at any rate, in addition to this,” he said, “you teach them that obeying you is both more noble and more conducive to their safety.”

“And how will I teach this?” he said.

“Far more easily, by Zeus,” he said, “than if you had to teach them that bad things are better and more profitable than good things.”

“Are you saying,” he said, “that, in addition to the rest, the cavalry commander must also attend to being able to speak?”

“Did you think,” he said, “that you ought to command the cavalry by silence? Or haven’t you pondered the fact that it is through speech that we learned all the things that we have learned are most noble according to law, things by means of which we understand how to live; and that if someone learns any other noble thing, he learns it through speech; and that those best at teaching use speech the most; and that those who have the most understanding of the most serious things converse most nobly?

"Or haven't you pondered the following fact, that whenever a single chorus comes from this city, like the one that is sent to Delos, not one from anywhere else is a match for it, nor is there an abundance of good men, similar to that here, gathered in any other city?"

"You speak truly," he said.

"And yet, the Athenians do not surpass others in goodness of voice,, nor in size and strength of body, as much as they surpass them in love of honor, the thing that especially spurs one toward what is noble and honored."

"This also is true," he said.

"Do you think, accordingly," he said, "that if someone should attend also to the cavalry here, that it too would far surpass the others—in equipage of other arms and horses, in orderliness, and in readiness to take risks against the enemy—if the horsemen held that in doing these things they would obtain praise and honor?"

"It is plausible, at least," he said.

"Then, don't hesitate," he said, "but try to turn your men toward the things from which both you yourself, and the other citizens through you, will benefit."

"But, by Zeus, I shall try," he said.

## Chapter 4

Once when he saw Nicomachides departing from the elections for offices, he asked, "Who were the generals elected, Nicomachides?"

And he said, "Why Socrates, aren't the Athenians just the sort not to elect me, although I am quite worn out from going on campaign from the service list as well as from serving as company leader and squadron commander, and have so many wounds from the enemy?"—and as he said this he undressed and displayed to him his scars from the wounds—"but instead they elected Antisthenes," he said, "who has never gone on campaign as a hoplite nor done anything admirable among the horsemen, and who understands nothing other than how to gather wealth."

"Well, isn't this a good thing," Socrates said, "if, that is, he is to be competent to procure provisions for the soldiers?"

"Merchants too are competent to gather wealth," Nicomachides said, "but they wouldn't, on this account, have the capacity to be generals as well."

And Socrates said, "But Antisthenes is also a lover of victory, which is a suitable attribute for a general. Don't you see that, as often as he has sponsored choruses, he has won the victory with all of them?"

"By Zeus," said Nicomachides, "there is no similarity between presiding over a chorus and an army."

“And yet,” said Socrates, “although Antisthenes is experienced in the teaching of neither song nor dance, he was nevertheless competent to find those who are best at these things.”

“In the army, too, then,” said Nicomachides, “will he find some who will put it in order instead of him, and others who will fight?”

“If, at any rate,” Socrates said, “in the contests of war, too, he discovers and selects those who are best, as he did in the choral contests, it is plausible that he will bear away the victory in this field as well. And in all likelihood he would want to spend wealth more on victory in contests of war—a victory shared with the whole city—than on a victory in choral contests shared with his tribe.”

“Are you saying, Socrates,” he said, “that it belongs to the same man nobly to sponsor a chorus and to be a general?”

“What I, for my part, am saying,” he said, “is that, whatever someone presides over, if he knows what is needed and is able to procure it, he will be a good presiding officer, whether it is a chorus or a household or a city or an army that he presides over.”

And Nicomachides said, “By Zeus, Socrates, I never thought that I would hear you say that good household managers would be good generals.”

“Come then,” he said, “let’s review the tasks of each of them so that we may know whether they are the same or differ in some respect.”

“By all means,” he said.

“Is it, then,” he said, “the task of both to prepare the ruled to pay heed to them and to obey?”

“Yes, indeed,” he said.

“What about ordering those who are serviceable for doing each thing to do it?”

“This too,” he said.

“Moreover, I think it is fitting for both to punish the bad and to honor the good.”

“Certainly,” he said.

“And as for making their subordinates well disposed—how could this not be noble for both?”

“I think that this too is fitting,” he said.

“And, in your opinion, is it or is it not advantageous to both to bring over to their side allies and those who would give aid?”

“Certainly,” he said.

“But is it not fitting for both to be fit to guard their property?”

“Exceedingly,” he said.

“And so, is it fitting that both be attentive and fond of labor regarding their own tasks?”

“All these things belong similarly to both,” he said, “but fighting is no longer a thing belonging to both.”

“But enemies, at any rate, arise for both?”

"This much is indeed the case," he said.

"Then is it advantageous for both to prevail over them?"

"By all means," he said, "but what you are disregarding is this: if one should have to fight, what benefit would there be from the art of household management?"

"There, no doubt, the benefit would be in fact greatest," he said, "for the good household manager—who knows that nothing is so profitable and gainful as being victorious in fighting the enemy, nor so unprofitable and costly as being defeated—will eagerly seek out and furnish what is advantageous for victory, and attentively examine and guard against what brings defeat; and if he sees that his preparation is such as to bring victory he will fight energetically, and, what is not the least of these things, if he is unprepared he will guard against joining battle.

"Nicomachides," he said, "do not hold in contempt men who are skilled at household management. For attending to private affairs differs only in terms of multitude from attending to public ones. Among other very great similarities the greatest one is that neither takes place without human beings, nor is action taken in private affairs through some human beings, in public affairs through others. For those who attend to public affairs don't deal with any other human beings than those whom they deal with in private affairs when managing their households. And those who understand how to deal with these human beings do well both in private and in public affairs; and those who don't understand strike false notes in both."

## Chapter 5

Once, in a conversation with Pericles, the son of the great Pericles, he said, "I, for my part, have hope, Pericles, that with you as general the city will both be better in matters of war and have a better reputation regarding them, and that it will overpower its enemies."

And Pericles said, "I would wish for what you speak of, Socrates. But I am unable to discern how these things might come about."

"Do you wish, then," said Socrates, "that by calculating about them we examine what is possible at present?"

"I do wish it," he said.

"You know, then," he said, "that the Athenians are no worse off in number than the Boeotians?"

"I do know it," he said.

"And do you think that one could select more good and noble bodies from Boeotia than from Athens?"

"In my opinion, they do not fall short in this way either."

"And whom do you hold to be better disposed toward themselves?"

"I, for my part, think the Athenians are. For many of the Boeotians, having been subjected to the Thebans' greed, are ill disposed toward them, but I see nothing of this sort in Athens."

“Moreover, they are surely the most honor-loving as well as the most affectionate* of all—these being not the least of the qualities that spur one to take risks on behalf of both good reputation and fatherland.”

“The Athenians are not blameworthy in these things either.”

“And, as for noble deeds of ancestors—something by which many are exalted and turned toward attending to virtue and becoming stouthearted—no one has more of these or greater ones than Athenians do.”

“What you are saying is all true, Socrates. But you see that ever since the misfortune that befell the thousand with Tolmides in Lebedeia, and that with Hippocrates at Delium, the Athenians’ opinion regarding the Boeotians has been humbled on this account, and the high spirit of the Thebans regarding the Athenians has been exalted. As a result, the Boeotians, who before did not dare to range themselves against the Athenians even in their own land without the Lacedaimonians and the other Peloponnesians, now threaten on their own to invade Attica; and the Athenians, who before ravaged Boeotia, when the Boeotians were alone, now fear that the Boeotians will lay waste to Attica.”

And Socrates said, “I perceive that this is the case, but in my opinion the disposition of the city is now more acceptable to a good man who rules it. For confidence implants neglect, easygoingness, and disobedience, while fear makes people more attentive, more obedient, and more orderly.

“And I would make this judgment also on the basis of those who are on ships. For when they fear nothing, they are surely full of disorder. But whenever they are in terror of a storm or enemies, they not only do everything they are bid to do but even keep silent, watching anxiously for further instructions just like members of a chorus.”

“But,” said Pericles, “if indeed they would now most obey, now would be the time to say how we might turn them toward passionately loving again their ancient virtue, fame, and happiness.”

“And so, if we wished them,” said Socrates, “to lay claim to wealth that others had, we would show them that it is their patrimony and belongs to them, and it is in this way especially that we would set them on the path to claiming it; but since it is holding first place together with virtue that we wish them to attend to, we must show them that this, in turn, has from long ago belonged most to them, and that by attending to this they would be best of all.”

“How, then, would we teach this?”

“I think if we would remind them that they have heard that the most ancient ancestors of theirs of whom we hear were most excellent.”

“Are you speaking of the decision about the gods that those around Cecrops made on account of virtue?”

“I am speaking of that and of the rearing and birth of Erechtheus and of the war that came in his time against those from the whole bordering mainland and of the one in the time of the Heracleides against those in the Peloponnese and of all those fought in the time of Theseus, in all of which they were clearly the most excellent of the human beings of their time.

“And, if you wish, what their descendants did later, those who were born not much before us, on the one hand, contesting on their own against the lords of all Asia and Europe up to Macedonia, they acquired power and resources in amounts surpassing what their ancestors had, and accomplished the greatest deeds; and on the other, together with the Peloponnesians, they excelled both on land and on sea. Surely they are in fact said to have far surpassed human beings of their time.”

“They are indeed,” he said.

“So, accordingly, when many in Greece were migrating elsewhere, they stayed where they were in their own land; and many who were engaged in disputes about justice put themselves in their hands; and many who were treated insolently by those who were stronger than they were took refuge with them.”

And Pericles said, “Indeed I wonder, Socrates, how the city ever took a turn for the worse.”

“I, for my part, think,” said Socrates, “that, just as some others, who have become easygoing due to their great preeminence and mightiness, fall behind their adversaries, so the Athenians too neglected themselves when they had great preeminence and due to this became worse.”

“What, then,” he said, “could they do at present to recover their ancient virtue?”

And Socrates said, “It is nothing secret in my opinion, but if they would find out the pursuits of their ancestors and pursue them no worse than they did, they would become no worse than they were; alternatively, by at least imitating those who now have first place, and engaging in the same pursuits as they, if they use the same things similarly, they would be no worse than they are; and if they use them more attentively, they’ll be even better.”

“You are saying,” he said, “that gentlemanliness (nobility and goodness) is somewhere far away from the city. For when will the Athenians, who now have contempt for the old beginning with their fathers, revere their elders in the way the Lacedaimonians do? Or when will they, who not only themselves neglect good condition but even ridicule those who attend to it, train their bodies in the same way?

“When will they® obey their rulers, who even exult in their contempt for their rulers? And when will they have the same likeness of mind, who instead of working together to one another’s advantage threaten one another abusively and envy one another more than the other human beings; while they disagree most of all in private and public gatherings and prosecute the most cases against one another and choose to gain at one another’s expense in this way rather than jointly benefiting one another; and while, using the common property as if it were foreign, they fight in turn over this and take most delight in their abilities in such matters.

“From these things, much mischief’ and much badness are putting down roots in the city, and much enmity and hatred of one another are arising among the citizens, due to which, I am, for my part, always very afraid lest something bad befall the city that is too great for it to be able to bear."

"Don't at all believe, Pericles," Socrates said, "that the wickedness with which the Athenians are sick is so incurable. Don't you see that they are orderly in naval matters, that they obey those in charge in athletic contests in an orderly manner, and that in choruses their subordination to their teachers is inferior to none?"

"This," he said, "is in fact a wonder: that those sorts obey the rule of the ones in charge, while the hoplites and horsemen, who, as opinion has it, are distinguished among the citizens by their gentlemanliness (nobility and goodness), are the most disobedient of all."

And Socrates said, "But isn't the Council of the Areopagus, Pericles, established from among those who have been approved after scrutiny?"

"Yes, indeed," he said.

"Then, do you know any," he said, "who act more nobly, more lawfully, more augustly, or more justly in their judgment of cases and in all other respects?"

"I cast no blame on these," he said.

"You must not, then, be dispirited on the grounds that the Athenians are not orderly," he said.

"And yet," he said, "in what concerns the soldiers—where there is most need to be moderate, orderly, and obedient to rulers—they pay attention to none of this."

"For perhaps," said Socrates, "those who have the least understanding in these matters rule them. Don't you see that no one who lacks understanding attempts to rule cithara players, members of a chorus, and dancers, nor even wrestlers or pancratists, but all who rule over these are able to show where they learned the things they are in charge of. Most of the generals, on the other hand, make things up themselves as they go along.

"However, I, for my part, do not hold you, at least, to be of this sort, but I think that you are no less able to say when you began to learn how to be general than when you began to learn how to wrestle. Indeed I think that you have inherited and preserve many things from your father's store of generalship,-' and that you have collected many things from wherever it was possible to learn something beneficial for generalship.

"I think that you have given to this much anxious thought to avoid being ignorant, unawares, of anything beneficial for generalship, and that if you perceive that you do not know something of this sort, you seek out those who understand these things, sparing neither gifts nor favors in order that you might learn from them what you do not understand and have good helpers in your work."

And Pericles said, "I am not unaware, Socrates, that you say this not because you think that I attend to these things, but because you are attempting to teach me that one who is going to be a general must attend to all of them. Of course, I too agree with you about this."

"Have you observed this, Pericles," he said, "that large mountains lie before our land and reach down to Boeotia, through which there are narrow and steep paths into our land, and that the middle of our land is girded by mountain strongholds?"

"Yes, indeed," he said.

"What about this? Have you heard that the Mysians and Pisidians, because they possess extreme strongholds in the King's land, are able to run down and do great damage to the King's land and to live freely themselves, though they are lightly armed?"

"I have heard this too," he said.

"Don't you think," he said, "that Athenians of nimble age, who were armed with lighter weapons and held the mountains that lie before our land, would be harmful to the enemy and furnish the citizens with a great bulwark for the land?"

And Pericles said, "I think, Socrates, that all these things too are useful."

'Then, if these things please you," said Socrates, "attempt them, excellent fellow. For whichever of them you may accomplish, it will be both noble for you and good for the city. While, if you are unable to accomplish some one of them, you will neither harm the city nor shame yourself."

## Chapter 6

When Glaucon, the son of Ariston, attempted to make a public address out of a desire to preside over the city although he was not yet twenty years old, none of his other relatives or friends was able to stop him from being dragged from the speaker's stand and making himself ridiculous. But Socrates, who was well intentioned toward him for the sake of Charmides, the son of Glaucon, and for the sake of Plato, stopped him all by himself.

For, when he happened to meet him, he first detained him by saying the following sorts of things to make him want to listen. "Glaucon," he said, "do you intend to preside over our city?"

"I do, Socrates," he said.

"By Zeus," he said, "if indeed anything else among human beings is noble, this is. For it is clear that, should you accomplish this, you will be able to obtain for yourself whatever you desire and be competent to benefit your friends; you will raise up your paternal household; you will enlarge your fatherland; you will be famous, first in the city, then in Greece, and perhaps, like Themistocles, even among the barbarians. And wherever you are, you will be gazed at from all sides."

When he heard these things Glaucon was exalted and remained with pleasure. After that, Socrates said, "This, then, is clear, Glaucon, that if you wish to be honored the city must be benefited by you?"

"Certainly," he said.

"By the gods," he said, "don't keep it a secret, then, but tell us where you will begin to do good deeds for the city."

When Glaucon remained silent, as though examining just then where he would begin, Socrates said, “Just as you would attempt to make a friend richer if you wished to enlarge his household, will you also try to make the city richer?”

“Certainly,” he said.

“Would it be richer, then, if its revenues increased?”

“It’s plausible, at any rate,” he said.

“Tell, then, the sources and amounts of the city’s revenues at present,” he said. “For it is clear that you have examined this so that if any of them are in a deficient state you may bring them to full capacity, and if some are being passed over you may provide them in addition.”

“But, by Zeus,” said Glaucon, “these things I have not examined.”

“But if you have passed over this,” he said, “at least tell us about the city’s expenditures. For it is clear that you also intend to remove those that are superfluous.”

“But, by Zeus,” he said, “I have not yet had leisure for these either.”

“Shall we then,” he said, “postpone making the city richer? For how is it possible, at least for one who doesn’t know its expenditures and the revenues, to attend to these things?”

“But Socrates,” said Glaucon, “it is possible to make the city rich from enemies.”

“Exceedingly, by Zeus,” said Socrates, “if one is stronger than they; but if one is weaker, one would lose in addition even one’s own things.”

“You speak truly,” he said.

“And so,” he said, “the one at least who is going to deliberate regarding whom one should wage war against must know the power both of his city and of its adversaries, so that if that of his city is stronger he may advise it to attempt the war, but if it is weaker than that of the adversaries he may persuade it to be cautious.”

“You speak correctly,” he said.

“To begin with, then,” he said, “tell us the land and sea power of our city, next, that of its adversaries.”

“But, by Zeus,” he said, “I would not be able to tell you like this off the top of my head.”

“But if you have written it down, bring it forth,” he said, “for it would be very pleasant for me to hear this.”

“But, by Zeus,” he said, “I have not yet written it down either.”

“Shall we then,” he said, “hold off giving advice also regarding war, just now, at least? For, perhaps, due to the magnitude of these matters, and since you are just now beginning your presiding, you have not yet reviewed them. But I know that you have already attended at least to the guarding of the land, and that you know how many guard posts are vital and how many not, and how many guards are sufficient and how many not; and you will advise that the vital guard posts be enlarged, and the superfluous ones removed."

"By Zeus," said Glaucon, "or my part, would remove all of them, because they guard in such a way that what comes from the land is stolen."

"If one were to remove the guard posts," he said, "don't you think that license to rob will be given also to anyone who wishes? But," he said, "have you reviewed this matter by going yourself, or how do you know that they guard badly?"

"I conjecture it," he said.

"Shall we then," he said, "give advice about these matters, too, when we no longer conjecture but already know?"

"Perhaps," said Glaucon, "that would be better."

"I know that you have not got to the silver mines," he said, "so as to be able to say why less revenue proceeds from there now than in the past."

"No, I certainly haven't gone," he said.

"Indeed, by Zeus," Socrates said, "the place is said to be oppressive, so that this will be excuse enough for you whenever you may have to give advice about it."

"I am being made fun of," said Glaucon.

"But this, at least," he said, "I know that you have not neglected, but you have examined for what length of time the food that comes from the land is capable of continually sustaining the city, and how much in addition is needed annually, so that the city may never come to be in need of this with you unawares, but, knowing it, you would be able to come to the city's aid and save it by advising it about its necessities."

"You speak of a huge task," said Glaucon, "if one will have to attend to these sorts of things as well."

"But, indeed," said Socrates, "one would never manage even his own household nobly, unless he knows all its needs and attends to filling them all. But since the city is composed of more than ten thousand households, and it is hard to attend to so many households at the same time, how is it that you haven't first tried to enlarge one, that belonging to your uncle? It needs it. And if you should be able to do this, you will also attempt a larger number. But if you are unable to benefit one, how would you be able to benefit many? Just as if someone were not able to carry one talent, how would it not be visible that he shouldn't even attempt to carry a larger number?"

"But, I for my part, would benefit my uncle's household," said Glaucon, "if he should want to obey me."

"Then," said Socrates, "although you are not able to persuade your uncle, you hold that you would be able to make all the Athenians along with your uncle obey you?"

"Be on your guard, Glaucon," he said, "lest out of a desire to have a good reputation* you come into the opposite. Or don't you see how perilous it is for someone to say or do what he doesn't know? Ponder whether, in the case of others whom you know to be of the sort visibly to say and do what they don't know, they obtained praise rather than blame for such things, in your opinion, or were admired rather than held in contempt?

"And ponder as well the case of those who know both what they say and what they do. And, as I hold, you will find in every work that those who have good reputations and are admired come from those who have the most understanding, while those who have bad reputations and are held in contempt come from the most ignorant.

"So, if you desire to have a good reputation and to be admired in the city, try to achieve, to the greatest extent, knowledge of what you wish to do. For if, after surpassing the others in this, you should attempt to engage in the city's affairs, I would not wonder if you should very easily obtain what you desire."

## Chapter 7

When he saw that Charmides, the son of Glaucon, was a man worthy of note and far more able than those engaged in political affairs at that time, but was hesitant to approach the demos and to attend to the city's affairs, he said, "Tell me, Charmides, if someone should not want to compete in the contests whose prizes are garlands—although he is competent to win the victory in them and, on account of that, be honored himself and enhance the reputation of his fatherland in Greece—what sort would you hold this man to be?"

"That is clear," he said, "soft and cowardly."

"And if someone," he said, "who is able, by attending to the city's affairs, to enlarge his city and on account of that to gain honor for himself, should hesitate to do this, wouldn't he plausibly be held a coward?"

"Perhaps," he said. "But with regard to what are you asking me these questions?"

"The fact," he said, "that I think you hesitate to attend to them, though you are able and they are matters in which it is necessary for you to participate, since you are a citizen."

"In what sort of work have you observed this ability of mine so as to form these judgments about me?" said Charmides.

"In your associations in which you keep company with those who engage in the city's affairs," he said. "For in fact whenever they consult with you on some matter I see you advising them nobly and, whenever they err in something, censuring them correctly."

"It is not the same thing, Socrates," he said, "to converse in private and to compete among the multitude."

"And yet," he said, "he who is able to count, counts no worse among the multitude than when he is alone; and those who play the cithara best when they are alone prevail also among the multitude."

"But don't you see that awe and fear," he said, "have natural roots in human beings and that they come to one far more in crowds than in private company?"

“In fact I have set out to teach you,” he said, “that you, who feel no awe of those who are most prudent and no fear of those who are strongest, are ashamed to speak among those who are both the most senseless and the weakest.

“Is it the fullers among them or the shoemakers or the carpenters or the smiths or the farmers or the merchants or those who barter in the agora and worry about what they can buy for less and sell for more whom you feel shame before? For it is from all of these that the assembly is composed.

“In what, do you think, is what you are doing different from fearing the amateurs even though one prevails over those who are in training? For, although you easily converse with those who have first place in the city (some of whom have contempt for you), and although you far surpass those who attend to conversing with the city, you hesitate to speak among those who have never yet worried about political affairs and who do not have contempt for you, because you are afraid of being ridiculed.”

“What about this?” he said. “Don’t those in the assembly frequently, in your opinion, ridicule those who speak correctly?”

“In fact so do the former,” he said. “Therefore I also wonder if you, who handle those with ease whenever they do this, think that you will be able to find no way to approach the latter.

“Do not be ignorant of yourself, good fellow, and don’t err the way most do: for the many, having set out to examine the affairs of the others, do not turn to taking themselves under review. So don’t be easygoing about this, but rather exert yourself to pay attention to yourself. And don’t neglect the city’s affairs, if due to you they can be in a somewhat better state. For when these things are going well, not only the other citizens but also your friends and, not least, you yourself will benefit.

## Chapter 8

Aristippus attempted to refute Socrates, just as he himself had been refuted by him earlier. Wishing to benefit his companions, Socrates answered him, not as those who are on their guard lest their speech somehow become entangled, but as one who has been persuaded that he would thus most be doing what he should.

For he asked him whether he knew anything good, so that if he should say one of the things such as food, drink, wealth, health, strength, or daring, [Aristippus] would then show that the thing mentioned was sometimes bad. But [Socrates], who knew that if something annoys us we are in need of what will stop it, answered after the manner in which it is best also to act.

“Are you,” he said, “asking me if I know something good for fever?”

“No, I am not, for my part,” he said.

“Rather for ophthalmia?”

“Not that either.”

“Rather for hunger?”

"Nor for hunger."

"And yet," he said, "if you are asking me at any rate if I know something that is good for nothing, I neither know it," he said, "nor need it."

And, again, when Aristippus asked him whether he knew anything noble, he said, "Indeed many things."

"So," he said, "are they all like one another?"

"Some are certainly as unlike as possible," he said.

"Then how," he said, "could what is unlike the noble be noble?"

"Because, by Zeus," he said, "a human being noble at wrestling is unlike another who is noble at running. And a shield noble for defense is as unlike as can be to a javelin noble for being violently and swiftly borne."

"You are answering me no differently," he said, "than when I asked you if you knew something good."

"Do you think," he said, "that one thing is good and another noble? Don't you know that all things are noble and good for the same things? For, first, virtue is not something good for some things and noble for other things; next, human beings are said to be noble and good in the same respect as well as for the same things; the bodies of human beings, too, appear noble and good for the same things; and all other things that human beings use are held to be noble and good for the same things—whatever they are useful for."

'Then," he said, "is even a dung-carrying basket noble?"

"By Zeus," he said, "and a gold shield is shameful (ugly), if for their own work one should be nobly made, and the other badly."

"Are you saying," he said, "that the same things are both noble and shameful?"

"And, by Zeus, I, for my part, am saying," he said, "that they are both good and bad. For frequently what is good for hunger is bad for fever, and what is good for fever is bad for hunger. Frequently what is noble for running is shameful for wrestling, and what is noble for wrestling is shameful for running. For all things are good and noble for the things for which they are well suited, and bad and shameful for the things for which they are ill suited."

And when he said that the same houses are both noble and useful, he was educating, at least in my opinion, as to the sort that should be built. He examined it in the following way: "Ought one who is going to have the sort of house he should, contrive that it will be both most pleasant to live in and most useful?"

And this being agreed to:

"Is it pleasant, then, to have one cool in summer and warm in winter?"

When they would assent to this too:

"Accordingly, in houses looking toward the south, does the sun shine into the inner rooms in winter, while in the summer when it travels over us and the roofs, it provides shade? If then it is noble that these things come to be thus, one should build a house higher on the southern side, so that the winter sun won't be shut out, and closer to the ground on the northern side, so that the cold winds won't burst in.

"In sum, the most pleasant and most noble dwelling would plausibly be the one where one would have in every season the most pleasant refuge and where one would make one's belongings most secure. Paintings and embroideries deprive one of more delights than they provide." Moreover the most becoming place for temples and altars he said to be that which, while being most visible, would be most untrodden; for it is pleasant for those who see it to offer prayers, and it is pleasant for those who are undefiled to approach it.

## Chapter 9

Again when he was asked whether courage is a thing that is taught or natural, he said, "I think that, just as one body is born stronger than another with regard to its labors, so one soul comes to be by nature more vigorous than another with regard to what is terrible. For I see that those reared in the same laws and customs differ greatly from one another in daring.

"I hold, however, that every nature will be augmented with regard to courage by learning and by practice. For it is clear that Scythians and Thracians would not dare to take up shields and swords to fight against Lacedaimonians. And it is visible that Lacedaimonians would want to compete neither against Thracians with light shields and javelins nor against Scythians with bows.

"I, for my part, also see that, similarly in all other things, human beings both differ from one another by nature and improve greatly by attentiveness. From this it is clear that everyone—those who are naturally better as well as those whose natures are duller-should both learn and practice those things at which they wish to become worthy of note."

And he did not distinguish between wisdom and moderation but decided that one is both wise and moderate who knows and uses the noble and good things and knows and avoids the shameful ones. And when he was asked in addition whether he held those to be wise and continent who understand what they should do, but do the opposite, he said, "No more than unwise and incontinent;) for I think that all, choosing from among the possibilities the things they think are most to their advantage, do those things; I hold, then, that those who do not act correctly are neither wise nor moderate."

And he said that justice as well as every other virtue is wisdom. For the just things and all the things that are done through virtue are noble and good. And those who know these things would not choose anything else instead of them, nor would those who understand them not be able to do them, but err even if they should try. Thus also as regards what is noble and good, the wise do them and those who are not wise are not able to, but even if they try, they err. Since, then, it is through virtue that the just things and all other noble and good things are done, it is clear that justice as well as every other virtue is wisdom.

He said, moreover, that madness is the opposite of wisdom; however, he did not hold that lack of understanding is madness. He reasoned that to be ignorant of oneself and—with regard to the things one doesn't know—to opine and think that one in fact knows them is nearest to madness. He said that the many, however, assert that those who are mistaken in matters that most fail to know are not mad, while they call mad those who are mistaken in matters the many know.

For if someone thinks that he is so tall that he bends forward when he goes through he gates of the city wall, or so strong that he attempts to lift up houses, or applies himself to another of the things that are clear to everyone that they are impossible, they assert that this person is mad. But those who make a small mistake are not mad in the opinion of the many, but, just as they call strong desire erotic passion, so they also call great derangement of mind madness.

And when he examined envy, whatever it is, he discovered that it is a certain pain, not indeed that which comes at misfortunes of friends nor that at good fortunes of enemies, but he said only those who are distressed by their friends' doing well feel envy. When some wondered if someone who loved another could be pained by his doing well, he reminded them that many are so disposed to some people that when those people are doing badly they are unable to look the other way but aid them in their misfortune, while they are pained at those people's good fortune. This, however, would not happen to a sensible man, but those who are foolish always experience this passion.

And when he examined leisure, what it is, he said that he discovered that most people are doing something; for even players at checkers and buffoons do something. And he said that these all have leisure, for it is in their power to go to do the things that are better than these. No one, however, has leisure to go from the better things to the worse; and if someone should go, he said lack of leisure afflicts the one who does this, so that he does badly.

He said that kings and rulers are not those who hold the scepters, nor those elected by just anybody, nor those who obtain office by lot, nor those who have used violence, nor those who have used deceit, but those who understand how to rule.

For whenever someone would agree that it belongs to the ruler to command what should be done, and to the ruled to obey, he pointed out that on a ship the one who understands, rules, while the ship-owner together with all others on the ship obey the one who understands; and in farming those who possess fields and in sickness those who are sick and in body training those who are training their bodies and all others to whom there belongs something needing attention, if they themselves believe that they understand how to attend to it, [they do so]; but if not, they not only obey those who understand when they are present but even send for them when they are absent, so that by obeying them they may do what they should. And he pointed out that in the spinning of wool even the women rule the men due to the fact that they know how one should work wool, while the men do not know.

And if someone should say in response to these things that it is possible for the tyrant not to obey those who speak correctly, he said, "How indeed would it be possible for him not to obey, since a penalty is laid down if someone does not obey the one who speaks well? For in whatever matter someone does not obey the one who speaks well, he will no doubt err, and in erring be penalized.”

And if someone should say that it is possible for the tyrant even to kill the one who thinks well, he said, “But do you think that the one who has killed the best of his allies is free from penalty, or that he suffers some chance penalty? For do you think that the one who does this would be preserved, or rather that he would in this way quickly perish?”

When someone asked him what, in his opinion, is the best pursuit for a man, he answered that it is doing well. And when he asked again if he held that good fortune too is a pursuit, he said, “For my part, I believe that fortune and action are complete opposites. For I think it is good fortune for someone who is not seeking it to chance upon something that he needs, but I hold that it is doing well for someone who has learned and practiced something to do it well, and those who pursue this are, in my opinion, doing well.”

And he said that the best and the dearest to the gods are, in farming, those who do well in farming affairs and, in medicine, those who do well in medical affairs and, in political life, those who do well in political affairs. And he said that the one who does well in nothing is neither useful nor dear to the gods.

## Chapter 10

Furthermore, if he ever conversed with any of those who possessed arts and used them for their trade, he was beneficial to these also. For, once when he visited Parrasius the painter and conversed with him, he said, “Parrasius, does the art of painting consist in making likenesses of what is seen? At any rate, you closely imitate bent, stately, dark, light, hard, soft, rough, smooth, young, and old bodies by making likenesses through colors.”

“You speak truly,” he said.

“Moreover, in making as likenesses the beautiful forms, you bring together from many what is most beautiful in each, and in this way you make whole bodies appear beautiful, since it is not easy to chance upon a single human being all of whose parts are blameless.”

“We do this indeed,” he said.

“What about this?” he said. “Do you imitate a most persuasive, pleasing, loving, longed-for, and passionately beloved thing, the soul’s character? Or is this not a thing that can be imitated?”

“How could a thing be imitated, Socrates, which has neither proportion nor color nor any of the things you just now mentioned—and which is altogether unseen?” he said.

“Doesn’t it come to pass, then,” he said, “that a human being looks toward some in a friendly or hostile manner?”

“In my opinion, at least,” he said.

“And so, can this much, at least, be imitated in the eyes?”

"Yes, indeed," he said.

"And, do those who are worried and those who are not, have, in your opinion, similar facial expressions on the occasion of the good things and on that of the bad things that befall their friends?"

"By Zeus, surely not," he said. "For at the good things they are bright, and at the bad ones they are downcast."

"And so," he said, "is it possible to make likenesses of these things too?"

"Yes, indeed," he said.

"Furthermore, the character that is magnificent and liberal or humble and illiberal, that is moderate and sensible or insolent and inexperienced in the beautiful, shines through the facial expression as well as the postures of human beings—whether they are standing still or in motion."

"You speak truly," he said.

"And so, these things, too, can be imitated?"

"Yes, indeed," he said.

"Which likenesses then," he said, "do you hold to be more pleasant for human beings to see: those through which the noble and good and cherished characters are visible, or those through which the shameful and wicked and hateful characters are visible?"

"There is a great difference, by Zeus, Socrates," he said.

When he visited the sculptor Cleiton once and conversed with him, he said, "That the runners, wrestlers, boxers, and pancratists that you make, Cleiton, are beautiful I both see and know. But how do you work into your statues what especially draws the souls of human beings through their sense of sight, namely, the appearance of being alive?"

And when Cleiton, perplexed, did not answer quickly, he said, "Is it by likening what you make to the forms of living beings that you make your statues appear more lifelike?"

"Yes, indeed," he said.

"Do you, accordingly, by making likenesses of what in bodies is pulled up and down by the postures, and what is squeezed together, pulled apart, stretched tight, and relaxed, make them appear more similar to true bodies and more persuasive?"

"Certainly," he said.

"And doesn't the imitation also of the passions" of bodies that are doing something cause a certain joy in those who behold it?"

"It's plausible, at any rate," he said.

"Should one, then, make likenesses also of the threatening eyes of those who are fighting, and imitate the look of those delighting in the victory they have won?"

"Exceedingly so," he said.

"Then the sculptor must make likenesses of the passions" of the soul by means of the form."

When he visited Pistias, the maker of breastplates, after the latter had displayed to Socrates some well-made breastplates, “By Hera,” he said, “noble indeed, Pistias, is the invention of the breastplate, which protects the parts of a human being in need of protection but does not prevent the use of one’s hands.

“Yet, tell me, Pistias,” he said, “why do you sell your breastplates for more, although you do not make them stronger or costlier than others?”

“Because, Socrates,” he said. “I make them better proportioned.”

“Is it by measure or by weight that you show their proportion in placing more value on them?” he said. “For I certainly do not think that you make them all equal or similar, at least if you make them fit.”

“But, by Zeus, I do make them fit,” he said, “for a breastplate without this is of no benefit.”

“As for bodies, at least, of human beings,” he said, “are some well proportioned, and others ill proportioned?”

“Certainly,” he said.

“How then,” he said, “do you make a breastplate that fits an ill-proportioned body well proportioned?”

“In just the way in fact that I make it fit,” he said, “for what fits is well proportioned.”

“You are saying, in my opinion,” said Socrates, “that a thing is well proportioned not in itself, but with regard to the one using it, just as if you should say that a shield is well proportioned for whomever it fits, or a mantle—and this is how it seems to be with everything else by your argument.

“And perhaps something else, too, which is no small good, attaches to fittingness.”

“Teach it, Socrates,” he said, “if you have something.”

“Breastplates that fit,” he said, “are less likely to press with their heaviness than those of the same weight that don’t fit. For those that do not fit, either hanging wholly from the shoulders or pressing excessively also some other part of the body, become difficult to bear and harsh. But those that fit, dividing their heaviness so that some of it is supported by the collarbones and the tops of the shoulders where they join the collarbone, some by the shoulders, some by the breast, some by the back, some by the stomach, seem almost not like a thing carried but like an appendage.”

“You have spoken,” he said, “the very thing on account of which I, for my part, hold that those I make are worth the most. Some, however, buy decorated and gold-plated breastplates instead.”

“But yet,” he said, “if, at any rate, on account of these things they buy ones that do not fit, in my opinion they buy what is bad—decorated and gold-plated though it may be.”

“Yet,” he said, “since the body does not remain in one position but sometimes bends and sometimes is straight, how would precisely fitted breastplates fit?”

“There is no way they would,” he said.

“You are saying,” he said, “that it is not the precisely fitted that fit, but those that do not cause pain in their use?”

“You are saying it yourself, Socrates,” he said, “and your grasp of the matter is very correct.”

## Chapter 11

There was once a beautiful woman in the city, whose name was Theodote and who was the sort to keep company with whoever persuaded her. When one of those who were present mentioned her and said that the beauty of the woman surpassed speech; and when he had said that painters, to whom she displayed as much of herself as was noble to display, visited her in order to draw her likeness, Socrates said, “We must go to behold her, for surely it is not possible for those who have merely heard to learn what surpasses speech.” And the one who had described her said, “Hurry up and follow.”

Thus they went to Theodote and came upon her standing for a certain painter, and they beheld her. After the painter left off, Socrates said, “Men, should we be more grateful to Theodote for displaying to us her beauty, or she to us because we beheld? If the display is more beneficial to her, is it for her to be grateful to us, while if the beholding is more beneficial to us, for us to be grateful to her?”

And when someone said that what he said was just, he said, “She, then, already gains from our praise and will be the more benefited whenever we should report it to more people; while we already desire to touch what we have beheld and will go away rather excited and will long for what we have left behind. From And Theodote said, “By Zeus, if this is so, then it is I who should be grateful to you for the beholding.”

After this, Socrates—seeing that she herself was adorned in a costly manner and that her mother, who was with her, was dressed and served in no chance manner and that her maidservants were many and good-looking and that not even these were inattentively maintained and that her household was furnished with the other things in abundance—said, “Tell me, Theodote, do you own a farm?”

“Not I,” she said.

“How about a household with revenues?”

“Not a household either,” she said.

“But some artisans perhaps?”

“Not artisans either,” she said.

“Then what source do you have for your provisions?” he said.

“If someone who has become my friend wants to treat me well,” she said, “he is my livelihood.”

“By Hera, Theodote,” he said, “it is a noble possession indeed, and far better to possess a herd of friends than a herd of sheep, goats, and cattle. But," he said, "do you entrust it to chance whether some friend will light on you, like a fly, or do you yourself contrive something?"

"How could I find a contrivance for this?" she said.

"It belongs much more, by Zeus, to you to-do this than to spiders," he said. "You know how they hunt things for their livelihood: for, of course, they weave fine webs and use whatever falls into them for sustenance."

"Are you advising me, too," she said, "to weave some hunting net?"

"No, for you surely shouldn't think that you will hunt so artlessly the prey that is worth the most: friends. 'Don't you see that even for rabbits, which are worth very little, hunters craft many artifices?

"For, since they graze at night, they procure for themselves dogs fit for nighttime hunting and hunt them with these. And because they run away when it is day, they acquire other dogs who find the rabbits out by perceiving through scent the path they take from their grazing ground to their lair. And because they are swift-footed enough to escape by running even when they are visible, they furnish themselves with still other dogs, swift ones, so that they may capture them by following on their heels. And because some of them escape even from these, they set nets up on the paths through which they flee, so that when they fall into them they may become enmeshed."

"So with what thing of this sort," she said, "could I hunt friends?"

"By Zeus," he said, "if instead of a dog you acquire someone who will track and find for you those who love beauty and are rich, and who, after finding them, will contrive to throw them into your nets."

"And what sort of nets," she said, "do I have?"

"To be sure, one that is indeed very entangling: your body," he said. "And in it a soul, through which you learn both how you might gratify with a look and delight with what you say; and that you must receive with gladness one who is attentive but shut out one who is spoiled; and that when a friend is sick, at least, to watch over him worriedly, and when he does something noble to be exceedingly pleased by it along with him; and to gratify with your whole soul the one who worries about you exceedingly. I know very well that you understand how to love, at any rate, in a manner not only soft but also well intentioned; and as to the fact that your friends are best for you, I know that you convince not only by speech but by deed."

"By Zeus," said Theodote, "I, for my part, contrive none of these things."

"And yet," he said, "it makes a big difference to approach a human being according to nature and correctly. For to be sure you would neither take nor hold a friend by violence, but this prey is both captured and kept constant by means of benefaction and pleasure."

"You speak truly," she said.

"You must first, then," he said, "require that those who worry about you do the sort of things that they will least regret doing, and then you yourself should make a return by gratifying them in the same fashion. For this way they would most become friends and love for the longest time and confer the greatest benefactions.

“And you would most gratify them, if you should give of yourself to those who are in need. For you see that even the most pleasant of foods, if someone offers it before there is desire, appears unpleasant and even provokes disgust in those who are satiated; but if someone offers it after inducing hunger, even if it is very common it appears quite pleasant.”

“How, then,” she said, “would I be able to induce hunger in someone for what I have?”

“By Zeus,” he said, “if, first, you neither approach nor offer any reminder to those who are satiated until they stop being full and are in need again. Then, if you offer reminders to those who are in need by means of the most decorous intimacy possible and by visibly wishing to gratify, yet fleeing—until they are most in need. For it makes a big difference to give the same gifts at that point, rather than before they desire them.

And Theodote said, “Why then, Socrates, don’t you become my fellow hunter of friends?”

“If, by Zeus,” he said, “you persuade me.”

“How, then, might I persuade you?” she said.

“You yourself will seek this out and will contrive it,” he said, “if you have some need of me.”

“Then visit often,” she said.

And Socrates, joking about his own lack of busyness, said, “But Theodote, it is not very easy for me to find leisure, for in fact many affairs both private and public deprive me of leisure. And I also have female friends who will not allow me to leave them day or night, since they are learning love charms and incantations from me.”

“Do you understand these things, as well, Socrates?” she said.

“Well,” he said, “why do you think Apollodorus here and Antisthenes are never absent from me? And why do you think Cebes and Simmias are present from Thebes? Know well that this hasn’t happened without many love charms, incantations, and spells.”

“Then lend me the spell,” she said, “so that I might draw it first against you.”

“But, by Zeus,” he said, “I myself do not wish to be drawn to you—but that you come to me.”

“Then I will go to you,” she said. “Only receive me.”

“But I will receive you,” he said, “unless some female dearer than you is inside.”

## Chapter 12

When he saw that one of his companions, Epigenes, was both young and maintained his body badly, he said, “How like a private individual you maintain your body, Epigenes.”

And he said, “For I am a private individual, Socrates.”

“Not any more in fact than those who are about to compete in the Olympics,” he said. “Or in your opinion is the contest for one’s life against the enemy—a contest the Athenians may at any time chance to establish—a small one?

“And yet, not a few people die amid the risks of war, or are saved in a shameful manner, due to the bad condition of their body. And many, due to this same thing, are captured alive and after being captured either live the rest of their lives as slaves—if they so chance—in the harshest slavery or, having fallen into the most painful necessities and paid sometimes more than they have, they are in want of necessities for the rest of their lives and live in misery. And many acquire a shameful reputation due to the incapacity of their body, because, as opinion has it, they are cowardly.

“Or do you hold in contempt these penalties for bad condition and think that you would easily bear such things? And yet I think that the things that one who attends to the good condition of his body must endure are much easier and more pleasant than those things. Or do you hold that bad condition is healthier and more useful for other things than good condition? Or do you hold in contempt what comes about due to good condition?

“And yet the things that happen to those who maintain their bodies well are all the opposites of the ones that happen to those who maintain them badly. For those who maintain their bodies well are both healthy and strong. And many due to this are saved in a seemly manner in the contests of war and escape all the terrible things; many bring aid to their friends and do good deeds for their fatherland and due to this are deemed worthy of gratitude, acquire a great reputation, and obtain most noble honors and due to these things live the rest of their life in a more pleasant and more noble manner and leave their children with more noble resources for life.

“One should not, just because the city does not train one at the public expense for the things of war, neglect this in private as well, but attend to it no less. For, know well that you will not be worse off in any other contest or in any action from having your body better equipped. The body is useful for all actions that human beings take; and in all the uses of the body it makes a lot of difference to have the body in as good condition as possible.

“Since, even where, in your opinion, there is least use of the body—in thinking—who does not know that, even here, many greatly falter because their body is not healthy? And forgetfulness, dispiritedness, peevishness, and madness frequently attack the thought of many due to the bad condition of their body, so as to drive out even the sciences.

“For those whose bodies are in good condition, there is much security and no risk of suffering something of this sort, at least due to the bad condition of the body; and it is plausible rather that good condition, too, is useful for the opposites of the things that occur due to bad condition. And what would anyone with sense not endure for the sake of the opposites of the things mentioned?

“It is also shameful due to neglect to grow old before seeing oneself in the most beautiful and strongest bodily state one might attain. But it is not possible for one who is neglectful to see these things, for they do not want to come to pass spontaneously.”

## Chapter 13

Once when someone was angry because, when he addressed someone in greeting, he was not addressed in return, he said, “It is ridiculous that, if you met someone with a worse body you wouldn’t be angry, but you are pained because you met by chance someone more boorishly disposed in his soul.”

When someone else said that he didn’t take pleasure in eating, he said, “Acumenus teaches a good cure for this.” And when the other asked him, “Of what sort?” he said, “To stop eating, and to live more pleasantly, more cheaply, and more healthfully after you have stopped.”

Again, when someone else said that the drinking water at his house was warm, he said, “Then whenever you wish to take a bath in warm water, it will be ready for you.”

“But, it’s too cold for bathing,” he said.

“Then, are your household servants, too, annoyed when they drink it or bathe in it?” he said.

“By Zeus,” he said, “I frequently have wondered, rather, at the pleasure with which they use it for both these purposes.”

“Which is warmer to drink,” he said, “the water at your house or that in the temple of Æclepius?”

“That in the temple of Æclepius,” he said.

“And which is colder to bathe in, the water at your house or that in the temple of Amphiaraus?”

“That in the temple of Amphiaraus,” he said.

“Ponder, then, on the fact that you run the risk of being more difficult to please than both your household servants and those who are sickly.”

When someone was vigorously punishing an attendant, he asked him why he was angry with his servant.

“Because,” he said, “although he is most slack, he is a great eater of relishes, and although laziest, a great lover of money.”

“Have you ever yet examined, then, which one is more in need of blows, you or your servant?”

When someone was afraid of the trip to Olympia, he said, “Why are you afraid of the trip? Don’t you walk about for nearly the whole day even at home? And when you travel there, you will walk until breakfast, walk until dinner, and then rest. Don’t you know that, if you would stretch out the walks you take in five or six days you would easily arrive at Olympia from Athens? It is also more delightful to set out early by one day than to arrive late. For to be compelled to prolong the stages beyond measure is hard, while increasing by one the days of travel provides great ease. It's better, then, to hasten in setting out rather than on the road."

When another said that he was worn out from having traveled a long way, he asked him if he carried a burden as well.

"No, by Zeus, I did not, except for my cloak," he said.

"And did you travel alone," he said, "or did your attendant follow too?"

"He followed," he said.

"Was he empty-handed," he said, "or carrying something?"

"By Zeus, he was carrying the bedding and the other equipment," he said.

"And how," he said, "has he emerged from the journey?"

"In my opinion," he said, "better than I have."

"Then, what if you had to carry his burden?" he said. "How do you think you would have fared?"

"Badly, by Zeus," he said. "Or, rather, I wouldn't even have been able to convey it."

"How, then, in your opinion, has a man trained himself, who is so much less able to labor than his slave boy?"

## Chapter 14

Whenever some of his dinner companions brought a small amount of relish and others brought a large amount, Socrates bid the slave boy either to place the small amount at the common disposal or to distribute a portion of it to each. Then those who brought the large amount were ashamed not to join in partaking of what was placed in common and not to place their own in return.

So they too placed their own at the common disposal. And since they had no more than those who brought a small amount, they stopped spending a lot on relishes.

When he observed once that one of his dinner companions had stopped eating bread and was eating the relish itself by itself, the talk being then about names—for what sort of work each name exists—he said, "Would we be able to say, men, with a view to what sort of work a human being is ever called a relish eater? For surely all eat relish on their bread, when it is available. But I think that they are not yet called relish eaters for this."

"Surely not," said one of those present.

"What about this?" he said. "If someone should eat the relish itself without the bread, not because he is in training but for the sake of pleasure, would he be a relish eater according to opinion or not?"

"Scarcely anyone else would be a relish eater," he said.

And someone else of those present said, "And the one who eats a large amount of relish with a small amount of food?"

"In my opinion," Socrates said, "he too would justly be called a relish eater. And whenever other human beings pray to the gods for a large crop, it is plausible that he would pray for a large amount of relish."

When Socrates said this, the youth, who held that what had been said was spoken with a view to him, did not stop eating relish but took a loaf as well. And when Socrates observed it, he said, "Those who are near this one should watch closely whether he will use the food as relish or the relish as food."

When he saw another one of his dinner companions tasting more than one relish with a single morsel of bread, he said, "Could there be a more costly relish making or one more likely to ruin the relish than that practiced by the one who eats many at once and takes a variety of sweets into his mouth at once? In mixing more together than the relish makers do he adds cost; and in mixing things that they do not mix together, on the grounds that they don't fit, he errs and undoes their art, if, that is, they act correctly.

"And yet how is it not ridiculous to furnish oneself with the relish makers who have the best understanding and then, though one doesn't even lay a claim to this art, to change around what is done by them? And something else befalls one who has become habituated to eating many foods at once: for, when there are not many relishes present, he has the opinion that he is somehow worse off, since he longs for what is habitual with him. But the one who has become habituated to dispatching one morsel of bread with one relish would be able painlessly to use the one when many should not be available."

He said also that "to feast" was called eating in the Athenian tongue. He said that the "well" was added with a view to eating those things that pain neither the soul nor the body and are not difficult to find. As a result he attributed feasting, too, to those who live with a decorous way of life.

# BOOK IV

## Chapter 1

So beneficial was Socrates in every matter and in every manner that it was visible to one who examined with even limited perception that there was nothing more beneficial than being a companion of Socrates and spending time with him anywhere at all and in any matter whatsoever, since even remembering him when he was not present was of no small benefit to those who were accustomed to being in his company and who were receptive to him. In fact when he was joking he was no less profitable to those who spent time with him than when he was serious.

For while he would often say that he was in love with someone, his desire was visibly not for those whose bodies were naturally well formed for youthful bloom but rather for those whose souls were naturally well formed for virtue. And he judged the good natures from their learning quickly what they turned their minds to, remembering what they learned, and desiring all of the subjects of learning through which one can nobly manage a household and a city and, altogether, make good use of human beings and human matters. For he believed that, if they have been educated, those with such a nature would not only be happy themselves and nobly manage their own households but they would also be able to make other human beings as well as cities happy.

He did not approach all in the same manner, but those who thought they were by nature good and who were contemptuous of learning he taught that the natures opinion holds as best are most in need of education—pointing out that the horses with the best natures, who are high-spirited and impetuous, if broken in from a young age become most useful and best, but if unbroken become hardest to restrain and quite common; and that in the case of the dogs with the best natures, who love labor and are ready to attack their prey, those that have been nobly reared become best for the hunts and most useful, while without rearing they become useless and mad and most intractable.

Similarly, he pointed out also that the human beings with the best natures, who are most robust in their souls and most able to accomplish whatever they attempt, if they are educated and learn what they should do, become best and most beneficial (for the good things they accomplish are very many and very great), while without education and learning they become worst and most harmful, for—not understanding how to decide what they should do—they frequently attempt wicked actions, and since they are grand and impetuous they are hard to restrain and hard to turn back, which is why the bad things they do are very many and very great.

And as for those who were proud on account of their riches and held that they had no need of education besides but thought that their riches would suffice for them both in accomplishing whatever they wished and in being honored by human beings, he instructed them by saying that one is foolish if he thinks that without learning he will distinguish which things are beneficial and which harmful; and one is foolish if he thinks that without distinguishing these things, while procuring for himself whatever he wishes due to his riches, he will be able to do what is advantageous; and one is a simpleton if he thinks that, without being able to do what is advantageous, he does well and is nobly or sufficiently furnished for his life; and one is a simpleton also if he thinks that due to his riches he will, without understanding anything, be thought to be good in anything, or, without being thought good in anything, have a good reputation.

## Chapter 2

I shall now describe how he approached those who held that they had obtained the best education and were proud on account of their wisdom. For he learned that Euthydemus the beautiful had collected many writings of the poets and of the sophists who were held in the highest repute, and due to these held himself to be already superior to his contemporaries on account of wisdom and had great hopes of surpassing everyone in being able to speak and take action. To begin with, perceiving that because of his youth he did not yet enter the agora but sat at one of the bridle makers' shops near the agora when he wished to have something done, he too entered this place with some of those with him.

And first—when someone inquired whether it was due to keeping company with one of the wise or by nature that Themistocles was so superior to the citizens that the city looked to him whenever it had need of a serious man—Socrates, who wished to stir Euthydemus, said that it was naive to think, on the one hand, that in the arts hardly worth mentioning human beings don't become serious without competent teachers, but, on the other hand, presiding over a city, which is the greatest work of all, comes to them spontaneously.

And once again when Euthydemus was present—seeing that he retreated from the group seated together and was on his guard lest he seem to admire Socrates for his wisdom—he said, "Men, it is quite clear from his pursuits that when Euthydemus here comes of age he will not refrain from giving advice when the city proposes a discussion about something. And, in my opinion, he prepares for himself a noble opening for his public addresses by guarding against having a reputation for having learned anything from anyone. For it is clear that in beginning to speak he would make the following opening:

'From no one, ever, men of Athens, did I learn anything, nor when I heard that some were competent at speaking and taking action did I seek to meet them; nor did I attend to having one of those who understand become my teacher. Rather, the opposite: I have spent my time fleeing not only from learning anything from anyone but even from seeming to do so. Nevertheless, I shall give you whatever advice spontaneously occurs to me.'

"Opening in this manner would also be fitting for those who wish to get medical work from the city. It would be serviceable for them to begin the speech from this point: 'From no one, ever, men of Athens, did I learn the medical art, nor did I seek that any of the physicians become my teacher. For I have spent my time guarding not only against learning anything from the physicians but even against seeming to have learned this art. Nevertheless, give me the medical work: I shall try to learn, making my trials on you." Then all who were present laughed at the speech's opening.

When it was visible that Euthydemus was already turning his mind to what Socrates was saying, but still guarding against uttering anything himself and holding that by his silence he clothed himself with a reputation for moderation, Socrates, wishing to stop him from this, then said, "It is to be wondered at why those who wish to play the cithara or the flute or to ride horses or to become competent at anything else of the sort try to do as continuously as possible whatever they wish to have ability in—and not on their own but by the side of those thought to be best, doing and enduring everything in order to do nothing without their judgment, on the assumption that they would not otherwise become worthy of mention—while some of those who wish to become able to speak and to act in political affairs hold that without preparation and attentiveness to them they will spontaneously, all at once, be able to do them.

"And yet, the latter things appear more difficult to accomplish than the former to the extent that those who accomplish them are fewer, although more people involve themselves in them. So it is clear that those desirous of the latter need to give them more and stronger attention than those desirous of the former."

Now, in the beginning, Euthydemus listened when Socrates made such speeches. But when he perceived that he endured it more readily when he conversed, and listened more eagerly, he went alone to the bridle maker's. And when Euthydemus sat down next to him, he said, "Tell me, Euthydemus, have you really collected, as I hear, many writings of the men said to have been wise?"

And Euthydemus said, "Yes, by Zeus, Socrates. And in fact I am still collecting them, until shall acquire as many as can."

"By Hera, I do admire you," said Socrates, "because you did not choose to possess treasures of silver and gold rather than of wisdom. For you clearly hold that silver and gold make human beings no better, but that the wise men's judgments make those who possess them rich in virtue."

And when he heard this Euthydemus was delighted, holding that he was pursuing wisdom correctly in Socrates' opinion. And the latter, observing that he was pleased at this praise, said, "In what do you wish to become good, Euthydemus, when you gather the writings?"

When Euthydemus remained silent while he examined how he should answer, Socrates again spoke: "It is not as a physician, is it? For indeed there are also many treatises by physicians."

And Euthydemus said, "By Zeus, not I."

"You don't wish to become a master builder either? For this too requires a man of judgment."

"Not I," he said.

"You don't desire to become a good geometrician either, like Theodorus?"

"Not a geometrician, either," he said.

“You don’t wish to become an astronomer either?” he said. As he denied this too, he said, “Nor a rhapsode? For they say that you possess also all the verses of Homer.”

“By Zeus, not I,” he said, “for indeed I know that the rhapsodes are accurate as to the verses, while being themselves quite the simpletons.”

And Socrates said, “Do you not, Euthydemus, desire that virtue through which human beings become fit for political affairs, fit to manage households, competent to rule, and beneficial to other human beings as well as themselves?”

Memorabilia

]

And Euthydemus said, “ want this virtue exceedingly.”

“By Zeus,” said Socrates, “you desire the noblest virtue and greatest art, for it belongs to kings and is called kingly. Yet, have you considered,” he said, “whether it is possible to be good at this without being just?”

“Yes, indeed,” he said. “And it is not possible to be a good citizen without justice.”

“So what about this—have you in fact achieved it?” he said.

“I think, at least, Socrates,” he said, “that I would appear no less

just than anyone.”

“Then are there not works belonging to the just,” he said, “as there are works belonging to builders?”

“There are, indeed,” he said.

“Then,” he said, “as builders are able to display their own works, would those who are just be able to explain theirs?”

“Are you afraid,” said Euthydemus, “that I can’t explain the works of justice? By Zeus, for my part, I can explain also those of injustice, since it is possible every day to see and to hear not a few such things.”

“Then do you wish us to write a *J* here, and an *I* here,” said Socrates, “and then to put under *J* whatever is a work of justice, in our opinion, and whatever is a work of injustice under *I*?”

“If, in your opinion, we have some need of this in addition,” he said, “do it.”

And having written as he said, Socrates said, “So then, does lying exist among human beings?”

“It does indeed,” he said.

“Then under which shall we put it?” he said.

“Clearly under injustice,” he said.

“Accordingly, does deceiving, too, exist?” he said.

“Yes, indeed,” he said.

“Then under which shall we put it?”

“Clearly this too goes under injustice.”

“And what about doing mischief?”

“This too,” he said.

“And enslaving?”

“This too.”

“None of these things will be laid by us next to justice, Euthydemus?”

“For that would be terrible,” he said.

“What if someone who has been elected general should enslave an unjust and hostile city? Will we say that he does an injustice?”

“Surely not,” he said.

“Will we not say that he does what is just?”

“Yes, indeed,” he said.

“What if he should use deception when he is at war with them?”

“This too is just,” he said.

“And if he should steal and seize their belongings, will he not do what is just?”

“Yes, indeed,” he said. “But , for my part, supposed at first that you asked about these things with regard to one’s friends alone.”

“And so,” he said, “would one have to put next to justice, too, what we put next to injustice?”

“It seems so,” he said.

‘Then, do you wish,” he said, “after thus putting these things, that we make the additional distinction that while it is just to do such things to enemies, it is unjust to friends, but to these at least one should be as straightforward as possible?”

“Certainly,” said Euthydemus.

“What about this?” said Socrates. “If some general who sees that his army is dispirited should lie and say that allies are approaching and by this lie put an end to the soldiers’ lack of spirit: under which shall we put this deception?”

“Under justice, in my opinion,” he said.

“And if someone, whose son needs medicine but will not allow it near him, should deceive him by giving him the medicine as food and by using the lie in this way to make him healthy: where, again, should one put this deception?”

“In my opinion,” he said, “this too goes in the same place.”

“What about if someone should steal or seize a friend’s sword or anything else of the sort, when the friend is dispirited, out of fear he might destroy himself: again, under which should one put this?”

“This too, by Zeus,” he said, “goes under justice.”

“Are you saying,” he said, “that one should not be straightforward even with one’s friends in all circumstances?”

“By Zeus, surely not,” he said. “Rather I change where I put the things mentioned, if it’s permitted.”

“It must indeed be permitted,” Socrates said, “much more than to put them incorrectly.

“But, so that we do not leave even this unexamined, who is more unjust among those who deceive their friends so as to harm them: the one who does so willingly or unwillingly?”

“But Socrates, I, for my part, no longer trust my answers. In fact all my previous answers are now otherwise in my opinion than as thought then. Nevertheless, let it be said by me that the one who lies willingly is more unjust than the one who does so unwillingly.”

“In your opinion, is there learning and understanding of the just, in the same way as there is of writing?”

“In my opinion, at least.”

“Which do you decide to be more skilled in writing, the one who willingly writes and reads incorrectly, or the one who does so unwillingly?”

“For my part, the one who does so willingly. For he would be able also to do these things correctly whenever he should wish.”

“Would, then, the one who willingly writes incorrectly be skilled in writing and the one who does so unwillingly unskilled?”

“How not?”

“Which knows the just things, the one who willingly lies and deceives, or the one who does so unwillingly?”

“Clearly the one who does so willingly.”

“Are you saying, then, that the one who understands writing is more skilled at writing than the one who doesn’t understand, and that the one who understands the just things is more just than the one who doesn’t understand?”

“I appear to be: in my opinion, I am saying—I don’t know how—these things as well.”

“What about if someone who wishes to speak the truth never says the same things about the same things; but when he points out the same road he at one time points to the east, and at another to the west; and when he declares the same calculation, he declares it at one time as greater, and then at another as less: what is your opinion of such a person?”

“Clearly, by Zeus, he does not know what he thought he knew.”

“Do you know of any people who are called slavish?”

“I do, for my part.”

“Is it due to wisdom or ignorance?”

“It is clear that it is due to ignorance.”

“Now is it due to ignorance in smithing that they obtain this name?”

“Surely not.”

“Rather, then, to ignorance in building?”

“Not due to this either,”

"Rather to ignorance in shoemaking?"

"It is not due to any one of these things," he said, "but in fact the opposite: most of those who understand how to do such things are slavish."

"Then is this the name of those who do riot know what the noble and good and just things are?"

"In my opinion, at any rate," he said.

"Should we, then, exert ourselves in every way to escape being slaves?"

"But, by the gods, Socrates," he said, "I very much thought that I was pursuing in my philosophizing a philosophy through which, I held, I would be educated to the highest degree in what befits a man yearning for gentlemanliness (nobility and goodness). But now, how dispirited do you think I am at seeing that, for my previous pains, I am unable to answer even what is asked about things one most should know, and that I have no other road that I might travel to become better?"

And Socrates said, "Tell me, Euthydemus, have you ever arrived at Delphi?"

"Yes, twice in fact, by Zeus," he said.

"Surely, you learned, then, what is written on the temple: 'Know thyself."

"I did indeed."

"Was the writing of no concern to you, then, or did you turn your mind to it and attempt to examine yourself regarding who you are?"

"By Zeus, certainly not," he said. "For indeed I thought that I knew this, at any rate, quite well: I could scarcely know anything else if I did not even know myself."

"In your opinion, does the one know himself who knows only his own name? Or—just as horse traders don't think they know the horse they wish to know before they examine whether it is obedient or disobedient and whether strong or weak and whether fast or slow and how it is with regard to the other qualities that make a horse suitable and unsuitable for use—is it the one who has examined himself as to how he is with regard to the use to which human beings are put and who knows his capacity?"

"That is indeed my opinion," he said, "that the one who doesn't know his own capacity is ignorant of himself."

"Is this not visible," he said, "that human beings experience most good things due to knowing themselves, and most bad ones due to being deceived about themselves? For those who know themselves know what suits them and distinguish between what they are capable of and what they are not; and by doing what they understand how to do, they procure what they need and do well, while by refraining from what they don't understand, they remain free from error and escape doing badly. Due to this they are able to test other human beings as well, and through the use of the others procure the good things and guard against the bad ones.

"Those, on the other hand, who don't know but are utterly deceived about their own capacity are similarly disposed regarding the other human beings and the other human matters. And they know neither what they need nor whatever they are doing nor those they deal with; rather, erring utterly in all these respects, they fail to obtain the good things, and they encounter the bad ones.

"And those who know whatever they are doing, since they succeed in what they do, come to be well reputed and honored. In addition, not only do those who are similar to them deal with them with pleasure, but those who fail in their affairs desire to have them deliberate on their behalf and even to preside over themselves, and place in them their hopes for the good things and due to all of this cherish them most of all.

"Those, on the other hand, who do not know what they are doing, since they choose badly and fail at the things they attempt, are penalized and punished not only in these very matters, but also due to them they are held in low opinion and ridiculed and live in contempt and dishonor. You see among cities, too, that some of those that, out of ignorance of their power, go to war against stronger cities become ruined, while others who were before free are enslaved."

And Euthydemus said, "Know this, Socrates: that it is very much my opinion that one should place a high importance on knowing oneself. But as to where one should begin to examine oneself—for this I am looking to you, if you should want to explain it to me."

"You surely by all means know, then," said Socrates, "what sorts of things are good and what sorts are bad?"

"By Zeus," he said, "for if I did not know even this, I would be more common even than slaves."

"Come, then," he said, "explain this to me, too."

"But it is not hard," he said, "for, first, I hold that being healthy is itself good, being sick bad; then, as to the causes of each of these things—whether drink or food or pursuits—I hold that those are good that are conducive to being healthy, and those are bad that are conducive to being sick."

"So then, wouldn't being healthy and being sick," he said, "both be good whenever they should come to be the cause of something good, and bad when the cause of something bad?"

"When would being healthy ever come to be a cause of something bad or being sick a cause of something good?" he said.

"Whenever, by Zeus, there are shameful campaigns, harmful voyages, and many other things of the sort," he said, "and they perish, those who take part in them due to might, while those left out due to feebleness are saved."

"You speak truly," he said. "But you see that the mighty take part also in the beneficial things, while the feeble are left out."

"These things, then," he said, "that are sometimes beneficial and sometimes harmful—are they more good than bad?"

"Not at all, by Zeus, it appears, at least according to this argument. But wisdom at any rate, Socrates, is indisputably good. For in what sort of matter wouldn't someone do better if he were wise than if he were ignorant?"

“What about Daedalus?” he said. “Haven’t you heard that, after he was seized by Minos due to his wisdom, he was compelled to be his slave and was deprived of both his fatherland and his freedom at the same time; and that, when he attempted to escape with his son, he lost the boy and was himself unable to get away safely but was carried back to the barbarians to be a slave there again?”

“So it is said, by Zeus,” he said.

“And have you not heard of the sufferings of Palamedes? For according to what all sing of him in hymns, he was destroyed by Odysseus, who envied him because of wisdom.”

“This too is said,” he said.

“And how many others do you think have been dragged away to the King due to their wisdom to be slaves there?”

“It is probable, Socrates,” he said, “that the least debatable good is being happy.”

“Unless, at least, someone would compose it, Euthydemus, out of debatable goods,” he said.

“Which,” he said, “of the things conducive to happiness would be debatable?”

“None,” he said, “unless we will include among its attributes beauty or strength or riches or reputation or anything else of the sort.”

“But, by Zeus, we will include them,” he said. “For how would someone be happy without these?”

“By Zeus,” he said, “we will include then things from which many hard things befall human beings. For many due to their beauty are corrupted by those who are highly excited by those who are in bloom; and many due to their strength attempt greater works and encounter no small ills; and many due to their riches are destroyed when they are fussed over and plotted against; and many due to reputation and political power suffer great ills.”

“And yet,” he said, “if I do not speak correctly even when I praise being happy, I agree that I do not know even what one should pray to the gods for.”

“Well, these things, perhaps, you didn’t even examine due to your excessive trust that you knew them,” said Socrates. “But since you are preparing to preside over a democratically ruled city, it is clear that you at least know democracy, what it is.”

“By all means, to be sure,” he said.

“Now, in your opinion, is it possible to know democracy without knowing a demos?”

“By Zeus, not in my opinion, at least.”

“Then you know a demos, as well, what it is?”

“I think I do, at least.”

“And what do you hold a demos to be?”

“I, for my part, hold it to be the poor among the citizens.”

“You know, then, the poor, as well?”

“How could I not know?”

“Do you know, then, the rich, as well?”

“No less, at least, than in fact the poor.”

“What sorts do you call poor and what rich?”

“Poor, those who do not have what is sufficient to spend for what they need, I think, and rich, those who have more than is sufficient.”

“Have you observed, then, that for some the little that they have is not only enough, but they even put savings away from it, while for others a great amount is not sufficient?”

“Yes, by Zeus,” said Euthydemus, “you are indeed correct to remind me. For I know even some tyrants who are compelled due to neediness to commit injustice—like those who are most lacking in means.”

“Accordingly,” said Socrates, “if in fact this is so, we shall include the tyrants in the demos while putting those who possess little, if they are skilled household managers, among the rich?”

And Euthydemus said, “Clearly it is my worthlessness that compels me to agree to these things too. Indeed I worry whether it may not be best for me to remain silent, for I probably know nothing at all.”

And he went away very dispirited, having contempt for himself and holding that he was really a slave.

Now many who were put into this state by Socrates no longer approached him, and he held these to be the more slack.

But Euthydemus supposed that he would become in no other way a man worthy of mention than if he were to be in Socrates’ company as much as possible. And he no longer left him unless there was some compulsion, and even imitated some of his pursuits. And, for his part, when he recognized that this w»as his state, he disturbed him as little as possible and explained in the most simple and clear manner what he held he should know and what he held best for him to pursue.

## Chapter 3

Now he did not rush his companions to become skilled in speaking and in taking action and in contriving, but he thought that moderation should come to be in them before these things. For he held that those who had these abilities without being moderate are more unjust and more able to do mischief.

First, he tried to make his companions moderate about gods. Now others who were present have given descriptions of him associating in this manner with others. But I was present when he had a conversation with Euthydemus of the following sort.

“Tell me, Euthydemus,” he said, “has it ever yet occurred to you to ponder this: that the gods attentively furnish human beings with what they need?”

And he said, “By Zeus, it hasn’t occurred to me, at least.”

“But you surely know,” he said, “that, first, we need light, which the gods provide to us?”

“By Zeus,” he said, “if we did not have this, at least, we would be like those who are blind as far as our eyes are concerned.”

“Furthermore, we need rest as well, and they provide us with night, a most noble resting time.”

“Certainly,” he said, “this too is deserving of gratitude.”

“Accordingly, since also the sun in its shining makes clear to us both the periods of the day and everything else, but night is rather unclear due to its darkness, they have shown forth stars in the night that make visible to us the periods of the night; and on this account we do many of the things we need.”

“These things are so,” he said.

“Moreover, the moon at any rate makes visible to us the parts not only of the night but also of the month.”

“Certainly,” he said.

“And since we need sustenance, what about the giving it forth to us from the earth and the provision of seasons fitting for this, which furnish us with an abundance and variety not only of what we need but also of what we take delight in?”

“These things too,” he said, “are very indicative of a love of human beings.”

“And what about providing us also with water, which is so valuable that it helps the earth and seasons in bringing forth’ and increasing all the things useful to us, helps us also in sustaining ourselves, and, when mixed with all that sustains us, makes these things easier to digest and more beneficial as well as more pleasant; and, since we need this in very great quantity, it is provided to us most ungrudgingly?”

“This too,” he said, “is indicative of forethought.”

“And what about the procuring for us also of fire, an ally against cold, an ally against darkness, a coworker in every art and for all things that human beings equip themselves with for their benefit? For, in sum, without fire, human beings equip themselves with nothing worth mentioning of the things useful for life.”

“This too,” he said, “belongs to a surpassing love of human beings.”*

“And what about the sun’s approaching after it has turned in winter, ripening some things and drying others out when their time has passed; and when it has accomplished these things, its not approaching any nearer, but turning away, on its guard lest it do us some harm by heating us beyond what is needful; and when it again goes away and comes to the point when it is clear even to us that if it goes any farther away we will be frozen by the cold, its turning back and approaching again; and its turning to and fro in that region of the heaven where its presence would benefit us most?”

“By Zeus,” he said, “these things too are altogether like things that happen for the sake of human beings.”

"And since this too is visible, that we could endure neither the blazing heat nor the cold if they occurred suddenly, what about the sun's both approaching so gradually and going away so gradually that we are unaware that we are being brought into each extreme?"

"I, for my part," said Euthydemus, "am already examining whether the gods have any other work than serving human beings. The only thing holding me back is that the other animals too participate in these things."

"Is not this, too, visible," said Socrates, "that even these are born and sustained for the sake of human beings? For what other animal enjoys the benefits of so many good things as human beings do from goats, sheep, cattle, horses, asses, and the other animals? For, in my opinion, they enjoy more benefits from these than from the plants. At any rate, they are sustained and make wealth from the former no less than from the latter; and much of the human race does not use the plants from the earth for sustenance but lives by sustaining itself on milk, cheese, and flesh from grazing animals; and all domesticate and break in the animals that are useful and use them as helpers for war and much other work."

"I agree with you in this too," he said. "For I see even those that are much stronger than we who become subservient enough for human beings to make whatever use of them they wish."

"And since there are many noble and beneficial things, but they differ from each other, what about the addition of perceptions to human beings, which are fit for each of the things and which are the means for our enjoying the benefits of all the good things? And what about the implanting of calculation in us by which, when we calculate and remember the things we perceive, we learn how each of the things is advantageous, and contrive many ways to enjoy the benefit of the good things and ward off the bad ones?

"In addition, what about the gift of explanation, through which, by teaching, we share with one another all the good things, live collectively, establish laws, and partake of political life?"

"The gods seem altogether, Socrates, to be very attentive to human beings."

"In addition, if we are unable to know in advance what is advantageous for the future, what about their helping us themselves in these matters by pointing out through divination, to those who inquire, how things will turn out, and by teaching the way in which they might best happen?"

"They seem to deal with you, Socrates, in a more friendly manner than the others," he said, "if, that is, though they are not even asked by you, they signal you in advance what you should and should not do."

"And that I am speaking the truth, you, too, will know, if you do not wait until you see the shapes of the gods, but if it is enough for you, when you see their works, to revere and honor the gods. Reflect that even the gods themselves intimate so. For when the others give us the good things they do not enter into visibility when they give any of them; and the one who places together and keeps together the whole cosmos, in which all things are noble and good, and who always provides them unravaged, healthy, and ageless for our use, and who does unerring service more quickly than thought—this one, while seen to be doing the greatest things, is unseen by us as he manages them.

"And reflect that even the sun, which is thought to be visible to everyone, does not permit himself to be seen by human beings precisely, but he takes away the sight of anyone who attempts to behold him shamelessly. You will find that the servants of the gods, too, are invisible. For, that lightning at least is released from above is clear, and also that it overpowers all whom it encounters; but it is seen neither as it approaches nor as it strikes nor as it goes away. And breezes are not, themselves, seen, but what they do is visible to us, and we perceive them as they approach. Furthermore, that a human soul—which shares in the divine if indeed anything else belonging to human beings does—is king in us is visible, but not even it is seen. Knowing these things, one should not have contempt for the things that are unseen, but, learning their power from what comes to pass, one should honor the divine."

"I, for my part, know with certainty, Socrates," said Euthydemus, "that, not even in a small way, shall I neglect the divine. But I am dispirited at this: that in my opinion no single human being could ever repay the gods' benefactions with the gratitude they deserve."

"But don't be dispirited about that, Euthydemus," he said. "For you see that, whenever someone asks him how he would gratify the gods, the god at Delphi answers, 'By law of the city.' And surely it is law everywhere to please gods with sacrifices according to one's capacity. How, then, would one honor gods any more nobly or piously than by doing as they themselves bid? But one should in no way fall short of one's capacity.

"For whenever someone does this, it is surely visible that he is not honoring gods at that point. So one should leave nothing undone in honoring the gods according to his capacity, and take heart and hope for the greatest goods. For it would not be moderate for someone to hope for more from others than from those able to benefit in the most important things, nor would it be moderate to hope for this other than if one would please them. And how would he please them more than if he obeyed them in the highest degree?"

By saying such things and himself doing them he rendered his companions both more pious and more moderate.

## Chapter 4

Furthermore, he did not hide the judgment he had concerning justice, at any rate, but showed it even in deed, by dealing with everyone in private in a lawful and beneficial manner; and in public by being so obedient to rulers in what the laws command, both in the city and on campaigns, that it was thoroughly clear that he was orderly beyond the others; and when he presided in the assemblies he did not turn over a vote to the demos contrary to the laws, but together with the laws he opposed an onset of the demos so great that I don't think any other human being would have endured it.

And when the Thirty commanded him to do something contrary to the laws he did not obey. For when they forbade conversing with the young, and when they commanded him and some others to lead away one of the citizens to be put to death, he alone did not obey due to the fact that they were commanding him to do what was contrary to the laws.

And when he was a defendant against the indictment brought by Meletus—although the others are accustomed in the law courts to converse with the jurors in such a way as to gratify them and to flatter them and to beg them contrary to the laws, and although many are often let go by the jurors due to these sorts of things—he for his part wanted to do none of the customary things in the law court contrary to the laws; but, although he would have easily secured his release by the jurors if he had done any of these things even to a limited extent, he chose rather to die abiding by the laws than to live transgressing them.

And while he often spoke in this manner with others too, I know that he once also had a conversation of the following sort about justice with Hippias the Elean. For when Hippias came to Athens after an interval of time, he was present when Socrates was saying to some people that it was a wonder that, while one who wishes to have someone taught shoemaking, building, smithing, or horsemanship is not perplexed as to where he would send him to obtain it—and some say that for one who wishes to have even a horse or cow made just, all places are full of teachers—but if one wishes either oneself to learn justice or to have one's son or household servant taught it, he doesn't know where to go to obtain this.

And after listening to these things, Hippias said, as though making fun of him, "Are you, Socrates, still saying the same things that I myself once heard from you a long time ago?"

And Socrates said, "And what is even more terrible than this, Hippias—I not only say always the same things but even say them about the same things. But you, perhaps, due to your great learning, never say the same things about the same things."

"By all means," he said, "I try always to say something new."

"Even about the things you understand?" he said. "For example, if someone asks you how many and which letters are in 'Socrates,' do you try to say different things now from what you said before? Or to those who ask regarding numbers whether twice five is ten, don't you give the same answer now as you did before?"

"About these things, Socrates," he said, "I too always say the same things, just as you do. About justice, however, I altogether think that I am now able to say something against which neither you nor anyone else would be able to speak."

"By Hera," he said, "great is the good you're saying that you have found, if jurors will cease being divided in their votes; citizens will cease contradicting one another, bringing lawsuits, and forming factions concerning the just things; the cities will cease disagreeing about the just things and going to war. And, for my part, I don't know how I could leave before hearing you, who has found a good of such magnitude."

“But, by Zeus,” he said, “you will not hear—at least, not before you yourself declare what you hold justice to be. For it is enough that you ridicule the others by asking and refuting everyone, while you yourself do not want to render an account to anyone or to declare your judgment about anything.”

“What’s this, Hippias?” he said. “Have you not perceived that I never stop showing what things are just in my opinion?”

“And what sort is this speech of yours?” he said.

“If not by speech,” he said, “I show it rather by deed. Or is it not your opinion that one’s deed is more worthy testimony than one’s speech?”

“Far more, by Zeus,” he said. “For many who say just things do unjust ones, while no one who does just things would be unjust.”

“Have you ever perceived me, then, either bearing false witness or making a false accusation or casting friends or cities into civil faction or doing anything else unjust?”

“No, I have not, for my part,” he said.

“And don’t you believe that refraining from the unjust things is just?”

“It is clear, Socrates,” he said, “that even now you are attempting to escape showing your judgment, whatever you hold justice to be. For you are saying not what the just do, but what they don’t do.”

“But, for my part,” said Socrates, “I thought, that not wanting to do injustice was a sufficient display of justice. But if you don’t have the same opinion, examine whether the following pleases you more. For I say that the lawful is just.”

“Are you saying, Socrates, that the same thing is both lawful and just?”

“I am, for my part,” he said.

“For I do not perceive what sort of thing you are saying is lawful and what sort is just.”

“Do you know laws of a city?” he said.

“I certainly do,” he said.

“And which do you hold these are?”

“What the citizens agreed upon and wrote as to what one must do and refrain from.”

“Would, then,” he said, “one who partakes of political life according to these be lawful, and one who transgresses them be lawless?”

“Certainly,” he said.

“Accordingly, would the one obeying these do just things, and the one disobeying them do unjust ones?”

“Certainly.”

“Then the one who does the just things is just, and the one who does the unjust things is unjust?”

“How could it not be the case?”

“Then the lawful one is just, and the lawless one is unjust.”

And Hippias said, “Socrates, how could anyone believe that laws or the obedience to them are a serious matter, when the very people who set them down often change them, having rejected them after scrutiny?”

“War, too,” said Socrates, “the cities have often begun only to make peace again.”

“Yes indeed,” he said.

“Do you think, then, that you behave differently,” he said, “in disparaging those who obey the laws, because the laws might be repealed, than if you would find fault with those who were orderly in wars, because peace might come to pass? Or do you also cast blame on those who eagerly bring aid to their fatherlands in wars?”

“By Zeus, I certainly do not,” he said.

“Have you observed,” said Socrates, “that Lycurgus the Lacedaimonian would have made Sparta no different from the other cities, had he not produced in it a special obedience to the laws? And don’t you know that the best rulers in the cities are those who are most responsible for their citizens’ being obedient to the laws, and that a city in which the citizens are especially obedient to the laws lives the best during peace and is the most difficult to withstand in war?

“Furthermore, concord is the greatest good in the cities’ opinion; and both the elder councils of the cities and the best men most often exhort the citizens to live in concord; and everywhere in Greece it is established law that the citizens take an oath that they will live in concord, and everywhere they take this oath. And I, for my part, think that these things come about, not so that the citizens should decide in favor of the same choruses, nor so that they should praise the same flute players, nor so that they should choose the same poets, nor so that they should take pleasure in the same things, but so that they should obey the laws. For when their citizens abide by these, the cities become strongest and happiest; but without concord neither would a city be well governed nor a household nobly managed.

“As for the individual, how would one be less penalized by a city, and how honored more, than if he should obey the laws? And how would one be defeated less in the law courts, or how would one win there more? And whom would someone trust more to keep for him wealth or sons or daughters? And whom would the whole city believe more worthy of trust than one who is lawful? And from whom more than him would parents or relatives or household servants or friends or citizens or strangers obtain the just things? And whom would enemies trust more in armistices or truces or treaties concerning peace? And with whom more than with one who is lawful would people want to become allies? And whom would the allies more entrust with leadership, or with command of garrisons, or with cities? And from whom would someone suppose that he is more likely to receive gratitude when he has done him a good deed than from the one who is lawful? Or for whom is someone more likely to do a good deed than for one from whom he holds that he will receive gratitude? And with whom would someone wish more to be a friend, or less to be an enemy, than with such a one? And against whom would someone be less likely to wage war than one with whom he most wishes to be a friend, and least an enemy, and with whom very many people wish to be friends and allies and very few enemies and opponents in war?

“For my part, then, Hippias, I show the same thing to be both lawful and just. But if you judge’*’ the opposite to be the case, you teach it.”

And Hippias said, “But, by Zeus, Socrates, I don’t, in my opinion, judge the opposite of what you have said about justice to be the case.”

“Do you know any unwritten laws, Hippias?” he said.

“Those, at any rate, held as law in the same way in every land,”

he said.

“Would you be able to say, then,” he said, “that human beings set them down?”

“Indeed, how?” he said. “At any rate, they would not all be able to assemble, nor do they speak the same language.”

“Who, then, do you hold to have set down these laws?”

“I, for my part,” he said, “think that gods set down these laws for human beings. For indeed among all human beings the first thing held as law is to revere gods.”

“And so, is honoring one’s parents also held everywhere as law?”

“This too,” he said.

“Accordingly, also that parents are not to have intercourse with their children, nor children with their parents?”

“This is no longer a god’s law, in my opinion, Socrates,” he said.

“Why?” he said.

“Because,” he said, “I perceive that some transgress it.”

“Indeed they break many other laws as well,” he said, “but those who transgress the laws laid down by the gods pay a penalty that a human being is unable to escape in any way, as some who transgress the laws laid down by human beings escape paying the penalty, either by going unnoticed or by using violence.”

“And what penalty, Socrates,” he said, “are parents who have intercourse with their children, and children who do so with their parents, unable to escape?”

“The greatest one, by Zeus,” he said. “For what greater penalty might human beings suffer when they beget offspring than to beget badly?”

“How, then, do these beget offspring badly,” he said, “when nothing prevents their being good themselves and begetting children with those who are good?”

“Because, by Zeus,” he said, “not only should those who beget children with each other be good, but their bodies should also be in their prime; or is it your opinion that the seed of those in their prime is like that of those not yet in their prime or past their prime?”

“But, by Zeus,” he said, “it is not plausible that it is.”

“Which, then, is better?” he said.

“Clearly,” he said, “the seed of those in their prime.”

“Then the seed of those not in their prime is not sound?”

“It is not plausible, by Zeus,” he said.

“And so, one should not beget children in this manner, at any rate.”

“Certainly not,” he said.

“Accordingly, do those, at least, who beget in this manner beget as they should not?”

“Certainly, in my opinion,” he said.

“Who else, then,” he said, “would beget children badly, if not these at least?”

“I agree with you in this too,” he said.

“What about this? Is it not lawful everywhere to do good in return to those who treat one well?”

“It is lawful,” he said, “but this too is transgressed.”

“Accordingly, do those who transgress this also pay the penalty, since they come to be bereft of good friends and are compelled to pursue those who hate them? Or aren’t good friends the ones who treat well those who deal with them; while those who don’t return favors to these sorts are hated by them due to their ingratitude, yet they pursue them most because it is these sorts whom it profits one most to deal with?”

“By Zeus, Socrates,” he said, “all these things befit gods.’ For, that the laws themselves contain the punishments for those who transgress them comes, in my opinion, from a better than human legislator.”

“Which, then, Hippias, do you believe: that the gods legislate the just things or things other than the just things?”

“Not other things, by Zeus,” he said. “For scarcely anyone else at any rate would legislate the just things, if not a god.”

“Then it pleases the gods too, Hippias, that the same thing is both just and lawful.”

By saying and doing such things he made those who were near him more just.

## Chapter 5

I shall now say how he also made his companions more skilled in taking action. For, holding that it is good for continence to be present in one who intends to do anything noble, first he made it visible to his companions that he, most of all human beings, had trained himself; then, when he conversed, he turned his companions most of all toward continence.

He himself, then, always spent his time recalling the things useful for virtue, and reminding all his companions of them. And I know that once with Euthydemus too he had a conversation about continence of the following sort. “Tell me, Euthydemus,” he said, “do you hold that freedom is a noble and grand possession for a man and a city?”

“As noble and grand as can be, in fact,” he said.

“Whoever, then, is ruled by the pleasures that come through the body and is on account of them unable to do what is best—do you hold this one to be free?”

“Least of all,” he said.

“For perhaps it appears to you that it belongs to one who is free to do what is best, and so you hold that to have those who will prevent one from doing this belongs to a person lacking freedom?”

“Altogether so,” he said.

“Then in your opinion the incontinent lack freedom altogether?”

“And suitably so, by Zeus.”

“In your opinion, are the incontinent only prevented from doing what is most noble, or are they also compelled to do what is most shameful?”

“In my opinion,” he said, “they are no less compelled to do the latter things than they are prevented from doing the former.”

“What sort of masters do you believe prevent what is best, and compel what is worst?”

‘The worst possible ones, by Zeus,” he said.

“And what sort of slavery do you hold to be the worst?”

“For my part, that under the worst masters,” he said.

“Then are the incontinent enslaved in the worst slavery?”

“In my opinion, at least,” he said.

“As for wisdom, the greatest good, isn’t it your opinion that, in debarring human beings from it, incontinence casts them into the opposite of wisdom? Or isn’t it your opinion that in dragging toward what is pleasant incontinence prevents turning one’s mind to the beneficial things and learning them; and, often driving the wits from those who perceive what is good and bad, it makes them choose the worse instead of the better?”

“This happens,” he said.

“As for moderation, to whom, Euthydemus, would we say that it belongs less than to the one who is incontinent? For surely the works of moderation and incontinence are the very opposite.”

“I agree with this too,” he said.

“As for being attentive to what it is fitting to attend to, do you think that anything prevents one from this more than incontinence?”

“No, I don’t, for my part,” he said.

“And do you think there is anything worse for a human being than what makes one choose the harmful in place of the beneficial and persuades one to attend to the former, while neglecting the latter, and compels one to do the opposite of what the moderate do?”

“Nothing,” he said.

“Is it plausible, accordingly, that continence is the cause of the opposite of what incontinence causes in human beings?”

“Certainly,” he said.

“And so, is it plausible that what causes the opposite things is best?”

“It is, indeed, plausible,” he said.

“Does it seem, then, Euthydemus,” he said, “that continence is best for a human being?”

“Suitably so, Socrates,” he said.

“But have you ever pondered the following, Euthydemus?” he said.

“What?” he said.

“That incontinence is unable to lead even to those things that are all that opinion supposes it leads human beings to, the pleasures, while it is continence most of all that makes them experience pleasure.”

“How?” he said.

“Incontinence prevents one from experiencing any pleasure worth mentioning from the things that are the most necessary and frequent. For it does not allow one patiently to endure either hunger or thirst or sexual desire or sleeplessness; and it is only in this way that one can pleasurably eat and drink as well as engage in sex or pleasurably rest and sleep—that is, by waiting and bearing up until these things become as pleasant as possible. But continence, the only thing that makes one patiently endure the things mentioned, is also the only thing that makes one experience pleasures worth recalling from the things mentioned.”

“You speak altogether truly,” he said.

“Moreover, as regards learning anything noble and good and attending to any of these sorts of things—things through which one would nobly direct one’s own body and nobly manage one’s own household and become beneficial to friends and city and overpower enemies, and which afford not only benefits but also very great pleasures—those who are continent enjoy the benefits that come from doing these things, while the incontinent have no share in any of them. To whom would we say such things belong less than to the one least permitted to do them, in that he is held fast by his eagerness for the nearest pleasures?”

“In my opinion, Socrates,” he said, “you are saying that no virtue at all belongs to a man who is overcome by the pleasures that come through the body.”

“For how, Euthydemus,” he said, “does an incontinent human being differ from the most ignorant beast? How would one who does not examine what is best, but seeks in every way to do what is most pleasant, differ from the most thoughtless cattle? Rather, it is possible only for the continent to examine the best of the things and, by separating them in speech and deed according to classes, to choose the good things while refraining from the bad.”

And he said that in this manner men become best and happiest as well as most able to converse. And he said also that conversing was named from the collective deliberation of those who come together and separate the things according to class;

and that one should accordingly try to prepare oneself as much as possible to be ready for this and attend to this most; for from this men become best and most fit for leading as well as most skilled in conversing.

## Chapter 6

I shall now attempt to tell also how he also made his companions more skilled in conversing. For Socrates held that those who knew what each of the beings is would also be able to explain this to the others. And he said that it was no wonder at all that those who didn't know faltered themselves and made others falter. For these reasons he never ceased examining with' his companions what each of the beings is. It would be a lot of work, then, to go through all things as he defined them. But I will tell some in which I think his manner of examination will be clear.

First, regarding piety, he examined it somewhat as follows. "Tell me, Euthydemus," he said, "what sort of thing do you hold piety to be?"

And he said, "The noblest sort, by Zeus,"

"Are you able, then, to say what sort of person the pious one is?"

"In my opinion," he said, "one who honors the gods."

"Is it permitted to honor the gods in whatever manner one wishes?"

"No, but there are laws in accordance with which one should honor the gods."

"And so, would the one who knows these laws know how one should honor the gods?"

"I, at least, think so," he said.

"Now, the one who knows how one should honor the gods does not think that one should do this in any way other than as he knows?"

"Certainly not," he said.

"Does anyone honor gods in a way other than as he thinks one should?"

"I don't think so," he said.

"Then the one who knows what is lawful concerning the gods would honor the gods lawfully?"

"Certainly," he said.

"And so, does the one at least who honors lawfully honor as one should?"

"How would this not be the case?" he said.

"And the one who honors as one should is pious?"

"Certainly," he said.

"Then the one who knows what is lawful concerning the gods would correctly be defined by us as pious?"

"In my opinion, at any rate," he said.

"Then is it permitted to deal with human beings in any manner someone may wish?"

“No, but also regarding these, the one who knows what is lawful—in accordance with which people should deal with one another—would be lawful.”

“And so, do those who deal with one another in accordance with what is lawful, deal with one another as one should?”

“How could this not be the case?” he said.

“Accordingly, do those who deal with human beings as one should, deal with them nobly?”

“Certainly,” he said.

“And so, do those who deal with human beings nobly engage nobly in human affairs?”

“It is plausible,” he said.

“Accordingly, those who are obedient to the laws—these do what is just?”

“Certainly,” he said.

“Do you know what sort of things are called just?” he said.

“The things that the laws bid,” he said.

“Then do those who do what the laws bid, do both what is just and what one should?”

“How could this not be the case?”

“And so, are those just who do what is just?”

“For my part, I think so,” he said.

“Now do you think that any obey the laws without knowing what the laws bid?”

“For my part, I don’t,” he said.

“Do you think, then, that any of those who know what one should do think that they should not do these things?”

“I don’t think so,” he said,

“Do you know any who do other than what they think they should?”

“For my part, I don’t,” he said.

“Then those who know what is lawful concerning human beings—these do what is just?”

“Certainly,” he said.

“And so, are those just who do what is just?”

“Who else?” he said.

“Would we ever define correctly, then, in defining as just those who know what is lawful concerning human beings?”

“In my opinion, at least,” he said.

“As for wisdom, what would we say it is? Tell me, are the wise, in your opinion, wise in what they understand, or are some wise in what they do not understand?”

“Clearly in what they understand,” he said, “for how could one be wise in what he doesn’t understand?”

"Are the wise, then, wise by dint of understanding?"

"For how else would someone be wise," he said, "if not by dint of understanding?"

"Do you think that wisdom is anything other than that by dint of which people are wise?"

"For my part, I don't."

"Then understanding is wisdom?"

"In my opinion, at least," he said.

"Now in your opinion is a human being able to understand all the beings?"'

"By Zeus, not even a small part of them, in my opinion."

"It is not possible, then, for a human being to be wise in everything?"

"By Zeus, surely not," he said.

"What each person understands, then, is that in which he is also wise?"

"In my opinion, at least."

"Now, Euthydemus, should one seek also in this manner what is good?"

"How?" he said.

"In your opinion, is the same thing beneficial to all?"

"Not in my opinion, at least," he said.

"What about this? Isn't it your opinion that what is beneficial to one is sometimes harmful to another?"

"Yes, indeed," he said.

"Would you say that anything is good other than what is beneficial?"

"For my part, I wouldn't," he said.

"Then is the beneficial good to whomever it is beneficial?"

"In my opinion," he said.

"Would we be able to speak about the noble in any other way? Or is there something you call noble—whether a body or an implement or anything else whatsoever—that you know is noble for everything?"

"By Zeus, for my part, I don't," he said.

"Then is it noble to use each thing for what it may be useful for?"

"Certainly," he said.

"Is each thing noble for anything other than what it is noble to use it for?"

"Not for a single other thing," he said.

"Then is what is useful noble for whatever it is useful?"

"In my opinion, at least," he said.

"As for courage, Euthydemus, do you hold that it is among the noble things?"

"For my part, I hold that it is very noble indeed," he said.

"Then you hold that courage is useful not for the least important things?"

“By Zeus,” he said, “for the most important, certainly.”

“Now, regarding the terrible and risky things, is it useful in your opinion to be ignorant of them?”

“Least of all,” he said.

“Then those who aren’t frightened by such things because they don’t know what they are, aren’t courageous?”

“By Zeus,” he said, “in that way, at any rate, many both of the mad and of the cowardly would be courageous.”

“And what about those who are afraid even of things that are not terrible?”

“Even less, by Zeus,” he said.

“Do you believe, then, that those who are good regarding the terrible and risky things are courageous, while those who are bad are cowardly?”

“Certainly,” he said.

“Do you hold any others to be good regarding such things than those who are able to deal with them nobly?”

“No, rather these,” he said.

“Then you hold as bad the sort who deal with) them badly?”

“Who else?” he said.

“Does each sort, then, deal with them as they think one should?”

“How else?” he said.

“‘Do those, then, who are unable to deal with them nobly know how one should deal with them?”

“Perhaps not,” he said.

“Those who know how one should deal with them—are these, then, also able to?”

“Only these,” he said.

“What about this? Do those who are not mistaken about them deal with things of this sort badly?”

“I don’t think so,” he said.

“Then those who deal with them badly are mistaken about them?”

“It is plausible, at any rate,” he said.

“Those who understand how nobly to deal with the terrible and risky things are courageous, then, and those who are mistaken about this are cowardly?”

“They are, at least in my opinion,” he said.

He believed that kingship and tyranny were both types of rule, but he held that they differed from each other. For he believed that rule over the human beings who are willing and according to laws of the cities, was kingship, while rule over the unwilling and not according to laws, but however the ruler wished, was tyranny. And wherever ruling offices are filled from those who perfect the lawful, he held that regime to be an aristocracy; and wherever on the basis of property assessments, a plutocracy; and wherever from all, a democracy.

If someone should contradict him about something without having anything clear to say, but claim without showing it that the one he mentioned himself was wiser or more skilled at political affairs or more courageous or anything else of the sort, he would bring the entire argument back to its hypothesis somewhat as follows:

"Do you assert that the one whom you praise is a better citizen than the one I praise?"

"I do indeed assert it."

"Why then didn't we examine first what a good citizen's work is?"

"Let's do this."

"In the management of wealth, accordingly, would he prevail who makes the city better provided with wealth?"

"Certainly."

"And in war indeed the one at any rate who makes it superior to its adversaries?"

"How could this not be the case?"

"And in diplomacy, is it whoever furnishes friends in place of enemies?"

"It is plausible, at any rate."

"And so, in public speaking as well, the one who puts an end to civil faction and produces in it concord?"

"In my opinion, at least."

When the arguments were brought back in this manner the truth became visible even to the contradictors themselves.

But whenever he went through something in argument (logos) by himself, he proceeded via what was most agreed upon, holding this to be safety in argument. Therefore, of those I know, he, when he spoke, produced by far the most agreement in his listeners. And he said that Homer, too, applied to Odysseus the attribute of being a safe orator on the grounds that he was competent to lead his arguments through the opinions of human beings.

## Chapter 7

It is clear, then, from what has been said, in my opinion, that Socrates declared his own judgment simply to those who associated with him. I shall now tell how he was attentive also to their being self-sufficient in the activities that were fit for them. For, of all those I know, he was most concerned with knowing what any of his companions had understanding of. And he taught most eagerly of all whatever he himself knew of the things it is fitting for a man who is a gentleman (noble and good) to know. And whatever he himself lacked experience in, he led them to those who understood it.

He taught also how far one who has been correctly educated should be experienced in each matter. For example, he said that one should learn geometry up to the point of being competent, if there should ever be need, to receive or to transfer or to apportion land by correctly measuring it, or to assign work. And he said that this was so easy to learn that the one who turned his mind to measuring would know how much land there was and at the same time go away understanding how it is measured.

But he disapproved of learning geometry as far as the diagrams that are hard to comprehend. For what benefit these might have, he said he did not see (and yet he did not lack experience of them), and he said that they were sufficient to exhaust the life of a human being and to hinder one from many other beneficial studies.

He bid them also to become experienced in studying the stars—in this too, however, up to the point of being able to judge the time of night, month, and year, for the sake of traveling, sailing, and guarding, and as for the other things that are done by night or by month or by year to have marks to use in distinguishing the periods of the things mentioned. And he said that these things were easy to learn from night hunters and ship pilots as well as many others whose concern it is to know them.

But he turned them strongly away from learning astronomy as far as knowing also the beings that do not keep to the same path of revolution, both the planets and the unstable stars, or exhausting themselves by seeking their distances from the earth, their orbits, and the causes of these things. For he said that he did not see any benefit in these things either (and yet even in these he was not uninstructed), and he said that they too were sufficient to exhaust the life of a human being and to hinder one from many beneficial things.

And he turned one away wholly from becoming a worrier about the way in which the god contrives each of the heavenly things. For he held that these things are not discoverable by human beings, and he believed that the one who sought what the gods did not wish to make clear would not gratify them. And he said that the one who was anxious about these things ran the risk of going out of his mind no less than Anaxagoras went out of his mind, he who took the greatest pride in explaining the contrivances of the gods.

For when he said that fire and sun were the same thing he was ignorant of the fact that human beings easily gaze upon the fire but are unable to look directly at the sun; and that those who have the sun shine upon them have darker skin, but not those who have fire shine on them. And he was ignorant also of the fact that none of the things growing from the earth could nobly increase in size without the sun's ray, but that they all perish when heated by fire. And when he asserted that the sun is a glowing stone he was ignorant also of this, that a stone in fire neither shines nor holds out for a long time, while the sun persists through all time while shining most brightly of all.

He bade them also to learn calculations. And in these, similarly to the others, he bade them to be on their guard against vain involvement in the matter, but as far as what was beneficial, he himself both examined and went through everything with his companions.

He also vehemently turned his companions toward attending to their health by learning from those who know how, as much as was possible, and by each one turning his mind to himself through his whole life, that is, to which food or which drink or what sort of labor was to his advantage and how he might live most healthfully by making use of these things. For he said that someone who turned his mind toward himself in this way would have to work to find a doctor who discerned better than himself what was advantageous for his health.

And if someone wished to be benefited more than in accord with human wisdom, his advice was to attend to divination. For he said that one who knows those things through which the gods give signs to human beings about their affairs would never be bereft of the advice of gods.

## Chapter 8

And if someone thinks that he was proven to be lying about the divine thing, since he was condemned to death by the jurors although he claimed that the divine thing signified to him beforehand what he should and should not do, let him reflect first that he was already at the time so far advanced in age that his life would have ended not much later, even if not then; and next, that he left behind both the part of life that is most burdensome and in which everyone diminishes in their power of thought and that, in place of this, he acquired additional fame by displaying the strength of his soul, both by stating his case most truthfully, most freely, and most justly of all human beings and by bearing his condemnation to death most gently and most courageously.

For it is agreed that no human being within memory has borne death more nobly. For it was necessary for him to live thirty days after the judgment—due to the Delian festival being during that month and the law allowing no one to be put to death by the public until the mission returned from Delos—and during this time he was visible to all his acquaintances living in no way other than during the previous time. And yet previously, of all human beings, he was most admired for living in good spirits and contentedly.

And how could someone die more nobly than in this manner? Or what sort of death would be more noble than the death one dies most nobly? What sort of death would be happier than the most noble? Or what sort would be dearer to the gods than the happiest?

I shall tell also what I heard about him from Hermogenes the son of Hipponicus. For he said that after Meletus had already entered the charge against him and he himself heard him conversing about everything other than the trial, he said to him that he should be examining what his defense would be. At first, he said, “Haven’t I been practicing this all my life, in your opinion?” And when he asked him, “How?” he said that he had continuously done nothing other than thoroughly examine what the just and the unjust things are, while doing the just and refraining from the unjust—which he held to be the noblest practice for a defense.

And, once again, he himself said, “Don’t you see, Socrates, that the Athenian jurors, when annoyed by speech, have already put to death many who committed no injustice and released many who did commit injustice?”

“But, by Zeus, Hermogenes,” he said, “I have already attempted to worry about my defense to the jurors, but the divine thing opposed it.”

And he himself said, “You say things to be marveled at.”

He said, “Do you marvel if it is better in the god’s opinion that

I end my life now? Don’t you know that up to this time I, for my part, would not have yielded to any human being that he lived either a better or more pleasant life than mine? For I think that those live best who best attend to becoming as good as possible, and that those live most pleasantly who most perceive that they are becoming better.

“These things I, for my part, perceived up to this time befalling me, and, encountering the other human beings and comparing myself to the others, I have continued in this judgment about myself. And not only I, but my friends also continue to judge likewise about me, not because they love me (for those who love the others could also make the same judgment about their own friends), but for the very reason that they think that by being in my company they themselves, too, would become best.

“But if I should live longer, perhaps it will be necessary to pay the price of old age, both seeing and hearing less, and thinking more poorly, and ending by being less capable of learning and more forgetful, and becoming worse in the things at which I was better before. Moreover, for one who did not perceive these things life would not be worth living, while for one who did perceive them, how could it not be necessary that he live worse and more unpleasantly?

“Moreover, if indeed I will die unjustly, this would be shameful for those who killed me unjustly. For if committing injustice is shameful, how is it not shameful as well to do anything whatsoever unjustly? But, for me, what is shameful in the inability of others to judge or to do what is just concerning me?

“And, for my part, I see also that the opinion held of the human beings who have come before, among those who come after, is not alike for those who have committed injustice and for those who suffered injustice. And know that I shall indeed obtain attentiveness from human beings, even if I die now, which is not the same as there will be for those who kill me. For I know that it will always be witnessed on my behalf that I, for my part, never committed an injustice against any human being, nor made one worse, but that I always tried to make my companions better.”

These were the sort of things he conversed about both with Hermogenes and with the others.

Of those who knew Socrates—what sort he was—all who desired virtue even now still continue to long for him most of all, on the grounds that he was most beneficial with regard to attending to virtue. In my opinion, to be sure, inasmuch as he was such as I have described—so pious as to do nothing without the gods’ judgment; so just as to harm no one, not even a little, and to benefit to the greatest extent those who dealt with him; so continent as never to choose what was more pleasant in place of what was better; so prudent as not to make mistakes in deciding what was better and worse, nor to need another in addition, but to be self-sufficient in his judgment of these matters; and competent also to say and to define such things in speech; and competent as well to test others and to refute them when they made mistakes, and to turn them toward virtue and gentlemanliness (nobility and goodness)—he was such as a most good and happy man would be. And if these things do not please someone, let him decide by comparing the character of others with these things.

# Halcyon

Translated by Brad Inwood.

---

Chaerephon:: Socrates, what was that voice that reached us from way down along the beach, under the headland? It was so sweet to my ears! What creature can it be that makes that sound? Surely creatures that live in the sea are silent.

Socrates:: It's a sort of sea bird, Chaerephon, called the halcyon, much given to lamenting and weeping. There is an ancient account about this bird, which was handed down as a myth by men of old. They say that it was once a woman, the daughter of Aeolus the son of Hellen, who ached with love and lamented the death of her wedded husband, Ceyx of Trachis, the son of Eosphorus the Dawn Star—a handsome son of a handsome father. And then, through some act of divine will, she grew wings like a bird and now flies about the sea searching for him, since she could not find him when she wandered all over the face of the earth.

Chaerephon:: Is it Halcyon that you're referring to? I had never heard the voice before; it really did strike me as something exotic. Anyway, the creature certainly does produce a mournful sound. About how big is it, Socrates?

Socrates:: Not very large. Yet great is the honor she has been given by the gods because of her love for her husband. For it's when the halcyons are nesting that the cosmos brings us what are called the 'halcyon days' in mid-winter, days distinguished for their fair weather—today is an especially good example. Don't you see how bright the sky above is and how the whole sea is calm and tranquil, like a mirror, so to speak?

Chaerephon:: You're right; today does seem to be a halcyon day, and yesterday was much like it. But by the gods, Socrates! How can we actually believe those ancient tales, that once upon a time birds turned into women or women into birds? All that sort of thing seems utterly impossible.

Socrates:: Ah, my dear Chaerephon, we seem to be utterly short-sighted judges of what is possible or impossible—we make our assessment according to the best of our human ability, which is unknowing, unreliable, and blind. Many things which are feasible seem, to us, not feasible, and many things which are attainable seem unattainable—often because of our inexperience, and often because of the childish folly in our minds. For in fact all human beings, even very old men, really do seem to be as foolish as children, since the span of our lives is small indeed, no longer than childhood when compared with all eternity. My good friend, how could people who know nothing about the powers of the gods and divinities, or of nature as a whole, possibly tell whether something like this is possible or impossible?

Did you notice, Chaerephon, how big a storm we had the day before yesterday? Someone pondering those lightning flashes and thunderbolts and the tremendous force of the winds might well be struck by fear; one might have thought the whole inhabited world was actually going to collapse. But a little later there was an astounding restoration of fair weather which has lasted right up to the present moment. Do you think, then, that it is a greater and more laborious task to conjure up this kind of fair weather out of such an overwhelming storm and disturbance and to bring the entire cosmos into a state of calm, than it is to reshape a woman's form and turn it into a bird's? Even our little children who know how to model such things out of clay or wax can easily work them into all kinds of shapes, all out of the same material. Since the divinity possesses great power, incomparably greater than ours, perhaps all such things are actually very easy for it. After all, how much greater than yourself would you say that the whole of heaven is?

Chaerephon:: Socrates, who among men could imagine or find words for anything of the sort? Even to say it is beyond human attainment.

Socrates:: When we compare people with each other, do we not see that there are vast differences in their abilities and inabilities? Adult men, when compared to mere infants who are five or ten days old, have an amazing superiority in their ability at virtually all the practical affairs of life, those carried out by means of our sophisticated skills as well as those carried out by means of the body and soul; these things cannot, as I said, even cross the minds of young children. And how immeasurably superior is the physical strength of one man grown to full size, compared to them, for one man could easily vanquish thousands of such children; and it is surely natural that in the initial stages of life men should be utterly helpless and incapable of anything. When one person, as it seems, is so far superior to another, how are we to suppose that the powers of the whole heaven would appear, compared with our powers, to those who are capable of grasping such matters? Perhaps indeed many people will think it plausible that, just as the size of the cosmos surpasses the form of Socrates or Chaerephon, so its power and wisdom and intelligence will to the same degree surpass our condition.

For you and me and many others like us, many things are impossible which are quite easy for others to do. For as long as they lack the knowledge, it is more impossible that people who cannot play the flute should do so or that the illiterate should read or write, than it is to make women out of birds or birds out of women. Nature virtually tosses into a honeycomb an animal which is footless and wingless; then she gives it feet and wings, adorns it with all kinds of variegated and beautiful colors and so produces a bee, wise producer of heavenly honey; and from mute and lifeless eggs she shapes many species of winged, walking and water-dwelling animals, using (as some say) the sacred arts of the vast aether. We are mortal and utterly trivial, unable to see clearly either great or small matters and in the dark about most of the things which happen to us; so we could not possibly make any reliable claim about the mighty powers of the immortals, whether as regards halcyons or as regards nightingales.

O bird of musical lamentations, I shall pass on to my children the far-famed myth about your songs just as I received it from my ancestors, and I shall sing frequently to my wives, Xanthippe and Myrto, of your piety and loving devotion to your husband, with special emphasis on the honor you received from the gods. Will you too do something like this, Chaerephon?

Chaerephon:: That would certainly be appropriate, Socrates, and what you say is a double exhortation to the bond between husbands and wives.

Socrates:: Well, now it's time to bid farewell to Halcyon, and go on to the city from Cape Phaleron.

Chaerephon:: Certainly; let's do so.

## Dialectic

Saturday, July 30, 2022

Dialectic is the factual evolutionary response to the death of a species. To prove it, ask your computer, how many parts of speech does it use to manage all information? The result is just two, just two parts of speech as Plato noted noun, correlative, and verb, the relative: the verb has another name, behavior. Plato called it Dialectic, today we call it Binary Information Processing. A mind is that life support system of man which is aimed at the survival of mankind, by learning all behavior and using that knowledge for self defense. Dialectic is based on biological fact, we can only name a thing's shape or form, which Plato called a noun, and we can only name a thing's relative difference, which Plato called a verb, also known as behavior. The verb, just like the body's own sense systems, is metaphorical, a fact denied by so-called linguist, semanticists, and grammarians today.

One can then, by biological fact, state; Dialectic is the Grammar of the Living.

The following, one might notice is a misquote of Plato, it is not subject and verb, but noun and verb. One might also note, the author's do not know the difference between the two words, Language and Grammar. Language cannot be learnt, it is a biological given. The intelligence of a species is determined by that species ability to take advantage of that given.

"Grammar is a very old field of study. Did you know that the sentence was first divided into subject and verb by Plato, the famed philosopher from ancient Greece? That was about 2,400 years ago! Ever since then, students all over the world have found it worthwhile to study the structure of words and sentences. Why? Because skill in speaking and writing is the hallmark of all educated people. *Basic English for English Language Learners* by Anne Seaton and Y. H. Mew, 2007

One does not study words and sentences but by biological fact, we study survival by the application of proofing our behavior in order to determine the best response so that we can survive. This is one example of a mountain of gibberish concerning grammar. Grammar today is simply a confession that Plato taught Dialectic, but still mankind today is still too simple minded to even read.

From the metaphors of the Bible, to the computer age, one can trace the evolution of Language in the human mind as expressed in grammar. Plato explained in *Phaedrus*, that a good writer can write on two levels, which turn out to be the only two levels of equality available in information processing, arithmetic and geometric, also known by the name pairs of literal and metaphorical. Interesting is that the Bible uses this very same technique to seal the Book until a certain time in human history, until after a single voice of God is heard around the world, i.e. the computer and the author of that Book used dialectic even beyond the ability of Plato. The writer actually layered these in the sentences themselves, i.e. it is the intelligence of the reader that determines, just like in vision, the level of their blindness. To the simple minded, the metaphorical content is completely invisible.

Dialectic, means binary information processing based on the binary format of the physical world, a things shape and the material within that shape. Plato called these *noun* for the shape or limit, and *verb* for the material difference and was using it as another common word, behavior. This use of grammar is also called, Psycholinguistics. Plato also demonstrates true psychological therapy with it called Confrontational Therapy, where the patient is brought face to face with a schism in their own mind which they have to resolve to proceed. The same technique used in proofing and learning by proofing. The same technique used in true Lucid Dreaming. Language is a biological given, however an intelligent species which recognizes language, can turn language into perceptible systems of grammar whose sole purpose is learning to manage behavior, of ourselves and of the Universe. Mathematics is actually behavioral management using the verb, the relative difference is also called behavior. Thus, one can say that a thing is a relative constrained by correlatives, or that a thing is a standard of behavior, or again, a thing is a definition.

The noun is not a verb, the verb is not a noun, i.e. the perceptible is not the intelligible, nor is the intelligible the perceptible. The perceptible, sense information, is an analog data stream, grammar systems allow us to parse and reparse that data for maximum comprehension and utility. Thus, the verb, in every system of grammar, is metaphorical, just like one's senses.

In short, it is by grammar alone, one exhibits their ability to distinguish between, to separate, body and mind as our own body's senses are recursively used to provide us with all analog information, i.e. the verb: our own body is proof that all information is metaphorical.

Binary produces exactly four categories of grammar, Common Grammar, Arithmetic, Algebra and Geometry, i.e. computational ability in four specific grammars which only differ in the symbol set and a particular method of binary recursion. Thus, our own body, tells us that all information is processed in one, and only one, manner which is itself metaphorical, i.e. every system of judgment, of grammatical computation, is based on binary metaphor.

Used in psycholinguistics, a master grammarian can use both types of equality in writing, as the object is the standardization of social behavior; however, it is the level of savagery, in all cases, which determine the effectiveness of grammar processing. Therefore treat Plato's dialogs as learning or attempting to learn, functional grammar.

Language is Universal and Intelligible, Grammar is Particular and Perceptible. Therefore, binary is a pure universal language which affords a sapient species, four perfect categories of grammar, a Grammar Matrix which even today has not been accomplished, so, there you have it, the Bible is provably correct, and, long prior to Plato. Socrates and Plato were actually a Conjugate Binary Pair of Prophets, by Biblical definition. Socrates was not to write the Grammar, and Plato was to put Socrates into metaphor.

Mankind, as it turns out, has never been able to test reading comprehension and never has produced a correct grammar book.

Grammar is the application of Psycholinguistics by which one learns behavioral management through Confrontational Therapy, in order to remove the schism of ignorance in our own mind, and in our own behavior which produces behavior by which we can manage our entire biosphere. Grammar is the successful application of the Intelligible and Universal Binary, called a Pure Language, which produces exactly four perfect categories of Grammar, Common Grammar, Arithmetic, Algebra and Geometry, each of them specifically designed for behavioral management over the whole of the perceptible and the intelligible. A sapient mind is the most powerful life support system possible, for it allows for the management of behavior over the whole of the perceptible.

Thus, by biological fact, mankind has been given, one and only one science to master, behavioral science afforded by dialectic, a science which is absolutely provable, and absolutely metaphorical, and is absolutely provable to manage the whole of one's environment.

# PLATO in the Nude.

Introduction by John Clark,

9/24/2020

A mind is one of the life support systems of the body, therefore it has a well defined biologically determined job to perform and well defined physically determined means of doing that job. Grammar systems allow for the recursion of memory; therefore, standards in grammar are a biological imperative for survival. Plato discovered that all of grammar is Dialectical, i.e. in today's terminology, effected by binary recursion. What this means is that by binary recursion there are two and only two parts of speech derived from the limits of a thing, or again their boundary, or again their shape or form, and the relative difference within those boundaries. And again, by binary recursion, there are only four systems of grammar possible: Common Grammar, Arithmetic, Algebra and Geometry. Plato spent his life in trying to figure out how to put together the Grammar Matrix by which a mind functions, and what we have today, is ruminants of his efforts. But never forget, functional grammar systems, all of which function by binary recursion, is a biological imperative to construct during our evolution. Plato is a very important part of that evolution. Dialectic means, binary memory recursion through grammar systems. Keep in mind that in Plato's time, they did not even have a toilet.

## The Focus of Plato as a Grammar Teacher

The first is the relationship between body and mind, perception and conception:

*By the development of intelligence in the soul and vision and hearing in the head as the crowning endowment of each. To put it concisely, when intelligence is fused into a unity with these noblest of the senses, they constitute what we have every right to call a creature's salvation. Laws*, by Plato

In short, the intelligible and the perceptible are a conjugate binary pair, and so are intelligence and perception.

The second is the answer to *What is intelligence*?

Every thing is defined in terms as the limits, the shape, of a thing, and the relative or material difference within those limits. This is an intelligible binary relationship called a relative constrained by correlatives.

Since the Universe is the sum of all possible things, the Universe is then established by binary recursion. It is wholly impossible for binary recursion to produced a non-binary result. Binary recursion also produces four, and only four specific categories of grammar, Common Grammar, Arithmetic, Algebra and Geometry. Plato spent his life trying to develop the Grammar Matrix, but although he fell somewhat short of it, he made a very solid beginning. Plato was developing grammar in accordance with biological and physical fact.

Dialectic means binary information processing, grammar in accordance with two together; not two people, but the two elements of a thing. So that when you hear the word dialectic as Plato's Dialectic, or so and so's dialectic, you are just being introduced to just another illiterate person. As binary recursion is a physical fact, grammar by binary recursion is also by physical fact. Grammar is discovered, not invented.

The Bible uses these facts to construct metaphor for Guided Evolution. When a mind can read the metaphor, dialectic becomes knowledge of Universal Standards of Information Exchange, or what we all First Contact Protocol.

Here is an example: as the definition of a thing is a Universal Constant, an expression of every possible thing, one can put it into the metaphor as God. When one becomes a functionally literate species, they are then children of God. Very nice metaphor. The Bible, cover to cover, resolves all of the metaphors to simple physical and biological fact. To the simple minded, it creates stress, stress is used for evolution. The Bible is a masterpiece of psycholinguistics. Plato uses metaphor in a very similar manner. Both the Bible and Plato, and so do I, work on biological fact; A mind is the most powerful life support system of a life form, and that is what we develop as fact.

## Let no one ignorant of Geometry Enter Here

Plato was a grammar teacher. Have you ever asked what geometry has to do with the ability to learn grammar? Why did Plato call his teachings in grammar Dialectic?

## Dialectic

Although People say that Plato taught philosophy, they forget, never learnt, never had the wit, to know that to know a name without its definition, that one does not know a thing at all. Thus, people use the word philosophy go one to claim that even nonsense itself is philosophy.

> Socrates:: Hear then, my dream, no matter whether it has passed through the gate of horn or ivory. For if temperance ruled us ever so much, would it not, being such as we have now defined it, be acted upon according to the sciences; and neither would he, who boasts to be a pilot when he is not, deceive us; nor would a physician, or a general of an army, or any other person, who pretends to know that, which he does not know, lie hid from us. But from this state of things something else would happen to us; for our bodies would be more healthy than at present, and we should be preserved, when in danger at sea and in war; and all our utensils and garments, and all our shoes, and all the necessaries of life, all things else, would be made more scientifically through our employing true artists. And if you are willing, let us grant that prophecy is the science of that which is to be; and that temperance, presiding over it, turns away the boastful diviners, but appoints over us the true prophets of things to come. Furnished then in this way, the human race would, I concede, act and live scientifically. For temperance being our guard, it would not permit ignorance to interfere and cooperate with us. But that, by acting

> scientifically, we should do well and be happy, this, friend Critias, I am not yet able to understand. *Charmides* by Plato, George Burges.

One of the earmarks of Plato's style in writing is his presentation of the greatest contrasts between a perceptible and an intelligible. Alcibiades, the greatest desire rule the world, Eryxias, the greatest wealth, Charmides, the greatest personal beauty, Euthydemus, the greatest fighters, Hippias, the wisest, etc. These contrasts between the perceptible and the intelligible is one of the things one has to actively seek to comprehend. Sometimes the greatest contrast between a perceptible and intelligible is easy to see, but it is actively demonstrated; for example, the Apology in being and not being, life and death, Cratylus, where the length and detail about the meaning of words actually resolves to the fact that names, in of themselves have no meaning, yet the science of Etymology is effected by a bloat of non-sense. As every possible grammar system is a method of utilizing binary and binary recursion it would make as much sense to trace the etymology of every number in arithmetic, every algebraic symbol and every segment in geometry. Our job, as a mind, is the recursion of memory which affords us the true art of prophecy. An intelligent person studies Plato to help lay down the foundation of that art in our mind, the effective recursion of memory in order to maintain and promote life. If one is a bit slow and does not recognize that grammar systems afford us that ability, then they are slow indeed.

Thus, we find in Plato, not only the recognition that grammar systems are binary expressions, but also by binary recursion we comprehend the distinction between body and mind, between the perceptible and the intelligible.

On the science of symbols:

> "Most ingenious Theuth, one person is able to give birth to art, another to judge of what amount of detriment or advantage it will be to those who are to use it, and now you, as being the father of letters, out of fondness have attributed to them just the contrary effect to that which they will have. For this invention will produce forgetfulness in the minds of those who learn it through the neglect of memory, for that through trusting to writing, they will remember outwardly by means of foreign marks, and not inwardly by means of their own faculties. So that you have not discovered a medicine for memory, but for recollection. And you are providing for your disciples the appearance and not the reality of wisdom. For hearing many things through your means without instruction, they will appear to know a great deal, although they are for the most part ignorant, and will become troublesome associates, through thinking themselves wise instead of being so." ~
>
> But, in my opinion, a far more noble employment results from this, when a man availing himself of dialectic art, on meeting with a congenial soul, plants and sows scientific discourses which are able to aid both themselves and him that planted them, and are not unfruitful but contain seed within themselves, from whence others springing up in other minds are able to make this seed immortal, and make their possessor happy as far as it is possible for man to be so. *Phaedrus* by Plato, Henry Cary.
>
> Now I myself, Phaedrus, am a lover of these processes of division and bringing together, as aids to speech and thought; and if I think any other man is able to see things that can naturally be collected into one and divided into many, him I follow

> after and walk in his footsteps as if he were a god. And whether the name I give to those who can do this is right or wrong, God knows, but I have called them hitherto dialecticians. *Phaedrus* by Plato, H. N. Fowler
>
> Indeed! Let our previous remarks help you to a conclusion. If unity, in and by itself, is thoroughly grasped by the sight or any other sense, like the finger we spoke of, it cannot possess the quality of drawing the mind towards real existence. But if some contradiction is always combined with it in all its manifestations, making it appear the opposite of unity quite as much as unity itself, in that case a critic will be immediately required, and the mind will be compelled to puzzle over the difficulty, and stir up the inward faculty of thought to the investigation, and put the question, What, after all, is unity in itself? And thus the study of the unit will be one of the things which turn and lead us to the contemplation of real existence. *Republic* by Plaot, Davies and Vaughan

Every fundamental principle of symbolic information processing using the fact that every possible grammar is a method of utilizing binary addressing is found in the *Dialogs* of Plato as what he meant by Dialectic; yet today, over twenty-five centuries later, the human race is still proto-linguistic, and still has not produced even one correct grammar book.

With the advent of the computer, people should be familiar with the idea of binary information processing. The computer can process any information and encoded by any grammar because every possible grammar is just another way to use binary. Binary is derived from observable physical fact. The name binary is of Latin origins, etymology: Late Latin binarius from bini ‘two together’. However, the Greek term is dialectic, the two elements of a thing which produce art or science of every possible grammar.

As every thing is expressible as a binary, this means, contrary to what simple minded grammarians claim, is that there are, as Plato noted, two, and only two, parts of speech.

Add into the mix that a mind is a life support system which functions in accordance with this binary, we have the factual basis for psychology which Plato recognized as an art; some would say a science.

The awareness of binary comes from our own observations and our own body. Every thing is some relative difference between correlatives. That is one way of talking about even the blinking of the eye, or the motion of the hand. Stop, go, stop. Off, on, off. Surface and the material within a surface, a container and the contained, a directory and its content, the one and the many, the similar idea in the many examples, a class and the members of a class, a noun and a verb, a point and a line, arithmetic identity and geometric identity. This single intelligible is observed to divide our own bodies life support systems between those which abstract information in regard to boundaries, and those which abstract material differences. During evolution man first learns the manipulations in the simple manner of arithmetic identity, at a certain point a mind learns to process information in accordance with a geometric identity which has another name, metaphor. In any event, Grammar is the standardization of mental behavior in accordance with binary fact, or again, Language. Psychology is commensurable with the principles of

Language, a simple binary, which are functionally resident in a mind as grammar systems which effect our behavior. It is this factual conceptualization of grammar which Plato called the job of a Dialectician.

Simple minded people cannot see the similar idea in the many examples, they do not think metaphorically. They think in macro's, nouns, not the meaning of the relative differences or verbs. It is called literal, and even stupid, reasoning. Every possible grammar is a binary expression and every possible grammar, when effected correctly, is metaphorical. But this concept of grammar is not available to the simple minded. The simple minded, like everyone else, are constrained by their own evolutionary stage of development. No one can be different than they are in terms of intelligible ability. And so, I will use the translations of the more simple minded of mankind and use the dialogs of Plato as they were intended to be used, as the basics of binary information processing to effect human behavior. The behavior Plato was teaching is the intelligible behavior of symbolic information processing using the unit, a binary. One has to study Plato deeply to learn the very complex science of grammar that he was preserving in his dialogs.

Binary provides the only two categories of abstractions, concepts possible and that we can name. We can name only the two elements of a thing, it is by recursion that affords us complex expressions. One can say that every possible grammar provides us with a binary address: In Plato we find these binary elements are called a noun and a verb. The combination of these names are methods of addressing memory of our abstractions, our experience, from things in our environment. Grammars are memory management systems which use binary in order to do our biologically defined job. We use the intelligible of binary to process the perceptible binary of our other life support systems and we do it for the same reason, to maintain and promote life.

Plato's dialogs are, as he mentioned in Phaedrus, a method of preserving the science of dialectic, the exercising and understanding of names to do our biologically defined job in accordance with binary, biological, fact. Plato noticed that despite the fact that all mankind uses names, man was wholly ignorant and illiterate as we still are today. There are no correct grammar books today, but we can use the dialogs of Plato as an introduction to binary information processing, to our grammar matrix, itself. Binary recursion gives us exactly four distinct grammar systems; Common Grammar, Arithmetic, Algebra and Geometry.

Grammars are memory management systems for a mind. They afford mankind the art of prophecy and the templates for his every physical and mental behavior. Grammar is afforded to man through Language. Language is a biological given of some one thing. By now you should know that a thing is composed of a relative contained by correlatives, or a relative and an absolute and these, by recursion, are used to produce our behavior as a life support system. The absolute of Language is this binary unit. However, one has to also have the intelligence to recognize it and to recognize its purpose and how it effects our ability to do our biologically defined job. Language is Universal and

Intelligible, while Grammar, effected by binary recursion, is Particular and Perceptible.

Plato, however, is not the first source of deliberate binary information processing lessons that we find in our history. If one could read, could process information correctly using the concepts binary gives to man, they will find that the Bible deliberately implants key concepts to its readers in regard to binary information processing as the salvation of a species; or one can say, a life support system. It is a masterful work in psycholinguistics. And the Bible does something else, it continually tests the reader for their ability to use it. The Bible was deliberately constructed to introduce and test in the human species, binary information processing is the salvation of a species. And factually, it proves that there is intelligent life in the universe, it just does not yet reside on this planet. We are not the only one looking for intelligent life, but between the two factions, only one of them is doing it correctly, the other is mentally dysfunctional due to its stage in evolutionary development and the other virtually farms life. We will always be looking for intelligent life, but eventually we will look for it with the intelligence to cultivate it. If, then, Plato confuses a normal reader such that they can only construct gibberish as to the dialogs, imagine how much more so the Bible whose mastery of metaphor went even beyond the ability of Plato. The Bible is aimed at the entire species by its writers, Plato to those intelligent enough to pursue binary information processing through grammar and smart enough to know that geometry is a perfect binary analog grammar. In the dialogs, Plato will intimate that Geometry is the perfect paradigm for logical reasoning. It is in fact, a perfect analog grammar as part of our grammar matrix.

The Bible repeatedly tells the reader of that Book, that man can neither understand nor read it and that this condition in man's development will remain until man is introduced to a pure language. Again, Language is intelligible, while grammars are perceptible. The Bible, itself, is a grammar book designed for guided evolution. The human race, however, does not, can not, yet recognize it as a grammar book. The Book also claims, that a day will come when man can actually read that Book. We have in our midst an alien artifact constructed by methods we are still incapable of doing. We have not only been given an I.Q. test, but the means to pass it through evolution. This configuration is put into metaphor in the Bible itself, It is the Key to the house of David. In my introduction to the Bible, I solve some specific requirements of the Book to actually use that key. The solutions spoken of in the text is not for one person to perform, but our entire species. I believe that the mark aimed for in the text is at least ten percent of the population.

Today, man's intelligence is still the problem. He still mythologizes the dialogs of Plato and the function and purpose of the Bible. We still do not have even one correct grammar book as a recognized species standard, while also claiming that we know right from wrong, judgment. Only the insane make such claims.

What we have today is the ability to slowly step backwards in time. We can start with the computer, and we can realize that binary is the common element to every expression of language and examine our own body to learn that it is even a biological fact. Then we can sort, and arrange the dialogs of Plato and learn not only how he organized his grammar lessons, but also which dialogs we have in a collection that man claim to be his are actually grammar lessons, and correct grammar lessons concerning dialectic. After doing this, one might find as I did, something interesting, 28 dialogs arranged as binary pairs, or 14, twice the number of life support systems of our body, or again a binary recursion. The Bible puts these seven into a number of metaphors throughout the Bible, all the metaphors are in regard to us as a collection of seven life support systems.

This arrangement is then placed like this; we go back in time, learning how to read and think, so that we can read a message about our future. Our future is in regard to a much larger community than the earth can possibly hold, a civilization of sapient intelligence, all doing their biologically defined job, maintaining and promoting life in the universe, regardless of origins and species, all tied to the fact that our job, as a life support system, hinges on our behavior as processed in binary, good and evil, life and death.

A unit, a thing, is a binary composed of relative differences constrained by absolutes or correlatives. One can call it Quantum Mechanics, but then one is only displaying a form of arrogance thinking that they can reinvent the name binary. Grammar is the correct expression of Quantum Mechanics, or again binary, or yet again, dialectic; what is called Quantum Mechanics today is mythology and gibberish constructed by illiterate minds. Who, in their right mind would even claim that they can encode and decode information about the entire universe, after first displaying that they cannot even write a correct grammar book? Dysfunctional minds are insane. The insane, however, never seem to recognize it.

The ability to process our experiences our memory of the past, provides us the recursive use of that memory, this recursion allows us the ability to predict the results of any behavior: Grammar affords us the ability to standardize, quantify, experience. This has a very old name, the *Art of Prophecy*. It is a very simple concept, and very provable. Your computer proves it to you every time you turn it on. A mind is learning how to predict the future with givens from our past. To claim that the ability to predict the future is impossible amounts to the claim that one cannot construct a simple unit. Prophecy is simply the ability to recursively use a unit using our grammar matrix. This makes the mind the most powerful life support system possible for any species. During our evolution we slowly learn to use names. Eventually, we end up realizing that man is being made to be the Messiah and the savior of the life on this planet. It is a metaphor, of course, but it is also a biological fact. The computer, itself, proves to you what is written in the Bible, too bad you are probably too illiterate to follow the metaphors. The computer also proves to you Plato's claims about grammar; too bad you are probably too illiterate to comprehend Plato.

It is also true that when we do learn to use language effected by its four grammars correctly, that we learn what we thought we knew, we did not know at all. We evolve slowly and during the time the mind is not functional, it is factually delusional and insane. At that point one will find more than once in the Bible, man will realize that what he thought was wisdom, was simply gibberish. This is true of his entire grammatical output, from science to religion and politics.

Those who had the Bible constructed knew this, and even Plato knew it. The insane, however, mostly never even suspect it. They describe themselves as normal, but not in terms of their biologically defined job, an intelligible, but by the perceptible. They manage themselves in a social structure in accordance with so called social norms, just like any other pack animal, they never use a standard of measure to judge their own self proclaimed normalcy. A standard of behavior is another way of describing a unit, or 1. Its only product is human unity which is not observable today.

Have you ever heard or read the statement; What may be predicated of any thing is wholly determined by the definition of that thing. Although it may appear to be complicated, it is one way of expressing the Law of Identity for binary information processing, it means something simple, what is put at a memory address can be retrieved from that memory address. Grammar is for the express purpose of standardizing memory across a species. Survival against the environment is a cooperative venture. Cooperative is simply another name for unity.

It is the illiteracy of man, his stupidity, not even to recognize the law of identity put into other words; Psychology is commensurate with the principles of language which are functionally resident in a mind. Measure then humanity today in accordance with that single biological fact. The unit, upon which every grammar is functional, against the fact that there is not one correct grammar book today, nor any social support for grammar through standards of names today. The human race believes in a delusion, that they are mankind, when it was written that man is being made.

### “Let no one ignorant of Geometry enter here.” Plato

Why would Plato put that up as a condition to enter his school? Geometry is a perfect analog grammar. Today, non-Euclidean geometry as it is called, as if there were such a thing as Euclidean Geometry, is a mainstay of math and science by those who consider themselves to be educated. All of them proving that they are still too stupid to enter Plato’s school. Not one since Plato’s time had the wit to recognize what the *Elements* of Euclid were aiming for, and what it failed to do with the givens it had, devise a geometric grammar capable of performing the whole of mathematics, even the whole of logic. I actually did that myself and you will find that in my work The Delian Quest and Basic Analog Grammar Sample Dictionary. I never had been taught geometry in school, I sat down one day, studying geometry the way I thought it should be studied, with a straightedge and compass by my own hand. I immediately started writing equations to my figures. You will find that in the novel, strange by today's standards, *The Delian Quest*. In solving the Delian Problem and I learnt why it was given and I did solve it, but along the way, I gained enough insight to then develop *Basic Analog Mathematics*, or better put, *Basic Analog Grammar*. Geometry is a universal binary analog grammar. One can proof any other grammar, logical and analogical with it.

Geometry effects its grammar just like every other one, through the establishment of a unit and then by complete induction and deduction. Just like the whole of mathematics. As soon as you deny that simple fact, you begin writing gibberish which is what non-Euclidean Geometers do, and now science has more mystics in its walls than all the churches of the world combined.

What geometry does do, is exactly what one is told in the Bible, it will demonstrate a fact, if you cannot correctly encode and decode information, what you thought you knew, what you thought you proved, will disappear. Mankind is at the time of an evolutionary cusp; it is a time man starts to transcends from being proto-linguistic to becoming functionally linguistic; a time when the wisdom man thought he had disappears; his doctrines and beliefs; his sciences, all gone because he did not even know that there are only two possible parts of speech, just like in a geometric figure: every grammar is a binary expression.

Geometry, provides a one-to-one correspondence between the two intelligible parts of a unit, a conjugate binary pair and is capable of proofing any binary process. It is actually a flow charting method for proofing logic and even other analogical grammar systems. A segment, as a relative between correlatives, is, like every other grammar, wholly metaphorical. It can represent any relative difference. When you apply binary to the two types of identity, we have the segment for arithmetic identity, and the circle affords us geometric identities.

Geometry is also something the mystics claim to be looking for, Quantum Computing. Geometry can process all information in 0-time, which means the output is concurrent with the input, it can do this regardless of the amount of data, and the answers are always exact. This is not possible in logic which is processed step by step, arithmetically.

Quantum Computer Mystics, however, do not even realize that they are attempting to perform this in the wrong grammar system, that of logic. What I show in the Basic Analog Sample Dictionary is how to draw any computer utilizing the domain of any grammar system and that, as soon as you effect an input, you acquire an exact output. I once had a lesson from our alien neighbors to the power and purpose of analog information processing. That lesson had long lasting effects on my mind, not to mention that it also allowed me to still be alive today.

Therefore, among other language projects, I work on the dialogs of Plato, slowing developing them into a recognized introduction to grammar using binary, or dialectic.

One can view a distinction between the life support system called mind, and the other life support systems of the body. Each of them function arithmetically. When they use an environmental resource, they use it up in a one-to-one manner. The intelligible, the mind functions by, increases what it gather's from the environment through recursive application of behavior. This recursive application of environmental resources in order to maintain and promote life, is what is meant by the metaphors of the Bible, being born again, and opening the eyes of the blind; it allows us not only see into the future, but to make that future of life come to pass. Plato will mention, a few times, that dialectic could establish true prophets as grammar concerns predictive life supporting behavior.

## Aristotle on Plato

> After the systems we have named came the philosophy of Plato, which in most respects followed these thinkers, but had peculiarities that distinguished it from the philosophy of the Italians. For, having in his youth first become familiar with Cratylus and with the Heraclitean doctrines (that all sensible things are ever in a state of flux and there is no knowledge about them), these views he held even in later years. Socrates, however, was busying himself about ethical matters and neglecting the world of nature as a whole but seeking the universal in these ethical matters, and fixed thought for the first time on definitions; Plato accepted his teaching, but held that the problem applied not to any sensible thing but to entities of another kind—for this reason, that the common definition could not be a definition of any sensible thing, as they were always changing. Things of this other sort, then, he called Ideas, and sensible things, he said, were apart from these, and were all called after these; for the multitude of things which have the same name as the Form exist by participation in it. Only the name 'participation' was new; for the Pythagoreans say that things exist by imitation of numbers, and Plato says they exist by participation, changing the name. But what the participation or the imitation of the Forms could be they left an open question. *Metaphysics*, Ross.

The end of this statement by Aristotle demonstrates that Aristotle could fixate on a perceptible name, but could not comprehend it in terms of meaning, class membership. The definition, or limit of a thing determines class membership, meaning that class, shape, form, definition, are all synonyms. As part of Plato's education was learning how to see the similar idea in the many examples, i.e. metaphor and how it is effected through synonyms, part of that process deliberately exampled in *Protagoras*, how is it that Aristotle did not even have a hint of this? Furthermore, how is it that certain key dialogs in Plato's works on grammar, Aristotle never even mentions, as if he were wholly unaware of them? Even Aristotle's account of what dialectic is is vastly different than one given in Plato's own works.

> Plato, then, declared himself thus on the points in question; it is evident from what has been said that he has used only two causes, that of the essence and the material cause (for the Forms are the cause of the essence of all other things, and the One is the cause of the essence of the Forms); and it is evident what the underlying matter is, of which the Forms are predicated in the case of sensible things, and the One in the case of Forms, viz. that this is a dyad, the great and the small. Further, he has assigned the cause of good and that of evil to the elements, one to each of the two, as we say some of his predecessors sought to do, e.g. Empedocles and Anaxagoras. *Metaphysics*, Ross

Dyad refers to the two correlatives, both nouns, not the binary.

Now, here, we can check with Plato's own work, for he explicitly stated that in regard to these two-elements of a thing, that all one can do is name them, that neither could be predicated of the other. Aristotle either deliberately lied, or, he had a poor memory after all. If all things, and they are, expressible as dialectical, a noun and a verb, this means in today's terminology, that Plato was teaching binary information processing, which is true and provable grammar; unlike any other grammar teacher, outside of the Bible, who taught that all of judgment is binary. Every grammar is a method of using binary for information processing. The information is the verb, the behavior, not the noun.

The fact that Aristotle, despite the time he supposedly spent at Plato's Academy, left as ignorant about the intelligible as he came in; in all respects, Aristotle did not have the intelligence to comprehend the fact that Plato discovered, and was teaching grammar, all grammar, as a binary expression and as binary recursion. This lack of intelligence is common in the human species even today. Plato was Socrates student, and learnt that what may be predicated of anything is wholly determined by the definition of that thing which means that all of reasoning resolves back to First Principles, the convention of naming in a grammar and the convention by which those names are indexed. In short, binary information processing effects exactly four grammar systems, geometry being the key to them all because grammar of geometry effects its two First Principles by an Arithmetic Equality, i.e. a one-to-one correspondence with the intelligible elements of any thing and the behavior of one's own hand.

It is incredible that one could have spent twenty years at Plato's Academy and not resorting to the intelligible work of Plato, but mostly quote from Plato's Dialogs, real and false, for no one today can say to what use he employed those dialogs. If one were to claim that Plato believed all the dialogs attributed to him as his own philosophy, one would also have to say that Plato had a very debilitating affliction of schizophrenia.

Geometric Equality, also known as proportional equality and metaphorical equality is based on the verb, not the noun, not particular things, but proportional equality, or geometric equality, in the abstract. In the *Gorgias* as in many dialogs, Plato will demonstrate proportional equality in reasoning. It was also the topic of Christ's most famous parables.

**Gorgias:**

> The sages too, say, Callicles, that heaven and earth, gods and men, are held together by communion, friendship, order, temperance, and justice, and for this reason, my friend, they call this universe, order, and not disorder or intemperance. You, however, appear to me not to attend to these things, and this though you are wise; but it has escaped your observation that geometrical equality has great power both among gods and among men; on the contrary you think that every one should strive to get more than others; for you neglect geometry.

If a mind reasons geometrically, as Plato will intimate here, then they will process all of information in the same way, the verb.

**Meno:**

> Socrates:: And this knowledge, which he now possesses, he has either at some time acquired, or has possessed it always?
>
> Meno:: Yes.

> Socrates:: If then he was always possessed of it, he was always a person of knowledge. But if he acquired it at any time, he would not have got it in the present life; or has some one taught him geometry? *For he will act in the very same manner with regard to the whole of geometry*, and *all other matters of learning*. Is there any one then who has taught the boy all this? I ask you; for you ought to know, especially since he was born and bred up in your family.

In short, the principles of grammar are all the same in any system of grammar.

Geometry as a Universal Paradigm upon which every grammar can be proofed using is found here, and as Plato constantly does, he is drawing a distinction between the perceptible and the intelligible. Everyone has access to the perceptible, however, not everyone has the same access to the intelligible.

**Republic:**

> Glaucon:: You mean geometry?
>
> Socrates:: Exactly so.
>
> Glaucon:: Clearly, we are concerned with that part of geometry which relates to war; for in pitching a camp, or taking up a position, or closing or extending the lines of an army, or any other military maneuver, whether in actual battle or on a march, it will make all the difference whether a general is or is not a geometrician.
>
> Socrates:: Yes, but for that purpose a very little of either geometry or calculation will be enough; the question relates rather to the greater and more advanced part of geometry—whether that tends in any degree to make more easy the vision of the idea of good; and thither, as I was saying, all things tend which compel the soul to turn her gaze towards that place, where is the full perfection of being, which she ought, by all means, to behold.
>
> Glaucon:: True.
>
> Socrates:: Then if geometry compels us to view being, it concerns us; if becoming only, it does not concern us?
>
> Glaucon:: Yes, that is what we assert.
>
> Socrates:: Yet anybody who has the least acquaintance with geometry will not deny that such a conception of the science is in flat contradiction to the ordinary language of geometricians.
>
> Glaucon:: How so?
>
> Socrates:: They have in view practice only, and are always speaking, in a narrow and ridiculous manner, of squaring and extending and applying and the like—*they confuse the necessities of geometry with those of daily life*; *whereas knowledge is the real object of the whole science*.
>
> Glaucon:: Certainly.
>
> Socrates:: Then must not a further admission be made?
>
> Glaucon:: What admission?
>
> Socrates:: *That the knowledge at which geometry aims is knowledge of the eternal*, and *not of aught perishing and transient*.
>
> Glaucon:: That, may be readily allowed, and is true.
>
> Socrates:: Then, my noble friend, geometry will draw the soul towards truth, and create the spirit of philosophy, and raise up that which is now unhappily allowed to fall down.
>
> Glaucon:: Nothing will be more likely to have such an effect.

> Socrates:: *Then nothing should be more sternly laid down than that the inhabitants of your fair city should by all means learn geometry.* Moreover the science has indirect effects, which are not small.
>
> Glaucon:: Of what kind?
>
> Socrates:: There are the military advantages of which you spoke, and in all departments of knowledge, as experience proves, any one who has studied geometry is infinitely quicker of apprehension than one who has not.
>
> Glaucon:: Yes indeed, there is an infinite difference between them.

In other words, the metaphorical application over the arithmetical application. Yet, if you follow the development of geometry after Plato, who do you find who viewed it as metaphorical and not literarily: Galileo, but definitely not Einstein. Einstein proudly bragged that he did not understand it.

The above quote should also inform one that Plato was wholly concerned not with the perceptible but with the intelligible. This fact, among many in the dialogs, not only contradict Aristotle, but all of those who claim to be believers in Plato's so called philosophy by simply being able to quote him and spin yarns about what he was teaching. Plato was a grammar teacher, and to date, not one Platonic scholar has arisen from his teaching.

Now you should know why, Let no one ignorant of Geometry enter here, was a mandate to Plato's Academy and one should be asking themselves, how is it that Aristotle never comprehended a man he claimed to be one of his teachers? How is it that Aristotle had no more of an understanding of Plato than any other simple minded person who reads his dialogs? Aristotle never elucidates any direct experience with Plato whatsoever in his works. I find that very odd. Forging educational credentials is a very old practice, and it makes me wonder about the real association between Plato and Aristotle. I do not see how twenty years at Plato's school could leave one as clueless as Aristotle. Aristotle never even mentions one of his classmates.

## Plato on the Elements of a Thing

At the foundation of every system of grammar are the intelligible elements of a thing, and thus for any grammar whatsoever:

“SOCRATES: Let me give you, then, a dream in return for a dream:—Methought that I too had a dream, and I heard in my dream that the primeval letters or elements out of which you and I and all other things are compounded [i.e. as in the perceptible so too the intelligible,] have no reason or explanation; you can only name them, but no predicate can be either affirmed or denied of them, for in the one case existence, in the other non-existence is already implied, neither of which must be added, if you mean to speak of this or that thing by itself alone. [relative and correlative and like every grammar, is based on a convention of names, a noun is not a verb, and a verb is not a noun] It should not be called itself, or that, or each, or alone, or this, or the like; for these go about everywhere and are applied to all things, but are distinct from them; [i.e. the elements of a thing, perceptible and intelligible, are not a thing of which they are the elements used for binary recursion] whereas, if the first elements could be described, and had a definition of their own, they would be spoken of apart from all else. [i.e. grammar is not an infinite loop of names, but start as a binary, recursively applied by the convention of names] But none of these primeval elements can be defined; they can only be named, for they have nothing but a name, and the things which are compounded of them, as they are complex, are expressed by a combination of names, for the combination of names is the essence of a definition [Tom = a cat, noun equals noun and verb.] Thus, then, the elements or letters are only objects of perception, and cannot be defined or known; but the syllables or combinations of them are known and expressed, and are apprehended by true opinion. When, therefore, any one forms the true opinion of anything without rational explanation, you may say that his mind is truly exercised, but has no knowledge; for he who cannot give and receive a reason for a thing, has no knowledge of that thing; but when he adds rational explanation, then, he is perfected in knowledge and may be all that I have been denying of him. Was that the form in which the dream appeared to you?” THEAETETUS, by Plato, Jowett. (1892)

All you can do is name those elements. In Common grammar, the naming convention is relative and the indexing system is relative; this means that until one has constructed a socially recognize authoritative dictionary, then the principles of that grammar are not being met. It also means that there are two, and only two, parts of speech in every grammar.

### Plato on Names:

Socrates:: I think that you will acknowledge with me that one principle is applicable to all names, primary as well as secondary—when they are regarded simply as names, there is no difference in them. [nouns and verbs]

Socrates:: How real existence is to be studied or discovered is, I suspect, beyond you and me. But we may admit so much, that the knowledge of things is not to be derived from names. No, they must be studied and investigated in themselves. [The perceptible is not the intelligible, and the intelligible is not perceptible, i.e. as he has said a number of times, words are not the data, i.e. words are indexing systems for memory management.]

Cratylus:: Clearly, Socrates.

Socrates:: Well, but do you not see, Cratylus, that he who follows names in the search after things, and analyzes their meaning, is in great danger of being deceived?

Whether there is this eternal nature in things, or whether the truth is what Heraclitus and his followers and many others say, is a question hard to determine, and no man of sense will like to put himself or the education of his mind in the power of names. Neither will he so far trust names or the givers of names as to be confident in any knowledge which condemns himself and other existences to an unhealthy state of unreality; he will not believe that all things leak like a pot, or imagine that the world is a man who has a running at the nose.

Grammars are indexing systems for memory, for experience. Those who claim that words, names, can take the place of experience, that we learn from books, is a person of no sense, they are wholly delusional.

The fundamentals of grammar are then ridiculously simple. The binary of Language effects standards of behavior called grammar systems. These systems are effected by standards of behavior starting with the naming conventions for each. The consequence of the naming convention does produce considerable study, but each resolve back to the original convention of names. Each and every one of them resolves back to the intelligible binary unit. Each and every one of them is a method of binary memory mapping. Not one of them imparts the knowledge of the world around us, the experiences required to learn. An index to a memory location is not the information stored at that location.

## A Point is that which has no Part

How many relatives exist between any pair of correlatives?

Protagoras:

Socrates:: Then every opposite has one opposite only and no more?

He assented.

Between any pair of correlatives, there is one, and only one, relative difference. When we parse the relative differences in a group, we also have to denote the correlatives specific to them.

What does this mean for geometry? Well, for one thing you can tell someone has absolutely no intelligence for geometry in the abstract. They use terms like straight-lines, curved-lines and have absolutely no clue that they are talking about something perceptible. They even say such gibberish as, a line is composed of an infinite number of points. They tell you that words of logical grammar systems can prove the words of a geometric figure. They postulate existences, and simple standards of behavior. So, does a verb consist of an infinite number of nouns? Give a guy an apple and a knife, and he will get his PhD. or even a whole wall of them if he wishes it.

## Induction and Deduction

Every possible grammar is a method of utilizing binary for memory manipulation. Therefore, at the outset, one has to not only learn the convention by which symbols are constructed but also how they are indexed. One can view the Dialogs of Plato as examinations into how we index names in accordance with a function which they perform.

# Excerpts From A Short Account Of The History Of Mathematics

by Ball, W. W. Rouse (Walter William Rouse), 1850-1925.

Pythagoras himself did not publish any books; the assumption of his school was that all their knowledge was held in common and veiled from the outside world, and, further, that the glory of any fresh discovery must be referred back to their founder. Thus Hippasus (circ. 470 B.C.) is said to have been drowned for violating his oath by publicly boasting that he had added the dodecahedron to the number of regular solids enumerated by Pythagoras. Gradually, as the society became more scattered, this custom was abandoned, and treatises containing the substance of their teaching and doctrines were written. The first book of the kind was composed, about 370 B.C., by Philolaus, and we are told that Plato secured a copy of it.

**Archytas**.[1] *Archytas*, circ. 400 B.C., was one of the most influential citizens of Tarentum, and was made governor of the city no less than seven times. His influence among his contemporaries was very great, and he used it with Dionysius on one occasion to save the life of Plato.

He introduced various mechanical devices for constructing curves and solving problems. These were objected to by Plato, who thought that they destroyed the value of geometry as an intellectual exercise, and later Greek geometricians confined themselves to the use of two species of instruments, namely, rulers and compasses.

---

[1] See Allman, chap. iv. A catalogue of the works of Archytas is given by Fabricius in his *Bibliotheca Graceca*, vol. i, p. 833: most of the fragments on philosophy were published by Thomas Gale in his *Opuscula Mythologia*, Cambridge, 1670; and by Thomas Taylor as an Appendix to his translation of Iamblichus's *Life of Pythagoras* London, 1818. See also the references given by Cantor, vol. i, p. 203.

---

Hippias devised an instrument to construct the curve mechanically; but constructions which involved the use of any mathematical instruments except a ruler and a pair of compasses were objected to by Plato, and rejected by most geometricians of a subsequent date.

---

**The Schools of Athens and Cyzicus**. The history of the Athenian school begins with the teaching of Hippocrates about 420 B.C.; the school was established on a permanent basis by the labours of Plato and Eudoxus; and, together with the neighbouring school of Cyzicus, continued to extend on the lines laid down by these three geometricians until the foundation (about 300 B.C.) of the university at Alexandria drew thither most of the talent of Greece.

---

Eudoxus, who was amongst the most distinguished of the Athenian mathematicians, is also reckoned as the founder of the school at Cyzicus. The connection between this school and that of Athens was very close, and it is now impossible to disentangle their histories. It is said that Hippocrates, Plato, and Theaetetus belonged to the Athenian school; while Eudoxus, Menaechmus, and Aristaeus belonged to that of Cyzicus. There was always a constant intercourse between the two schools, the earliest members of both had been under the influence either of Archytas or of his pupil Theodorus of Cyrene, and there was no difference in their treatment of the subject, so that they may be conveniently treated together.

---

The other problem to which Hippocrates turned his attention was the duplication of a cube, that is, the determination of the side of a cube whose volume is double that of a given cube.

This problem was known in ancient times as the Delian problem, in consequence of a legend that the Delians had consulted Plato on the subject. In one form of the story, which is related by Philoponus, it is asserted that the Athenians in 430 B.C., when suffering from the plague of eruptive typhoid fever, consulted the oracle at Delos as to how they could stop it. Apollo replied that they must double the size of his altar which was in the form of a cube. To the unlearned suppliants nothing seemed more easy, and a new altar was constructed either having each of its edges double that of the old one (from which it followed that the volume was increased eightfold) or by placing a similar cubic altar next to the old one. Whereupon, according to the legend, the indignant god made the pestilence worse than before, and informed a fresh deputation that it was useless to trifle with him, as his new altar must be a cube and have a volume exactly double that of his old one. Suspecting a mystery the Athenians applied to Plato, who referred them to the geometricians, and especially to Euclid, who had made a special study of the problem. The introduction of the names of Plato and Euclid is an obvious anachronism. Eratosthenes gives a somewhat similar account of its origin, but with king Minos as the propounder of the problem.

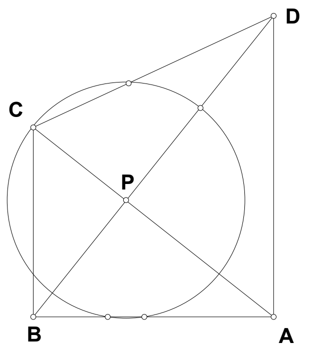
---

**Plato**. The next philosopher of the Athenian school who requires mention here was *Plato*. He was born at Athens in 429 B.C., and was, as is well known, a pupil for eight years of Socrates; much of the teaching of the latter is inferred from Plato's dialogues. After the execution of his master in 399 B.C. Plato left Athens, and being possessed of considerable wealth he spent some years in travelling; it was during this time that he studied mathematics. He visited Egypt with Eudoxus, and Strabo says that in his time the apartments they occupied at Heliopolis were still shewn. Thence Plato went to Cyrene, where he studied under Theodorus. Next he moved to Italy, where he became intimate with Archytas the then head of the Pythagorean school, Eurytas of Metapontum, and

Timaeus of Locri. He returned to Athens about the year 380 B.C., and formed a school of students in a suburban gymnasium called the "Academy." He died in 348 B.C.

Plato, like Pythagoras, was primarily a philosopher, and perhaps his philosophy should be regarded as founded on the Pythagorean rather than on the Socratic teaching. At any rate it, like that of the Pythagoreans, was coloured with the idea that the secret of the universe is to be found in number and in form; hence, as Eudemus says, "he exhibited on every occasion the remarkable connection between mathematics and philosophy." All the authorities agree that, unlike many later philosophers, he made a study of geometry or some exact science an indispensable preliminary to that of philosophy. The inscription over the entrance to his school ran "Let none ignorant of geometry enter my door," and on one occasion an applicant who knew no geometry is said to have been refused admission as a student.

Plato's position as one of the masters of the Athenian mathematical school rests not so much on his individual discoveries and writings as on the extraordinary influence he exerted on his contemporaries and successors. Thus the objection that he expressed to the use in the construction of curves of any instruments other than rulers and compasses was at once accepted as a canon which must be observed in such problems. It is probably due to Plato that subsequent geometricians began the subject with a carefully compiled series of definitions, postulates, and axioms. He also systematized the methods which could be used in attacking mathematical questions, and in particular directed attention to the value of analysis. The analytical method of proof begins by assuming that the theorem or problem is solved, and thence deducing some result: if the result be false, the theorem is not true or the problem is incapable of' solution: if the result be true, and if the steps be reversible, we get (by reversing them) a synthetic proof; but if the steps be not reversible, no conclusion can be drawn. Numerous illustrations of the method will be found in any modern text-book on geometry. If the classification of the methods of legitimate induction given by Mill in his work on logic had been universally accepted and every new discovery in science had been justified by a reference to the rules there laid down, he would, I imagine, have occupied a position in reference to modern science somewhat analogous to that which Plato occupied in regard to the mathematics of his time. The following is the only extant theorem traditionally attributed to Plato. If *CAB* and *DAB* be two right-angled triangles, having one side, *AB*, common, their other sides, *AD* and *BC*, parallel, and their hypotenuses, *AC* and *BD*, at right angles, then, if these hypotenuses cut in *P*, we have *PC* : *PB* = *PB* : *PA* = *PA* : *PD*. This theorem was used in duplicating the cube, for, if such triangles can be constructed having *PD* = 2*PC*, the problem will be solved. It is easy to make an instrument by which the triangles can be constructed. [Graphic added by J.C.]



**Eudoxus**.[2] Of Endoxus, the third great mathematician of the Athenian school and the founder of that at Cyzicus, we know very little. He was born in Cnidus in 408 B.C. Like Plato, he went to Tarentum and studied under Archytas the then head of the Pythagoreans. Subsequently he travelled with Plato to Egypt, and then settled at Cyzicus, where he founded the school of that name. Finally he and his pupils moved to Athens. There he seems to have taken some part in public affairs, and to have practised medicine; but the hostility of Plato and his own unpopularity as a foreigner made his position uncomfortable, and he returned to Cyzicus or Cnidus shortly before his death. He died while on a journey to

---

[2] The works of Eudoxus were discussed in considerable detail by H. Künssberg of Dinkelsbühl in 1888 and 1890.

Plato and Eudoxus were contemporaries. Among Plato's pupils were the mathematicians **Leodamas**, **Neocleides**, **Amyclas**, and to their school also belonged **Leon**, **Theudius** (both of whom wrote text-books on plane geometry), **Cyzicenus**, **Thasus**, **Hermotimus**, **Philippus**, and **Theaetetus**.

### Legend for columns

Sydenham and Taylor: 1, Bohn: 2,
Jowett 3, Bollingen 4, Cooper 5.

The leader, by way of reference material, is clearly the Cooper edition followed by Bohn Library. For a philosopher, Halcyon really hits home, a work I never even heard of until the Cooper edition. It would make a good front piece for the dialectical dialogs.

Ratings then for these works would go

1) Cooper.
2) Bohn.
3) Sydenham and Taylor.
4.) Jowett
5.) Bollingen.

### Items I find tasteless in translators are

Using the liturgical style in context especially since it was antiquated before any of these translations and I suspect the stylizing of speech patterns alien to the source text.

Using period and geographical colloquialisms, the worst being Latin phraseology in a Greek source (just think about that). Nor does it seem right, when, claiming a literal translation, one is confusing Greek mythology with Roman. If you missed it, some translators actually used the names of Roman gods, and even Christian, which is a bit creepy.

When you have a work deliberately constructed for the universal, it is tasteless to not realize it and particularize the phraseology. I think translators, aiming for a period piece translations, wholly miss Plato’s intended psychological effect in terms of the factual universal concept of language.

### Greatest Contrast

Many of the outlines of Plato's dialogs are presented in the greatest contrast possible commensurate with a unit. The wisest, the most beautiful, etc.

# Quotes.

Logic paired to analogic, or the unit, or again the conjugate binary pair: Socrates:—On the above supposition it is obvious that a Dædalean image unchained is of little worth, as having no continuance; but if chained it is valuable, for these images are really beautiful works. The same holds good of right opinions; these, so long as they remain, are beautiful and highly serviceable, but are apt to run away, as having no hold on the mind of the possessor, until bound by a chain of reasoning formed out of their causal interconnection. And this chain, friend Meno, as we before agreed, is memory or recollecting. When opinions are so chained they become science, and so steadfast and enduring. This is the reason why science is more valuable than right opinion, and it is this tie or character of fixity which makes the difference between them. Meno, by Plato, Mackay.

I will start these quotes with one that is the common declaration of modern linguists which proves beyond a shadow of a doubt, man is generally too stupid to comprehend what they see, feel and even what they read.

Although all languages have some common principles, there is no primitive form or forms of language known to us, or to be reasonably imagined, from which they are all descended. *Introduction to Cratylus*, Benjamin Jowett.

The Judeo-Christian Scripture, Plato, Euclid, your own biology tells you it is the unit, a standard concept of a thing, the Conjugate Binary Pair.

We cannot understand how Plato's legislators or guardians are to be fitted for their work of statesmen by the study of the five mathematical sciences. We vainly search in Plato's own writings for any explanation of this seeming absurdity. Introduction to *The Republic*, Benjamin Jowett.

I would ask Jowett, what is it that the mind can actually do? Process information in accordance with a common concept of a thing, or spend its life simply saying duh?

Is it possible for a world to find peace and purpose when the unit is not a functional part of its psychology? When their own body is telling them, there is but one by which all of creation is known, in metaphor, one God?

Now, as this is primarily quotes from the Dialogs of Plato, that is what they will be, however, since I am going through my directory of quotes, from time to time, I will toss in a few others.

## Taylor Composition.

it is upon speech that actions are completed.

And thus the discipline which relates to unity would be of the class of those which lead, and turn the soul to the contemplation of real being.

philosophy is the possession of science.

Now to be ignorant of oneself, said I, is it to be sound of mind, or to be insane?—To be insane, he replied.

## Salvation of Man, the Art of Measurement.

“Socrates: Well then, I shall say, if you agree so far, be so good as to answer me a question; Do not the same magnitudes appear larger to your sight when near, and smaller when at a distance?

Protagoras: They will acknowledge that.

Socrates: And the same holds of thickness and number; also sounds, which are in themselves equal, are greater when near, and lesser when at a distance.

Protagoras: They will grant that also.

Socrates: Now suppose happiness to consist in doing or choosing the greater, and in not doing or in avoiding the less, what would be the saving principle of human life? Would not the art of measuring be the saving principle; or would the power of appearance? Is not the latter that deceiving art which makes us wander up and down and take the things at one time of which we repent at another, both in our actions and in our choice of things great and small? But the art of measurement would do away with the effect of appearances, and, showing the truth, would fain teach the soul at last to find rest in the truth, and would thus save our life. Would not mankind generally acknowledge that the art which accomplishes this result is the art of measurement?” *Protgoras* by Plato, Jowett

“Seeing, then, that this is the case, answer me the following question. Do the same objects appear to your sight to be greater in size when near, and smaller in size when remote? or do they not?

Protagoras: They do, would be their answer.

Socrates: And is it not the same with the thickness and number of objects? And do not equal sounds appear louder when near, fainter at a distance?

Protagoras: Yes, they would say.

Socrates: If then our well-being had depended upon this, upon our making and choosing great lengths, and our avoiding and not making small ones, what would, to all appearance, have been the safeguard of our life? Would it be the art of mensuration, or the force of appearances? Or would this latter have led us astray, and caused us to be ever choosing and ever rejecting the same things; and ever repenting, in our practice and choice of lengths, both great and small? while the art of mensuration would bring to naught this phantom show, and, pointing out to us the truth, would anchor our soul thereon, and bid it rest, and assure us our life's safety. Would they allow, think you, that, in this case, the art of mensuration would save us, or some other art?" *Protgoras* by Plato, Wright, Josiah, 1824-1894

"Socrates: Since then, this is the case, I shall say 'Answer me this, do the same magnitudes appear to your sight greater when near, and less when at a distance, or not?' They will say they do. 'And things bulky, and things numerous, in like manner? and are not equal sounds greater when near, but less when at a distance?' They would say they are. If then, our wellbeing consisted in this, in making and choosing great masses, but in avoiding and not making little ones, what means of safety should we seem to have in life? Would it be the art of mensuration, or the faculty of judging by appearances? or would the latter lead us into error, and often cause us to vary in our choice of the same thing, now choosing one and now another, and to repent both in our actions and our selections of things great and little, but would the art of mensuration do away with this outward show, and making manifest the truth, cause the soul to be at ease, abiding in the truth, and preserve our life? Would the men upon this admit that the art of mensuration preserves us, or some other art?

Protagoras: The art of mensuration." *Protgoras* by Plato, Bohn

A universal is a unit, a definition for it determines class inclusion and class exclusion. Every member of a class is a member of that class in accordance with the definition of that class:—

"But the soul which has never seen the truth will not pass into the human form. For a man must have intelligence of universals, and be able to proceed from the many particulars of sense to one conception of reason;—this is the recollection of those things which our soul once saw while following God" Phaedrus, by Plato, Jowett.

## Curing the Soul.

Socrates: His approving answers reassured me, and I began by degrees to regain confidence, and the vital heat returned. Such, Charmides, I said, is the nature of the charm, which I learned when serving with the army from one of the physicians of the Thracian king Zamolxis, who are said to be so skilful that they can even give immortality. This Thracian told me that in these notions of theirs, which I was just now mentioning, the Greek physicians are quite right as far as they go; but Zamolxis, he added, our king, who is also a god, says further, that as you ought not to attempt to cure the eyes without the head, or the head without the body, so neither ought you to attempt to cure the body without the soul; and this, he said, is the reason why the cure of many diseases is unknown to the physicians of Hellas, because they are ignorant of the whole, which ought to be studied also; for the part can never be well unless the whole is well. For all good and evil, whether in the body or in human nature, originates, as he declared, in the soul, and overflows from thence, as if from the head into the eyes. And therefore if the head and body are to be well, you must begin by curing the soul; that is the first thing. And the cure, my dear youth, has to be effected by the use of certain charms, and these charms are fair words; and by them temperance is implanted in the soul, and where temperance is, there health is speedily imparted, not only to the head, but to the whole body. And he who taught me the cure and the charm at the same time added a special direction; Let no one, he said, persuade you to cure the head, until he has first given you his soul to be cured by the charm. For this, he said, is the great error of our day in the treatment of the human body, that physicians separate the soul from the body. And he added with emphasis, at the same time making me swear to his words, Let no one, however rich, or noble, or fair, persuade you to give him the cure, without the charm. Now I have sworn, and I must keep my oath, and therefore if you will allow me to apply the Thracian charm first to your soul, as the stranger directed, I will afterwards proceed to apply the cure to your head. But if not, I do not know what I am to do with you, my dear Charmides. Charmides, by Plato, Jowett.

## The Science or Craft of a Philosopher: Dialectic.

Socr. For my part, Phædrus, I am not only myself a lover of these divisions and generalisations, in order that I may be able both to speak and think; but if I perceive any one else able to comprehend the one and the many, as they are in nature, him "I follow behind as in the footsteps of a god." But whether I designate those who are able to do this, rightly or not, God knows, however I have hitherto called them dialecticians. *Phædrus*, by Plato, Bohn.

Guest. Since then we have acknowledged, that the genera (of things) have a mingling with each other, after the same manner, is it not necessary for him to proceed in his discourse with some science, who is about to show what kind of genera accord with what kind, and what do not receive each other? Likewise, whether these genera so hold together through all things as to be capable of being mutually mingled? And again in their divisions, whether there are other causes of division through wholes?

Theæ. How is there not a need of science, and, perhaps, of nearly the greatest?

Guest. What then, Theætetus, shall we call this science? Or, by Jupiter, have we ignorantly fallen upon the science of freemen? And do we nearly appear, while searching after a sophist, to have found previously a philosopher?

[83.] Theæ. How say you?

Guest. Shall we not say, that to divide according to genera, and neither to think the same species different, nor a different species the same, is the business of the dialectic science?" *The Sophist* by Plato, Bohn.

## The Elements

"SOCRATES: Let me give you, then, a dream in return for a dream:—Methought that I too had a dream, and I heard in my dream that the primeval letters or elements out of which you and I and all other things are compounded, have no reason or explanation; you can only name them, but no predicate can be either affirmed or denied of them, for in the one case existence, in the other non-existence is already implied, neither of which must be added, if you mean to speak of this or that thing by itself alone. It should not be called itself, or that, or each, or alone, or this, or the like; for these go about everywhere and are applied to all things, but are distinct from them; whereas, if the first elements could be described, and had a definition of their own, they would be spoken of apart from all else. But none of these primeval elements can be defined; they can only be named, for they have nothing but a name, and the things which are compounded of them, as they are complex, are expressed by a combination of names, for the combination of names is the essence of a definition. Thus, then, the elements or letters are only objects of perception, and cannot be defined or known; but the syllables or combinations of them are known and expressed, and are apprehended by true opinion. When, therefore, any one forms the true opinion of anything without rational explanation, you may say that his mind is truly exercised, but has no knowledge; for he who cannot give and receive a reason for a thing, has no knowledge of that thing; but when he adds rational explanation, then, he is perfected in knowledge and may be all that I have been denying of him. Was that the form in which the dream appeared to you?" *Theaetetus*, by Plato, Jowett. (1892)

"SOCRATES: Hear, then, a dream for a dream. For I too seem to myself to have heard some people say, that the first elements, as it were, from which we and all other things are composed, cannot be explained by reason; for that each several element by itself can only be named, but that nothing else can be predicated of it, neither that it exists nor does not exist; for that this would be to attribute to it existence or non-existence, whereas nothing ought to be added to it, if one means to speak of the thing itself only; neither must we add to it the term the, or that, or each, or only, or this, or many others of the same kind; for these are constantly varying and are applied to all things, and are different from the things to which they are added. But we ought, if it were possible, to speak of the thing itself, and, if it has a definition peculiar to itself, to speak of it without the addition of any thing else. Now, however, it is impossible for any of the first elements to be explained by a definition, for it does not admit of any thing else than being named, for it has only a name; but the things that have been composed from these, as they are complex, so their names, when connected together, constitute a definition for a connection of names is the essence of definition. Thus the elements themselves cannot be defined or known, but only perceived, but things compounded of them can be both known and defined, and apprehended by true judgment. When, therefore, any one forms a true judgment of any thing, without explanation, his soul indeed perceives the truth respecting it, but does not know it, for he who is not able to give and receive an explanation of a thing must be ignorant of that thing, but when he adds an explanation to it then he is capable of knowing all these things, and may be perfect in science. Is it thus that you have heard the dream, or in some other way?" *Theaetetus*, by Plato, Henry Cary, Bohn. (1861)

"SOCRATES: Take a dream in exchange for a dream. I seem to have heard that the primal elements, out of which all persons and things are composed, have no definition. Each element by itself is only a name, and cannot be said either to exist or not to exist. To affirm existence of it or nonexistence would by adding something to it destroy its singleness. Neither it nor that nor each nor only nor this nor any such term must be asserted of it; these terms are moveable and applicable everywhere, and are quite different from the things, to which they are joined, while, on the contrary, no statement about the elements or suitable definition of them, even if such a thing were possible, could be applied to any other thing. Thus these elements cannot be defined; named they can be but that is all. On the other hand that which is compounded from them, and the resulting combination of names, are defined, since the combination of two names is the essence of definition. Thus we have the undefinable and unknown letters or rudiments, which are objects of perception, and the compounds or syllables, which are known and expressed, and are conceived by true opinion. Whenever anyone has a true opinion without definition, his mind may be said to be concerned with it truly, but not to have knowledge. He who cannot give and take the definition of a thing, is in ignorance of it; but, if he can add the definition, he is in the opposite state of mind, having perfect knowledge. Such was the substance of my vision. Was yours the same?" *Theaetetus*, by Plato, S. W. Dyde. (1899)

"SOCRATES: Listen then, while I relate it to you a dream for a dream. I in turn used to imagine that I heard certain persons say that the primary elements of which we and all else are composed admit of no rational explanation; for each alone by itself can only be named, and no qualification can be added, neither that it is nor that it is not, for that would at once be adding to it existence or non-existence, whereas we must add nothing to it, if we are to speak of that itself alone. Indeed, not even itself or that or each or alone or this or anything else of the sort, of which there are many, must be added; for these are prevalent terms which are added to all things indiscriminately and are different from the things to which they are added; but if it were possible to explain an element, and it admitted of a rational explanation of its own, it would have to be explained apart from everything else. But in fact none of the primal elements can be expressed by reason; they can only be named, for they have only a name; but the things composed of these are themselves complex, and so their names are complex and form a rational explanation; for the combination of names is the essence of reasoning. Thus the elements are not objects of reason or of knowledge, but only of perception, whereas the combinations of them are objects of knowledge and expression and true opinion. When therefore a man acquires without reasoning the true opinion about anything, his mind has the truth about it, but has no knowledge; for he who cannot give and receive a rational explanation of a thing is without knowledge of it; but when he has acquired also a rational explanation he may possibly have become all that I have said and may now be perfect in knowledge. Is that the version of the dream you have heard, or is it different?" *Theaetetus*, by Plato, Harold North Fowler. (1921)

"SOCRATES: Listen then to a dream in return for a dream. In my dream, too, I thought I was listening to people saying that the primary elements, as it were, of which we and everything else are composed, have no account. Each of them, in itself, can only be named; it is not possible to say anything else of it, either that it is or that it is not. That would mean that we were adding being or not-being to it; whereas we must not attach anything, if we are to speak of that thing itself alone. Indeed we ought not to apply to it even such words as 'itself or 'that', 'each', 'alone', or 'this', or any other of the many words of this kind; for these go the round and are applied to all things alike, being other than the things to which they are added, whereas if it were possible to express the element itself and it had its own proprietary account, it would have to be expressed without any other thing. As it is, however, it is impossible that any of the primaries should be expressed in an account; it can only be named, for a name is all that it has. But with the things composed of these, it is another matter. Here, just in the same way as the elements themselves are woven together, so their names may be woven together and become an account of something—an account being essentially a complex" of names. Thus the elements are unaccountable and unknowable, but they are perceivable, whereas the complexes are both knowable and expressible and can be the objects of true judgement.

Now when a man gets a true judgement about something without an account, his soul is in a state of truth as regards that thing, but he does not know it; for someone who cannot give and take an account of a thing is ignorant about it. But when he has also got an account of it, he is capable of all this and is made perfect in knowledge. Was the dream you heard the same as this or a different one?" *Theaetetus*, by Plato, Levett. (1992)

"SOCRATES: Then hear a dream of mine as a set-off to yours. For I, on the other hand, fancy I heard some persons say, that the first principles, or elements as we may call them, from which we and all visible, things are composed, have no account that can be given of them; we can only give each of them a name as an abstraction, but we can predicate nothing else about them, not even Being or non-Being. For if so, there is added to it existence or non-existence; whereas we ought to apply no qualities, if one is to speak of a simple element. Nay, we must not add even 'itself,' or 'that', nor 'each,' nor 'only,' nor 'this,' nor many other attributes of the like kind. For these terms are applied to all things in a perpetual round, and are in themselves different from the things to which they are applied; but, if a thing can be spoken of per se, and a proper account can be given of it, it ought to be described without any of these accessories. But, as the case really stands, it is impossible that any of the first principles should be described in terms, since it can only be named at the most. But when we come to consider compounds of them, then as they are themselves combined, so the terms used to describe them are combined so as to become an account or definition of them. For the combination of terms is the very essence of a definition. Thus then the primary elements are undefinable and unknowable, and are merely objects of sensation ; but the combinations are knowable and definable and comprehensible by a true and correct view. When then a person has got the true conception of anything without being able to give an account of it, we say that his soul holds the truth about it, though he cannot be said to know it. For one who can neither give nor get an account of a thing, is without any scientific knowledge about that particular thing. But when he has got the further power of defining it, he has become able in all these respects, and is perfect in wisdom. Was this the purport of the dream you heard, or was it different?" *Theaetetus*, by Plato, Paley. (1875)

"SOCRATES: Hear, then, a dream for a dream. For I also appear to have heard from certain persons that the first elements, as it were, from which we and other things are composed cannot be rationally described. For they say that each of these can alone be denominated by itself, but cannot be called any thing else, neither as that which is nor as that which is not; because essence, or non-essence, would thus be assigned to it. But it is requisite to add nothing, if any one speaks of a thing itself alone. For neither the term this, nor that, nor each, nor alone, nor any other such appellations, should be employed, because these are applied to things in a circular progression, and are different from the things to which they are added. But it is necessary, if possible, to speak of the thing itself, and, if it has a proper definition, to assert something respecting it, without the addition of any thing else. Now, however, no one of things first can be made the subject of discourse; for it does not admit of any thing else than a denomination. But the things composed from these, as they are themselves woven together, so from the weaving together of their names discourse is produced. For the connection of names is the essence of discourse. Hence, the elements themselves are ineffable and unknown, but at the same time are objects of sense: but syllables are known and effable, and may be apprehended by true opinion. When, therefore, any one receives a true opinion of any thing, without reason, then his soul perceives the truth respecting it, but he does not know the thing; because he who is incapable of giving and receiving a reason concerning a thing must be destitute of science respecting it. But when he receives a reason, then he may be able to know all these, and acquire science in perfection. Have you not, therefore, heard a dream, or is it any thing else?” *Theaetetus*, by Plato, Thomas Taylor. (1804)

## False Words

“false words are not only evil in themselves, but they infect the mind with evil.” *Phaedo* by Plato, Jowett trans.

“Crito, that to speak improperly is not only culpable as to the thing itself, but likewise occasions some injury to our souls.” *Phaedo* by Plato, Bohn

“For you must know, my dear Crito, says he, turning to him, that speaking amiss of death is not only a fault in the way of speaking, but likewise wounds the soul” *Phaedo* by Plato, Morley, Henry, 1822-1894

“For, dear Crito, you may be sure that such wrong words are not only undesirable in themselves, but they infect the soul with evil.” *Phaedo* by Plato, Fowler, Harold North, 1859-1955

“Crito, that to use improper expressions not merely is an offence in respect of the thing itself, but also engenders some mischief in our souls.” *Phaedo* by Plato, Cope, Edward Meredith, 1818-1873

## Good and Evil

“Socrates: What then is the result of what has been said? Is not this the result, that other things are indifferent, and that wisdom is the only good, and ignorance the only evil?” Euthydemus, by Plato: Jowett.

## Language as Image

Socrates: The first would be to make one's thought clear by the voice, through the means of verbs and nouns, impressing one's judgment on what flows from the mouth, as it were [reflected] on a mirror, or [by] water; does not logos appear to you to be something of this kind?

Theaetetus: It does: and we say that he who does this speaks. *Theaetetus*, by Plato.

## Symbolic Representation.

Names, in of themselves, have no meaning:—

I think that you will acknowledge with me, that one principle is applicable to all names, primary as well as secondary, when they are regarded simply as names, there is no difference in them. *Cratylus* by Plato.

How real existence is to be studied or discovered is, I suspect, beyond you and me. But we may admit so much, that the knowledge of things is not to be derived from names. No; they must be studied and investigated in themselves. *Cratylus* by Plato, Jowett.

Well, but do you not see, Cratylus, that he who follows names in the search after things, and analyses their meaning, is in great danger of being deceived? *Cratylus* by Plato.

no man of sense will like to put himself or the education of his mind in the power of names; neither will he so far trust names or the givers of names as to be confident in any knowledge which condemns himself and other existences to an unhealthy state of unreality; he will not believe that all things leak like a pot, or imagine that the world is a man who has a running at the nose. *Cratylus* by Plato.

## Nouns and Verbs

SOCRATES: Does what I am saying apply only to the things themselves, or equally to the actions which proceed from them? Are not actions also a class of being?

HERMOGENES. Yes, the actions are real as well as the things. *Cratylus* by Plato, Jowett, 3rd ed.

## Number

“he who never looks for number in anything, will not himself be looked for in the number of famous men.” *Philebus*, by Plato, Jowett.

## Oak

SOCRATES: But, my friend, those who dwell in the temple of Dodonsean Jupiter said that the first prophetic words issued from an oak. It was sufficient for the men of those days, seeing they were not wise like you moderns, in their simplicity, to listen to an oak and a stone, if only they spoke the truth; and does it make any difference to you, forsooth, who the speaker is, and to what country he belongs? For you do not consider that only, whether the case is so or otherwise. *Phaedrus*, by Plato, Bohm

SOCRATES: Oh, but the authorities of the temple of Zeus at Dodona, my friend, said that the first prophetic utterances came from an oak tree. In fact the people of those days, lacking the wisdom of you young people, were content in their simplicity to listen to trees or rocks, provided these told the truth. For you apparently it makes a difference who the speaker is, and what country he comes from; you don't merely ask whether what he says is true or false. *Phaedrus*, by Plato, Hackforth

SOCRATES: There was a tradition in the temple of Dodona that oaks first gave prophetic utterances. The men of old, unlike in their simplicity to young philosophy, deemed that if they heard the truth even from ‘oak or rock,’ it was

> enough for them; whereas you seem to consider not whether a thing is or is not true, but who the speaker is and from what country the tale comes. *Phaedrus* by Plato

## On Education:

> “Pleasure and pain, I maintain to be the first perceptions of children, and I say that they are the forms under which virtue and vice are originally present to them. As to wisdom and true and fixed opinions, happy is the man who acquires them, even when declining in years; and we may say that he who possesses them, and the blessings which are contained in them, is a perfect man. Now I mean by education that training which is given by suitable habits to the first instincts of virtue in children; when pleasure, and friendship, and pain, and hatred, are rightly implanted in souls not yet capable of understanding the nature of them, and who find them, after they have attained reason, to be in harmony with her. This harmony of the soul, taken as a whole, is virtue; but the particular training in respect of pleasure and pain, which leads you always to hate what you ought to hate, and love what you ought to love from the beginning of life to the end, may be separated off; and, in my view, will be rightly called education.” *Laws* by Who knows?

## Two Parts of A Thing, or Unit.

> ‘A part’ may be a part either of the form (i.e. of the essence), or of the compound of the form and the matter, or of the matter itself. *Metaphysics* by Aristotle.

In the following, keep in mind that of the two elements, form and matter, Aristotle is saying one of them is perceptible, while the other intelligible. Each system of abstraction of the body abstracts one or the other, or can not know the thing in of itself, i.e., the whole. A thing is called a composite.

> “Therefore one kind of substance can be defined and formulated, i.e. the composite kind, whether it be perceptible or intelligible; but the primary parts of which this consists cannot be defined, since a definitory formula predicates some thing of some thing, and therefore, one part of the definition must play the part of matter and the other that of form.” *Metaphysics* by Aristotle. W. D. Ross.

In the following, Plato explains the two methods of reasoning, arithmetically, through the perceptible, but in the intelligible, one has to reason metaphorically, or again, geometrically.

> Stranger: I certainly don’t suppose that anyone with any sense would want to hunt down the definition of weaving for the sake of weaving itself. But I think the majority of people fail to recognize that for some of the things there are, there are certain perceptible likenesses which are there to be easily understood, and which it is not at all hard to point out when one wants to make an easy demonstration, involving no trouble and without recourse to verbal means, to someone who asks for an account of one of these things. Conversely, for those things that are greatest and most valuable, there is no image at all which has been worked in plain view for the use of mankind, the showing of which will enable the person who wants to satisfy the mind of an inquirer to satisfy it adequately, just by fitting it to one of the senses. That is why one must practice at being able to give and receive an account of each thing; for the things that are without body, which are finest and greatest,

are shown clearly only by verbal means and by nothing else, and everything that is now being said is for the sake of these things. But practice in everything is easier in smaller things, rather than in relation to the greater. Statesman by Plato, Rowe.

## The Philosopher

“But as to those then who are able to approach this beauty itself, and to behold it as it is in itself, must they not be few in number? Extremely so. He then who accounts some things beautiful, but neither knows beauty itself, nor is able to follow if one were to lead him to the knowledge of it, does he seem to you to live in a dream, or to be awake? Consider now, what is it to dream? Is it not this, when a man, whether asleep or awake, imagines the similitude of a thing is not the similitude, but really the thing itself which it resembles? I for my part would aver, replied he, that such a person is really in a dream. But what now as to him who judges opposite to this, who understands what beauty is itself, and is able to discern both it and such things as participate of it, and neither deems the participants to be beauty, nor beauty to be the participants? whether does such an one seem to you to live awake, or in a dream? Perfectly awake, said he.” *The Republic*, book 5, by Plato, Floyer Sydenham and Thomas Taylor

“I place those of whom we are now discoursing, whom alone we may properly call philosophers. How say you? replied he. The lovers of common stories and spectacles, delight in fine sounds, colours, and figures, and everything made up of these; but the nature of beauty itself their intellect is unable to discern and admire. That is the case, indeed, said he. As to those, however, who are able to approach this beauty itself and behold it in its real essence, surely they must be few in number? Extremely so. He then who deems some things beautiful, but neither knows beauty itself nor is able to follow, should any one lead to the knowledge of it, do you think he lives in a dream, or is awake? consider: is not this to dream, when a man, either asleep or awake, imagines the likeness of a thing not to be its likeness, but the real thing itself which it resembles? I for my part would assert, replied he, that such a person is really in a dream. But what now as to him who comes to an exactly opposite conclusion, who understands the real nature of beauty, and is able to discern both it and its accessories, and deems neither the accessories to be beauty, nor beauty the accessories;—does such a man, think you, live in a waking or dreaming state? Wide awake, said he.” The Republic, book 5, by Plato, Bohn

“And this is the distinction which I draw between the sight-loving, art-loving, practical class and those of whom I am speaking, and who are alone worthy of the name of philosophers.

How do you distinguish them? he said.

The lovers of sounds and sights, I replied, are, as I conceive, fond of fine tones and colours and forms and all the artificial products that are made out of them, but their mind is incapable of seeing or loving absolute beauty.

True, he replied.

Few are they who are able to attain to the sight of this.

Very true.

And he who, having a sense of beautiful things has no sense of absolute beauty, or who, if another lead him to a knowledge of that beauty is unable to follow—of such an one I ask, Is he awake or in a dream only? Reflect: is not the dreamer, sleeping or waking, one who likens dissimilar things, who puts the copy in the place of the real object?

I should certainly say that such an one was dreaming.

> But take the case of the other, who recognises the existence of absolute beauty and is able to distinguish the idea from the objects which participate in the idea, neither putting the objects in the place of the idea nor the idea in the place of the objects—is he a dreamer, or is he awake?
>
> He is wide awake.” *The Republic*, book 5, by Plato, B. Jowett 3rd ediction.

## Republic Not his Utopia, but the worst hell he could imagine. That was the model given to him in Book II.

### The inversion as the model of The Republic.

> “Will you, then, restore me what you borrowed in the reasoning? What, chiefly? I granted you, that the just man should be deemed unjust, and the unjust be deemed to be just. For you were of opinion, that though it were not possible that these things should be concealed from gods and men, it should, however, be granted, for the sake of the argument, that justice in itself might be compared with injustice in itself; do you not remember it? I should, indeed, be unjust, said he, if I did not.” ~ “For I will aver now, that the just, when they are grown up, shall arrive at power if they desire magistracies, they shall marry where they incline, and shall settle their children in marriage agreeably to their wishes; and everything else you mentioned concerning the others, I now say concerning these.” Republic, book 10, by Plato, Bohn

### Genesis 1-3

By presenting the same concept to *look* good one time and *look* bad another, you can test if a mind is functioning. Here is the Law in regard to the historically demonstrated ability of man to judge right from wrong.

Respect Persons.

> Deuteronomy 1:17 Ye shall not respect persons in judgment; but ye shall hear the small as well as the great; ye shall not be afraid of the face of man; for the judgment is God's: and the cause that is too hard for you, bring it unto me, and I will hear it.
>
> Deuteronomy 16:17 Ye shall not respect persons in judgment; but ye shall hear the small as well as the great; ye shall not be afraid of the face of man; for the judgment is God's: and the cause that is too hard for you, bring it unto me, and I will hear it.
>
> 2 Chronicles 19: 7 Wherefore now let the fear of the LORD be upon you; take heed and do it: for there is no iniquity with the LORD our God, nor respect of persons, nor taking of gifts.
>
> Proverbs 24: 23 These things also belong to the wise. It is not good to have respect of persons in judgment.
>
> Proverbs 28:21 To have respect of persons is not good: for for a piece of bread that man will transgress.
>
> Romans 2: 11 For there is no respect of persons with God.
>
> Ephesians 6: 9 And, ye masters, do the same things unto them, forbearing threatening: knowing that your Master also is in heaven; neither is there respect of persons with him.
>
> Colossians 3:25 But he that doeth wrong shall receive for the wrong which he hath done: and there is no respect of persons.

James 2: 9 But if ye have respect to persons, ye commit sin, and are convinced of the law as transgressors.

## The Source of All Knowledge.

“It is also clear that the loss of any one of the senses entails the loss of a corresponding portion of knowledge, and that, since we learn either by induction or by demonstration, this knowledge cannot be acquired. Thus demonstration develops from universals, induction from particulars; but since it is possible to familiarize the pupil with even the so-called mathematical abstractions only through induction—i.e. only because each subject genus possesses, in virtue of a determinate mathematical character, certain properties which can be treated as separate even though they do not exist in isolation—it is consequently impossible to come to grasp universals except through induction. But induction is impossible for those who have not sense-perception. For it is sense-perception alone which is adequate for grasping the particulars: they cannot be objects of scientific knowledge, because neither can universals give us knowledge of them without induction, nor can we get it through induction without sense-perception.” *Posterior Analytics*, Aristotle, Ross.

## The Seven

A mind is suppose to regulate the behavior of the body as a whole, this means seven means of perception. A dysfunctional mind means it is not doing its job. Let us look at some metaphors for our seven life support systems.

Isa 4:1 And in that day seven women shall take hold of one man, saying, We will eat our own bread, and wear our own apparel: only let us be called by thy name, to take away our reproach.

Zec 3:9 For behold the stone that I have laid before Joshua; upon one stone [shall be] seven eyes: behold, I will engrave the graving thereof, saith the LORD of hosts, and I will remove the iniquity of that land in one day.

Zec 4:2 And said unto me, What seest thou? And I said, I have looked, and behold a candlestick all [of] gold, with a bowl upon the top of it, and his seven lamps thereon, and seven pipes to the seven lamps, which [are] upon the top thereof:

Zec 4:10 For who hath despised the day of small things? for they shall rejoice, and shall see the plummet in the hand of Zerubbabel [with] those seven; they [are] the eyes of the LORD, which run to and fro through the whole earth.

Mar 16:9 Now when [Jesus] was risen early the first [day] of the week, he appeared first to Mary Magdalene, out of whom he had cast seven devils.

Luk 8:2 And certain women, which had been healed of evil spirits and infirmities, Mary called Magdalene, out of whom went seven devils,

Rev 1:13 And in the midst of the seven candlesticks [one] like unto the Son of man, clothed with a garment down to the foot, and girt about the paps with a golden girdle.

Rev 1:16 And he had in his right hand seven stars: and out of his mouth went a sharp twoedged sword: and his countenance [was] as the sun shineth in his strength.

Rev 1:20 The mystery of the seven stars which thou sawest in my right hand, and the seven golden candlesticks. The seven stars are the angels of the seven churches: and the seven candlesticks which thou sawest are the seven churches.

Rev 2:1 Unto the angel of the church of Ephesus write; These things saith he that holdeth the seven stars in his right hand, who walketh in the midst of the seven golden candlesticks;

Rev 3:1 And unto the angel of the church in Sardis write; These things saith he that hath the seven Spirits of God, and the seven stars; I know thy works, that thou hast a name that thou livest, and art dead.

Rev 4:5 And out of the throne proceeded lightnings and thunderings and voices: and [there were] seven lamps of fire burning before the throne, which are the seven Spirits of God.

Rev 5:1 And I saw in the right hand of him that sat on the throne a book written within and on the backside, sealed with seven seals.

Rev 5:5 And one of the elders saith unto me, Weep not: behold, the Lion of the tribe of Juda, the Root of David, hath prevailed to open the book, and to loose the seven seals thereof.

Rev 5:6 And I beheld, and, lo, in the midst of the throne and of the four beasts, and in the midst of the elders, stood a Lamb as it had been slain, having seven horns and seven eyes, which are the seven Spirits of God sent forth into all the earth.

### Know Thyself.

Here, as in other places, Plato is denoting that a person, as mind, has an art that we are born to master, each and everyone of us.

“temperance is the knowledge of self, in respect of his art” *Alcibiades I*, Plato

### The Unit.

“that branch of science which concerns unity would be among those which lead and turn the soul to the contemplation of real being.” *The Republic*, book 7, by Plato, Bohn

“If he has anything else to say about the art of speaking we should like to hear him; but if not, we are satisfied with our own view, that unless a man estimates the various characters of his hearers and is able to divide all things into classes and to comprehend them under single ideas, he will never be a skilful rhetorician even within the limits of human power.” *Phaedrus*, by Plato, Jowett.

Stranger: That we shall some day require this notion of a mean with a view to the demonstration of absolute truth; meanwhile, the argument that the very existence of the arts must be held to depend on the possibility of measuring more or less, not only with one another, but also with a view to the attainment of the mean, seems to afford a grand support and satisfactory proof of the doctrine which we are maintaining; for if there are arts, there is a standard of measure, and if there is a standard of measure, there are arts; but if either is wanting, there is neither.

Young Socrates: True; and what is the next step?

Stranger: The next step clearly is to divide the art of measurement into two parts, as we have said already, and to place in the one part all the arts which measure number, length, depth, breadth, swiftness with their opposites; and to have another part in which they are measured with the mean, and the fit, and the opportune, and the due, and with all those words, in short, which denote a mean or standard removed from the extremes. *The Statesman*, by Plato, Jowett.

## Persistent Stupidity.

Notice that Webster is going to urge by way of the study of language, and which persists today, the very same process spoofed by Plato.

> "These criticisms, already extended to an inconvenient length, considering the limited nature of this work, may serve to show the reader how artificial and arbitrary are the distribution and denominations of the several species of words, in our grammars, and how ill calculated are the common rules to illustrate the origin or the true principles of language. Before a language can be correctly understood, words must be traced to their source, their radical significations explained, their mutations, contractions, and combinations, developed. It is not the English language only whose history and principles are yet to be illustrated; but the grammars and dictionaries of all other languages, with which I have any acquaintance, must be revised and corrected, before their elements and true construction can be fully understood." An Improved Grammar Of The English Language, By Noah Webster, 1839

> "It is agreed by all jurists, and is established by the law of this and every other country, that it is the reason of man which makes him accountable for his actions, and that the deprivation of reason acquits him of crime. This principle is indisputable; yet so fearfully and wonderfully are we made, so infinitely subtle is the spiritual part of our being, so difficult is it to trace with accuracy the effect of diseased intellect upon human action, that I may appeal to all who hear me, whether there are any causes more difficult, or which, indeed, so often confound the learning of the judges themselves, as when insanity, or the effects and consequences of insanity, become the subjects of legal considerations and judgment." *Homicidal Insanity*, Thomas, Lord Erskine, (1750-1823)

## Principles of Symbolic Manipulation.

Three Fundamentals.

> SOCRATES: And so do I. But since we are thus disposed, let us in a quiet manner, as being abundantly at leisure, again consider, not morosely, but examining ourselves in reality, what the nature is of these appearances within us. And, on the first consideration of these, we shall say (as I think) that nothing at any time ever becomes greater or lesser, neither in bulk, nor in number, as long as it is equal to itself. Is it not so?
>
> THEÆTETUS: It is.
>
> SOCRATES: And, in the second place, that to which nothing is either added or taken away, will neither at any time ever be increased, or corrupted, but will always be equal.
>
> THEÆTETUS: And, indeed, very much so.

SOCRATES: And shall we not also say, in the third place, that a thing which was not formerly, but subsists afterwards, cannot exist without making and being made?

SOCRATES: These three things, then, which are acknowledged by us, oppose each other in a hostile manner in our soul, when we speak about dice, as above, or when we say that I, who am so old, am neither increased, nor suffer a contrary passion in myself; while you, who are a young man, are now greater, and afterwards less, since nothing is taken away from my bulk, but yours is increased. For, through a length of time, I am what I was not formerly, being no longer in a state of progressive increase: for without making, it is impossible that a thing can be made. But losing nothing of my bulk, I do not at any time become less. And there are ten thousand ether things of this kind, which happen to ten thousand other persons, if we admit these things. Speak, Theætetus: for you appear to me not to be unskilled in things of this kind. *The Theætetu*s by Plato, Taylor.

SOCRATES: And so do I. But since this is the case, shall we not quietly, seeing we have abundance of leisure, again consider, not feeling any annoyance, but really examining ourselves, in order to see what those appearances in us are. And on considering them, we shall say in the first place, I think, that nothing ever becomes greater or less, either in bulk, or number, as long as it continues equal to itself. Is it not so?

THEÆTETUS: Yes.

SOCRATES: And, in the second place, that a thing to which nothing is either added and from which nothing is taken away, will neither be ever increased or diminished, but always be equal.

THEÆTETUS: Just so.

SOCRATES: And shall we not say, in the third place, that it is impossible for a thing which did not before exist, to exist afterwards, without it has been produced and is produced.

THEÆTETUS: It seems so, indeed.

SOCRATES: These three admissions, I think, contend with each other in our soul, when we speak about dice, or when we say that I, being of the size lam, having neither increased, nor suffered diminution in the space of a year, am now larger than you, who are a young man, but afterwards less, though n bulk has not been diminished, but yours has been increased. For I am afterwards, what I was not before, without having been made so. *The Theætetus* by Plato, Bohn Library.

SOCRATES: And mine too. But since this is our feeling, and there is plenty of time, why should we not calmly and patiently review our own thoughts, and thoroughly examine and see what these appearances in us really are? If I am not mistaken, they will be described by us as follows:—first, equal to that nothing can become greater or less, either in number or magnitude, while remaining equal to itself—you would agree?

THEÆTETUS: Yes.

SOCRATES: Secondly, that without addition or subtraction there is no increase or diminution of anything, but only equality.

THEÆTETUS: Quite true.

SOCRATES: Thirdly, that what was not before cannot be afterwards, without becoming and having become.

THEÆTETUS: Yes, truly.

> SOCRATES: These three axioms, if I am not mistaken, are fighting with one another in our minds in the case of the dice, or, again, in such a case as this—if I were to say that I, who am of a certain height and taller than you, may within a year, without gaining or losing in height, be not so tall—not that I should have lost, but that you would have increased. In such a case, I am afterwards what I once was not, and yet I have not become; for I could not have become without becoming, neither could I have become less without losing somewhat of my height; and I could give you ten thousand examples of similar contradictions, if we admit them at all. I believe that you follow me, Theaetetus; for I suspect that you have thought of these questions before now. *The Theætetus* by Plato, Jowett.

## A Two Element Metaphysics.

Including Zeno, Parmenides, Socrates, Plato, Euclid, and Aristotle, many ancient philosophers were working on a Two-Element Metaphysics. It was, however, never formally named as such. It is by gathering the similar idea in the many examples that one derives the name. Euclid simply named it The Elements. I suspect he assumed the knowledge of it.

> “Further, since the matter exists, because it is ungenerated, it is a fortiori reasonable that the substance or essence, that which the matter is at any time coming to be, should exist; for if neither essence nor matter is to be, nothing will be at all, and since this is impossible there must be something besides the concrete thing, viz. the shape or form.
>
> But again (B) if we are to suppose this, it is hard to say in which cases we are to suppose it and in which not. For evidently it is not possible to suppose it in all cases; we could not suppose that there is a house besides the particular houses.—Besides this, will the substance of all the individuals, such as of all men, be one? This is paradoxical, for all the things whose substance is one are one. But are the substances many and different? This also is unreasonable.—At the same time, how does the matter become each of the individuals, and how is the concrete thing these two elements?” *Metaphysics*, by Aristotle.

> "(By the matter I mean, for instance, the bronze, by the shape the pattern of its form, and by the compound of these the statue, the concrete whole.)" *Metaphysics*, by Aristotle.
>
> "For we make it out of brass and the sphere; we bring the form into this particular matter, and the result is a brazen sphere." *Metaphysics*, by Aristotle.

> "For the product will always have to be divisible, and one part must be this and another that; I mean the one must be matter and the other form." *Metaphysics*, by Aristotle.

## What is Science?

If you have every read the JCS, then you will have read, Learn Judgment.

> Socrates: And now it has been made perfectly clear that science is something different from perception. But we did not commence this conversation with this view, that we might find out what science is not, but what it is. However, we have

advanced so far as not to seek it at all in perception, but in that name, whatever it is, which the soul possesses when it employs itself about things that exist.

Theaetetus: But this, I think, Socrates, is called, to judge.

Socrates: You think rightly, my friend. Theaetetus, by Plato. Bohn.

## The Rectification of Names.

A few persons in history, becoming known for their observation of the relationship between language and behavior, or in metaphor the mark of the beast, always seem to get a standard response, people reduce those words to a religion or philosophy and then ignore them.

> "Tsze-lu said, "The ruler of Wei has been waiting for you, in order with you to administer the government. What will you consider the first thing to be done?"
>
> The Master replied, "What is necessary is to rectify names."
>
> "So! indeed!" said Tsze-lu. "You are wide of the mark! Why must there be such a rectification?"
>
> The Master said, "How uncultivated you are, Yu! A superior man, in regard to what he does not know, shows a cautious reserve.
>
> "If names be not correct, language is not in accordance with the truth of things. If language be not in accordance with the truth of things, affairs cannot be carried on to success.
>
> "When affairs cannot be carried on to success, proprieties and music do not flourish. When proprieties and music do not flourish, punishments will not be properly awarded. When punishments are not properly awarded, the people do not know how to move hand or foot.
>
> "Therefore, a superior man considers it necessary that the names he uses may be spoken appropriately, and also that what he speaks may be carried out appropriately. What the superior man requires is just that, in his words there may be nothing incorrect." Analects by Confucius

## The Law of Reciprocity.

Some people believe that if they call a universal principle by a particular name, that the universe has a whole lot of particular Law. For example, for every action there is an opposite and equal reaction.

> Socr. Consider this also: When a man does any thing, must there not necessarily be something which is passive to him as an agent?
>
> Pol. It appears so to me.
>
> Socr. And does not the patient suffer what the agent does, and just such a thing as the agent does? I mean in this way: If any one strikes, is it not necessary that something should be struck?
>
> Pol. It is necessary.
>
> Socr. And if the striker strikes hard or swiftly, must not the thing struck be stricken accordingly?
>
> Pol. Yes.

Socr. That which is struck, then, undergoes a passion corresponding to that which the striker does.

Pol. Certainly.

Socr. In like manner, if any one burns, is it not necessary that something should be burnt?

Pol. How can it be otherwise?

Socr. And if he burns vehemently or painfully, that which is burnt must be burnt according as the burner burns?

Pol. Certainly.

Socr. So, if any one cuts any thing, is not the reasoning the same? for something is cut.

Pol. Yes.

Socr. And if the cut is large or deep, or painful, that which is cut is cut with such a cut as the cutter cuts.

Pol. It appears so.

Socr. In a word, then, see if you grant what I just now said respecting every thing, viz., that according as the agent does, so the patient suffers. *Gorgias*, by Plato, Bohn Library

## Virtual Reality, the Image of God.

Socr. But what? shall we consider another discourse, this one’s legitimate brother, in what manner it is produced, and how far better and more powerful it naturally is than this?

Phæ. What is that, and how do you say it is produced?

Socr. That which is written with science in the learner’s soul, which is able to defend itself, and knows before whom it ought to speak and be silent.

Phæ. You mean the discourse of a man endued with knowledge that has life and soul, of which the written may be justly called *an image*.

Socr. Assuredly.

## The Negative

Stranger: Then when we are told that the negative signifies the opposite, we shall not admit it; we shall admit only that the particle not indicates something different from the words to which it is prefixed, or rather from the things denoted by the words that follow the negative. *Sophist*, Fowler.

## Socrates in Chains.

There is a series of Platonic Dialogs which start from Socrates last day of freedom until his execution. They are Theaetetus, Euthyphro, Apology, Sophist, Statesman, Crito and Phaedo. They start on the day that Socrates was to go to court to answer the indictment of impiety. Early in the morning, we find Socrates with a Geometer, Theodorus, who introduces him to Theaetetus. At the end of that dialog, Socrates tells Theaetetus that he has to go to the porch of the King Archon to answer his indictment. When he gets there, he meets Euthyphro about to indict his father for impiety, actually murder. Socrates makes him doubt himself so much, he leaves claiming other business. Socrates thus prevents Euthypro from impiety. Then we find Socrates at his trial in Apology, thus on the same day as Theaetetus and Euthypho, Socrates was indicted and jailed. The next day we find that the Theodorus visits Socrates in jail to keep his promise of furthering the previos discourses in Theaetetus, first the Sophist which is followed by the Statesman. Close to the day that Socrates is to drink his poison, he is visted by Crito who wants to break him out of jail. Socrates counters with the strength of one's word. This is followed by his last day in Phaedo. Phaedo examples how to use the two elements of a thing to construct a mythology which apparently not one of his auditors could counter.

The starting dialog and the ending dialog, are both claimed to originate from those remembering Socrates to a friend, or the one, in Theaetetus, to the many friends in Phaedo. We have then a very deliberate set of dialogs written by Plato in a seqential manner, deliberately demonstrating the Conjugate Binary Pair in literary recursion. We also have, if my memery serves me correctly, one of the Letters of Plato where it mentions that he was encouraged to continue writing these dialogs. These dialogs then, form the basis of the entire set of Plato's Dialogs and exhibit a man who had already mastered the art of dialectic before any of the other dialogs were written. However, I preface this set of dialogs with two others, which were not of this group and which explain the craft of the Dialectician. Alcibiades 1. This dialog fully displays one of Plato's techniques of contrast. He takes a man with the greatest ambition to accomplish something in his life, and Socrates is helping to teach him the only path to accomplishing our desires.

Parmenides, on the other hand is one of the first mental exercises one has to master in order to learn the art of Dialectic, thinking and speaking by complete induction and deduction of the unit. It is aimed at providing the foundation in becoming aware of what a unit is, a relative constrained by correlatives, the only two categories of intelligible concepts we can name. The reader is encouraged to use a simple line segment to follow the demonstration. We can name the relative difference between correlatives and we can name the correlatives which contain the relative. If we become confused as to which is which, we speak, and think gibberish. So, these two dialogs example why we learn dialectic and what it is. It is learning to use grammar, derived from the intelligible of Language, by which we guide our behavior. The following dialogs after this introduction then exhibits that this art covers the whole of one's life.

## Introduction to the Dialogs: Alcibiades 1

A mind is responsible for the production of human behavior, to fulfill the desire to live itself. And so, we start with human will, human desire and its relationship to reasoning.

Each of Plato's dialogs is based on a principle of reasoning. Part of his technique is to use the greatest contrast possible to make his point, he uses the best of the best and even so far as to put the best of people in the worst possible hell imaginable such as the *Republic*. One will find that in constructing the worst hell he could image, he borrowed and exampled from another work which is claimed to be his, Laws, but which are clearly written by a sociopath who was superstitious and a control freak. If Plato wrote the *Laws* then he was schizophrenic a point no one ever noticed in his life. Alcibiades is that man who has the geatest ambition and the question is, whenever we want something, what are we willing to do to acquire it such that one's acquisition is obtained and obtained in accordance with the truth of things? Are we willing to work for what we want and what does that work entail in relation to judgment? Plato outlines it here.

## Introduction to Parmenides.

If one wants to know the organization of the *Platonic Dialogs*, then one has to listen to Plato tell them. Plato's aim of writing the dialogs are stated in the *Phaedrus*, the preservation of a science and if one takes a hint from that dialog, one starts a dissertation by defining one's terms. This means that it is *Parmenides* which is the first dialog of the Platonic series in terms of denoting a science of grammar, grammar beyond the common man. Dialectic starts by understanding *One* and its relationship to its predicates *a unit*. Every possible grammar is effected by complete induction and deduction from *One* through its predicates *a unit*. In short, every possible grammar is based on the One as a relative within correlatives, or again, a container and the contained.

$$\text{One} = \text{relative} \times \text{correlative, relative} = \frac{\text{One}}{\text{correlative}}.$$

One is a relative by, or with, its correltative, etc.

And if one understands it forms the paradigm for all of the symbolic processing of information and is also known as the *one and the many*, then they just might expect that there is a series of dialogs which follow the teaching of the One which are linked to it. It also forms a another one and the many, the beginning of science to its end, or the start of Socrates intellectual life to the end of his life. Socrates in chains is then the many preceeded by the one, *Parmenides*. Socrates in chains is the unit by which the dialogs are organized. Plato tells one in the *Sophist* that he took the teachings of *Parmenides* to its natural conclusion, his work went beyond *Parmenides*.

Unknown to man, certain things have been entrenched in human history preparing for and aiding in the day man attains to what is considered intelligence. The *Dialogs* of Plato introduced algebraic reasoning. Arithmetic thinkers cannot follow it, even though they are told directly how to solve the riddle about *Parmenides* in Theaetetus.

> Socrates: If you have had a dream, let me tell you mine in return. I seem to have heard some people say that what might be called the first elements of which we and all other things consist are such that no account can be given of them. Each of them just by itself can only be named; we cannot attribute to it anything further or say that it exists or does not exist, for we should at once be attaching to it existence or nonexistence, whereas we ought to add nothing if we are to express just it alone. We ought not even to add ‘just' or It' or ‘each' or ‘alone' or ‘this,' or any other of a host of such terms. These terms, running loose about the place, are attached to everything, and they are distinct from the things to which they are applied. If it were possible for an element to be expressed in any formula exclusively belonging to it, no other terms ought to enter into that expression. But in fact there is no formula in which any element can be expressed; it can only be named, for a name is all there is that belongs to it. But when we come to things composed of these elements, then, just as these things are complex, so the names are combined to make a description (λόγος), a description being precisely a combination of names. Accordingly, elements are inexplicable and unknowable, but they can be perceived, while complexes (‘syllables') are knowable and explicable, and you can have a true

> notion of them. So when a man gets hold of the true notion of something without an account, his mind does think truly of it, but he does not know it, for if one cannot give and receive an account of a thing, one has no knowledge of that thing. But when he has also got hold of an account, all this becomes possible to him and he is fully equipped with knowledge. Theaetetus, Plato, Translated by F. M. Cornford

Scholars seem to have a bad memory also. Our body presents us with perceptible information, but that information is either a relative or an absolute. The art of measurement for the salvation of man is language. Every possible grammar is afforded by complete induction and deduction of this conjugate binary pair using those very same paradigms. Every grammar system is a system of measurement, a system of judgment and the very same equations in any one of them have to agree with the same in any other. In the above passage, Plato was denoting symbol sets and the methods which effect their recursion.

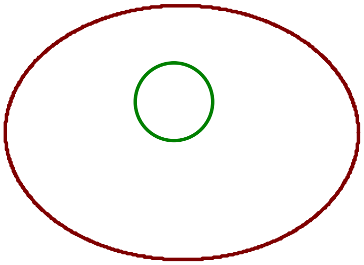
Parmenides is the most important dialog of the Platonic series, it establishes the definition upon which the rest of the dialogs are derived and scholars have never been able to make heads or tails of it. To mankind, the dialog appears to be gibberish. So, here it is, if you think and speak gibberish, then the actual method of processing information appears to you to be gibberish. A person processes information in accordance with their linguistic ability. Plato is teaching the correct form of reasoning which is also why the Judeo-Christian Scripture is sealed to man's understanding. It is why a pure language is being introduced to man. The mind of man is still being made. So, I will show what Parmenides is demonstrating. If you cannot follow it in this manner, consider this, your computer examples its power to you. A unit is also called a logic gated by transisters, simply turning them on and off. You can take any material difference and gate it to construct a computer. You can do it with water, air, light or electricity. Or you can do it with a simple line segment. See my work on Basic Analog Mathematics which is contained in Universal Language and the Art of Prophecy.

Every possible thing is some material difference within some shape or form. In the abstract, a relative difference within correlatives. Or again, a relative contained by absolutes. Simply put, a container and the contained. This is called a unit, a thing. In the simplest analog;

Our body informs us of boundaries and relative differences, relatives and correlatives. These are, as Plato noted, all we can name, yet neither of them is a thing. The process of naming, if you are following meaning, is rational explaination, i.e., language produces by standards of behavior the pairing of Logic to Analogic, and these grammars are indexing systems for information, our own experiences, just like measuring. Keep this in mind, every possible form of grammar, symbolic processing, starts by affording names to these exact same elements and the results is, they must always say the same things about the same things. We learn about standards of behavior, which is just another way of saying a unit, by, as Patanjali was want to say, paralleling these two intelligibles. The shape of a thing is not the material difference of a thing. The material difference of a thing is not its shape. When you apply a shape to some material, it does not change the material. The boundary of the segment is not the material difference between them. A mind processes information in regard to these two paradigms, neither of which is a thing. Every possible form of information processing is going to be indexing what we do with these two categories of information. Grammar systems are factually indexing systems for the effective use of memory. Grammar affords us a unit for complete induction and deduction, which affords us, as the JCS is trying to get the reader to realize, the Art of Prophecy, the ability to predict the future using any number of relative differences.

A mind is incorrectly processing information when it ascribes to an absolute a relative difference or to a relative difference an absolute.

The boundary of a thing then has many linguistic synonyms; shape, form, limit, definition, like, is, etc. Thus *Parmenides* is an exercise in what is called today Class Mechanics, which modern writers always get wrong but they do not know why. And, you can actually get Knighted for it, just ask Bertrand Russell. Let me show you.



If definition determines class inclusion and class exclusion, i.e. if a boundary determines which side of the fence you are on, then watch a common mistake which makes rubbish out of Venn Diagrams. Plato will make this demonstration in the start of *Parmenides* using a simple sail to covering many men. I will just use the simple ellipsis found in Venn Diagrams.

Let us say the larger ellipse is the definition which determines class inclusion and class exclusion. So the Venn Diagrammer is going to show you a member of that class with the green circle. And you are happy to follow along because it looks just so simple. Save for one thing people do not notice. The boundary of the member of the class excludes the class of which it is a member. As soon as you denote a member of a class, you are no longer talking in reference to that class but another set of relatives. You are no longer on the same topic. Just in order to draw the green circle, you are implying not just one relative difference but two and what you have left is simply a perceptible illusion. Two separate things overlaid. The Venn Diagrammar actually asserted an absolute of a relative difference. Every member of a class is a member of that class in accordance with the definition of that class but by definition of a class no member of it is distinguishable from any other member by the definition of that class. The very first thing a Venn Diagrammar does is make it impossible to do what they intended. That is not actually a sign of intelligence. A definition of a class determines class inclusion and class exclusion, however, logicians speak the words, but immediately forget it. Duh, they just demonstrated a fact, they cannot count. So what Venn Diagrams are actually doing is reducing to a common relative difference of what you see, to just geographical location on paper. Well, you have to admit, it certainly makes thinking easier by eliminating the details.

So, if a Venn Diagrammar was even literate enough to comprehend Plato, they would not even be trying to write Set Theory which is not a theory at all, it is the foundation of indexing information.

Logics are indexing systems for analog information. In other words, systems of measurement, both the relative and the absolute. The measure of a thing does not change the thing measured. It does not confuse the absolutes with the relatives. And thus, an literate child can factually disprove Einstein and countless other so called geniuses. A fool cannot recognize another fool.

Simple minds treat boundaries and relatives as if they were things, because they cannot make the abstraction, a distinction between the absolute and the relative, they treat them not as the parts of things, but as things in of themselves. So, *Parmenides* is trying to teach you the principles of predication, assertion and denial. You cannot assert or deny of an absolute or a relative. You cannot assert an absolute of a relative or a relative of an absolute. You cannot assert a thing of a relative or absolute.

You have to learn the foundation of thought as an indexing system for information. What will remain is an understanding that every grammar possible is afforded by complete induction and deduction of a unit, but you have to know how to construct one and correctly name the elements, or index the elements. In order to know anything at all, a mind must combine the information of the senses to make a thing, It combines relatives and absolutes to make a thing, neither of which is a thing and it has to index them by knowing how an indexing system functions by using those two paradigms.

The dialog is trying to get you to think what happens when you screw up assertion and denial in relation to biological fact. Every grammar today teaches rubbish, from common grammar to arithmetic, algebra and geometry.

Another way to work the demonstration of *Parmenides* is the definitive sentence.

The Conjugate Binary Pair, any possible thing, tells you that you only have two, and only two, categories of names. Nouns and Verbs. In Biblical terms, Two Tablets of Law afforded by your own biology or in metaphor, Two Witnesses of God. Right away, if your mind was working, you should want to toss your lunch with that gibberish they call English Grammar. A simple linear segment tells you that your grammar books are gibberish. However, long before man knew what a grammar book was, the Book was plating concepts which would drive a monkey mad. Evolution of a mind uses intelligible concepts.

So let us name our relative and correlative. Let us say that we have some class called Cat. And let us denote an indefinite material difference within that class, say, A.

We have *a cat*.

That is a predicate pair, the name of a relative and an absolute.

Now, let us name this predicate pair as a group. I only have two paradigms to use. Which is it, the container or the contained? Well if I am going to group a group, then I have to use the paradigm of form, an absolute.

I will name the group, Tom. What I have done is called recursion.

Now the noun Tom, is a container, it can contain all the predicate pairs I use to measure Tom, but as a container, you never notice, on paper, any change at all in the name Tom. Tom is a name of a group. Yet, if you think of Tom as One thing, it cannot be predicated of. If you consider it as one group, then the predicate pair you are adding to that group is not the One of the group. So, *Parmenides* appears confusing, if you are unable to follow the indexing.

Tom is a Cat. Tom, is a purse. If you ever read the JCS, and read, You shall have but one measure in your purse, you should now comprehend the metaphor.

A and Cat are derived from perception, but to group them requires an intelligible, the same way you handle information from the bodies senses.

Notice something else, the expression is not arithmetic, it is algebraic.

Tom is a member of the class cat.

The relative difference is A.

$$A = \frac{Tom}{Cat}.$$

Reasoning, as shown, follows the relative. Now, in deference to books on common grammar, that is wholly different than pointing to the geographical location of names in a sentence and renaming them; that is one of the stupidest behaviors possible. Imagine someone telling you that you had to learn the meaning of equations by learning how to group the greographical location of symbols in the equation. There is absolutely no name which performs the anthropomorphic function of modifying another name. Plato was introducing Algebraic reasoning long before algebra even had a name.

## Socrates in Chains.

The unit, *Parmenides*, forms the foundation of every possible system of grammar. It is biologically determined, on the other side of it, is its application to human behavior. Two of these dialogs will be in respect the the unit in terms of practical grammar, the *Sophist* and the *Statesman*.

The day that Socrates ended up in prison starts with the dialog *Theaetetus*. *Theaetetus*, by the text itself, is claimed to have been written down by Euclid, and I believe the very same one, who was working on geometry as a paradigm for the elements—reminants of which we have today in a very corrupted form, who was visiting Socrates while he was in prison. It is no accident that one is led to use a linear segment to comprehend the dialogs of Plato. From Socrates time with Theodorus and Theaetetus, Socrates went to the porch of the King-Archon where the dialog *Euthyphro* took place. From there, the *Apology*, which ended him in prison. The next day in prison (pay attention to the first line in the Sophist), Theodorus kept the appointment made in *Theaetetus* and brought with him an Elean guest for the *Sophist* and followed with the *Statesman*.

Then there is *Crito* and following that day was *Phaedo* of which Socrates was no more.

*Theaetetus*, [Absolute] what is science points directly to *Parmenides* for exercises. In short, the end of Socrates' life pointed to its intelligible beginning. The concept of a unit as a Conjugate Binary Pair aimed at exercising class mechanics for the impossibility of predicating of an element. It is the impossibility of predicating of an element which proves that language, being an art of measurement, can factually preserve the measure—every possible grammar, symbolic process, is commensurate with a naming convention based on a paradigm derived from a unit, manipulated as an indexing system. And since a Unit, a thing, is based on the recursion of the element of the correlative, or boundary, one cannot predicate of any thing, or unit. Lying is not, nor ever has been, grammar, but the denial of grammar. Lying is a declaration that one is not a man, but an animal less than a man. Predication is simply an indexing process for any possible unit or thing. Socrates, in teaching Theaetetus thus points back to his own learning as a young man and uses what he learned from *Parmenides* to examine and teach Theaetetus.

*Euthyphro*, [Agent and Patient] based on the worst possible behavior, the prosecution of one's own parents aimed at demonstrating that the definition of a thing, is not even predicable by the gods. It determines the whole of good and evil.

*The Apology*, [Correlatives] just like the *Republic*, puts the best of men in the worst of circumstances, or the relative difference between good and evil. One of the items one should pay very close attention to here. This Socrates is not the same as the one Plato uses in the other dialogs. Plato used Socrates metaphorically in the other dialogs. This Socrates is a moral examiner of the adults who imagined themselves wise, the Socrates in the other dialogs is a teacher of dialectic to the young. The age difference of Socrates's encounters and goals are rather distinct and so we have the perceptible correlatives and the intelligible as well.

And there is another very great distinction between the Socrates in the *Apology*, and the Socrates in the other Platonic Dialogs. The Socrates in the *Apology* measured things in accordance with knowledge and moral behavior, the product. While the Socrates of the other Dialogs is busy teaching symbolic processing of information, or the method, individual mental behavior. Plato, in the *Apology*, *Crito*, *Phaedo*, is showing a product of the disciplines learned in the other dialogs.

The Socrates of the *Apology*, is the Socrates of one-on-one, the Socrates of the other Platonic Dialogs is the recursion of Socrates for the many. The *Apology* is one man making a choice, what is the standard of human behavior?

*Sophist* and *Statesman* are demonstrating division of classes, each hinging on one of the elements. In the *Sophist*, Plato is demonstrating arithmetic division. In the *Statesman*, metaphorical, or again, geometric division.

Many claim that the series *Sophist* and *Statemen* are not complete because the *Philosopher* was not written. That is a failure of comprehension of the two dialogs. There are two ways to example meaning, the arithmetic, i.e. from the perceptible, and geometric, i.e., metaphorical often called model's or paradigms, etc. Combined they make a complete definition, i.e. both dialogs together.

Why was the Elean Stranger introduced into the two dialogs, *Sophist* and *Statesman*? Simply to keep Socrates in character. The Elean is teaching division of classes, through the absolute and the relative. Socrates is a metaphor for the method we learn, asking and answering questions and as he said, in of himself, he had no knowledge. The Stranger, the one we do not know, is why we define things through the processing of information.

In the three dialogs, *Parmenides*, *Sophist*, and *Statesman*, Socrates is not the main character. These are aimed at what Socrates, himself learned as a child. Each of them is centered around the teaching of Parmenides and Zeno, the unit, or the one. And also notice, in all three dialogs, that they are practice material for a dialectician. They lay out the study material, every other dialog is example material for these dialectical concepts, that is, if it is a Platonic Dialog.

*Crito*, the importance of one's own words.

In *Phaedo*, Plato is going to use dialectical mythology or metaphor to soothe the friends he is leaving behind. Even with his last breath he will dedicate it to the living, even though they are too simple to see past the metaphors. What exactly is the nature of his arguments? What he is going to do is exactly what Parmenides did with the unit in general, that it cannot be predicated of. In the *Phaedo*, Socrates with establish a particular unit, the soul. It is a very clever myth. The series then starts with *Parmenides*, the science of dialectic and ends up with a professional dialectician using the principles to construct psycholinguistics to soothe his friends.

The range of a dialectician in teaching men to regulate their own behavior in accordance with biological fact is from pure science to pure religion, or again, every possible grammar is metaphorical. The regulation of behavior in a mind is therefore regulated from within or from without.

These eight dialogs form a golden chain, the evolution of learning dialectic, the method by which a mind does its own biologically determined job.

Today, if you look at educational standards and standards for curriculum in education, what you see is a blind species that does not even know what it is, why it is, or even care to do its biologically defined job.

When it is said that a prophet is sent to prepare the way, it means that no prophet is sent for man as he is, but for the children to come. Man is still being made and by complete induction and deduction of One.

It is not even biologically possible to have any other god than One.

Now you know how to build a temple wholly without hands, if you comprehend the metaphor, it is the same as a pure language. All we can do is name and index, in body, mind, and soul.

A house divided against itself cannot stand. Man, divided against reality, his own biology, cannot stand.

The question then becomes, what behaviors can we actively pursue to change our own fate? That appears to be a contradictory question. How can the blind see what is wrong with themselves?

I leave this with a question; all of those who did a compilation with such titles as The Last Days of Socrates, or The Trial and Death of Socrates, etc., why is it that none of them used all of the dialogs in the series?

# Alcibiades 1

Wednesday, April 1, 2020

One should know that the function of a mind is to effect life supporting behavior and it accomplishes this through the artifice of Language, or grammar. In this dialog then, one takes the person with the greatest desire to accomplish the greatest of accomplishments. It does not matter if the desire is insane or not. In this dialog, Socrates represents the dialectician, a master in dialectic; dialectic is the application of grammar for the modification of human behavior such that that behavior maintains and promotes life. Alcibiades represents the person with the greatest desires and also expresses the greatest insanity; his own insanity is used to lead him and actually socially defuse him, thus benefiting both him and society. Through undeniable fact, Alcibiades, in his self-love, is set on a saner tract.

# First Alcibiades.

Translated by George Burges, M. A. 1861

PERSONS OF THE DIALOGUE.

Socrates, Alcibiades.

---

Socrates:: You feel some wonder, I think, son of Clinias, that I, who was the first of your admirers, am now, when all the rest have ceased to be so, the only one who has not withdrawn himself; and that, while the others were plaguing you with their conversation, I did for so many years never speak a word to you. For this behavior of mine the reason is to be found not in any obstacle arising from man, but from a dæmon, of whose power you shall hear hereafter. But as it no longer offers any opposition, I have come to you now; and I am in good hopes that for the future likewise it will be no impediment. By reflecting, however, during the interval, I nearly thoroughly understand what is your position with respect to your admirers. For though they were many, and men who thought highly of themselves, yet there is not one, who has not gone away from you, through their being surpassed by you in self-conceit. Now the reason for your thinking so highly of yourself I am desirous of detailing. You assert then, that you are in nothing inferior to any man. For what is your own, beginning from the body and ending in the mind, is so great, as to stand in need of nothing. In the first place, you fancy yourself to be very handsome, and of a great size. And in this it is evident to every one, who can see, that you are not mistaken. In the next place, you are of a family the most youth-like in your own city, which is the greatest of any in Greece; and that you have friends here, and relations on your father's side, very numerous and very powerful, ready, if need be, to assist you; and those too on your mother’s side are neither inferior nor fewer. But greater than all I have mentioned taken together, is the influence you possess through Pericles, the son of Xanthippus, whom your father left as guardian to yourself and brother; that Pericles who is able to do what he pleases, not only in this city, but through all Greece, and with many and mighty clans of Barbarians. And I will add too, that you are one of the wealthy; although, on this point, you seem to me to value yourself the least. Boasting yourself then highly on all these advantages, you have acted the lord over your admirers; and they, feeling their inferiority, have become your slaves. And of this you are very sensible; and hence I know full well, that you feel a wonder at what I have in my thoughts, in that I do not withdraw myself, and what is the hope I entertain in remaining, when all the rest have gone away.

Alcibiades:: Perhaps, Socrates, you are not aware that you have anticipated me a little. For I really had it in my mind to come to you previously, and to ask you these very questions—What can you possibly mean, and looking to what hope are you plaguing me, and, wherever I am, are perpetually present yourself? For I do in truth wonder what your business can be with me; and I should very gladly hear.

Socrates:: You will hear me then, as is likely, very readily, if, as you say, you are really desirous of knowing what I have in my thoughts. I speak then as to one who will hear, and stay.

Alcibiades:: Entirely so. Speak then.

Socrates:: But mark, for it will be a thing not of wonder, if, as I begin with difficulty, I should with difficulty likewise make an end.

Alcibiades:: Speak, my good man, for I will listen.

Socrates:: Speak then I must; and though it is a hard task for an admirer to address himself to him, who is not inferior to his admirers, yet I must dare to speak my mind. If, Alcibiades, I had seen you satisfied with the advantages which I have just now detailed, and that you conceived you ought to pass your life amongst them, I should long since have withdrawn myself from all the love I bear; at least so I persuade myself. But I will now convict you of having other thoughts relating to yourself; and by so doing you will know, how I have continued keeping my attention directed towards you. For you appear to me such that, if any god were to say to you, "Are you willing, Alcibiades, to live possessing what you now do, or to die instantly, unless you are permitted to possess things still greater?" you would prefer to die. But in what kind of hope are you now living? I will unfold. For you conceive that, if you were to come rather quickly before a meeting of the Athenian people—and this will take place within a few days—you will be able to show that you are worthy of being honored in a way that neither Pericles nor any one else of those, who have ever existed, was worthy; and after you have shown this, that you will possess the greatest power in the state; and that if you are the man of the greatest influence here, you will be so amongst the rest of the Greeks; and not only amongst the Greeks, but amongst the Barbarians likewise, as many as inhabit the same continent with us. And further, if the very same god were to say to you that—It is necessary for you to be the master here in Europe, but that it will not be allowed you to pass over into Asia, nor to concern yourself with affairs there—it appears to me that you would not even on these terms be willing to live, unless you could fill the mouths, so to say, of all men with your name and power; and you would deem, I fancy, that no man ever lived, except Cyrus and Xerxes, worth mentioning. Now, that you do entertain such hopes I know full well, and speak not from conjecture merely. Perhaps, you will say, as being convinced that I am speaking the truth—What has all this to do with the reason, which you said you would tell, why you have not withdrawn yourself from me? I will tell you then, my dear son of Clinias and Dinomache. That to all these thoughts of yours a finish should be put, is impossible without my help; so great power do, I think, I possess with regard to your affairs and to yourself to boot. Hence I have long ago thought that the god did not permit me to converse with you; for whom I have waited, until he should permit. For as you have a hope of being able to show before the state that you are worth every thing to it, and after having shown it, that there is nothing that you will not be able to do forthwith, so do I have a hope that I shall possess the greatest power over you, after having shown that I am worth every thing to you; and that neither guardian, nor relation, nor any one else, is able to procure you the power you desire, except myself, with the assistance, however, of the god. While therefore you were rather young, and before you were filled with these hopes, the god, it seems to me, would not permit me to discourse with you, lest I should converse in vain; but now he has permitted; for now you will hearken to me.

Alcibiades:: Much more unreasonable, Socrates, do you appear to me now, since you have begun to speak, than when you followed me in silence: and yet you were at that time very much a person of such kind to look upon. Whether I have such thoughts, or not, you, it seems, know with certainty; so that were I to deny it, the denial would not avail me to persuade you an atom the more. Let it then be so. But if I have such thoughts ever so much, can you tell me how they will be accomplished through you; but without your help they never can be?

Socrates:: Do you ask me, whether I am able to make a long harangue, such as you are accustomed to hear? For if so, such is not my ability. But yet I should be able, I think, to show you, that such is the case, if you are willing to do me only one small piece of service.

Alcibiades:: If you mean some service not difficult, I am willing.

Socrates:: Does it seem to you difficult to give answers to questions?

Alcibiades:: Not difficult at all.

Socrates:: Answer then.

Alcibiades:: Ask.

Socrates:: Shall I ask you then as having the thoughts, which I say you are thinking of?

Alcibiades:: Be it so, if you will; in order that I may know what you will say.

Socrates:: Well then. You have it in your mind, as I said, to go and consult with the Athenians within not a long time. If then, when you were just about to mount the platform, I were to lay hold of you, and to say—"Since the Athenians are thinking, Alcibiades, about deliberating upon some matter, are you rising up to give them advice? Is it, since about what you know better than they do?" What answer would you make?

Alcibiades:: I would assuredly answer—About what I know better than they do.

Socrates:: On those subjects, then, which you happen to know, you are a good counselor?

Alcibiades:: How not?

Socrates:: Do you know those things only, which you have learnt from others, or found out yourself?

Alcibiades:: What other things are there?

Socrates:: Is it then possible that you should ever have learnt, or found out, any thing, which you were not willing to learn, or to search out by yourself?

Alcibiades:: It is not.

Socrates:: What then, have you ever been willing to search out or learn what you thought you knew?

Alcibiades:: Certainly not.

Socrates:: What you now happen to know, was there a time, when you did not think you knew?

Alcibiades:: Of course.

Socrates:: Now, what you have learnt, I know pretty nearly. But if any thing has escaped me, do you mention it. To the best of my memory, you have learnt assuredly grammar, and to play on the harp, and to wrestle: for to play on the hautboy, you were not willing to learn. These things are what you know; unless peradventure you have learnt something else secretly. And yet I think that you neither by day or night went out from within.

Alcibiades:: I have never gone to the school of other masters than of these.

Socrates:: When therefore the Athenians are deliberating about grammar, and how they are to write correctly, at that time will you rise up to give them advice?

Alcibiades:: By Zeus, not I.

Socrates:: But when they are debating about striking the strings of the lyre?

Alcibiades:: By no means.

Socrates:: But on the subject of wrestling they are not wont to deliberate in a public assembly.

Alcibiades:: Certainly not.

Socrates:: When then they are deliberating about what? For assuredly it cannot be, when the subject is about house-building.

Alcibiades:: No, certainly.

Socrates:: For a house-builder would advise them better than you could.

Alcibiades:: True.

Socrates:: Nor yet is it, when they are deliberating about divination.

Alcibiades:: No.

Socrates:: For a diviner would do so better than you.

Alcibiades:: Yes.

Socrates:: And that too, whether he be a short man or a tall one; whether handsome or ugly; and whether of a noble or ignoble family.

Alcibiades:: How not?

Socrates:: For advice upon each subject belongs, I conceive, to a person who knows it, and not to a man of wealth.

Alcibiades:: How not?

Socrates:: And whether the man, who gives advice, be rich or poor, it will make no difference to the Athenians, when they are deliberating about the health of those in the city; but they will seek for a physician to be their counselor.

Alcibiades:: And reasonably so.

Socrates:: When they are inquiring into what subject, will you rise up, and after rising up, give them advice?

Alcibiades:: When they are inquiring, Socrates, into the state of their affairs.

Socrates:: Do you mean about building a fleet? and what kind of vessels it is requisite should be built?

Alcibiades:: No such thing, Socrates.

Socrates:: Because you are ignorant, I think, in the art of ship-building. Is this or any thing else the reason?

Alcibiades:: There is no other than this.

Socrates:: But when they are consulting about what affairs of their own do you mean?

Alcibiades:: When they are deliberating, Socrates, about war or peace; or any other affairs of state.

Socrates:: Do you mean when they are deliberating with whom it is requisite to make peace, and against whom to engage in war, and in what way?

Alcibiades:: Just so.

Socrates:: Now is it not requisite to do so with whom it is better to do so?

Alcibiades:: Certainly.

Socrates:: And at that time, when it is better?

Alcibiades:: By all means.

Socrates:: And for so long a time, as it is better?

Alcibiades:: Just so.

Socrates:: If then the Athenians were deliberating with whom it was requisite to wrestle and with whom to come to close quarters, and in what way, would you give better advice than the exercise-master?

Alcibiades:: The exercise-master assuredly.

Socrates:: Can you tell me now, by looking to what would the exercise-master give advice, with whom it is meet to wrestle closely, and with whom it is not? and at what time, and in what manner? I mean something of this kind.

Is it meet to wrestle closely with those persons, with whom it is better to do so? or is it not?

Alcibiades:: It is.

Socrates:: Whether to such an extent as it is better?

Alcibiades:: To such an extent.

Socrates:: And at the time too when it is better?

Alcibiades:: By all means.

Socrates:: Moreover, a singer ought sometimes to play the harp, and to move his feet according to the tune.

Alcibiades:: Just so.

Socrates:: Ought he not to do so at the time when it is better to do so?

Alcibiades:: Certainly.

Socrates:: And to such an extent as it is better?

Alcibiades:: So I say.

Socrates:: Well then, since you make use of the term better in both cases, namely in playing the harp according to the tune, and in close wrestling, what do you call “the better” in playing the harp, as I call the better in wrestling by the term gymnastical? what do you call that?

Alcibiades:: I do not understand.

Socrates:: Try then to imitate me. For I have assuredly answered you, it is that which, under all circumstances, is correct. Now that is correct, which is done according to art. Is it not?

Alcibiades:: It is.

Socrates:: Now is not the art gymnastic?

Alcibiades:: How not?

Socrates:: And I said, that the better in wrestling is gymnastical.

Alcibiades:: You said so.

Socrates:: And was it not well said?

Alcibiades:: It seems so to me at least.

Socrates:: Come then, and say—for it would surely become you too to discourse correctly—in the first place, What is the art, to which belong the playing on the harp, the singing, and the moving the feet correctly. By what name is the whole of this art called? Are you not able to tell?

Alcibiades:: Indeed I am not.

Socrates:: Try in this way then. Who are the goddesses to whom the art belongs?

Alcibiades:: Mean you, Socrates, the Muses?

Socrates:: I do. Consider now, what appellation has the art derived from their name?

Alcibiades:: You appear to me to mean musical.

Socrates:: Yes, I meant so. What then is that, which is performed rightly according to this art? Just as I told you, that what was performed rightly according to art, was gymnastical. So what do you say is similarly in this case? How is it to be performed?

Alcibiades:: Musically, I think.

Socrates:: You say well. Come then—What do you term the better in the expressions, "the warring better," and "in enjoying peace better?" just as there you made use in each case of the term better, in one as being more musical, in the other as more gymnastical. Try now in these cases likewise to state what is "the better."

Alcibiades:: I cannot tell at all.

Socrates:: But surely it is a disgraceful thing, should any one, while you were giving advice respecting the kinds of food, and saying, that this is better than that, both as regards the present time and quantity, inquire of you, “What do you mean, Alcibiades, by ‘the better?’” that you should, on these subjects, be able to tell him that it was the more wholesome—and this, too, although you do not profess to be a physician—but that on a subject, of which you profess to have a knowledge, and, after rising up, you will give advice, as if you knew it, you are not, when questioned, ashamed, as you seem to be, if you are unable to say any thing? Or does this appear to be not disgraceful?

Alcibiades:: Very much so.

Socrates:: Consider now, and be ready to state—To what point tends “the better” in enjoying peace, and in warring with those with whom it is meet?

Alcibiades:: But though I do consider, I am unable to imagine what it is.

Socrates:: Know you not, when we make war, that after accusing each other of some suffering, we proceed to hostilities, and by what calling it we proceed?

Alcibiades:: I do. It is by our being deceived, or treated with violence, or deprived of something.

Socrates:: Hold. How are they suffering in each of these points? Endeavor to state what is the difference, this way or that.

Alcibiades:: By the expression “this way,” do you mean, Socrates, “justly” or “unjustly?”

Socrates:: This very thing.

Alcibiades:: And yet this is a difference wholly and entirely.

Socrates:: Well then, with whom shall you advise the Athenians to war? with those, who do what is unjust, or with those, who do what is just?

Alcibiades:: You are asking a hard question. For even if any man conceives that it is needful to war with such, as do what is right, he would not confess it.

Socrates:: For this, it seems, is not lawful.

Alcibiades:: By no means is it so; nor does it seem to be honorable.

Socrates:: With a view then to these points, and to what is just, you will make your speeches.

Alcibiades:: It is necessary to do so.

Socrates:: Does then the term “better,” about which I asked you just now, relating to the going to war or not, and with whom it is meet to do so, and with whom not, and at what time, and when not, happen to be any thing else than the term “more just?” or does it not?

Alcibiades:: It appears to be nothing else.

Socrates:: How then, my dear Alcibiades, does it lie hid from yourself, that you are ignorant of this? or have you lain hid from me, while learning, and frequenting the school of a master, who has taught you to distinguish between what is the more just, and what is the less just? Now who is he? Tell me, in order that you may introduce me too, as a frequenter of his school.

Alcibiades:: You are bantering, Socrates.

Socrates:: Not so, by the guardian-god of friendship to both myself and you, whom I would the least of all invoke as witness to a falsehood? If then you have any master, tell me who he is.

Alcibiades:: But what if I have not? Think you that I could by no other means have a knowledge of what is just, and what is unjust?

Socrates:: I think you would, if you had discovered it yourself.

Alcibiades:: Do you conceive then I could not have discovered it?

Socrates:: You would have done so perfectly, had you sought for it.

Alcibiades:: Think you, then, that I have not sought for it?

Socrates:: I think you would, if you had thought you did not know it.

Alcibiades:: Was there not a time, when I was in that state?

Socrates:: You speak correctly. Can you then mention the time when you did not think you knew what is just, and what is unjust? Come, tell me, were you making the search last year, and did you think then, or did you not, that you knew them? Answer truly now, that our conversation may not be in vain.

Alcibiades:: Nay, I did at that time think I knew.

Socrates:: And did you not think so during the third, fourth, and fifth year preceding?

Alcibiades:: I did.

Socrates:: But previously you were a boy.

Alcibiades:: True.

Socrates:: And even then, I know full well, that you thought you knew.

Alcibiades:: How do you know it well?

Socrates:: Often have I heard you, when you were a boy at school, and in other places, when you were playing at marbles, or any other game, speaking, as if you had no doubt respecting what is just and unjust, but proclaiming loudly and boldly about any of the boys who happened to be there, that he was a knave, and not just. Say I not what is true?

Alcibiades:: But, Socrates, what else was I to do, when any one did me an act of injustice?

Socrates:: Right. But if you happened at that time to be ignorant whether you were injured or not, would you have said, What were you to do?

Alcibiades:: But, by Zeus, I was not ignorant; but I clearly knew that I was injured.

Socrates:: You thought then, it seems, when you were a mere boy, that you knew what is just and unjust?

Alcibiades:: I did think so; and knew it too.

Socrates:: At what time did you discover it? for certainly it was not when you merely thought you knew.

Alcibiades:: Certainly not then.

Socrates:: At what time then did you think you did not know? Reflect; for that time you will never find.

Alcibiades:: By Zeus, Socrates, I am not able to tell.

Socrates:: You did not then know by finding it yourself.

Alcibiades:: It seems I did not.

Socrates:: But you stated however just now, that you knew, even without learning. But if you neither discovered it nor learnt it, how or whence did you know it?

Alcibiades:: But perhaps I did not answer you correctly by saying that I knew by discovering it myself. But the case is this. I learnt it, I presume, as others do.

Socrates:: We are now come again to the same point. From whom did you learn it? Tell me.

Alcibiades:: From the people.

Socrates:: In referring it to the people, you fly to no good instructors.

Alcibiades:: Why so? Are not they capable of teaching?

Socrates:: Not even the game of back-gammon correctly or not. And yet I think that these subjects are of less importance than those relating to what is just. Do not you think so too?

Alcibiades:: I do.

Socrates:: Are they then unable to teach some things of less importance, and some things of more?

Alcibiades:: I think so; at least they are able to teach many things of more importance than playing at back-gammon.

Socrates:: What things are these?

Alcibiades:: I learnt, for instance, from them to speak the Greek language; nor could I name my teacher on that subject, but I refer to those very persons, who you say are not good teachers.

Socrates:: But, my noble sir, on this subject, indeed, the people are good teachers, and may be justly praised for their power of instructing.

Alcibiades:: Why so?

Socrates:: Because on those subjects they possess what it is necessary for good teachers to possess.

Alcibiades:: What mean you by this?

Socrates:: Know you not, that it is necessary for those who are to teach any thing, in the first place to know it themselves? Must they not?

Alcibiades:: How not?

Socrates:: And must not they, who know it, agree together, and not differ?

Alcibiades:: Certainly.

Socrates:: But would you say that they know the subjects in which they differ?

Alcibiades:: Certainly not.

Socrates:: Of such things, then, how can they be good teachers?

Alcibiades:: By no means.

Socrates:: Well then, do the people appear to you to differ as to what is stone and wood? And should you inquire of any one, do they not all agree in the same opinion? and when they wish to take up a stone, or a piece of wood, do they not all rush to the same kind of things? and similarly understand all things of such kind? For I very nearly learn that you mean by this the knowing how to use the Greek language? Is it not so?

Alcibiades:: It is.

Socrates:: On these subjects, then, as we have said, do not persons individually agree with each other and themselves? and publicly the states of Greece do not have a difference with each other, by some of them meaning one thing, and others a different thing by the same words.

Alcibiades:: They do not.

Socrates:: On these subjects, then, they would reasonably be good teachers.

Alcibiades:: Yes.

Socrates:: If then we wished to cause a person to have a knowledge on these points, we should do right in sending him for such instruction to the people?

Alcibiades:: Perfectly so.

Socrates:: But what if we wished that person to know not only of what kind are men and of what are horses, but what kind of horses are fit for the race, and what are not, are the people competent to teach this?

Alcibiades:: Certainly not.

Socrates:: And is this for you a sufficient proof that they do not know and are not correct teachers on these points, because they do not agree with each other on these points?

Alcibiades:: To me at least it is.

Socrates:: And what, if we wished that person to know not only of what kind men are, but what are healthy and unhealthy, would the many be competent teachers for us?

Alcibiades:: By no means.

Socrates:: And it would be a proof to you that they are bad teachers on these points, if you saw them disagreeing.

Alcibiades:: It would.

Socrates:: What then, do the many seem to you to agree, themselves with themselves, or with each other, respecting persons and acts, just and unjust?

Alcibiades:: By Zeus, Socrates, the least of all.

Socrates:: What then, that they differ the most on these points?

Alcibiades:: Very much indeed.

Socrates:: You have never, I suppose, seen or heard of men, differing so violently, about things wholesome and not, as on that account to fight and kill one another?

Alcibiades:: Never.

Socrates:: But upon questions of justice and injustice, how bitterly they differ I know well; and if you have not seen it, you have at least heard from many others, and from Homer; for you have heard of both the Odyssey and the Iliad.

Alcibiades:: Entirely, Socrates.

Socrates:: Are not then those poems concerning a difference as to what is just and unjust?

Alcibiades:: Yes.

Socrates:: And did not the battles and the deaths take place amongst the Greeks and the other Trojans, and amongst the wooers of Penelope, and Ulysses, on account of this very difference?

Alcibiades:: You speak what is true.

Socrates:: And I conceive that to the Athenians, Lacedæmonians, and Bœotians who perished at Tanagra, and to those, who afterwards met in arms at Coronea, when Clinias your father ended his career, a difference upon no other question than what relates to justice and injustice, caused the deaths and battles. Is it not so?

Alcibiades:: You are in the right.

Socrates:: Shall we say then that those persons had a knowledge on the question about which they differed with such vehemence, as by their contending with each other to inflict upon themselves the extreme of mischief?

Alcibiades:: It appears not.

Socrates:: Do you not then refer to teachers of such a kind, as you confess yourself to know nothing?

Alcibiades:: I seem to do so.

Socrates:: How then is it likely that you should know what is just and unjust on questions, about which so vague are your ideas, and which you appear to have neither learnt from another, nor to have discovered yourself?

Alcibiades:: From what you say, it is not likely.

Socrates:: See you again this, that you have not spoken, Alcibiades, correctly?

Alcibiades:: What is it?

Socrates:: In that you stated that I said so.

Alcibiades:: What, did not you say that I know nothing of what is just and unjust?

Socrates:: Not I, indeed.

Alcibiades:: But did I say it?

Socrates:: Yes.

Alcibiades:: How so?

Socrates:: You will see it in this way, should I ask you about one and two, which is the greater number, you will say that two is.

Alcibiades:: I shall.

Socrates:: By how much.

Alcibiades:: By one.

Socrates:: Which of us then is the person who says that two is more than one by one?

Alcibiades:: It is I.

Socrates:: Did not I ask the question, and did not you answer it?

Alcibiades:: Yes.

Socrates:: On these points, then, who appears to assert? Is it I who ask, or thou who answerest?

Alcibiades:: I.

Socrates:: What then, were I to ask how many and what are the letters in "Socrates," and you were to state, which of us would be the teller?

Alcibiades:: Myself.

Socrates:: Come then, tell me in one word, whenever a question and answer take place, who is it that asserts? he who asks, or he who answers?

Alcibiades:: He who answers, Socrates, as it seems to me.

Socrates:: Now through the whole of the conversation was not I the party asking?

Alcibiades:: Yes.

Socrates:: And you the party answering?

Alcibiades:: Certainly.

Socrates:: Well then, which of us two said what was asserted?

Alcibiades:: From what has been admitted, Socrates, I appear to be the party.

Socrates:: Has it not been said that Alcibiades, the handsome son of Clinias, knew nothing about what is just and unjust, but thought he knew; and that he was about to go to a public meeting to give the Athenians advice upon questions of which he knew nothing? Is it not so?

Alcibiades:: So it appears.

Socrates:: The saying then of Euripides has come to pass, Alcibiades. You seem very nearly to have heard this from yourself, and not from me. For it is not I, who say this, but yourself; and vainly do you lay the blame on me. And indeed you speak correctly. For mad is the endeavor, O best of men, which you have in your thoughts of attempting to teach what you do not know and have neglected to learn.

Alcibiades:: I conceive, Socrates, that the Athenians, and the other Greeks, seldom deliberate whether things are more just or unjust; for these things they think are plain enough. Dismissing then the consideration of such points, they look to what will be most conducive to those who act. For I imagine that justice and interest are not the same things; since to many it has conduced to their interest to have done things very unjust, while to others there has been no advantage in having acted with justice.

Socrates:: Then if justice happens to be a thing ever so much of one kind, and interest of another, do you not surely think you know what is a man’s interest, and why it is so?

Alcibiades:: What prevents me, Socrates? unless you ask me again from whom I learnt it, or how I discovered it myself.

Socrates:: What is this you are doing? If you say any thing not correctly, and it happens to be possible to prove it so by the same arguments as before, you fancy forsooth that you ought to hear something fresh, and other arguments; as if the former had been worn out like dresses, and you could no longer put them on, unless one should bring you a proof clear and without a stain. But bidding farewell to the quick sallies of your speech, I will nevertheless ask you from whence have you learnt, and how do you know, what is to a person's interest, and who was your teacher? and all the former points I now put in a single question. For it is evident that you will come to the same point; nor will you be able to show either that, by having discovered it, you know what is to a person's interest, or that you have learnt it. But since you give yourself airs, and would not pleasantly have a taste of the same argument again, I bid farewell to the question, whether you do or do not know what is for the interest of the Athenians. But whether justice and interest are the same, or different, why have you not shown, by putting, if you wish it, questions to me, as I did to you? or, if you had rather go through the subject in a speech at your discretion.

Alcibiades:: But I know not, Socrates, if I should be able to go through it before you.

Socrates:: But, my good friend, suppose me to be the assembly and people. For there it will be necessary for you to persuade every individual. Is it not so?

Alcibiades:: Yes.

Socrates:: Does it not belong, then, to the same person to be able to persuade each individual, and many met together, about what he knows? just as a teacher of grammar is wont to persuade one and many on the question of letters.

Alcibiades:: True.

Socrates:: And will not on the question of numbers the same person persuade both one and many?

Alcibiades:: Yes.

Socrates:: And will not he, who knows, be an arithmetician?

Alcibiades:: Certainly.

Socrates:: And are not you likewise able to persuade many on those points, on which you persuade one?

Alcibiades:: It is probable.

Socrates:: But these subjects it is plain are what you know.

Alcibiades:: Yes.

Socrates:: Does then the person in a meeting like this differ from the orator before the people in any thing else, than that the one endeavors to persuade persons collected together, but the other persons taken singly.

Alcibiades:: It appears nearly so.

Socrates:: Come then, since it appears that it belongs to the same person to persuade many and one, practice your skill on myself, and endeavor to prove that what is just is sometimes not to a person's interest.

Alcibiades:: You are very saucy, Socrates.

Socrates:: And I am now from my sauciness about to persuade you the very contrary to what you are unwilling to persuade me.

Alcibiades:: Say on.

Socrates:: Do you only answer the questions asked.

Alcibiades:: Not so; but do you say yourself.

Socrates:: Why so? Do you not wish to be persuaded as much as possible?

Alcibiades:: By all means.

Socrates:: Would you not, if you said that such was the case, be entirely persuaded of it?

Alcibiades:: So it seems to me.

Socrates:: Answer then; and if you do not hear from yourself that what is just is to a person's interest, do not believe any one else who says so.

Alcibiades:: Not at all. But I must answer. For I do not think I shall come to any hurt.

Socrates:: For you are like a diviner. Tell me then. Say you that of things, that are just, some are to a person's interest, and some not?

Alcibiades:: Yes.

Socrates:: What then, that some of them are beautiful, and some not?

Alcibiades:: Why ask you this?

Socrates:: Whether has any one seemed to you to act basely indeed, but justly?

Alcibiades:: Not to me at least.

Socrates:: But you think that all actions that are just are honorable?

Alcibiades:: Yes.

Socrates:: But what, as to actions, that are honorable? Whether are all good, or some are so and some not?

Alcibiades:: I indeed, Socrates, conceive that some honorable actions are evil.

Socrates:: And that some base actions are good?

Alcibiades:: Yes.

Socrates:: Do you mean such actions as these? For instance, many men by aiding in battle a friend or relation have received wounds and died; whilst others, by not aiding when they ought, have come off safe and sound.

Alcibiades:: Very much so.

Socrates:: Such aid then you call honorable with respect to their endeavor to save those whom they ought. Now this is fortitude, is it not?

Alcibiades:: It is.

Socrates:: But you call it evil with respect to the death and wounds.

Alcibiades:: Yes.

Socrates:: Is not fortitude one thing, and death another?

Alcibiades:: Certainly.

Socrates:: To aid a friend then is not honorable and evil in the same respect?

Alcibiades:: It appears it is not.

Socrates:: Consider now, whether it be not good so far as it is honorable, as in the present case. For, with respect to fortitude, you acknowledged that such aid is an honorable act. Consider then this very thing, namely fortitude, whether it be a good or an evil; and consider it in this way. Which would you choose to have, good things or evil?

Alcibiades:: Good things.

Socrates:: And would not you choose the best things the most?

Alcibiades:: Yes.

Socrates:: And would you not choose to be deprived of them the least?

Alcibiades:: How not?

Socrates:: How say you then of fortitude? at what price would you choose to be deprived of it?

Alcibiades:: I would not accept even of life to be a coward.

Socrates:: To you, then, it seems that cowardice is the extreme of evil.

Alcibiades:: It does, at least to me.

Socrates:: On a par, as it seems, with death.

Alcibiades:: So I say.

Socrates:: Are not life and fortitude the most opposite to death and cowardice?

Alcibiades:: They are.

Socrates:: And would you choose to have those the most, and these the least?

Alcibiades:: Yes.

Socrates:: Is it because you deem those the best of things, and these the worst?

Alcibiades:: For this very reason.

Socrates:: To aid, then, our friends in war, in so far as it is honorable, with regard to the working out a good action, namely, that of fortitude, you call an honorable thing.

Alcibiades:: Yes, I appear to do so.

Socrates:: But with regard to the working out an evil action, namely, that of death, you call it an evil thing.

Alcibiades:: Yes.

Socrates:: Is it not then just to denominate every action thus? If, in so far as it works out an evil, you call it evil, ought it not to be called good, in so far as it works out a good?

Alcibiades:: It seems so to me.

Socrates:: In so far, then, as it is good, is it not honorable? but in so far as it is evil, is it not base?

Alcibiades:: Yes.

Socrates:: In saying then that the aiding our friends in a war is honorable indeed, but yet evil, you speak in not a different way than if you called it good indeed, but yet evil.

Alcibiades:: You seem to me, Socrates, to speak the truth.

Socrates:: Nothing then which is honorable, so far as it is honorable, is an evil; nor is any thing which is base, so far as it is base, a good.

Alcibiades:: Evidently it is not.

Socrates:: Consider now further in this way. Whoever acts honorably does he not act well too?

Alcibiades:: Yes.

Socrates:: And are not they, who act well, fortunate?

Alcibiades:: How not?

Socrates:: And are they not happy through the possession of good things?

Alcibiades:: Most certainly.

Socrates:: And they possess these good things by acting well.

Alcibiades:: Yes.

Socrates:: To do well then is a good?

Alcibiades:: How not?

Socrates:: And is the doing well an honorable thing also?

Alcibiades:: It is.

Socrates:: Therefore the same thing has again been shown to us to be both honorable and good?

Alcibiades:: It seems so.

Socrates:: Whatever then we shall find to be an honorable thing, we shall find it to be a good thing likewise, according to this reasoning at least.

Alcibiades:: It must be so.

Socrates:: What then, do good things conduce to one’s interest, or not?

Alcibiades:: They do.

Socrates:: Do you remember now how we agreed about things that are just?

Alcibiades:: I suppose you mean that they, who do what is just, must of necessity do what is honorable.

Socrates:: And that they, who do what is honorable, do what is good?

Alcibiades:: We did.

Socrates:: And that good things conduce to one’s interest?

Alcibiades:: Yes.

Socrates:: Things then that are just, Alcibiades, conduce to one’s interest.

Alcibiades:: It seems so.

Socrates:: Well then, are not you the asserter of this, and I the questioner?

Alcibiades:: I appear so, as it seems.

Socrates:: If then a person rises up to give advice to the people either of Athens or Peparethus, conceiving that he knows what is just and unjust, and should say that what is just is sometimes an evil, would you not laugh at him? since you too happen yourself to be the person asserting, that the same things are both just and conducive to one’s interest.

Alcibiades:: Now, by the gods, Socrates, I know not what to say; but I am really like a man in an absurd position.

For while you are asking questions, at one time I am of one opinion, and at another time of another.

Socrates:: Are you then ignorant, my friend, what condition you are in?

Alcibiades:: Entirely.

Socrates:: Think you, then, that if a person were to ask you, Have you two eyes or three? and two hands or four? or put any other question of such a kind, you would give one answer at one time, and another at another time? or always the same?

Alcibiades:: I have indeed some fear for myself; but I think I should give the same answer.

Socrates:: Is not the reason, because you know?

Alcibiades:: I think so.

Socrates:: Of matters then, where you give contrary answers unwillingly, it is evident that you know nothing.

Alcibiades:: Probably so.

Socrates:: Do you not say that about things just and unjust, honorable and base, good and evil, to one's interest and not, you waver in your answer? Is it not then evident, that through your not knowing these subjects, you waver respecting them?

Alcibiades:: It is plain to myself at least.

Socrates:: Is not then this the case? When a man does not know a thing, must not his mind waver respecting it?

Alcibiades:: How not?

Socrates:: Well then, do you know by what means you can mount up to heaven?

Alcibiades:: By Zeus, not I.

Socrates:: Does your opinion waver on this subject?

Alcibiades:: Not at all.

Socrates:: Do you know the reason? Or shall I tell it?

Alcibiades:: Tell it.

Socrates:: It is, my friend, because not knowing, you do not think you know.

Alcibiades:: How say you this?

Socrates:: Do you, in common with me, look at the matter. About the questions, which you do not know, and are convinced you do not know, do you waver? For instance, in preparing sauces, you surely know that you know nothing.

Alcibiades:: Perfectly.

Socrates:: Do you then form any opinion respecting them, how it is necessary to prepare them, and then waver in your opinions? or do you commit them to the person who does know?

Alcibiades:: In this way I act.

Socrates:: And what, if you were sailing in a vessel, would you form any opinion, whether it was necessary to bring the rudder inwards or outwards, and waver as a person knowing nothing? Or would you commit it to the pilot, and keep yourself quiet?

Alcibiades:: I should commit it to the pilot.

Socrates:: In matters then of which you are ignorant, you do not waver, at least if you know that you know nothing.

Alcibiades:: I do not seem to do so.

Socrates:: Do you perceive then, that errors in acting arise through this very ignorance, namely, in a person thinking he knows, when he does not know.

Alcibiades:: How say you this again?

Socrates:: Whenever we think we know what we are doing, then we surely endeavor to do it.

Alcibiades:: Certainly.

Socrates:: But when persons think they do not know, then they hand over the matters to others.

Alcibiades:: How not?

Socrates:: Such then of those, who do not know, live free from mistakes through their committing the management of such matters to others.

Alcibiades:: True.

Socrates:: Who then are they, who make mistakes? for certainly they are not the knowing.

Alcibiades:: By no means.

Socrates:: Since then they are neither the knowing, nor those of the ignorant, who know that they are ignorant, are any other persons left than those who are ignorant, but fancy that they are knowing?

Alcibiades:: None other than these.

Socrates:: This very ignorance, then, is the cause of their evils, and an absence of learning worthy of reproach.

Alcibiades:: Certainly.

Socrates:: When therefore it relates to things of greatest moment, is it not then the most mischievous and disgraceful?

Alcibiades:: Yes, the most so.

Socrates:: Well then, can you mention things of greater moment than the just, and honorable, and good, and conducing to one’s interest?

Alcibiades:: Certainly not.

Socrates:: Do you not say that upon these subjects you waver?

Alcibiades:: I do.

Socrates:: But if you are wavering, is it not evident from the previous reasoning, that not only you are ignorant of subjects of the greatest moment, but that you think that, although not knowing, you do know them?

Alcibiades:: I seem to be nearly so.

Socrates:: Ho, ho! Alcibiades! In what a state are you suffering! such as I am loth to name; but however, since we are alone, it must be mentioned. You are dwelling, O best of men, in a state of ignorance, the most disgraceful; since the reasoning brings a charge against you, and you are bearing witness against yourself, in that you are rushing to affairs of state, before you have been taught at all. But this not you alone have suffered, but the majority likewise of those, who manage the affairs of the state, except a few, and perhaps your guardian Pericles.

Alcibiades:: He, however, is reported, Socrates, to have become wise, not from himself, but through his intercourse with many wise men, and Pythocleides and Anaxagoras; and even at his time of life he is, on this very account, intimate with Damon.

Socrates:: What then, have you ever seen a person wise in any thing, and yet unable to make another person wise in the same things as himself; for instance, he, who taught you grammar, was clever himself, and he has made you so, and whomsoever he wished of other persons likewise. Is it not so?

Alcibiades:: Yes.

Socrates:: And will not you too, who have learnt from him, be able to teach another?

Alcibiades:: Certainly.

Socrates:: And as a harp-master, and a teacher of gymnastic exercises, in like manner?

Alcibiades:: Perfectly.

Socrates:: This then is assuredly a fair proof that they, who know any thing whatever, do really know it, when they are able to produce another person knowing it likewise.

Alcibiades:: So it seems to me.

Socrates:: Well then, can you mention any one whom Pericles has made clever, beginning with his own sons?

Alcibiades:: But what, if the sons of Pericles were silly fellows, Socrates?

Socrates:: Clinias, then, your brother?

Alcibiades:: Why should you mention Clinias, a man out of his senses?

Socrates:: Since then Clinias is a madman, and the sons of Pericles were silly fellows, what reason shall we assign in the case of yourself, for his overlooking you, when you are in such a state?

Alcibiades:: I am, I fancy, myself the cause, by not giving my mind to him.

Socrates:: But of the other Athenians or foreigners, mention either a slave or a freeman, who can show a reason for his having become wiser through his intercourse with Pericles; as I can mention Pythodorus the son of Isolochus, and Callias the son of Calliades through Zeno; to whom each of them paid a hundred minæ, and thus became clever and in high repute.

Alcibiades:: By Zeus, I cannot.

Socrates:: Be it so. What then do you intend respecting yourself? whether to leave yourself as you now are, or to pay some regard to yourself?

Alcibiades:: Let the consultation, Socrates, be common to both.

For I have something in my mind, while you are speaking, and agree to it. For they who manage the affairs of the state, seem, except a few, to be uneducated.

Socrates:: And what then?

Alcibiades:: If they had been educated, it would have been requisite for the person attempting to be their antagonist, to go against them, as ‘if they were prize-fighters, after having learnt and practiced the science. But now, since they proceed to state affairs raw and undisciplined, what need is there for a person to exercise himself, and by learning to give himself any trouble? For I well know, that by my natural abilities, I shall be very much their superior.

Socrates:: Ho! ho! thou best of men, what a mighty speech is this thou hast spoken. How unworthy of your personal qualities, and of the other advantages belonging to you!

Alcibiades:: What especially do you mean, Socrates, and why do you say this?

Socrates:: I feel greatly hurt in behalf of yourself, and of the love I bear you.

Alcibiades:: How so?

Socrates:: In that you think there is a fitting contest for yourself against the men here.

Alcibiades:: Against whom then?

Socrates:: This forsooth is a question for him to ask, who fancies himself to be a high-minded man!

Alcibiades:: How say you? Is not my contest with these very persons?

Socrates:: If you had any thought of steering a trireme about to engage in a sea-fight, would it be sufficient for you to be superior to your fellow-sailors in the art of steering?

or would you think that this ought to be at hand, and you would look to those in reality your antagonists, but not as you now do to your fellow-combatants? to whom it is assuredly meet for you to be so much the superior, that they ought never to deem themselves fit to contend against you, but, through their being held in little esteem, to contend merely with you against the enemy; if indeed you are thinking of exhibiting any exploit in reality honorable, and worthy of yourself and of your country.

Alcibiades:: Of such an act I am indeed thinking.

Socrates:: Is it then very worthy of you to rest contented, if you are a better man than your fellow-soldiers merely, and not to look to the leaders of your opponents, considering if perchance you shall become somewhat better than they, and exercising yourself in reflecting upon the things relating to them.

Alcibiades:: Who are the persons, of whom you are speaking, Socrates?

Socrates:: Know you not, that the state is constantly at war with the Lacedæmonians, and the great king?

Alcibiades:: True.

Socrates:: If then you have it in your mind to be the leader of this state, would you not think rightly in thinking that you will have to contend against the kings of Lacedæmon and Persia?

Alcibiades:: You are very near to speaking the truth?

Socrates:: Nay, but, my good man, must you not look to Midias, the quail-feeder, and others of that kind, who attempt to manage the affairs of the state, and still wear, as the women would say, the slave-like cut of hair in their souls, through their want of a liberal education; nor having as yet thrown it off, but acting still the part of barbarians, they have come to the city, to fawn upon, and not to rule it.

Ought you then to look to these men, of whom I am speaking, and to disregard yourself, and neither to learn what is closely connected with learning, when you are about to enter into a contest so great, nor to practice what requires practice, and, after being furnished with every kind of preparation, to proceed thus to the affairs of state?

Alcibiades:: Indeed, Socrates, you seem to me to say what is true. I fancy, however, that the Lacedæmonian generals and the king of Persia differ in nothing from other persons.

Socrates:: But consider, thou best of men, of what kind is this fancy of yours.

Alcibiades:: With respect to what?

Socrates:: In the first place, whether you fancy you would take the more care of yourself, when feeling a fear, and fancying them to be formidable, or not?

Alcibiades:: It is evident, if I fancied them formidable.

Socrates:: Do you fancy then that you would sustain any injury by taking care of yourself?

Alcibiades:: Not at all; but be benefited even greatly.

Socrates:: This fancy then of yours has this one evil of so great a kind.

Alcibiades:: You say the truth.

Socrates:: Consider then if there be not probably a second, namely, that it is false.

Alcibiades:: How so?

Socrates:: Whether is it probable that the better natures are produced from noble races, or not?

Alcibiades:: It is evident, from the noble.

Socrates:: And is it not probable that the well-born, if they are brought up well, will thus become perfect in virtue?

Alcibiades:: Necessarily so.

Socrates:: Let us consider then in comparing our condition with theirs, whether the kings of Lacedæmon and of Persia appear to be sprung from inferior races. Now know we not that the former are descendants of Hercules, and the latter of Achæmenes? and that both the family of Hercules, and that of Achæmenes, are carried up to Perseus the son of Jupiter?

Alcibiades:: And my family, Socrates, is carried up to Eurysaces; and that of Eurysaces to Zeus.

Socrates:: And mine, my noble Alcibiades, is to Dædalus, and his to Vulcan, the son of Zeus. But in the families of the other parties, beginning from themselves, are kings sprung from kings carried up to Zeus; some of Argos and Lacedæmon, and the others of Persia for ever, and often of all Asia, as they are at present: whereas we and our fathers are only private individuals. If then it were requisite to exhibit your ancestors in the person of Eurysaces, and Salamis as your country, or Ægina as that of the still more remote Æacus, of what ridicule do you fancy you would not have to pay the debt in the presence of Artaxerxes, the son of Xerxes? Consider besides, whether we are not inferior both in the pride of birth, and in the rest of our bringing up. Know you not how great are the advantages attendant upon the kings of Lacedæmon? whose wives are watched in public by the Ephori, in order that as far as possible, no king may be secretly begotten except by one of the family of the Heracleidæ; while the Persian king is so greatly our superior, that not a single person has the least suspicion that a king can be born from any other than a king. The consort, therefore, of the king is under no guard but that imposed by her own fears. Further, when the eldest son is born to him, who is then the ruler, all those in the palace of the king over whom he rules, have a feast, and subsequently at another period the whole of Asia makes a sacrifice and feast, on the birth-day of the king. But when we were born, Alcibiades, “our very neighbors even little knew it,” as the comic poet says. After this the child is brought up, not by some nurse at a little price, but by the eunuchs, who are considered the best about the king’s person; on whom the duty is imposed of taking care of the royal infant in other matters, and of contriving how he may become as handsome as possible in his person, by molding his limbs, and making them straight; and they who do this well are held in great honor. When the young princes are seven years old, they are placed upon horseback, and frequent the schools of the riding-masters, and commence going a hunting. At fourteen years of age they, who are called the royal preceptors, take the boy under their care. Now these are chosen out from such as are deemed the most excellent of the Persians, men in the prime of life, four in number, excelling severally in wisdom, justice, temperance, and fortitude. The first of these instructs the youth in the learning of the Magi according to Zoroaster, the son of Oromazes,—now by this learning is meant the worship of the gods,—and likewise in the art of kingly government. The person, excelling in justice, teaches him to be true in words and deeds through the whole of life. He who excels in temperance, to be governed by not a single pleasure of any kind, in order that he may acquire the habits of a freeman, and be really a king, by governing first his own appetites, instead of being their slave. But the person who excels in fortitude, makes him fearless and intrepid, since he, who fears, is a slave. But over you, Alcibiades, Pericles appointed as a preceptor, Zopyrus of Thrace, who was, through old age, the most useless of his domestics. I could recount to you the rest of the bringing up and instruction of your antagonists, if it were not a work of time; and moreover, these are sufficient to show all the rest that follow after them. But of your birth, Alcibiades, and nurture, and instruction, or any thing else whatever, there is a care to not one, so to say, of the Athenians; unless there happens to be some admirer of you. But if on the other hand you would turn your eyes to the wealth of the Persian kings, and their luxurious living and apparel, and the trailing of the trains of their dresses, and the anointing of themselves with perfumes, and the multitude of their retinue and servants, and the rest of their delicate living, you would be ashamed of yourself, on perceiving how greatly you fall short of them. And if, on the other hand, you would turn your eyes to the temperance and orderly conduct of the Lacedæmonians, their easy deportment and mildness of disposition, and high-mindedness, and regularity, and manly bearing, and endurance under suffering, and their love of labor, and of contending, and of honor, you would deem yourself a child in all these points. But if you turn your thoughts at all to your wealth, and fancy that on this point you are something, let not this be left unsaid by us, if perchance you are sensible in what rank you stand. If you are willing then to look to the wealth of the Lacedæmonians, you will know that the lands here fall far short of those there. For the land which they possess in their own country, and in Messenia, is such, that not one of those here would contend to be inferior, either in quantity or quality, or in the possession of slaves of other kinds, and of those called Helotes, and of horses, and such other cattle as pasture in Messenia. But to all this I bid a farewell. But as to gold and silver, there is not so much amongst all the Greeks, as there is at Lacedæmon in private hands. For already during many generations the metals have been coming thither from all the Greeks, and often too from the Barbarians; but there is no going out to any place; but really, according to the fable of Æsop, where the fox speaks to the lion, the impressions of coined money at Lacedæmon, as it enters thither, one may see plainly marked, but no where of its going out; so that it is easy to know well that of all the Grecians the richest in gold and silver are the people there, and of them the richest is their king. For from sources of that kind the largest and most frequent receipts go to the kings; and still further, the royal tribute, which the Lacedæmonians pay to their kings, is not a trifle. But though the wealth of the Lacedæmonians is great, as compared with that of the Greeks, yet as compared with that of the Persians, and their king, it is nothing. For I once heard a person worthy of credit, one of those who went up to the king, who stated that he passed along a large and fertile territory for nearly a day's journey, which the inhabitants called the Queen's Girdle; that there was another called the Queen's Veil; and that many other fair and fruitful countries were appropriated to provide the Queen's apparel; and that each of those countries had its name from the part of the apparel it furnished. So that I think, if any person were to tell Amastris, the mother of the reigning king, and the consort formerly of Xerxes, that the son of Dinomache had in mind to array himself against her son, and that Dinomache's whole attire was worth perhaps fifty minæ, supposing it to be of the most costly kind, and that her son possessed in Ercheia not even three hundred plethra of land, she would wonder to what could Alcibiades be trusting, so as to have in mind to contend with Artaxerxes; and she would, I think, say, it is impossible for this man to make the attempt through trusting to nothing else than his carefulness and wisdom; for these are the only things worth mention amongst the Greeks. Since if she heard, that this same Alcibiades is making so great an attempt, being in the first place, not yet twenty years of age, and in the next place, that he is utterly uninstructed; and besides this, that when his admirer told him he ought first to acquire knowledge, and to pay attention to himself, and after some practice to go in this way, when he was about to contend with the king, he would not do so, but said that he was all-sufficient as he was, then, she would, I think, be astonished, and ask, What is the thing in which the youth puts his trust? If then we were to say that he trusts to his beauty and size and family and wealth, and to the natural faculties of his mind, she would think us, Alcibiades, out of our senses, when she reflected upon the advantages of such a kind on their side. And I think too that Lampido, the daughter of Leotychidas, and the wife of Archidamus, and the mother of Agis, all of whom became kings, would wonder, when she reflected upon the advantages on their side, that you should have a mind to contend with her son, while you have been brought up so ill. And now do you not think it a shameful thing, that the wives of our enemies should consider more prudently for us, than we do for ourselves, what sort of persons we ought to be to attack them. But do you, O blessed one, be persuaded by me and the inscription at Delphi, “Know thyself;” since such are your antagonists, and not those whom you fancy, and to whom you would never be superior by any thing else except application and skill; in which, if you are deficient, you will fail in that renown amongst the Greeks and Barbarians, of which you appear to me to have such a desire as no other person has of any thing else.

Alcibiades:: To what then, Socrates, must I apply myself? Can you inform me? for you seem to me to say what is especially correct.

Socrates:: Yes, I can. But let there be a joint consultation respecting the means of our becoming the best. For I do not say that, as regards you, there is a necessity for instruction, but not as regards myself; for there is no difference between you and me, except in one thing.

Alcibiades:: What is that?

Socrates:: My guardian is better and wiser than Pericles, who is yours.

Alcibiades:: And who is yours, O Socrates?

Socrates:: A deity, Alcibiades, who did not suffer me to converse with you before to-day; and trusting to whom I assert that your favorable appearance in life will arise through no one else than myself.

Alcibiades:: You are in jest, Socrates.

Socrates:: Perhaps so. I am speaking, however, the truth, in saying that we are in need of application, if not more than all men, yet very much so.

Alcibiades:: In saying that I am in need of it, you do not say what is false.

Socrates:: Nor that I myself am so.

Alcibiades:: What then must we do?

Socrates:: We must not hesitate, my friend, nor act a soft part.

Alcibiades:: It is by no means, Socrates, becoming to do so.

Socrates:: Indeed it does not; but we must consider in common. Now tell me. We say that we wish to become as excellent as possible. Do we not?

Alcibiades:: Yes.

Socrates:: In what quality?

Alcibiades:: Plainly in what men are good.

Socrates:: Good in what?

Alcibiades:: Evidently in performing acts.

Socrates:: What acts? Of horsemanship?

Alcibiades:: Surely not.

Socrates:: For then we should go to jockeys.

Alcibiades:: Certainly.

Socrates:: Do you then mean naval affairs?

Alcibiades:: No.

Socrates:: For then we should go to nautical men.

Alcibiades:: Yes.

Socrates:: What affairs then? and who are the doers?

Alcibiades:: Such as the Athenians do, who are men of honor and goodness.

Socrates:: By men of honor and goodness, do you mean those with mind or without it?

Alcibiades:: With mind.

Socrates:: In whatever, then, each is a man of mind, in that is he good likewise?

Alcibiades:: Yes.

Socrates:: But in whatever he is without a mind, in that is he bad likewise?

Alcibiades:: How not?

Socrates:: Is not a shoemaker a man of mind, as regards the making of shoes?

Alcibiades:: Very much so.

Socrates:: In this respect then is he good?

Alcibiades:: Yes.

Socrates:: But as regards the making of garments, is not the shoemaker without mind?

Alcibiades:: Yes.

Socrates:: In this respect then he is bad.

Alcibiades:: Yes.

Socrates:: By this reasoning then the same man is both bad and good.

Alcibiades:: It appears so.

Socrates:: Would you say then that the good men are also bad?

Alcibiades:: Surely not.

Socrates:: Whom then do you mean by the good?

Alcibiades:: I mean such as are able to rule in the state.

Socrates:: Not the horses, surely?

Alcibiades:: Certainly not.

Socrates:: But men?

Alcibiades:: Yes.

Socrates:: Men, who are sick?

Alcibiades:: No.

Socrates:: Those on a voyage?

Alcibiades:: No.

Socrates:: Those harvesting?

Alcibiades:: No.

Socrates:: Those who are doing nothing? or those who are doing something?

Alcibiades:: I mean, who are doing something?

Socrates:: What? Endeavor to show to me clearly.

Alcibiades:: Those I mean who come in contact with, and make use of each other, as we do, who are living in cities.

Socrates:: You mean then of persons using each other, so as to rule.

Alcibiades:: I do.

Socrates:: Do you mean of boatswains, who make use of rowers?

Alcibiades:: By no means.

Socrates:: For this ability to do so belongs to the steersman.

Alcibiades:: True.

Socrates:: Do you then mean of men able to rule hautboy-players, and by leading the song to men, and making use of ballet-dancers?

Alcibiades:: Not at all.

Socrates:: For this ability belongs to the ballet-master.

Alcibiades:: Very much so.

Socrates:: But of persons making use of what, do you say it is possible for men to rule men?

Alcibiades:: Of those, I mean, who partake in a polity, and come in contact with each other, and are able to rule those in the city.

Socrates:: What then is this art? As if I were to ask you again, what I did just now—What is the art, which enables a person to know how to rule those partaking in a sailing?

Alcibiades:: The art of steering.

Socrates:: And what is the science, that enables a person to rule those, who, as was just now said, partake in a song?

Alcibiades:: The teaching, as you just now said, of ballet-dancing.

Socrates:: Well then, and what do you call the science enabling one to rule those, who partake in a polity?

Alcibiades:: I call it, Socrates, good counsel.

Socrates:: What, then, does the science of steersman seem to you to be a want of counsel?

Alcibiades:: Certainly not.

Socrates:: But good counsel.

Alcibiades:: So it seems to me, at least.

Socrates:: For the preservation of those who are sailing.

Alcibiades:: You speak correctly.

Socrates:: But what you call good counsel, for what is it good?

Alcibiades:: For the better administering the commonwealth, and its being saved.

Socrates:: By the presence or absence of what, is it the better administered to and preserved? As, if you had asked me—By the presence or absence of what is the body the better administered and preserved? I would have said—When health is present, and disease absent. Do not you think thus?

Alcibiades:: Yes.

Socrates:: And if you had asked me again—By the presence or absence of what, are administered the better and preserved the eyes? I would have answered in like manner—By sight being present, and blindness absent. So likewise the ears, when deafness is absent, and hearing present, are the better, and better taken care of.

Alcibiades:: Certainly.

Socrates:: What then is the state? By the presence and absence of what does it become better, and is better attended to and administered.

Alcibiades:: It seems to me, Socrates, when friendship exists to them with each other, and hate and dissension are absent.

Socrates:: By friendship do you mean the thinking alike, or not alike?

Alcibiades:: The thinking alike.

Socrates:: Now by what science do states think alike respecting numbers?

Alcibiades:: Through the science of arithmetic.

Socrates:: Well then, and do not individuals too through the same science?

Alcibiades:: Yes.

Socrates:: And does not each person think alike with himself too?

Alcibiades:: Yes.

Socrates:: Now, through what science does each person think alike with himself about a span and a cubit, which of the two is the greater? Is it not through the science of mensuration?

Alcibiades:: How not?

Socrates:: And do not individuals with each other, and states likewise?

Alcibiades:: Yes.

Socrates:: And about weights? Is it not in like manner?

Alcibiades:: I say so.

Socrates:: But the thinking alike, of which you are speaking, what is it, and about what? and what is the science that furnishes it? And is it the same in the case of a state, and an individual, as regards both himself and another person?

Alcibiades:: Probably it is.

Socrates:: What is it then? Do not be faint-hearted in giving an answer, but be ready to speak out.

Alcibiades:: I suppose I may say that friendship and thinking alike is that, by which a father and a mother think alike, in loving their son, and a brother with his brother, and a man with his wife.

Socrates:: Do you then, Alcibiades, suppose that a man can think alike with his wife on the subject of weaving, he, who does not know, with her, who does?

Alcibiades:: By no means.

Socrates:: Nor ought he either. For this knowledge belongs to women.

Alcibiades:: Certainly.

Socrates:: What then, can a woman think alike with a man on the subject of shield-warfare, when she has never learnt it?

Alcibiades:: Certainly not.

Socrates:: For this you would perhaps say belongs to men.

Alcibiades:: I would.

Socrates:: Some kinds of knowledge then belong to women, and some to men, according to your account.

Alcibiades:: How not?

Socrates:: On these subjects then there is no thinking alike amongst women and men.

Alcibiades:: There is not.

Socrates:: Neither then is there any friendship, if friendship be a thinking alike.

Alcibiades:: It appears not.

Socrates:: So far then as wives attend to their own business, they are not beloved by their husbands.

Alcibiades:: It is probable.

Socrates:: Neither are husbands beloved by their wives, so far as they attend to their own business.

Alcibiades:: It seems not.

Socrates:: Neither are states well administered in this way, when every one attends to his own business.

Alcibiades:: I think so, Socrates.

Socrates:: How say you, when friendship is not present, through the existence of which we said that states were well administered, but otherwise not?

Alcibiades:: But friendship seems to me to exist to them on this very account, because every one attends to his own business.

Socrates:: It did not seem so to you just now. How then do you now state the reverse? Does friendship exist, while a thinking alike does not exist? Or is it possible for a thinking alike to exist on subjects, which some do know and others do not?

Alcibiades:: It is not possible.

Socrates:: Do persons act justly or unjustly, when each attends to his own business?

Alcibiades:: Justly. How not?

Socrates:: When the citizens in a state act justly, is not friendship produced amongst each other?

Alcibiades:: It appears to me necessary, Socrates.

Socrates:: What kind of friendship then, or thinking alike, do you mean, respecting which it is meet for us to be wise and of good counsel, in order that we may be good men? For I am unable to learn what it is, or in what things it exists. For at one time it seems to exist in the same things, and at another time not, according to your account of it.

Alcibiades:: Now by the gods, Socrates, I do not know myself what I mean; but I am in danger of having been unconsciously for a long time in a shameful state.

Socrates:: But now you ought to take courage. For if you had perceived you were so suffering at the age of fifty, it would have been difficult for you to take care of yourself.

But you are now at the very time of life, in which it is meet for you to perceive it.

Alcibiades:: What then must I do, Socrates, now that I perceive it?

Socrates:: Answer to what I ask, Alcibiades. And if you do so, you and I, god willing, will be in a better state, if one may trust to my prophetic powers.

Alcibiades:: Such will be the result, as far as it depends on my answering.

Socrates:: Come then, say,—What is it to take care of oneself?—in order that we may not be unconsciously, as we often are, not taking care of ourselves, although fancying we are—and when does a man do so? When he is taking care of what belongs to him, is he then taking care of himself?

Alcibiades:: To me, at least, it appears so.

Socrates:: What then, when does a man take care of his feet? Is it when he is taking care of the things belonging to his feet?

Alcibiades:: I do not understand.

Socrates:: Do you call by a name something belonging to the hand? as, for instance, a ring? Would you say that it belongs to any other part of a man than his finger?

Alcibiades:: Certainly not.

Socrates:: And does not a shoe belong to the foot in like manner?

Alcibiades:: Yes.

Socrates:: When we are taking care of shoes, are we then taking care of feet?

Alcibiades:: I do not, Socrates, very well understand.

Socrates:: Well then, Alcibiades, do you call by any name the taking a correct care of any thing whatever?

Alcibiades:: I do.

Socrates:: When then a person makes any thing better, call you that a correct care?

Alcibiades:: Yes.

Socrates:: What then is the art, that makes shoes better?

Alcibiades:: The shoemaker's.

Socrates:: By the shoemaker's art then we take care of shoes.

Alcibiades:: Yes.

Socrates:: And do we take care of a foot by the shoemaker's art, or by that by which we make the feet better?

Alcibiades:: By this last art.

Socrates:: And we make better the feet not by the art, by which we do the rest of the body?

Alcibiades:: So it seems, at least to me.

Socrates:: And is not this the gymnastic art?

Alcibiades:: Especially so.

Socrates:: By the gymnastic art then we take care of the foot, but by the shoemaker's art that, which belongs to the foot.

Alcibiades:: Exactly so.

Socrates:: And by the gymnastic art we take care of the hands, but by the art of engraving rings, of what belongs to the hand.

Alcibiades:: Certainly.

Socrates:: And by the gymnastic art we take care of the body, but by the art of the weaver and other arts, what belongs to the body.

Alcibiades:: Entirely so.

Socrates:: By one art then we take care of each thing, but by another what belongs to it.

Alcibiades:: It appears so.

Socrates:: You are not then taking care of yourself, when you are taking care of what belongs to yourself.

Alcibiades:: Not at all.

Socrates:: For the art, it seems, is not the same, by which one takes care of himself, and of what belongs to himself.

Alcibiades:: So it appears.

Socrates:: Now then, by what kind of art can we take care of ourselves?

Alcibiades:: I cannot tell.

Socrates:: So much, however, has been agreed upon, that it is not the art, by which we render better any thing whatever belonging to us, but that, by which we render so ourselves.

Alcibiades:: You say what is true.

Socrates:: Could we have ever known what art would make a shoe better, if we knew not what a shoe was?

Alcibiades:: Impossible.

Socrates:: Neither what art makes better finger-rings, if ignorant, could we have known what a finger-ring was.

Alcibiades:: True.

Socrates:: Well then, can we ever know what art makes a man better, if we are ignorant what we are ourselves?

Alcibiades:: Impossible.

Socrates:: Does it then happen to be an easy thing to know oneself? and was he a person of mean abilities, who put up that inscription in the temple at Pytho? or is it a difficult thing, and not for every one to discover?

Alcibiades:: To me indeed, Socrates, it has often seemed to be an easy thing, for every one to discover, and often too, a thing very difficult.

Socrates:: But, Alcibiades, whether it be easy or not, with respect to us, the case is this. Had we known it, we should perhaps have known to take care of ourselves; but not knowing, we can never do so.

Alcibiades:: Such is the case.

Socrates:: Come then, by what means can a thing be discovered what it is by itself? For so we might thus perhaps find what we are ourselves; but being in ignorance on that point, we are unable to know ourselves.

Alcibiades:: You speak correctly.

Socrates:: Attend now, by Zeus. With whom are you conversing now? Is it not with myself?

Alcibiades:: Yes.

Socrates:: And am I not conversing with you?

Alcibiades:: Yes.

Socrates:: It is Socrates then who is conversing and arguing?

Alcibiades:: Quite true.

Socrates:: And Alcibiades who is listening?

Alcibiades:: Yes.

Socrates:: Is it not by a discourse that Socrates is conversing?

Alcibiades:: How not?

Socrates:: And is not the same thing to converse and to use a discourse?

Alcibiades:: Certainly.

Socrates:: But is not the person, who uses a thing, different from the thing, which he uses?

Alcibiades:: How do you mean?

Socrates:: As a shoemaker, for instance, cuts leather with a semicircular knife, and a straight knife, and other tools.

Alcibiades:: Yes.

Socrates:: Is not then the shoemaker, who cuts and uses tools, one, but the tools, which he uses, another?

Alcibiades:: How not?

Socrates:: Would not in like manner the instruments on which a harp-player plays, and the harp-player himself, be different?

Alcibiades:: Yes.

Socrates:: This, then, I was lately asking, whether the person, who uses a thing, seems to you always to be different from the thing, which he uses.

Alcibiades:: He seems so.

Socrates:: What then shall we say of the shoemaker? That he cuts with his tools only, or with his hands likewise?

Alcibiades:: With his hands likewise.

Socrates:: He uses them too.

Alcibiades:: Yes.

Socrates:: And does he not use his eyes too, when he is cutting leather?

Alcibiades:: He does.

Socrates:: Now we are agreed, that the person, who uses, is different from what he uses.

Alcibiades:: Yes.

Socrates:: The shoemaker, then, and the harp-player, are different from the hands and eyes with which they work.

Alcibiades:: It is apparent.

Socrates:: And does not a man use also his whole body.

Alcibiades:: Certainly.

Socrates:: Now the thing using is different from what it uses.

Alcibiades:: True.

Socrates:: A man therefore is a being different from his body.

Alcibiades:: It seems so.

Socrates:: What sort of being then is a man?

Alcibiades:: I cannot tell.

Socrates:: But you can tell that it is some being making a use of its body.

Alcibiades:: Yes.

Socrates:: Does any other being make use of its body but the soul?

Alcibiades:: None other.

Socrates:: And does it not so do by ruling the body?

Alcibiades:: Yes.

Socrates:: I suppose moreover that no man would ever think otherwise than this.

Alcibiades:: Than what?

Socrates:: That the man was one of three things.

Alcibiades:: What things?

Socrates:: Soul, or body, or a whole, itself formed of both.

Alcibiades:: How not?

Socrates:: Now have we agreed that the being, which rules the body, is a man.

Alcibiades:: We have agreed.

Socrates:: What being then is a man? Does the body itself govern itself?

Alcibiades:: By no means.

Socrates:: For we said that it was ruled.

Alcibiades:: True.

Socrates:: This then cannot be that, of which we are in search.

Alcibiades:: It seems not.

Socrates:: But does the compound being rule the body? and is this a man?

Alcibiades:: Perhaps it is.

Socrates:: Least of all so. For of two parties, one not being a joint-ruler, there are no means for both to rule jointly.

Alcibiades:: Right.

Socrates:: Since then neither the body, nor the compound of both, is a man, it remains, I think, either that the being man is nothing at all, or, if it be any thing, it results that the man is nothing else than soul.

Alcibiades:: It is just so.

Socrates:: Needs it then be proved to you still more clearly, that the soul is man?

Alcibiades:: It needs not, by Zeus: for it seems to me to be shown sufficiently.

Socrates:: If it be proved not accurately, yet moderately so, it is sufficient for us. For we shall then perhaps know accurately, when we shall have discovered, what we just now passed by, through its being a matter of much consideration.

Alcibiades:: What is that?

Socrates:: That which was just now spoken of in some such way as this; that we must first consider the self by itself; but now instead of “the self by itself,” we have been considering the “each” what it is; and this perhaps will suffice. For we could surely never say that any thing is more the master of ourselves, than the soul.

Alcibiades:: Certainly not.

Socrates:: Is it not then well to think thus; that we are having an intercourse with each, by making use of discourses, soul with soul?

Alcibiades:: Very much so.

Socrates:: This then was what we were saying a little before; that Socrates is conversing with Alcibiades, by using speech, not, as it seems, to your person, but by putting reasons to Alcibiades; now this is his soul.

Alcibiades:: So it seems to me at least.

Socrates:: He then who enjoins a person to know himself, orders us to recognize a soul.

Alcibiades:: It is probable.

Socrates:: Whoever then knows only the things belonging to his body, knows the things belonging to himself, but not himself.

Alcibiades:: Just so.

Socrates:: Not one therefore of the physicians, so far as he is a physician, knows himself; neither does any master of exercises, so far as he is such a master.

Alcibiades:: It is probable.

Socrates:: Husbandmen then, and other workmen, are far from knowing themselves. For these it seems do not consider even what belongs to themselves, but what are still more remote from themselves, according to the arts which they possess. For they know the things belonging to the body, and by which it is taken care of.

Alcibiades:: You say what is true.

Socrates:: If therefore it is temperance to know oneself, none of these is temperate according to their respective arts.

Alcibiades:: I think they are not.

Socrates:: On this account then these arts seem to be those of handicrafts, and not the learning fit for a good man.

Alcibiades:: Entirely so.

Socrates:: Again, whoever takes care of his body, takes care of what belongs to him, but not of himself.

Alcibiades:: It is nearly so.

Socrates:: And whoever takes care of his property, takes care neither of himself nor of what belongs to him, but of what are still more remote from what belongs to himself.

Alcibiades:: So it seems to me at least.

Socrates:: The money-making man does then not do his own business.

Alcibiades:: Rightly said.

Socrates:: If then a person has become an admirer of the body of Alcibiades, he is not in love with Alcibiades, but with something which belongs to Alcibiades.

Alcibiades:: You say what is true.

Socrates:: But whoever is in love with you, is in love with your soul.

Alcibiades:: This appears necessary from the reasoning.

Socrates:: And hence he, who admires your body, when it ceases to bloom, goes away.

Alcibiades:: It seems so.

Socrates:: But the admirer of the soul does not go away, so long as it goes on to what is better.

Alcibiades:: Probably so.

Socrates:: Am I not then the person not going away, but remaining, when, the body ceasing to bloom, the rest have departed?

Alcibiades:: And well have you done so, Socrates; and never may you depart.

Socrates:: Be ready then to be the best possible.

Alcibiades:: I will be ready.

Socrates:: For the case is this. There never has been, it seems, an admirer of Alcibiades, the son of Clinias, nor is there now, but one alone, and he worthy to be loved, Socrates, the son of Sophroniscus and Phænarete.

Alcibiades:: It is true.

Socrates:: Did you not say that I had been a little beforehand with you when I accosted you; for that you were about to address me first, being desirous to ask me, why I alone do not go away?

Alcibiades:: It was so.

Socrates:: This then is the reason; for I alone am the admirer of you; but the others of what belong to you. Now what belong to you are ceasing to bloom; but you are beginning to be in flower. If then you are not now spoilt by the Athenian mob, and become ugly, I shall never forsake you. For of this I am most afraid, that you may become a mob-lover, and be spoilt by them. Since many, even virtuous Athenians, have already suffered this fate. For the mob of the magnanimous Erectheus has a fair exterior. But you ought to see it undressed. Make use therefore of the caution, which I give you.

Alcibiades:: What caution?

Socrates:: In the first place, my friend, exercise yourself, and learn what a person ought to learn, who is proceeding to state affairs; but previously not; in order that you may go to them possessing an antidote, and suffer no grievous harm.

Alcibiades:: You seem to me, Socrates, to speak correctly. But endeavor to explain in what way we may take care of ourselves.

Socrates:: Has not so much been gone through by us already? For what we are, has been tolerably well agreed upon. Indeed we feared lest, if mistaken on that point, we should be unconsciously taking care of something else, and not of ourselves.

Alcibiades:: It is so.

Socrates:: And after this we ought to take care of the soul, and look to it.

Alcibiades:: Plainly so.

Socrates:: And that to others should be handed over the care of our bodies and our property.

Alcibiades:: How not?

Socrates:: In what way then can we know these things the most clearly? For, after we know this, it seems, we shall know ourselves. Now, by the gods, do we not understand the Delphic inscription we just now mentioned, as saying correctly?

Alcibiades:: What? What are you thinking of, and what do you mean, Socrates?

Socrates:: I will tell you what I suspect this inscription means, and what it advises us to do. For it nearly seems that its resemblance does not exist every where, but only with reference to the sight.

Alcibiades:: How say you thus?

Socrates:: Do you likewise consider it. If it had said to our eye, as to a man, by way of advice—"Behold yourself"—how and what should we suppose it was advising? Would it not be to look to that, by looking to which the eye might see itself?

Alcibiades:: It is evident.

Socrates:: Let us then consider, by looking to what of things existing we can see both it and ourselves?

Alcibiades:: It is evident, Socrates, by looking at mirrors, and other things of the like kind.

Socrates:: You say rightly. And in the eye itself, with which we see, is there not something of such a kind?

Alcibiades:: Very much so.

Socrates:: You have observed then, that the face of him, who looks at the eye of another, appears visible to himself in the eye-sight of the person opposite to him, as in a mirror, which we call the pupil, being the image of the person, who looks in it.

Alcibiades:: You say what is true.

Socrates:: An eye therefore beholding an eye, and looking at that, which is the best part of itself, with which it sees, may thus see itself?

Alcibiades:: It appears so.

Socrates:: But if it look at any other part of the man, or at any of things existing, except at that, to which it happens to be like, it will not see itself.

Alcibiades:: You say what is true.

Socrates:: If then an eye would see itself, it must look at an eye, and to that place of the eye where the virtue of the eye is naturally seated; now this is surely the sight.

Alcibiades:: Just so.

Socrates:: Is it not true then, my dear Alcibiades, that the soul likewise, if it would know itself, must look at soul, and especially at that place of the soul where wisdom, the virtue of the soul, is inherent, and to that other thing, to which it happens to be like?

Alcibiades:: To me at least, Socrates, it seems so.

Socrates:: Can we mention any property of the soul more divine than that, about which knowledge and intelligence are conversant?

Alcibiades:: We cannot.

Socrates:: This therefore in the soul resembles the divine nature. And a person looking at this, and recognizing all that is divine, both god and intelligence, would thus know himself the most.

Alcibiades:: It appears so.

Socrates:: And to know oneself, we acknowledge to be wisdom.

Alcibiades:: By all means.

Socrates:: As mirrors then are more clear, and more pure, and more brilliant, than the mirror in the eye, so the deity is more pure and more brilliant than that, which is the best in our soul.

Alcibiades:: It is likely, Socrates.

Socrates:: Looking therefore at the deity, we should make use of him, as the most beautiful mirror; but of things belonging to man, to the virtue of the soul; and shall we not thus especially see and know our very selves?

Alcibiades:: Yes.

Socrates:: By not knowing ourselves, and not being wise, can we know what of things belonging to us are good and evil?

Alcibiades:: How could it be, Socrates?

Socrates:: For perhaps it appears impossible for him who knows not Alcibiades himself, to know that what belongs to Alcibiades does so belong to Alcibiades.

Alcibiades:: It is, by Zeus, impossible.

Socrates:: Nor that what are our own, are really our own, unless he knows us.

Alcibiades:: For how should he?

Socrates:: And if not what are ours, then not what belongs to ours.

Alcibiades:: It appears he cannot.

Socrates:: We did not then rightly admit, as we did just now, that there were some, who know not themselves, and yet know what belonged to them, but that others do not know even what belongs to them. For it seems, that it is the province of one person, and of one art, to know himself, and the things which are his, and what belongs to the things that are his.

Alcibiades:: The fact is nearly so.

Socrates:: And whoever is ignorant of what belongs to himself, would surely be ignorant likewise of what belongs to other men.

Alcibiades:: How not?

Socrates:: And if he is ignorant of what belongs to other men, will he not be ignorant also of what belongs to states?

Alcibiades:: Necessarily.

Socrates:: Such a man therefore cannot be a statesman.

Alcibiades:: Certainly not.

Socrates:: Nor fit even to manage a family.

Alcibiades:: Certainly not.

Socrates:: Nor will he know what he is doing.

Alcibiades:: He will not.

Socrates:: And will not he, who knows not what he is doing, act amiss?

Alcibiades:: Very much so.

Socrates:: And acting amiss, will he not do ill, both in private and public capacity?

Alcibiades:: How not?

Socrates:: And is not he, who does ill, miserable?

Alcibiades:: Yes, very.

Socrates:: And what are those, for whom he is acting?

Alcibiades:: And they too are miserable.

Socrates:: It is not possible then for a person to be happy, unless he be prudent and good.

Alcibiades:: It is not possible.

Socrates:: Bad men then are in a miserable state.

Alcibiades:: Very.

Socrates:: Not even the rich man then is free from a miserable state, but only the prudent one.

Alcibiades:: It appears so.

Socrates:: States then are not in want of walls, or ships, or docks, if they would be happy, nor even of a multitude of people, or of extent of country, without the possession of virtue.

Alcibiades:: Not at all.

Socrates:: If then you would manage the affairs of a state rightly and well, you must impart to the citizens virtue.

Alcibiades:: How not?

Socrates:: But how can a person impart what he has not himself?

Alcibiades:: How indeed?

Socrates:: You must therefore, in the first place, acquire virtue yourself, and so must another, who would rule, take care not only of himself and his own private affairs, but of the state, and the affairs of the state.

Alcibiades:: You say true.

Socrates:: You must not therefore procure for yourself or the state the power and dominion to do what you please, but justice and prudence.

Alcibiades:: It appears so.

Socrates:: For by acting justly and prudently both you and the state will act in a manner pleasing to the deity.

Alcibiades:: It is likely.

Socrates:: And by looking, as we said before, at what is divine and bright, ye will do so.

Alcibiades:: It appears so.

Socrates:: And, moreover, by looking there, ye will behold and know what is your own good.

Alcibiades:: True.

Socrates:: And will ye not then act both rightly and well?

Alcibiades:: Yes.

Socrates:: And acting thus I will guarantee that you will be happy.

Alcibiades:: For you are a sure guarantee.

Socrates:: But by acting unjustly and looking to that which is godless and dark, ye will, it is likely, commit acts similar to those things, through your being ignorant of yourselves.

Alcibiades:: It is likely.

Socrates:: For to the party, my dear Alcibiades, who has the power of doing what he pleases, and does not possess a mind, what is there likely to happen, either as a private person, or in the case of a state? as in the case of a sick person, having the power to do what he pleased, but not possessing a medical mind, and acting the tyrant, so that nobody would chide him, what would be the consequence? Would it not be in all probability that his body would be destroyed?

Alcibiades:: You say the truth.

Socrates:: And do you see, in the case of a ship, if a person devoid of mind and the talent of a steersman had the power of doing as he thought proper, what would happen both to himself and to his shipmates?

Alcibiades:: I do; that they would all be lost.

Socrates:: Does not, in like manner, in the case of a state, the doing ill follow upon all offices and power deficient in virtue?

Alcibiades:: Necessarily.

Socrates:: It is not meet then, O best of men Alcibiades, to procure a tyrant's power either for yourself, or for the state, if ye would be happy, but virtue.

Alcibiades:: You say true.

Socrates:: And before possessing virtue, it is better for a man, and not a child alone, to be ruled by his better, than to rule.

Alcibiades:: It appears so.

Socrates:: Is not the better more beautiful likewise?

Alcibiades:: Yes.

Socrates:: And is not the more beautiful more becoming?

Alcibiades:: How not?

Socrates:: It is becoming then for a bad man to be a slave; for it is better.

Alcibiades:: Certainly.

Socrates:: Now vice is a thing becoming only to a slave.

Alcibiades:: It seems so.

Socrates:: But virtue is a thing becoming to a freeman.

Alcibiades:: Yes.

Socrates:: Ought we not, friend, to fly from what is becoming to a slave?

Alcibiades:: Most especially, Socrates!

Socrates:: Perceive you then in what state you are? Is it such as becomes a freeman, or not?

Alcibiades:: I think I perceive it very strongly.

Socrates:: Know you then, how you may escape from that, which is now around you? I say this that we may not apply that name to a man of honor?

Alcibiades:: I do.

Socrates:: How?

Alcibiades:: If you, Socrates, are willing.

Socrates:: You say not well, Alcibiades!

Alcibiades:: But what ought I to say?

Socrates:: This, "if a god is willing."

Alcibiades:: So I say then. And I will add to those words this too; that we shall be in danger, Socrates, of changing characters, I assuming yours, and you mine. For it is not possible for me from this day forward not to follow you, as if I were your tutor, and you were my pupil.

Socrates:: My love then for you, my noble Alcibiades, differs in nothing from that of the stork; if after having hatched for you a winged love, it shall be administered to in return by this love of yours.

Alcibiades:: And such is the case; and I will begin henceforth to pay all attention to what is just.

Socrates:: I wish you may persevere. But I have a great fear, not indeed through distrusting your natural disposition, but through perceiving the strength of the city, lest it overcome both me and you.

## **Alcibiades**

Translated by D. S. Hutchinson. 1997

PERSONS OF THE DIALOGUE.

Socrates, Alcibiades.

---

Socrates:: I was the first man to fall in love with you, son of Clinias, and now that the others have stopped pursuing you I suppose you're wondering why I'm the only one who hasn't given up—and also why, when the others pestered you with conversation, I never even spoke to you all these years. Human causes didn't enter into it; I was prevented by some divine being, the effect of which you'll hear about later on. But now it no longer prevents me, so here I am. I'm confident it won't prevent me in future either.

I've been observing you all this time, and I've got a pretty good idea how you treated all those men who pursued you: they held themselves in high esteem, but you were even more arrogant and sent them packing, every single one of them. I'd like to explain the reason why you felt yourself so superior.

You say you don't need anybody for anything, since your own qualities, from your body right up to your soul, are so great there's nothing you lack. In the first place, you fancy yourself the tallest and best-looking man around—and it's quite plain to see you're not wrong about that. Next, you think that yours is the leading family in your city, which is the greatest city in Greece: on your father's side you have plenty of aristocratic friends and relations, who would be of service to you if there was any need; and on your mother's side your connections are no worse and no fewer. And you have Pericles son of Xanthippus, whom your father left as a guardian to you and your brother; you think he's a more powerful ally than all those people I mentioned put together—he can do whatever he likes, not only in this city, but anywhere in Greece, and also in many important foreign countries. I will also mention your wealth, but I think that’s the least of the reasons you hold yourself in high esteem. You bragged about all those things and got the better of your suitors; they didn’t measure up and came off the worse. You knew what was going on.

And so I’m sure you’re wondering what I could possibly have in mind— why don’t I give up on you? The others have all been sent packing, so what do I hope to achieve by persisting?

Alcibiades:: Yes, Socrates, perhaps you don’t realize that you’ve just taken the words out of my mouth. I had already decided to come and ask you that very question: what could you have in mind? What do you hope to achieve by bothering me, always making so sure you’re there wherever I am? Yes, I really do wonder what you might be up to, and I'd be very glad to find out.

Socrates:: So then you’ll probably be eager to give me your full attention, since, as you say, you’re keen to know what I have in mind. I take it that you’ll listen carefully?

Alcibiades:: Yes, of course—just tell me.

Socrates:: Watch out—I wouldn’t be at all surprised if I found it as hard to stop as it was to start.

Alcibiades:: Tell me, please. I will pay attention.

Socrates:: Speak I must, then. It’s not easy to play the role of suitor with a man who doesn’t give in to them; nevertheless, I must summon up my courage and say what’s on my mind.

Alcibiades, if I saw that you were content with the advantages I just mentioned and thought that this was the condition in which you should live out the rest of your life, I would have given up on you long ago; at least that’s what I persuade myself. But I’m going to prove to you in person what very different plans you actually have in mind. Then you’ll realize how constantly I’ve been thinking about you.

Suppose one of the gods asked you, “Alcibiades, would you rather live with what you now have, or would you rather die on the spot if you weren’t permitted to acquire anything greater?” I think you'd choose to die. What then is your real ambition in life? I’ll tell you. You think that as soon as you present yourself before the Athenian people—as indeed you expect to in a very few days—by presenting yourself you’ll show them that you deserve to be honored more than Pericles or anyone else who ever was. Having shown that, you’ll be the most influential man in the city, and if you’re the greatest here, you’ll be the greatest in the rest of Greece, and not only in Greece, but also among the foreigners who live on the same continent as we do.

And if that same god were then to tell you that you should have absolute power in Europe, but that you weren’t permitted to cross over into Asia or get mixed up with affairs over there, I think you'd rather not live with only that to look forward to; you want your reputation and your influence to saturate all mankind, so to speak. I don’t think you regard anybody as ever having been much to speak of, except perhaps Cyrus and Xerxes. I’m not guessing that this is your ambition—I’m sure of it.

Since you know that what I say is true, maybe you’ll say, “Well then, Socrates, what’s this got to do with your point? You said you were going to tell me why you haven’t given up on me.” Yes, I will tell you, my dear son of Clinias and Dinomache. It is impossible to put any of these ideas of yours into effect without me—that’s how much influence I think I have over you and your business. I think this is why the god hasn’t allowed me to talk to you all this time; and I’ve been waiting for the day he allows me.

I’m hoping for the same thing from you as you are from the Athenians: I hope to exert great influence over you by showing you that I’m worth the world to you and that nobody is capable of providing you with the influence you crave, neither your guardian nor your relatives, nor anybody else except me—with the god’s help, of course. When you were younger, before you were full of such ambitions, I think the god didn’t let me talk to you because the conversation would have been pointless. But now he’s told me to, because now you will listen to me.

Alcibiades:: Really, Socrates, now that you’ve started talking you seem much more bizarre to me than when you followed me in silence, though you were very bizarre to look at then, too. Well, on the question of whether or not these are my ambitions, you seem to have made up your mind already, and no denial of mine will do anything to convince you otherwise. Fine. But supposing I really do have these ambitions, how will you help me achieve them? What makes you indispensable? Have you got something to say?

Socrates:: Are you asking if I can say some long speech like the ones you’re used to hearing? No, that sort of thing’s not for me. But I do think I'd be able to show you that what I said is true, if only you were willing to grant me just one little favor.

Alcibiades:: Well, as long as you mean a favor that’s not hard to grant, I’m willing.

Socrates:: Do you think it’s hard to answer questions?

Alcibiades:: No, I don’t.

Socrates:: Then answer me.

Alcibiades:: Ask me.

Socrates:: My question is whether you have in mind what I say you have in mind.

Alcibiades:: Let's say I do, if you like, so I can find out what you're going to say.

Socrates:: Right then; you plan, as I say, to come forward and advise the Athenians some time soon. Suppose I stopped you as you were about to take the podium and asked, "Alcibiades, what are the Athenians proposing to discuss? You're getting up to advise them because it's something you know better than they do, aren't you?" What would you reply?

Alcibiades:: Yes, I suppose I would say it was something that I know better than they do.

Socrates:: So it's on matters you know about that you're a good adviser.

Alcibiades:: Of course.

Socrates:: Now the only things you know are what you've learned from others or found out for yourself; isn't that right?

Alcibiades:: What else could I know?

Socrates:: Could you ever have learned or found out anything without wanting to learn it or work it out for yourself?

Alcibiades:: No, I couldn't have.

Socrates:: Is that right? Would you have wanted to learn or work out something that you thought you understood?

Alcibiades:: Of course not.

Socrates:: So there was a time when you didn't think you knew what you now understand.

Alcibiades:: There must have been.

Socrates:: But I've got a pretty good idea what you've learned. Tell me if I've missed anything: as far as I remember, you learned writing and lyre-playing and wrestling, but you didn’t want to learn aulos-playing. These are the subjects that you understand—unless perhaps you’ve been learning something while I wasn’t looking; but I don’t think you have been, either by night or by day, on your excursions from home.

Alcibiades:: No, those are the only lessons I took.

Socrates:: Well then, is it when the Athenians are discussing how to spell a word correctly that you’ll stand up to advise them?

Alcibiades:: Good God, I'd never do that!

Socrates:: Then is it when they’re discussing the notes on the lyre?

Alcibiades:: No, never.

Socrates:: But surely they’re not in the habit of discussing wrestling in the Assembly.

Alcibiades:: Certainly not.

Socrates:: Then what will they be discussing? I presume it won’t be building.

Alcibiades:: Of course not.

Socrates:: Because a builder would give better advice on these matters than you.

Alcibiades:: Yes.

Socrates:: Nor will they be discussing divination, will they?

Alcibiades:: No.

Socrates:: Because then a diviner would be better at giving advice than you.

Alcibiades:: Yes.

Socrates:: Regardless of whether he’s tall or short, or handsome or ugly, or even noble or common.

Alcibiades:: Of course.

Socrates:: And when the Athenians are discussing measures for public health, it will make no difference to them if their counselor is rich or poor, but they will make sure that their adviser is a doctor.

Alcibiades:: Of course.

Socrates:: I suppose that's because advice on any subject is the business not of those who are rich but of those who know it.

Alcibiades:: Quite reasonably so.

Socrates:: Then what will they be considering when you stand up to advise them, assuming you're right to do so?

Alcibiades:: They'll be discussing their own business, Socrates.

Socrates:: You mean their shipbuilding business—what sorts of ships they should be building?

Alcibiades:: No, Socrates, I don't.

Socrates:: I suppose that's because you don't understand shipbuilding. Am I right, or is there some other reason?

Alcibiades:: No, that's it.

Socrates:: So what kind of 'their own business' do you think they'll be discussing?

Alcibiades:: War, Socrates, or peace, or anything else which is the business of the city.

Socrates:: Do you mean they'll be discussing who they should make peace with and who they should go to war with and how?

Alcibiades:: Yes.

Socrates:: But shouldn't they do that with the ones with whom it's better to?

Alcibiades:: Yes.

Socrates:: And when it's better?

Alcibiades:: Certainly.

Socrates:: And for as long a time as it's better?

Alcibiades:: Yes.

Socrates:: Now supposing the Athenians were discussing who they should wrestle with and who they should spar with and how, who would be a better adviser, you or the trainer?

Alcibiades:: The trainer, I guess.

Socrates:: And can you tell me what the trainer has in view when he advises you who you should or shouldn't wrestle with, and when, and how? I mean, for example, that one should wrestle with those with whom it's better to wrestle, isn't that right?

Alcibiades:: Yes.

Socrates:: And as much as is better?

Alcibiades:: That's right.

Socrates:: And when it's better, right?

Alcibiades:: Certainly.

Socrates:: Let's take another example: when you're singing, you should sometimes accompany the song with lyre-playing and dancing.

Alcibiades:: Yes, you should.

Socrates:: You should do so when it's better to, right?

Alcibiades:: Yes.

Socrates:: And as much as is better.

Alcibiades:: I agree.

Socrates:: Really? Since you used the term 'better' in both cases—in wrestling and in playing the lyre while singing—what do you call what's better in lyre-playing, as I call what's better in wrestling 'athletic'? What do you call that?

Alcibiades:: I don't get it.

Socrates:: Then try to follow my example. My answer was, I think, ‘what is correct in every case’—and what is correct, I presume, is what takes place in accordance with the skill, isn’t it?

Alcibiades:: Yes.

Socrates:: Wasn’t the skill athletics?

Alcibiades:: Of course.

Socrates:: I said that what’s better in wrestling, was ‘athletic’.

Alcibiades:: That’s what you said.

Socrates:: Wasn’t that well said?

Alcibiades:: I think so, anyway.

Socrates:: Come on then, it’s your turn; it’s partly up to you, surely, to keep our conversation going well. First of all, tell me what the skill is for singing and dancing and playing the lyre correctly. What is it called as a whole? … Aren’t you able to tell me yet?

Alcibiades:: No, I can’t.

Socrates:: Well, try it this way. Who are the goddesses to whom the skill belongs?

Alcibiades:: Do you mean the Muses, Socrates?

Socrates:: I do indeed. Don’t you see? What’s the name of the skill that’s named after them?

Alcibiades:: I think you mean music.

Socrates:: Yes, I do. Now what is “correctly” for what takes place in accordance with this skill? In the other case I told you what “correctly” is for what takes place in accordance with the skill, so now it’s your turn to say something similar in this case. How does it take place?

Alcibiades:: Musically, I think.

Socrates:: A good answer. Come on now, what do you call what's better in both going to war and keeping the peace? In these last two examples you said that what was better was more musical and more athletic, respectively. Now try to tell me what's better in this case, too.

Alcibiades:: I really can't do it.

Socrates:: But surely it's disgraceful if when you're speaking and giving advice about food—saying that a certain kind is better than another, and better at a certain time and in a certain quantity—and someone should ask you, "What do you mean by 'better', Alcibiades?" you could tell him in that case that 'better' was 'healthier', though you don't even pretend to be a doctor; and yet in a case where you do pretend to understand and are going to stand up and give advice as though you knew, if you aren't able, as seems likely, to answer the question in this case, won't you be embarrassed? Won't that seem disgraceful?

Alcibiades:: Yes, certainly.

Socrates:: Then think about it, and try to tell me what the better tends towards, in keeping the peace or in waging war with the right people.

Alcibiades:: I'm thinking, but I can't get it.

Socrates:: But suppose we're at war with somebody—surely you know what treatment we accuse each other of when we enter into a war, and what we call it.

Alcibiades:: I do—we say that they're playing some trick on us, or attacking us or taking things away from us.

Socrates:: Hold on—how do we suffer from each of these treatments? Try to tell me how one way differs from another way.

Alcibiades:: When you say 'way', Socrates, do you mean 'justly' or 'unjustly'?

Socrates:: Precisely.

Alcibiades:: But surely that makes all the difference in the world.

Socrates:: Really? Who will you advise the Athenians to wage war on? Those who are treating us unjustly, or those who are treating us justly?

Alcibiades:: That’s a hard question you’re asking. Even if someone thought it was necessary to wage war on people who were treating us justly, he wouldn’t admit it.

Socrates:: Because I think that wouldn’t be lawful.

Alcibiades:: It certainly wouldn’t.

Socrates:: Nor would it be considered a proper thing to do.

Alcibiades:: No.

Socrates:: So you would also frame your speech in these terms.

Alcibiades:: I'd have to.

Socrates:: Then this ‘better’ I was just asking you about—when it comes to waging war or not, on whom to wage war and on whom not to, and when and when not to—this ‘better’ turns out to be the same as ‘more just’, doesn’t it?

Alcibiades:: It certainly seems so.

Socrates:: But how could it, my dear Alcibiades? Don’t you realize that this is something you don’t understand? Or perhaps, when I wasn’t looking, you’ve been seeing some teacher who taught you how to tell the difference between the more just and the less just. Have you? … Well, who is he? Tell me who he is so that you can sign me up with him as well.

Alcibiades:: Stop teasing me, Socrates.

Socrates:: I’m not—I’ll swear by Friendship, yours and mine. I'd never perjure myself by him. So tell me who he is, if you can.

Alcibiades:: And what if I can’t? Don’t you think I might know about justice and injustice some other way?

Socrates:: Yes, you might—if you found it out.

Alcibiades:: Well, don’t you think I might find it out?

Socrates:: Yes, of course—if you investigate the matter.

Alcibiades:: And don’t you think I might investigate it?

Socrates:: Yes, I do—if you thought you didn’t know.

Alcibiades:: And didn’t I once think that?

Socrates:: A fine answer. Can you tell me when this was, when you didn’t think you knew about justice and injustice … Well, was it last year that you were looking into it and didn’t think you knew? Or did you think you knew? … Answer me truthfully, or else our conversation will be a waste of time.

Alcibiades:: Yes, I thought I knew.

Socrates:: Didn’t you think the same thing two years ago, and three years ago, and four?

Alcibiades:: I did.

Socrates:: But surely before that you were a boy, weren’t you?

Alcibiades:: Yes.

Socrates:: Well now, at that point I’m sure you thought you knew.

Alcibiades:: How can you be sure of that?

Socrates:: When you were a boy I often observed you, at school and other places, and sometimes when you were playing knucklebones or some other game, you'd say to one or another of your playmates, very loudly and confidently—not at all like someone who was at a loss about justice and injustice—that he was a lousy cheater and wasn’t playing fairly. Isn’t that true?

Alcibiades:: But what was I to do, Socrates, when somebody cheated me like that?

Socrates:: Do you mean, what should you have done if you didn't actually know then whether or not you were being cheated?

Alcibiades:: But I did know, by Zeus! I saw clearly that they were cheating me.

Socrates:: So it seems that even as a child you thought you understood justice and injustice.

Alcibiades:: Yes, and I did understand.

Socrates:: At what point did you find it out? Surely it wasn't when you thought you knew.

Alcibiades:: Of course not.

Socrates:: Then when did you think you didn't know? Think about it— you won't find any such time.

Alcibiades:: By Zeus, Socrates, I really can't say.

Socrates:: So it isn't by finding it out that you know it.

Alcibiades:: That's not very likely.

Socrates:: But surely you just finished saying that it wasn't by being taught, either, that you knew it. So if you neither found it out nor were taught it, how and where did you come to know it?

Alcibiades:: Maybe I gave you the wrong answer when I said I knew it by finding it out myself.

Socrates:: Then how did it happen?

Alcibiades:: I suppose I learned it in the same way as other people.

Socrates:: That brings us back to the same argument: from whom? Do tell me.

Alcibiades:: From people in general.

Socrates:: When you give the credit to ‘people in general’, you’re falling back on teachers who are no good.

Alcibiades:: What? Aren’t they capable of teaching?

Socrates:: No, they can’t even teach you what moves to make or not make in knucklebones. And yet that’s a trivial matter, I suppose, compared with justice … What? Don’t you agree?

Alcibiades:: Yes.

Socrates:: So although they can’t teach trivial things, you say they can teach more serious things.

Alcibiades:: I think so; at any rate, they can teach a lot of things that are more important than knucklebones.

Socrates:: Like what?

Alcibiades:: Well, for example, I learned how to speak Greek from them; I couldn’t tell you who my teacher was, but I give the credit to the very people you say are no good at teaching.

Socrates:: Yes, my noble friend, people in general are good teachers of that, and it would be only fair to praise them for their teaching.

Alcibiades:: Why?

Socrates:: Because they have what it takes to be good teachers of the subject.

Alcibiades:: What do you mean by that?

Socrates:: Don’t you see that somebody who is going to teach anything must first know it himself? Isn’t that right?

Alcibiades:: Of course.

Socrates:: And don’t people who know something agree with each other, not disagree?

Alcibiades:: Yes.

Socrates:: If people disagree about something, would you say that they know it?

Alcibiades:: Of course not.

Socrates:: Then how could they be teachers of it?

Alcibiades:: They couldn’t possibly.

Socrates:: Well then, do you think that people in general disagree about what wood or stone is? If you ask them, don’t they give the same answers? Don’t they reach for the same things when they want to get some wood or some stone? And similarly for all other such cases; I suppose this is pretty much what you mean by understanding Greek, isn’t it?

Alcibiades:: Yes.

Socrates:: So they agree with each other in these cases, as we said, and with themselves when acting privately. But don’t they also agree in public? Cities don’t disagree with each other and use different words for the same thing, do they?

Alcibiades:: No.

Socrates:: So it’s likely that they would make good teachers of these things.

Alcibiades:: Yes.

Socrates:: So if we wanted somebody to know these things, we'd be right to send him to lessons given by these people in general.

Alcibiades:: Certainly.

Socrates:: Now if we wanted to know not just what men or horses are like, but which of them could and couldn’t run, would people in general be able to teach this as well?

Alcibiades:: Of course not.

Socrates:: Isn’t the fact that they disagree with each other about these things enough to show you that they don’t understand them, and are not ‘four-square teachers’ of them?

Alcibiades:: Yes, it is.

Socrates:: Now if we wanted to know not just what men are like, but what sick and healthy men are like, would people in general be able to teach us?

Alcibiades:: Of course not.

Socrates:: And if you saw them disagreeing about it, that would show you that they were bad teachers of it.

Alcibiades:: Yes, it would.

Socrates:: Very well, then—does it seem to you that people in general actually agree among themselves or with each other about just and unjust people and actions?

Alcibiades:: Not in the slightest, Socrates.

Socrates:: Really? Do they disagree a huge amount about these things?

Alcibiades:: Very much so.

Socrates:: I don’t suppose you’ve ever seen or heard people disagreeing so strongly about what is healthy and unhealthy that they fight and kill each other over it, have you?

Alcibiades:: Of course not.

Socrates:: But I know you’ve seen this sort of dispute over questions of justice and injustice; or even if you haven’t seen it, at least you’ve heard about it from many other people—especially Homer, since you’ve heard the Iliad and the Odyssey, haven’t you?

Alcibiades:: I certainly have, of course, Socrates.

Socrates:: Aren’t these poems all about disagreements over justice and injustice?

Alcibiades:: Yes.

Socrates:: It was over this sort of disagreement that the Achaeans and the Trojans fought battles and lost their lives, as did Odysseus and the suitors of Penelope.

Alcibiades:: You're right.

Socrates:: I suppose the same is true of those Athenians and Spartans and Boeotians who died at Tanagra, and later at Coronea, including your own father. The disagreement that caused those battles and those deaths was none other than a disagreement over justice and injustice, wasn't it?

Alcibiades:: You're right.

Socrates:: Are we to say that people understand something if they disagree so much about it that in their disputes with each other they resort to such extreme measures?

Alcibiades:: Obviously not.

Socrates:: But aren't you giving credit to teachers of this sort who, as you yourself admit, have no knowledge?

Alcibiades:: I guess I am.

Socrates:: Well then, given that your opinion wavers so much, and given that you obviously neither found it out yourself nor learned it from anyone else, how likely is it that you know about justice and injustice?

Alcibiades:: From what you say anyway, it's not very likely.

Socrates:: See, there you go again, Alcibiades, that's not well said!

Alcibiades:: What do you mean?

Socrates:: You say that I say these things.

Alcibiades:: What? Aren't you saying that I don't understand justice and injustice?

Socrates:: No, not at all.

Alcibiades:: Well, am I?

Socrates:: Yes.

Alcibiades:: How?

Socrates:: Here's how. If I asked you which is more, one or two, would you say two?

Alcibiades:: I would.

Socrates:: By how much?

Alcibiades:: By one.

Socrates:: Then which of us is saying that two is one more than one?

Alcibiades:: I am.

Socrates:: Wasn't I asking and weren't you answering?

Alcibiades:: Yes.

Socrates:: Who do you think is saying these things—me, the questioner, or you, the answerer?

Alcibiades:: I am.

Socrates:: And what if I asked you how to spell 'Socrates', and you told me? Which of us would be saying it?

Alcibiades:: I would.

Socrates:: Come then, give me the general principle. When there's a question and an answer, who is the one saying things—the questioner or the answerer?

Alcibiades:: The answerer, I think, Socrates.

Socrates:: Wasn't I the questioner in everything just now?

Alcibiades:: Yes.

Socrates:: And weren't you the answerer?

Alcibiades:: I certainly was.

Socrates:: Well then, which of us said what was said?

Alcibiades:: From what we've agreed, Socrates, it seems that I did.

Socrates:: And what was said was that Alcibiades, the handsome son of Clinias, doesn’t understand justice and injustice—though he thinks he does—and that he is about to go to the Assembly to advise the Athenians on what he doesn’t know anything about. Wasn’t that it?

Alcibiades:: Apparently.

Socrates:: Then it’s just like in Euripides, Alcibiades; ‘you heard it from yourself, not from me.’ I’m not the one who says these things—you are— don’t try to blame me. And furthermore, you’re quite right to say so. This scheme you have in mind—teaching what you don’t know and haven’t bothered to learn—your scheme, my good fellow, is crazy.

Alcibiades:: Actually, Socrates, I think the Athenians and the other Greeks rarely discuss which course is more just or unjust. They think that sort of thing is obvious, so they skip over it and ask which one would be advantageous to do. In fact, though, what’s just is not the same, I think, as what’s advantageous; many people have profited by committing great injustices, and others, I think, got no advantage from doing the right thing.

Socrates:: So? Even if just and advantageous things happen to be completely different, surely you don’t think you know what’s advantageous for people, and why, do you?

Alcibiades:: What’s to stop me, Socrates?—unless you’re going to ask me all over again who I learned it from or how I found it out myself.

Socrates:: What a way of carrying on! If you say something wrong, and if there’s a previous argument that can prove that it was wrong, you think you ought to be given some new and different proof, as if the previous one were a worn-out scrap of clothing that you refuse to wear again. No, you want an immaculate, brand-new proof.

I’ll pass over your anticipation of my argument and ask you, all the same, ‘How did you come to understand what is advantageous? Who was your teacher?’, and in my one question ask everything I asked you before. Clearly this will put you in the same position again—you won’t be able to prove that you know what is advantageous, either by finding it out or by learning it.

But since you’ve got a delicate stomach and wouldn’t enjoy another taste of the same argument, I’ll pass over this question of whether or not you know what is advantageous for the Athenians. But why don’t you prove whether the just and the advantageous are the same or different? You can question me, if you like, as I questioned you—or else work it out yourself, in your own argument.

Alcibiades:: No, Socrates, I don’t think I'd be able to work it out in front of you.

Socrates:: Well then, my good sir, imagine that I’m the Assembly and the people gathered there; even there, you know, you’ll have to persuade them one by one. Isn’t that right?

Alcibiades:: Yes.

Socrates:: If somebody knows something, don’t you think he can persuade people about it one by one, as well as all together? Take the schoolteacher—don’t you think he persuades people about letters individually, as well as collectively?

Alcibiades:: Yes.

Socrates:: And won’t the same person be able to persuade people about numbers individually, as well as in groups?

Alcibiades:: Yes.

Socrates:: He would be a mathematician, someone who knows about numbers.

Alcibiades:: Certainly.

Socrates:: So won't you also be able to persuade an individual person about the things you can persuade a group of people about?

Alcibiades:: Probably.

Socrates:: Obviously these are things you know about.

Alcibiades:: Yes.

Socrates:: Is there any difference between an orator speaking to the people and an orator speaking in this sort of conversation, except insofar as the former persuades them all together while the latter persuades them one by one?

Alcibiades:: I guess not.

Socrates:: Well then, since it's plain that the same person can persuade individuals as well as groups, practice on me, and try to prove that what is just is sometimes not advantageous.

Alcibiades:: Stop pushing me around, Socrates!

Socrates:: No, in fact I'm going to push you around and persuade you of the opposite of what you're not willing to show me.

Alcibiades:: Just try it!

Socrates:: Just answer my questions.

Alcibiades:: No, you do the talking yourself.

Socrates:: What?! Don't you want to be completely convinced?

Alcibiades:: Absolutely, I'm sure.

Socrates:: Wouldn't you be completely convinced if you yourself said, 'Yes, that's how it is'?

Alcibiades:: Yes, I think so.

Socrates:: Then answer my questions. And if you don’t hear yourself say that just things are also advantageous, then don’t believe anything else I say.

Alcibiades:: No, I’m sure I won’t. But I'd better answer—I don’t think I’ll come to any harm.

Socrates:: You’re quite a prophet. Now tell me—are you saying that some just things are advantageous while others are not?

Alcibiades:: Yes.

Socrates:: Really? Are some of them admirable and others not admirable?

Alcibiades:: What do you mean by that question?

Socrates:: Have you ever thought that someone was doing something that was both just and contemptible?

Alcibiades:: No, I haven’t.

Socrates:: So all just things are admirable.

Alcibiades:: Yes.

Socrates:: Now what about admirable things? Are they all good, or are some good and others not good?

Alcibiades:: What I think, Socrates, is that some admirable things are bad.

Socrates:: And some contemptible things are good?

Alcibiades:: Yes.

Socrates:: Are you thinking of this sort of case? Many people get wounded and killed trying to rescue their friends and relatives in battle, while those who don’t go to rescue them, as they should, escape safe and sound. Is this what you’re referring to?

Alcibiades:: Exactly.

Socrates:: Now you call a rescue of this sort admirable, in that it’s an attempt to help the people whom you should help, and this is what courage is; isn't that what you're saying?

Alcibiades:: Yes.

Socrates:: But you call it bad, in that it involves wounds and death, don't you?

Alcibiades:: Yes.

Socrates:: Now courage is one thing, and death is something else, right?

Alcibiades:: Certainly.

Socrates:: So it's not on the same basis that rescuing your friends is admirable and bad, is it?

Alcibiades:: Apparently not.

Socrates:: Now let's see whether, insofar as it's admirable, it's also good, as indeed it is. You agreed that the rescue is admirable, in that it's courageous. Now consider this very thing—courage. Is it good or bad? Look at it like this: which would you rather have, good things or bad things?

Alcibiades:: Good things.

Socrates:: Namely the greatest goods?

Alcibiades:: Very much so.

Socrates:: And wouldn't you be least willing to be deprived of such things?

Alcibiades:: Of course.

Socrates:: What would you say about courage? How much would you have to be offered to be deprived of that?

Alcibiades:: I wouldn't even want to go on living if I were a coward.

Socrates:: So you think that cowardice is the worst thing in the world.

Alcibiades:: I do.

Socrates:: On a par with death, it would seem.

Alcibiades:: That’s what I say.

Socrates:: Aren’t life and courage the extreme opposites of death and cowardice?

Alcibiades:: Yes.

Socrates:: And wouldn’t you want the former most and the latter least?

Alcibiades:: Yes.

Socrates:: Is that because you think that the former are best and the latter are worst?

Alcibiades:: Certainly.

Socrates:: Would you say that courage ranks among the best things and death among the worst?

Alcibiades:: I would say so.

Socrates:: So you called rescuing your friends in battle admirable, insofar as it is admirable, in that it does something good, being courageous.

Alcibiades:: I think so, anyway.

Socrates:: But you called it bad, in that it does something bad, being fatal.

Alcibiades:: Yes.

Socrates:: Now since you call this act bad insofar as it produces something bad, wouldn’t you also, in all fairness, have to call it good insofar as it produces something good?

Alcibiades:: I think so.

Socrates:: Isn’t it also admirable insofar as it’s good, and contemptible insofar as it’s bad?

Alcibiades:: Yes.

Socrates:: Then when you say that rescuing one’s friends in battle is admirable but bad, you mean exactly the same as if you'd called it good but bad.

Alcibiades:: I suppose you’re right, Socrates.

Socrates:: So nothing admirable, to the extent that it's admirable, is bad, and nothing contemptible, to the extent that it's contemptible, is good.

Alcibiades:: Apparently not.

Socrates:: Now then, let's take a new approach. People who do what's admirable do things well, don't they?

Alcibiades:: Yes.

Socrates:: And don't people who do things well live successful lives?

Alcibiades:: Of course.

Socrates:: Aren't they successful because they've got good things?

Alcibiades:: Certainly.

Socrates:: And they get good things by acting properly and admirably.

Alcibiades:: Yes.

Socrates:: So it is good to act properly.

Alcibiades:: Of course.

Socrates:: And good conduct is admirable.

Alcibiades:: Yes.

Socrates:: So we've seen once again that the very thing that is admirable is also good.

Alcibiades:: Apparently.

Socrates:: So if we find that something is admirable, we'll also find that it's good—according to this argument, at least.

Alcibiades:: We'll have to.

Socrates:: Well then, are good things advantageous, or not?

Alcibiades:: Advantageous.

Socrates:: Do you remember what we agreed about doing just things?

Alcibiades:: I think we agreed that someone who does what’s just must also be doing what’s admirable.

Socrates:: And didn’t we also agree that someone who does what’s admirable must also be doing what’s good?

Alcibiades:: Yes.

Socrates:: And that what’s good is advantageous?

Alcibiades:: Yes.

Socrates:: So, Alcibiades, just things are advantageous.

Alcibiades:: So it seems.

Socrates:: Well then, am I not the questioner and are you not the answerer?

Alcibiades:: It appears I am.

Socrates:: So if someone who believed that he knew what is just and unjust were to stand up to advise the Athenians, or even the Peparethians, and said that sometimes just things are bad, what could you do but laugh at him? After all, as you yourself say, the same things are just and also advantageous.

Alcibiades:: I swear by the gods, Socrates, I have no idea what I mean— I must be in some absolutely bizarre condition! When you ask me questions, first I think one thing, and then I think something else.

Socrates:: And are you unaware, my dear fellow, of what this feeling is?

Alcibiades:: Completely.

Socrates:: Well, if someone asked you whether you had two eyes or three eyes, or two hands or four hands, or something else like that, do you think you'd give different answers at different times, or would you always give the same answer?

Alcibiades:: I’m quite unsure of myself at this point, but I think I'd give the same answer.

Socrates:: Because you know it—isn’t that the reason?

Alcibiades:: I think so.

Socrates:: So if you gave conflicting answers about something, without meaning to, then it would be obvious that you didn’t know it.

Alcibiades:: Probably.

Socrates:: Well then, you tell me that you’re wavering about what is just and unjust, admirable and contemptible, good and bad, and advantageous and disadvantageous. Isn’t it obvious that the reason you waver about them is that you don’t know about them?

Alcibiades:: Yes, it is.

Socrates:: Would you also say that whenever someone doesn’t know something, his soul will necessarily waver about it?

Alcibiades:: Of course.

Socrates:: Really? Do you know any way of ascending to the stars?

Alcibiades:: I certainly don’t.

Socrates:: Does your opinion waver on this question, too?

Alcibiades:: Of course not.

Socrates:: Do you know the reason, or shall I tell you?

Alcibiades:: Tell me.

Socrates:: It’s because, my friend, you don’t understand it and you don’t think you understand it.

Alcibiades:: And what do you mean by that?

Socrates:: Let’s look at it together. Do you waver about what you realize you don’t understand? For example, you know, I think, that you don’t know how to prepare a fine meal, right?

Alcibiades:: Quite right.

Socrates:: So do you have your own opinions about how to prepare it, and waver about it; or do you leave it to someone who knows how?

Alcibiades:: The latter.

Socrates:: Well, if you were sailing in a ship, would you be out there wondering whether to put the helm to port or starboard, and wavering because you didn’t know? Or would you leave it to the skipper and take it easy?

Alcibiades:: I'd leave it to the skipper.

Socrates:: So you don’t waver about what you don’t know, if in fact you know that you don’t know.

Alcibiades:: Apparently not.

Socrates:: Don’t you realize that the errors in our conduct are caused by this kind of ignorance, of thinking that we know when we don’t know?

Alcibiades:: What do you mean by that?

Socrates:: Well, we don’t set out to do something unless we think we know what we’re doing, right?

Alcibiades:: Right.

Socrates:: But when people don’t think they know how to do something, they hand it over to somebody else, right?

Alcibiades:: Of course.

Socrates:: So the sort of people who don’t think they know how to do things make no mistakes in life, because they leave those things to other people.

Alcibiades:: You’re right.

Socrates:: Well, who are the ones making the mistakes? Surely not the ones who know?

Alcibiades:: Of course not.

Socrates:: Well, since it’s not those who know, and it’s not those who don’t know and know they don’t know, is there anyone left except those who don’t know but think they do know?

Alcibiades:: No, they’re the only ones left.

Socrates:: So this is the ignorance that causes bad things; this is the most disgraceful sort of stupidity.

Alcibiades:: Yes.

Socrates:: And isn’t it most harmful and most contemptible when it is ignorance of the most important things?

Alcibiades:: Very much so.

Socrates:: Well, can you name anything more important than what’s just and admirable and good and advantageous?

Alcibiades:: No, I really can’t.

Socrates:: But aren’t those the things you say you’re wavering about?

Alcibiades:: Yes.

Socrates:: So, if you’re wavering, it’s obvious from what we’ve said that not only are you ignorant about the most important things, but you also think you know what you don’t know.

Alcibiades:: I guess that’s right.

Socrates:: Good God, Alcibiades, what a sorry state you’re in! I hesitate to call it by its name, but still, since we’re alone, it must be said. You are wedded to stupidity, my good fellow, stupidity in the highest degree— our discussion and your own words convict you of it. This is why you’re rushing into politics before you’ve got an education. You’re not alone in this sad state—you’ve got most of our city’s politicians for company. There are only a few exceptions, among them, perhaps, your guardian, Pericles.

Alcibiades:: Yes, Socrates, and people do say that he didn’t acquire his expertise all by himself; he kept company with many experts like Pythoclides and Anaxagoras. Even now, despite his advanced age, he consults with Damon for the same purpose.

Socrates:: Really? Have you ever seen any expert who is unable to make others expert in what he knows? The person who taught you how to read and write—he had expertise in his field, and he made you and anybody else he liked expert as well, didn’t he?

Alcibiades:: Yes.

Socrates:: And will you, having learned from him, be able to teach somebody else?

Alcibiades:: Yes.

Socrates:: And isn’t it the same with the music teacher and the gymnastics teacher?

Alcibiades:: Certainly.

Socrates:: I think we can be pretty sure that someone understands something when he can show that he has made someone else understand it.

Alcibiades:: I agree.

Socrates:: Well then, can you tell me who Pericles has made into an expert? Shall we start with his sons?

Alcibiades:: But Socrates, both of his sons turned out to be idiots!

Socrates:: What about Clinias, your brother?

Alcibiades:: There’s no point talking about him—he’s a madman!

Socrates:: Well then, since Clinias is mad and Pericles’ sons were idiots, what shall we say is the reason that he allowed you to be in the state you’re in?

Alcibiades:: I suppose it’s because I didn’t really pay attention.

Socrates:: But can you name any other Athenian or any foreigner—slave or free—who became any more of an expert by keeping company with Pericles? After all, I can name Pythodorus, son of Isolochus, and Callias, son of Calliades, who became wise through their association with Zeno; they paid him a hundred minas each and became famous experts.

Alcibiades:: I can't think of anyone, by Zeus.

Socrates:: Very well. What do you propose for yourself? Do you intend to remain in your present condition, or practice some self-cultivation?

Alcibiades:: Let's discuss it together, Socrates. You know, I do see what you're saying and actually I agree—it seems to me that none of our city's politicians has been properly educated, except for a few.

Socrates:: And what does that mean?

Alcibiades:: Well, if they were educated, then anyone who wanted to compete with them would have to get some knowledge and go into training, like an athlete. But as it is, since they entered politics as amateurs, there's no need for me to train and go to the trouble of learning. I'm sure my natural abilities will be far superior to theirs.

Socrates:: Good God, my dear boy, what a thing to say—how unworthy of your good looks and your other advantages!

Alcibiades:: What in the world do you mean, Socrates? What are you getting at?

Socrates:: I'm furious with you and with my infatuation for you!

Alcibiades:: Why?

Socrates:: Because you stoop to compete with these people.

Alcibiades:: Who else have I got to compete with?

Socrates:: That’s a fine sort of question, from a man who thinks he holds himself in high esteem!

Alcibiades:: What do you mean? Aren’t they my competitors?

Socrates:: Look here, if you were intending to steer a ship into battle, would you be content to be the best sailor at steering? Granted that’s necessary, but wouldn’t you keep your eye on your real opponents and not on your comrades, as you’re doing now? Surely you ought to be so far superior to them that they’re happy to be your humble comrades in the struggle, and wouldn’t dream of competing with you. I’m assuming that you do really intend to distinguish yourself with some splendid deed worthy of you and your city.

Alcibiades:: Yes, that’s certainly what I intend to do.

Socrates:: Dear me, how very proper it is for you to be satisfied with being better than the soldiers—how proper not to keep an eye on the leaders of the opposing camp, so that you can some day become better than them by training and scheming against them!

Alcibiades:: Who are you talking about, Socrates?

Socrates:: Don’t you know that our city is at war from time to time with the Spartans and with the Great King of Persia?

Alcibiades:: You’re right.

Socrates:: So since you plan to be leader of this city, wouldn’t it be right to think that your struggle is with the kings of Sparta and Persia?

Alcibiades:: That may well be true.

Socrates:: But no sir, you’ve got to keep an eye on Midias the cock-fighter and such people—people who try to run the city’s affairs with their ‘slave-boy hair styles’, as the women say, still showing on their boorish minds. They set out to flatter the city with their outlandish talk, not to rule it. These are the people, I’m telling you, you’ve got to keep your eyes on. So relax, don’t bother to learn what needs to be learned for the great struggle to come, don’t train yourself for what needs training—go ahead and go into politics with your complete and thorough preparation.

Alcibiades:: No, Socrates, I think you’re right. But still I don’t think the Spartan generals or the Persian king are any different from anybody else.

Socrates:: But what sort of a notion is that? Think about it.

Alcibiades:: About what?

Socrates:: In the first place, when do you think you'd cultivate yourself: if you feared them and thought they were formidable, or if you didn’t?

Alcibiades:: Obviously if I thought they were formidable.

Socrates:: Surely you don’t think that cultivating yourself will do you any harm, do you?

Alcibiades:: Not at all. In fact, it would be a big help.

Socrates:: So that’s one flaw in this notion of yours, a big flaw, isn’t it?

Alcibiades:: You’re right.

Socrates:: Now the second flaw is that it’s also false, judging by the probabilities.

Alcibiades:: What do you mean?

Socrates:: Is it likely that natural talents will be greatest among noble families, or in other families?

Alcibiades:: In noble families, obviously.

Socrates:: Those who are well born will turn out to be perfectly virtuous, if they’re well brought up, won’t they?

Alcibiades:: They certainly will.

Socrates:: So let’s compare our situation with theirs, and consider, first of all, whether the Spartan and Persian kings are of humbler descent. We know, of course, that the Spartan kings are descended from Heracles, and the Persian kings are descended from Achaemenes, and that the families of Heracles and Achaemenes go right back to Perseus, son of Zeus.

Alcibiades:: Mine too, Socrates—my family goes back to Eurysaces and Eurysaces’ goes back to Zeus.

Socrates:: So does mine too, noble Alcibiades, mine goes back to Daedalus and Daedalus’ goes back to Hephaestus, son of Zeus. Starting with those kings, though, and tracing backwards, every one of them is a king all the way back to Zeus—kings of Argos and Sparta, and kings of Persia in eternity, and sometimes of Asia, too, as they are now. But you and I are private citizens, as were our fathers. And if you had to show off your ancestors and Salamis, the native land of Eurysaces, to Artaxerxes, son of Xerxes—or Aegina, the native land of Aeacus the ancestor of Eurysaces— don’t you realize how much you'd be laughed at? But you think we’re the equal of those men in the dignity of our descent, as well as in our upbringing.

Haven’t you noticed what a commanding position the Spartan kings enjoy? Their wives are guarded at public expense by the ephors, so as to ensure, as far as possible, that their kings are descended from the family of the Heraclidae alone. And as for the Persian king, his position is so supreme that nobody so much as suspects his heir of being fathered by anybody but him; that’s why his queen is left unguarded except by fear. When the eldest son and heir to the throne is born, all the king’s subjects have a feast day. Then, in the years that follow, the whole of Asia celebrates that day, the king’s birthday, with further sacrifice and feasting. But when we are born, Alcibiades, “even the neighbors hardly notice it,” as the comic poet says.

Then the boy is brought up—not by some nanny of no account, but by the most highly respected eunuchs in the royal household. They attend to all the needs of the infant child, and are especially concerned to make him as handsome as possible, shaping and straightening his infant limbs; and for this they are held in great esteem. When the boys reach seven years of age they take up horseback riding with their instructors, and begin to hunt wild game.

When he is twice seven years, the boy is entrusted to people called the “royal tutors.” These are four Persians of mature age who have been selected as the best: the wisest, the justest, and most self-controlled, and the bravest. The first of them instructs him in the worship of their gods, the Magian lore of Zoroaster, son of Horomazes, and also in what a king should know. The justest man teaches him to be truthful his whole life long. The most self-controlled man teaches him not to be mastered by even a single pleasure, so that he can get accustomed to being a free man and a real king, whose first duty is to rule himself, not be a slave to himself. The bravest man trains him to be fearless and undaunted, because fear is slavery.

But for you, Alcibiades, Pericles chose from among his household Zopyrus the Thracian, a tutor so old he was perfectly useless. I could tell you about all the rest of the upbringing and education of your competitors, but it would be a long story and, besides, you can probably imagine the later stages from what I’ve told you so far. But, Alcibiades, your birth, your upbringing, and your education—or that of any other Athenian—is of no concern to anybody, to tell the truth—nobody, that is, except perhaps some man who may happen to be in love with you.

Again, if you care to consider the wealth of the Persians, the splendor, the clothes and trailing robes, the anointing with myrrh, the throng of servants-in-waiting, and all their other luxuries, you'd be ashamed of your circumstances, because you'd see how inferior they are to theirs.

Again, if you care to consider the self-control and the decorum of the Spartans, their confidence and their composure, their self-esteem and their discipline, their courage and their fortitude, and their love of hardship, victory, and honor, you'd consider yourself a mere child in all these respects.

Again, we'd better discuss your wealth, Alcibiades, if you're to see where you stand. You may devote yourself to it and think it makes you something, but if you care to look at the wealth of the Spartans you'd realize that it greatly exceeds ours in Athens. They have land of their own and in Messene that not a single one of our estates could compete with—not in size, nor in quality, nor in slaves—especially Helots—nor even in horses, nor in the other livestock grazing in Messene. But I'll pass over all that.

There is more gold and silver in Sparta in private hands than in the rest of Greece put together. It's been coming in to them for many generations, pouring in from all of Greece's cities, and often from foreign cities, too, and it never goes out again. It's just like what the fox says to the lion in Aesop's fable—you can clearly see the tracks of the money going in toward Sparta, but the tracks coming out are nowhere to be seen. So you can be sure that the Spartans are the richest of the Greeks in gold and silver, and that the king is the richest of all the Spartans, because the greatest share of these revenues goes to him. Furthermore, he receives a considerable sum from the Spartans by way of royal tribute.

But great as they are when compared with other Greek cities, the Spartan fortunes are nothing compared with the fortunes of the Persians and their king. I once spoke with a reliable man who travelled over to the Persian court, and he told me that he crossed a very large and rich tract of land, nearly a day's journey across, which the locals called "the Queen's girdle." There's another one called "the Queen's veil," as well as many others, all fine and rich properties, each one named for a part of the Queen's wardrobe, because each one is set aside to pay for the Queen's finery.

Now suppose someone were to say to Amestris, the king's mother and the widow of Xerxes, "The son of Dinomache intends to challenge your son; her wardrobe is worth only fifty minas at best, and her son has less than three hundred acres of land at Erchia." I think she'd be wondering what this Alcibiades had up his sleeve to think of competing against Artaxerxes. I think she'd say, "I don't see what this fellow could be relying on, except diligence and wisdom—the Greeks don't have anything else worth mentioning."

But if she heard that this Alcibiades who is making this attempt is, in the first place, hardly twenty years old yet, and, secondly, entirely uneducated, and furthermore, when his lover tells him to study and cultivate himself and discipline himself so that he can compete with the king, he says he doesn't want to and that he's happy with the way he is—if she heard all that, I think she'd ask in amazement, "What in the world could this youngster be relying on?" Suppose we were to reply, "Good looks, height, birth, wealth, and native intelligence." Then, Alcibiades, considering all that they have of these things as well, she'd conclude that we were stark raving mad. Again, I think that Lampido, the daughter of Leotychides, wife of Archidamus and mother of Agis, who were all Spartan kings, would be similarly amazed if you, with your bad upbringing, proposed to compete with her son, considering all his advantages.

And yet, don't you think it's disgraceful that even our enemies' wives have a better appreciation than we do of what it would take to challenge them? No, my excellent friend, trust in me and in the Delphic inscription and 'know thyself'. These are the people we must defeat, not the ones you think, and we have no hope of defeating them unless we act with both diligence and skill. If you fall short in these, then you will fall short of achieving fame in Greece as well as abroad; and that is what I think you're longing for, more than anyone else ever longed for anything.

Alcibiades:: Well, Socrates, what kind of self-cultivation do I need to practice? Can you show me the way? What you said really sounded true.

Socrates:: Yes—but let's discuss together how we can become as good as possible. You know, what I've said about the need for education applies to me as well as to you—we're in the same condition, except in one respect.

Alcibiades:: What?

Socrates:: My guardian is better and wiser than Pericles, your guardian.

Alcibiades:: Who's that, Socrates?

Socrates:: God, Alcibiades; it was a god who prevented me from talking with you before today. I put my faith in him, and I say that your glory will be entirely my doing.

Alcibiades:: You're teasing me, Socrates.

Socrates:: Maybe; but I'm right in saying that we stand in need of self-cultivation. Actually, every human being needs self-cultivation, but especially the two of us.

Alcibiades:: You're right about me.

Socrates:: And about me.

Alcibiades:: So what should we do?

Socrates:: There must be no giving up, my friend, and no slacking off.

Alcibiades:: No, Socrates, that really wouldn’t do.

Socrates:: No it wouldn’t. So let’s work it out together. Tell me—we say that we want to be as good as possible, don’t we?

Alcibiades:: Yes.

Socrates:: In what respect?

Alcibiades:: In what good men do, obviously.

Socrates:: Good at what?

Alcibiades:: Taking care of things, obviously.

Socrates:: What sorts of things? Horses?

Alcibiades:: Of course not.

Socrates:: In that case, we'd consult a horse expert.

Alcibiades:: Yes.

Socrates:: Well, do you mean sailing?

Alcibiades:: No.

Socrates:: In that case, we'd consult a sailing expert.

Alcibiades:: Yes.

Socrates:: Well, what sorts of things? Whose business is it?

Alcibiades:: The leading citizens of Athens.

Socrates:: By ‘leading citizens’ do you mean clever men or stupid men?

Alcibiades:: Clever.

Socrates:: But isn’t everybody good at what they’re clever at?

Alcibiades:: Yes.

Socrates:: And bad at what they’re not?

Alcibiades:: Of course.

Socrates:: And is the shoemaker clever at making shoes?

Alcibiades:: Certainly.

Socrates:: Then he’s good at it.

Alcibiades:: That’s right.

Socrates:: Well now, isn’t the shoemaker stupid at making clothes?

Alcibiades:: Yes.

Socrates:: So he’s bad at that.

Alcibiades:: Yes.

Socrates:: So the same person is both good and bad, at least by this argument.

Alcibiades:: Apparently.

Socrates:: Do you mean to say that good men are also bad?

Alcibiades:: Of course not.

Socrates:: So which ones do you say are good men?

Alcibiades:: I mean those with the ability to rule in the city.

Socrates:: But not, I presume, over horses.

Alcibiades:: No, of course not.

Socrates:: Over people?

Alcibiades:: Yes.

Socrates:: When they’re sick?

Alcibiades:: No.

Socrates:: When they’re at sea?

Alcibiades:: No.

Socrates:: When they’re harvesting?

Alcibiades:: No.

Socrates:: When they're doing nothing? Or when they're doing something?

Alcibiades:: Doing something.

Socrates:: Doing what? Try to make it clear for me.

Alcibiades:: It's when they're helping each other and dealing with each other, as we do in our urban way of life.

Socrates:: So you mean ruling over men who deal with men.

Alcibiades:: Yes.

Socrates:: Over the boatswains who deal with rowers?

Alcibiades:: Of course not.

Socrates:: That's what the pilot is good at.

Alcibiades:: Yes.

Socrates:: Do you mean ruling over flute-players, who direct the singers and deal with the dancers?

Alcibiades:: Of course not.

Socrates:: Again, that's what the chorus-master is good at.

Alcibiades:: Certainly.

Socrates:: So what do you mean by being able to 'rule over men who deal with men'?

Alcibiades:: I mean ruling over the men in the city who take part in citizenship and who make a mutual contribution.

Socrates:: Well, what skill is this? Suppose I asked you the same thing again—what skill makes men understand how to rule over men who take part in sailing?

Alcibiades:: The pilot's.

Socrates:: And what knowledge did we say enables them to rule over those who take part in singing?

Alcibiades:: The chorus-master's, as you just said.

Socrates:: Well now, what do you call the knowledge that enables you to rule over those who take part in citizenship?

Alcibiades:: I call it the knowledge of good advice, Socrates.

Socrates:: But then do you think the pilot’s advice is bad advice?

Alcibiades:: Of course not.

Socrates:: Then is it good advice?

Alcibiades:: I should think so; he has to ensure the safety of his passengers.

Socrates:: You’re right. Well then, what’s the purpose of this good advice you’re talking about?

Alcibiades:: The safety and better management of the city.

Socrates:: But what is present or absent when the city is safe and better managed? If, for example, you asked me, “What is present or absent in the body when it is safe and better managed?” I'd reply, “Health is present and disease is absent.” Wouldn’t you agree?

Alcibiades:: Yes.

Socrates:: And if you asked me again, “What is present in our eyes when they are better cared for?” I'd say the same sort of thing—”Sight is present and blindness is absent.” Again, with our ears, deafness is absent and hearing is present when they’re in better condition and getting better treatment.

Alcibiades:: You’re right.

Socrates:: Well then, what about a city? What is it that’s present or absent when it’s in a better condition and getting better management and treatment?

Alcibiades:: The way I look at it, Socrates, mutual friendship will be present, and hatred and insurrection will be absent.

Socrates:: When you say ‘friendship’, do you mean agreement or disagreement?

Alcibiades:: Agreement.

Socrates:: What skill is it that makes cities agree about numbers?

Alcibiades:: Arithmetic.

Socrates:: What about private citizens? Isn’t it the same skill?

Alcibiades:: Yes.

Socrates:: And doesn’t it also make each person agree with himself?

Alcibiades:: Yes.

Socrates:: And what skill is it that makes each of us agree with himself about whether a hand’s-width is larger than an arm’s-length? It’s measuring, isn’t it?

Alcibiades:: Of course.

Socrates:: Doesn’t it make both cities and private citizens agree?

Alcibiades:: Yes.

Socrates:: And isn’t it the same with weighing?

Alcibiades:: It is.

Socrates:: Well, this agreement you’re talking about, what is it? What’s it about? What skill provides it? Doesn’t the same skill make both a city and a private citizen agree, both with themselves and with others?

Alcibiades:: That does seem quite likely.

Socrates:: What is it then? Don’t give up … Try your best to tell me.

Alcibiades:: I suppose I mean the sort of friendship and agreement you find when a mother and father agree with a son they love, and when a brother agrees with his brother, and a woman agrees with her husband.

Socrates:: Well, Alcibiades, do you think that a husband is able to agree with his wife about wool-working, when he doesn't understand it and she does?

Alcibiades:: Of course not.

Socrates:: Nor does he have any need to, because that's for a woman to know about.

Alcibiades:: That's right.

Socrates:: And is a woman able to agree with her husband about military tactics, without having learned about it?

Alcibiades:: Of course not.

Socrates:: I suppose you'd say that that's for a man to know about.

Alcibiades:: I would.

Socrates:: So, according to your argument, some subjects are women's subjects and some are men's subjects.

Alcibiades:: Of course.

Socrates:: So, in these areas at least, there's no agreement between men and women.

Alcibiades:: No.

Socrates:: Nor is there any friendship, since friendship was agreement.

Alcibiades:: Apparently not.

Socrates:: So women are not loved by men, insofar as they do their own work.

Alcibiades:: It seems not.

Socrates:: Nor are men loved by women, insofar as they do theirs.

Alcibiades:: No.

Socrates:: So neither are cities well governed when the different groups each do their own work.

Alcibiades:: But I think they are, Socrates.

Socrates:: What do you mean? In that case there's no friendship in cities, but we said friendship was present when cities are well governed, and not otherwise.

Alcibiades:: But I think it's when each person does his own work that mutual friendship results.

Socrates:: You've just changed your mind. What do you mean now? Can there be friendship without agreement? Can there be any agreement when some know about the matter and others don't?

Alcibiades:: There can't possibly.

Socrates:: But when everyone does his own work, is everyone being just, or unjust?

Alcibiades:: Just, of course.

Socrates:: So when the citizens do what is just in the city, there is no friendship between them.

Alcibiades:: Again, Socrates, I think there must be.

Socrates:: Then what do you mean by this 'friendship' and 'agreement' that we must be wise and good advisers in if we're to be good men? I can't figure out what it is, or who's got it. According to your argument, it seems that sometimes certain people have it and sometimes they don't.

Alcibiades:: Well, Socrates, I swear by the gods that I don't even know what I mean. I think I must have been in an appalling state for a long time, without being aware of it.

Socrates:: But don't lose heart. If you were fifty when you realized it, then it would be hard for you to cultivate yourself, but now you're just the right age to see it.

Alcibiades:: Now that I've seen it, Socrates, what should I do about it?

Socrates:: Answer my questions, Alcibiades. If you do that, then, God willing,—if we are to trust in my divination—you and I will be in a better state.

Alcibiades:: Then we will be, if it depends on my answering.

Socrates:: Well then, what does it mean to cultivate oneself?—I'm afraid we often think we're cultivating ourselves when we're not. When does a man do that? Is he cultivating himself when he cultivates what he has?

Alcibiades:: I think so, anyway.

Socrates:: Really? When does a man cultivate or care for his feet? Is it when he's caring for what belongs to his feet?

Alcibiades:: I don't understand.

Socrates:: Is there anything you'd say belonged to a hand? Take a ring, for example—could it belong anywhere else on a man but on his finger?

Alcibiades:: Of course not.

Socrates:: Similarly a shoe belongs nowhere but on the feet.

Alcibiades:: Yes.

Socrates:: Likewise cloaks and bedclothes belong to the rest of the body.

Alcibiades:: Yes.

Socrates:: So when we cultivate or care for our shoes, are we caring for our feet?

Alcibiades:: I don't really understand, Socrates.

Socrates:: Surely, Alcibiades, you talk about taking proper care of one thing or another, don't you?

Alcibiades:: Yes, I do.

Socrates:: And when you make something better, you say you're taking proper care of it.

Alcibiades:: Yes.

Socrates:: What skill is it that makes shoes better?

Alcibiades:: Shoemaking.

Socrates:: So shoemaking is the skill by which we take care of shoes.

Alcibiades:: Yes.

Socrates:: Do we use shoemaking to take care of our feet, too? Or do we use the skill that makes our feet better?

Alcibiades:: The latter.

Socrates:: Isn't the skill that makes the feet better the same as what makes the rest of the body better?

Alcibiades:: I think so.

Socrates:: Isn't this skill athletics?

Alcibiades:: Yes, absolutely.

Socrates:: So while we take care of our feet with athletics, we take care of what belongs to our feet with shoemaking.

Alcibiades:: Certainly.

Socrates:: And while we take care of our hands with athletics, we take care of what belongs to our hands with ring-making.

Alcibiades:: Yes.

Socrates:: And while we cultivate our bodies with athletics, we take care of what belongs to our bodies with weaving and other skills.

Alcibiades:: That's absolutely right.

Socrates:: So while we cultivate each thing with one skill, we cultivate what belongs to it with another skill.

Alcibiades:: Apparently so.

Socrates:: And so when you're cultivating what belongs to you, you're not cultivating yourself.

Alcibiades:: Not at all.

Socrates:: For it seems that cultivating yourself and cultivating what belongs to you require different skills.

Alcibiades:: Apparently.

Socrates:: Well then, what sort of skill could we use to cultivate ourselves?

Alcibiades:: I couldn't say.

Socrates:: But we've agreed on this much, at least—it's a skill that won't make anything that belongs to us better, but it will make us better.

Alcibiades:: You're right.

Socrates:: Now if we didn't know what a shoe was, would we have known what skill makes a shoe better?

Alcibiades:: No, we couldn't have.

Socrates:: Nor would we have known what skill makes a ring better if we didn't know what a ring was.

Alcibiades:: True.

Socrates:: Well then, could we ever know what skill makes us better if we didn't know what we were?

Alcibiades:: We couldn't.

Socrates:: Is it actually such an easy thing to know oneself? Was it some simpleton who inscribed those words on the temple wall at Delphi? Or is it difficult, and not for everybody?

Alcibiades:: Sometimes I think, Socrates, that anyone can do it, but then sometimes I think it's extremely difficult.

Socrates:: But Alcibiades, whether it's easy or not, nevertheless this is the situation we're in: if we know ourselves, then we might be able to know how to cultivate ourselves, but if we don't know ourselves, we'll never know how.

Alcibiades:: I agree.

Socrates:: Tell me, how can we find out what ‘itself’ is, in itself? Maybe this is the way to find out what we ourselves might be—maybe it’s the only possible way.

Alcibiades:: You’re right.

Socrates:: Hold on, by Zeus—who are you speaking with now? Anybody but me?

Alcibiades:: No.

Socrates:: And I’m speaking with you.

Alcibiades:: Yes.

Socrates:: Is Socrates doing the talking?

Alcibiades:: He certainly is.

Socrates:: And is Alcibiades doing the listening?

Alcibiades:: Yes.

Socrates:: And isn’t Socrates talking with words?

Alcibiades:: Of course.

Socrates:: I suppose you'd say that talking is the same as using words?

Alcibiades:: Certainly.

Socrates:: But the thing being used and the person using it—they’re different, aren’t they?

Alcibiades:: What do you mean?

Socrates:: A shoemaker, for example, cuts with a knife and a scraper, I think, and with other tools.

Alcibiades:: Yes, he does.

Socrates:: So isn’t the cutter who uses the tools different from the tools he’s cutting with?

Alcibiades:: Of course.

Socrates:: And likewise isn’t the lyre-player different from what he’s playing with?

Alcibiades:: Yes.

Socrates:: This is what I was just asking—doesn't the user of a thing always seem to be different from what he's using?

Alcibiades:: It seems so.

Socrates:: Let's think about the shoemaker again. Does he cut with his tools only, or does he also cut with his hands?

Alcibiades:: With his hands, too.

Socrates:: So he uses his hands, too.

Alcibiades:: Yes.

Socrates:: And doesn't he use his eyes, too, in shoemaking?

Alcibiades:: Yes.

Socrates:: Didn't we agree that the person who uses something is different from the thing that he uses?

Alcibiades:: Yes.

Socrates:: So the shoemaker and the lyre-player are different from the hands and eyes they use in their work.

Alcibiades:: So it seems.

Socrates:: Doesn't a man use his whole body, too?

Alcibiades:: Certainly.

Socrates:: And we agreed that the user is different from the thing being used.

Alcibiades:: Yes.

Socrates:: So a man is different from his own body.

Alcibiades:: So it seems.

Socrates:: Then what is a man?

Alcibiades:: I don't know what to say.

Socrates:: Yes, you do—say that it's what uses the body.

Alcibiades:: Yes.

Socrates:: What else uses it but the soul?

Alcibiades:: Nothing else.

Socrates:: And doesn’t the soul rule the body?

Alcibiades:: Yes.

Socrates:: Now here’s something I don’t think anybody would disagree with.

Alcibiades:: What?

Socrates:: Man is one of three things.

Alcibiades:: What things?

Socrates:: The body, the soul, or the two of them together, the whole thing.

Alcibiades:: Of course.

Socrates:: But we agreed that man is that which rules the body.

Alcibiades:: Yes, we did agree to that.

Socrates:: Does the body rule itself?

Alcibiades:: It couldn’t.

Socrates:: Because we said it was ruled.

Alcibiades:: Yes.

Socrates:: So this can’t be what we’re looking for.

Alcibiades:: Not likely.

Socrates:: Well then, can the two of them together rule the body? Is this what man is?

Alcibiades:: Yes, maybe that’s it.

Socrates:: No, that’s the least likely of all. If one of them doesn’t take part in ruling, then surely no combination of the two of them could rule.

Alcibiades:: You’re right.

Socrates:: Since a man is neither his body, nor his body and soul together, what remains, I think, is either that he’s nothing, or else, if he is something, he’s nothing other than his soul.

Alcibiades:: Quite so.

Socrates:: Do you need any clearer proof that the soul is the man?

Alcibiades:: No, by Zeus, I think you've given ample proof.

Socrates:: Well, if we've proven it fairly well, although perhaps not rigorously, that will do for us. We'll have a rigorous proof when we find out what we skipped over, because it would have taken quite a lot of study.

Alcibiades:: What was that?

Socrates:: What we mentioned just now, that we should first consider what 'itself' is, in itself. But in fact, we've been considering what an individual self is, instead of what 'itself' is. Perhaps that was enough for us, for surely nothing about us has more authority than the soul, wouldn't you agree?

Alcibiades:: Certainly.

Socrates:: So the right way of looking at it is that, when you and I talk to each other, one soul uses words to address another soul.

Alcibiades:: Very true.

Socrates:: That's just what we were saying a little while ago—that Socrates converses with Alcibiades not by saying words to his face, apparently, but by addressing his words to Alcibiades, in other words, to his soul.

Alcibiades:: I see it now.

Socrates:: So the command that we should know ourselves means that we should know our souls.

Alcibiades:: So it seems.

Socrates:: And someone who knows certain things about his body knows about what belongs to him, not himself.

Alcibiades:: That's right.

Socrates:: So no doctor, to the extent he's a doctor, knows himself, and neither does any trainer, to the extent he's a trainer.

Alcibiades:: It seems not.

Socrates:: So farmers and other tradesmen are a long way from knowing themselves. It seems they don’t even know what belongs to them; their skills are about what’s even further away than what belongs to them. They only know what belongs to the body and how to take care of it.

Alcibiades:: You’re right.

Socrates:: If being self-controlled is knowing yourself, then their skills don’t make any of them self-controlled.

Alcibiades:: I don’t think so.

Socrates:: That’s why we consider these skills to be beneath us, and not suitable for a gentleman to learn.

Alcibiades:: You’re quite right.

Socrates:: Furthermore, if someone takes care of his body, then isn’t he caring for something that belongs to him, and not for himself?

Alcibiades:: That seems likely.

Socrates:: And isn’t someone who takes care of his wealth caring neither for himself nor for what belongs to him, but for something even further away?

Alcibiades:: I agree.

Socrates:: So the money-earner is not, in fact, doing his own work.

Alcibiades:: Right.

Socrates:: Now if there was someone who loved Alcibiades’ body, he wouldn’t be loving Alcibiades, only something that belonged to Alcibiades.

Alcibiades:: That’s right.

Socrates:: But someone who loved you would love your soul.

Alcibiades:: By our argument, I think he'd have to.

Socrates:: Wouldn't someone who loves your body go off and leave you when your beauty is no longer in full bloom?

Alcibiades:: Obviously.

Socrates:: But someone who loves your soul will not leave you, as long as you're making progress.

Alcibiades:: That's probably right.

Socrates:: Well, I'm the one who won't leave you—I'm the one who will stay with you, now that your body has lost its bloom and everyone else has gone away.

Alcibiades:: I'm glad you are, Socrates, and I hope you never leave me.

Socrates:: Then you must try to be as attractive as possible.

Alcibiades:: I'll certainly try.

Socrates:: So this is your situation: you, Alcibiades, son of Clinias, have no lovers and never have had any, it seems, except for one only, and he is your darling Socrates, son of Sophroniscus and Phaenarete.

Alcibiades:: True.

Socrates:: Remember when I first spoke to you? You said that you were just about to say something; you wanted to ask me why I was the only one who hadn't given up on you.

Alcibiades:: That's right.

Socrates:: Well, this is the reason: I was your only lover—the others were only lovers of what you had. While your possessions are passing their prime, you are just beginning to bloom. I shall never forsake you now, never, unless the Athenian people make you corrupt and ugly. And that is my greatest fear, that a love of the common people might corrupt you, for many Athenian gentlemen have suffered that fate already. "The people of great-hearted Erechtheus" might look attractive on the outside, but you need to scrutinize them in their nakedness, so take the precaution I urge.

Alcibiades:: What precaution?

Socrates:: Get in training first, my dear friend, and learn what you need to know before entering politics. That will give you an antidote against the terrible dangers.

Alcibiades:: I think you're right, Socrates. But try to explain how exactly we should cultivate ourselves.

Socrates:: Well, we've made one step forward anyway—we've pretty well agreed what we are; we were afraid that we might make a mistake about that and unwittingly cultivate something other than ourselves.

Alcibiades:: That's right.

Socrates:: And the next step is that we have to cultivate our soul and look to that.

Alcibiades:: Obviously.

Socrates:: And let others take care of our bodies and our property.

Alcibiades:: Quite so.

Socrates:: Now, how can we get the clearest knowledge of our soul? If we knew that, we'd probably know ourselves as well … By the gods— that admirable Delphic inscription we just mentioned—didn't we understand it?

Alcibiades:: What's the point of bringing that up again, Socrates?

Socrates:: I'll tell you what I suspect that inscription means, and what advice it's giving us. There may not be many examples of it, except the case of sight.

Alcibiades:: What do you mean by that?

Socrates:: You think about it, too. If the inscription took our eyes to be men and advised them, "See thyself," how would we understand such advice? Shouldn't the eye be looking at something in which it could see itself?

Alcibiades:: Obviously.

Socrates:: Then let's think of something that allows us to see both it and ourselves when we look at it.

Alcibiades:: Obviously, Socrates, you mean mirrors and that sort of thing.

Socrates:: Quite right. And isn't there something like that in the eye, which we see with?

Alcibiades:: Certainly.

Socrates:: I'm sure you've noticed that when a man looks into an eye his face appears in it, like in a mirror. We call this the 'pupil', for it's a sort of miniature of the man who's looking.

Alcibiades:: You're right.

Socrates:: Then an eye will see itself if it observes an eye and looks at the best part of it, the part with which it can see.

Alcibiades:: So it seems.

Socrates:: But it won't see itself if it looks at anything else in a man, or anything else at all, unless it's similar to the eye.

Alcibiades:: You're right.

Socrates:: So if an eye is to see itself, it must look at an eye, and at that region of it in which the good activity of an eye actually occurs, and this, I presume, is seeing.

Alcibiades:: That's right.

Socrates:: Then if the soul, Alcibiades, is to know itself, it must look at a soul, and especially at that region in which what makes a soul good, wisdom, occurs, and at anything else which is similar to it.

Alcibiades:: I agree with you, Socrates.

Socrates:: Can we say that there is anything about the soul which is more divine than that where knowing and understanding take place?

Alcibiades:: No, we can't.

Socrates:: Then that region in it resembles the divine, and someone who looked at that and grasped everything divine—vision and understanding—would have the best grasp of himself as well.

Alcibiades:: So it seems.

Socrates:: But we agreed that knowing oneself was the same as being self-controlled.

Alcibiades:: Certainly.

Socrates:: So if we didn't know ourselves and weren't self-controlled, would we be able to know which of the things that belong to us were good and which were bad?

Alcibiades:: How could we know that, Socrates?

Socrates:: No; I suppose it would seem impossible to you to know that what belongs to Alcibiades belongs to him, without knowing Alcibiades.

Alcibiades:: Quite impossible, I'm sure.

Socrates:: And similarly we couldn't know that what belongs to us belongs to us, without knowing ourselves.

Alcibiades:: How could we?

Socrates:: And if we didn't even know what belongs to us, how could we possibly know what belongs to our belongings?

Alcibiades:: We couldn't.

Socrates:: Then it wasn't quite right to agree, as we did a few minutes ago, that some people know what belongs to them without knowing themselves, while others know what belongs to their belongings. It seems that it's the job of one man, and one skill, to know all these things: himself, his belongings, and his belongings' belongings.

Alcibiades:: That seems likely.

Socrates:: And it follows that anyone who doesn't know his own belongings probably won't know other people's belongings either.

Alcibiades:: Quite so.

Socrates:: And if he doesn't know other people's belongings, nor will he know what belongs to the city.

Alcibiades:: He couldn't.

Socrates:: So such a man couldn't become a statesman.

Alcibiades:: Of course not.

Socrates:: Nor could he even manage a household estate.

Alcibiades:: Of course not.

Socrates:: Nor indeed will he know what he's doing.

Alcibiades:: Certainly not.

Socrates:: And if he doesn't know what he's doing, won't he make mistakes?

Alcibiades:: Certainly.

Socrates:: Since he makes mistakes, won't he conduct himself badly, both publicly and privately?

Alcibiades:: Of course.

Socrates:: Since he conducts himself badly, won't he be a failure?

Alcibiades:: Absolutely.

Socrates:: What about the people he's working for?

Alcibiades:: They will be too.

Socrates:: Then it's impossible for anyone to prosper unless he is self-controlled and good.

Alcibiades:: Impossible.

Socrates:: So it's the bad men who are failures.

Alcibiades:: Absolutely.

Socrates:: And so the way to avoid being a failure is not by getting rich, but by being self-controlled.

Alcibiades:: Apparently.

Socrates:: So it's not walls or war-ships or shipyards that cities need, Alcibiades, if they are to prosper, nor is it numbers or size, without virtue.

Alcibiades:: Definitely.

Socrates:: So if you are to manage the city's business properly and well, you must impart virtue to the citizens.

Alcibiades:: Of course.

Socrates:: Is it possible to impart something you haven't got?

Alcibiades:: How could you?

Socrates:: Then you, or anyone else who is to be ruler and trustee, not only of himself and his private business, but also the city and the city's business, must first acquire virtue himself.

Alcibiades:: You're right.

Socrates:: So what you need to get for yourself and for the city isn't political power, nor the authority to do what you like; what you need is justice and self-control.

Alcibiades:: Apparently.

Socrates:: Because my dear Alcibiades, when an individual or a city with no intelligence is at liberty to do what he or it wants, what do you think the likely result will be? For example, if he's sick and has the power to do whatever he likes—without any medical insight but with such a dictator's power that nobody criticizes him—what's going to happen? Isn't it likely his health will be ruined?

Alcibiades:: You're right.

Socrates:: And in a ship, if someone were free to do what he liked, but was completely lacking in insight and skill in navigation, don’t you see what would happen to him and his fellow sailors?

Alcibiades:: I do indeed; they would all die.

Socrates:: Likewise, if a city, or any ruler or administrator, is lacking in virtue, then bad conduct will result.

Alcibiades:: It must.

Socrates:: Well then, my good Alcibiades, if you are to prosper, it isn’t supreme power you need to get for yourself or the city, but virtue.

Alcibiades:: You’re right.

Socrates:: But before one acquires virtue it’s better to be ruled by somebody superior than to rule; this applies to men as well as to boys.

Alcibiades:: So it seems.

Socrates:: And isn’t what is better also more admirable?

Alcibiades:: Yes.

Socrates:: And isn’t what is more admirable more appropriate?

Alcibiades:: Of course.

Socrates:: So it’s appropriate for a bad man to be a slave, since it’s better.

Alcibiades:: Yes.

Socrates:: And vice is appropriate for a slave.

Alcibiades:: Apparently.

Socrates:: And virtue is appropriate for a free man.

Alcibiades:: Yes.

Socrates:: Well, my friend, shouldn’t we avoid whatever is appropriate for slaves?

Alcibiades:: Yes, as much as possible, Socrates.

Socrates:: Can you see what condition you’re now in? Is it appropriate for a free man or not?

Alcibiades:: I think I see only too clearly.

Socrates:: Then do you know how to escape from your present state?— let's not call a handsome young man by that name.

Alcibiades:: I do.

Socrates:: How?

Alcibiades:: It's up to you, Socrates.

Socrates:: That's not well said, Alcibiades.

Alcibiades:: Well, what should I say?

Socrates:: That it's up to God.

Alcibiades:: Then that's what I say. And furthermore I say this as well: we're probably going to change roles, Socrates. I'll be playing yours and you'll be playing mine, for from this day forward I will never fail to attend on you, and you will always have me as your attendant.

Socrates:: Then my love for you, my excellent friend, will be just like a stork: after hatching a winged love in you, it will be cared for by it in return.

Alcibiades:: Yes, that's right. I'll start to cultivate justice in myself right now.

Socrates:: I should like to believe that you will persevere, but I'm afraid— not because I distrust your nature, but because I know how powerful the city is—I'm afraid it might get the better of both me and you.

# Alcibiades I.

Translated by Jowett 3rd ed. 1892

PERSONS OF THE DIALOGUE.

Alcibiades, Socrates.

---

Socrates:: I dare say that you may be surprised to find, O son of Cleinias, that I, who am your first lover, not having spoken to you for many years, when the rest of the world were wearying you with their attentions, am the last of your lovers who still speaks to you. The cause of my silence has been that I was hindered by a power more than human, of which I will some day explain to you the nature; this impediment has now been removed; I therefore here present myself before you, and I greatly hope that no similar hindrance will again occur. Meanwhile, I have observed that your pride has been too much for the pride of your admirers; they were numerous and high-spirited, but they have all run away, overpowered by your superior force of character; not one of them remains. And I want you to understand the reason why you have been too much for them. You think that you have no need of them or of any other man, for you have great possessions and lack nothing, beginning with the body, and ending with the soul. In the first place, you say to yourself that you are the fairest and tallest of the citizens, and this every one who has eyes may see to be true; in the second place, that you are among the noblest of them, highly connected both on the father's and the mother's side, and sprung from one of the most distinguished families in your own state, which is the greatest in Hellas, and having many friends and kinsmen of the best sort, who can assist you when in need; and there is one potent relative, who is more to you than all the rest, Pericles the son of Xanthippus, whom your father left guardian of you, and of your brother, and who can do as he pleases not only in this city, but in all Hellas, and among many and mighty barbarous nations. Moreover, you are rich; but I must say that you value yourself least of all upon your possessions. And all these things have lifted you up; you have overcome your lovers, and they have acknowledged that you were too much for them. Have you not remarked their absence? And now I know that you wonder why I, unlike the rest of them, have not gone away, and what can be my motive in remaining.

Alcibiades:: Perhaps, Socrates, you are not aware that I was just going to ask you the very same question—What do you want? And what is your motive in annoying me, and always, wherever I am, making a point of coming? I do really wonder what you mean, and should greatly like to know.

Socrates:: Then if, as you say, you desire to know, I suppose that you will be willing to hear, and I may consider myself to be speaking to an auditor who will remain, and will not run away?

Alcibiades:: Certainly, let me hear.

Socrates:: You had better be careful, for I may very likely be as unwilling to end as I have hitherto been to begin.

Alcibiades:: Proceed, my good man, and I will listen.

Socrates:: I will proceed; and, although no lover likes to speak with one who has no feeling of love in him, I will make an effort, and tell you what I meant: My love, Alcibiades, which I hardly like to confess, would long ago have passed away, as I flatter myself, if I saw you loving your good things, or thinking that you ought to pass life in the enjoyment of them.

But I shall reveal other thoughts of yours, which you keep to yourself; whereby you will know that I have always had my eye on you. Suppose that at this moment some God came to you and said: Alcibiades, will you live as you are, or die in an instant if you are forbidden to make any further acquisition?—I verily believe that you would choose death. And I will tell you the hope in which you are at present living: Before many days have elapsed, you think that you will come before the Athenian assembly, and will prove to them that you are more worthy of honor than Pericles, or any other man that ever lived, and having proved this, you will have the greatest power in the state. When you have gained the greatest power among us, you will go on to other Hellenic states, and not only to Hellenes, but to all the barbarians who inhabit the same continent with us. And if the God were then to say to you again: Here in Europe is to be your seat of empire, and you must not cross over into Asia or meddle with Asiatic affairs, I do not believe that you would choose to live upon these terms; but the world, as I may say, must be filled with your power and name—no man less than Cyrus and Xerxes is of any account with you. Such I know to be your hopes—I am not guessing only—and very likely you, who know that I am speaking the truth, will reply, Well, Socrates, but what have my hopes to do with the explanation which you promised of your unwillingness to leave me? And that is what I am now going to tell you, sweet son of Cleinias and Dinomache. The explanation is, that all these designs of yours cannot be accomplished by you without my help; so great is the power which I believe myself to have over you and your concerns; and this I conceive to be the reason why the God has hitherto forbidden me to converse with you, and I have been long expecting his permission. For, as you hope to prove your own great value to the state, and having proved it, to attain at once to absolute power, so do I indulge a hope that I shall have the supreme power over you, if I am able to prove my own great value to you, and to show you that neither guardian, nor kinsman, nor any one is able to deliver into your hands the power which you desire, but I only, God being my helper. When you were young and your hopes were not yet matured, I should have wasted my time, and therefore, as I conceive, the God forbade me to converse with you; but now, having his permission, I will speak, for now you will listen to me.

Alcibiades:: Your silence, Socrates, was always a surprise to me. I never could understand why you followed me about, and now that you have begun to speak again, I am still more amazed. Whether I think all this or not, is a matter about which you seem to have already made up your mind, and therefore my denial will have no effect upon you. But granting, if I must, that you have perfectly divined my purposes, why is your assistance necessary to the attainment of them? Can you tell me why?

Socrates:: You want to know whether I can make a long speech, such as you are in the habit of hearing; but that is not my way. I think, however, that I can prove to you the truth of what I am saying, if you will grant me one little favor.

Alcibiades:: Yes, if the favor which you mean be not a troublesome one.

Socrates:: Will you be troubled at having questions to answer?

Alcibiades:: Not at all.

Socrates:: Then please to answer.

Alcibiades:: Ask me.

Socrates:: Have you not the intention which I attribute to you?

Alcibiades:: I will grant anything you like, in the hope of hearing what more you have to say.

Socrates:: You do, then, mean, as I was saying, to come forward in a little while in the character of an adviser of the Athenians? And suppose that when you are ascending the bema, I pull you by the sleeve and say, Alcibiades, you are getting up to advise the Athenians—do you know the matter about which they are going to deliberate, better than they?—How would you answer?

Alcibiades:: I should reply, that I was going to advise them about a matter which I do know better than they.

Socrates:: Then you are a good adviser about the things which you know?

Alcibiades:: Certainly.

Socrates:: And do you know anything but what you have learned of others, or found out yourself?

Alcibiades:: That is all.

Socrates:: And would you have ever learned or discovered anything, if you had not been willing either to learn of others or to examine yourself?

Alcibiades:: I should not.

Socrates:: And would you have been willing to learn or to examine what you supposed that you knew?

Alcibiades:: Certainly not.

Socrates:: Then there was a time when you thought that you did not know what you are now supposed to know?

Alcibiades:: Certainly.

Socrates:: I think that I know tolerably well the extent of your acquirements; and you must tell me if I forget any of them: according to my recollection, you learned the arts of writing, of playing on the lyre, and of wrestling; the flute you never would learn; this is the sum of your accomplishments, unless there were some which you acquired in secret; and I think that secrecy was hardly possible, as you could not have come out of your door, either by day or night, without my seeing you.

Alcibiades:: Yes, that was the whole of my schooling.

Socrates:: And are you going to get up in the Athenian assembly, and give them advice about writing?

Alcibiades:: No, indeed.

Socrates:: Or about the touch of the lyre?

Alcibiades:: Certainly not.

Socrates:: And they are not in the habit of deliberating about wrestling, in the assembly?

Alcibiades:: Hardly.

Socrates:: Then what are the deliberations in which you propose to advise them? Surely not about building?

Alcibiades:: No.

Socrates:: For the builder will advise better than you will about that?

Alcibiades:: He will.

Socrates:: Nor about divination?

Alcibiades:: No.

Socrates:: About that again the diviner will advise better than you will?

Alcibiades:: True.

Socrates:: Whether he be little or great, good or ill-looking, noble or ignoble—makes no difference.

Alcibiades:: Certainly not.

Socrates:: A man is a good adviser about anything, not because he has riches, but because he has knowledge?

Alcibiades:: Assuredly.

Socrates:: Whether their counselor is rich or poor, is not a matter which will make any difference to the Athenians when they are deliberating about the health of the citizens; they only require that he should be a physician.

Alcibiades:: Of course.

Socrates:: Then what will be the subject of deliberation about which you will be justified in getting up and advising them?

Alcibiades:: About their own concerns, Socrates.

Socrates:: You mean about shipbuilding, for example, when the question is what sort of ships they ought to build?

Alcibiades:: No, I should not advise them about that.

Socrates:: I suppose, because you do not understand shipbuilding:—is that the reason?

Alcibiades:: It is.

Socrates:: Then about what concerns of theirs will you advise them?

Alcibiades:: About war, Socrates, or about peace, or about any other concerns of the state.

Socrates:: You mean, when they deliberate with whom they ought to make peace, and with whom they ought to go to war, and in what manner?

Alcibiades:: Yes.

Socrates:: And they ought to go to war with those against whom it is better to go to war?

Alcibiades:: Yes.

Socrates:: And when it is better?

Alcibiades:: Certainly.

Socrates:: And for as long a time as is better?

Alcibiades:: Yes.

Socrates:: But suppose the Athenians to deliberate with whom they ought to close in wrestling, and whom they should grasp by the hand, would you, or the master of gymnastics, be a better adviser of them?

Alcibiades:: Clearly, the master of gymnastics.

Socrates:: And can you tell me on what grounds the master of gymnastics would decide, with whom they ought or ought not to close, and when and how? To take an instance: Would he not say that they should wrestle with those against whom it is best to wrestle?

Alcibiades:: Yes.

Socrates:: And as much as is best?

Alcibiades:: Certainly.

Socrates:: And at such times as are best?

Alcibiades:: Yes.

Socrates:: Again; you sometimes accompany the lyre with the song and dance?

Alcibiades:: Yes.

Socrates:: When it is well to do so?

Alcibiades:: Yes.

Socrates:: And as much as is well?

Alcibiades:: Just so.

Socrates:: And as you speak of an excellence or art of the best in wrestling, and of an excellence in playing the lyre, I wish you would tell me what this latter is;—the excellence of wrestling I call gymnastic, and I want to know what you call the other.

Alcibiades:: I do not understand you.

Socrates:: Then try to do as I do; for the answer which I gave is universally right, and when I say right, I mean according to rule.

Alcibiades:: Yes.

Socrates:: And was not the art of which I spoke gymnastic?

Alcibiades:: Certainly.

Socrates:: And I called the excellence in wrestling gymnastic?

Alcibiades:: You did.

Socrates:: And I was right?

Alcibiades:: I think that you were.

Socrates:: Well, now,—for you should learn to argue prettily—let me ask you in return to tell me, first, what is that art of which playing and singing, and stepping properly in the dance, are parts,—what is the name of the whole? I think that by this time you must be able to tell.

Alcibiades:: Indeed I cannot.

Socrates:: Then let me put the matter in another way: what do you call the Goddesses who are the patronesses of art?

Alcibiades:: The Muses do you mean, Socrates?

Socrates:: Yes, I do; and what is the name of the art which is called after them?

Alcibiades:: I suppose that you mean music.

Socrates:: Yes, that is my meaning; and what is the excellence of the art of music, as I told you truly that the excellence of wrestling was gymnastic—what is the excellence of music—to be what?

Alcibiades:: To be musical, I suppose.

Socrates:: Very good; and now please to tell me what is the excellence of war and peace; as the more musical was the more excellent, or the more gymnastical was the more excellent, tell me, what name do you give to the more excellent in war and peace?

Alcibiades:: But I really cannot tell you.

Socrates:: But if you were offering advice to another and said to him—This food is better than that, at this time and in this quantity, and he said to you—What do you mean, Alcibiades, by the word ‘better’? you would have no difficulty in replying that you meant ‘more wholesome,’ although you do not profess to be a physician: and when the subject is one of which you profess to have knowledge, and about which you are ready to get up and advise as if you knew, are you not ashamed, when you are asked, not to be able to answer the question? Is it not disgraceful?

Alcibiades:: Very.

Socrates:: Well, then, consider and try to explain what is the meaning of ‘better,’ in the matter of making peace and going to war with those against whom you ought to go to war? To what does the word refer?

Alcibiades:: I am thinking, and I cannot tell.

Socrates:: But you surely know what are the charges which we bring against one another, when we arrive at the point of making war, and what name we give them?

Alcibiades:: Yes, certainly; we say that deceit or violence has been employed, or that we have been defrauded.

Socrates:: And how does this happen? Will you tell me how? For there may be a difference in the manner.

Alcibiades:: Do you mean by ‘how,’ Socrates, whether we suffered these things justly or unjustly?

Socrates:: Exactly.

Alcibiades:: There can be no greater difference than between just and unjust.

Socrates:: And would you advise the Athenians to go to war with the just or with the unjust?

Alcibiades:: That is an awkward question; for certainly, even if a person did intend to go to war with the just, he would not admit that they were just.

Socrates:: He would not go to war, because it would be unlawful?

Alcibiades:: Neither lawful nor honorable.

Socrates:: Then you, too, would address them on principles of justice?

Alcibiades:: Certainly.

Socrates:: What, then, is justice but that better, of which I spoke, in going to war or not going to war with those against whom we ought or ought not, and when we ought or ought not to go to war?

Alcibiades:: Clearly.

Socrates:: But how is this, friend Alcibiades? Have you forgotten that you do not know this, or have you been to the schoolmaster without my knowledge, and has he taught you to discern the just from the unjust? Who is he? I wish you would tell me, that I may go and learn of him—you shall introduce me.

Alcibiades:: You are mocking, Socrates.

Socrates:: No, indeed; I most solemnly declare to you by Zeus, who is the God of our common friendship, and whom I never will forswear, that I am not; tell me, then, who this instructor is, if he exists.

Alcibiades:: But, perhaps, he does not exist; may I not have acquired the knowledge of just and unjust in some other way?

Socrates:: Yes; if you have discovered them.

Alcibiades:: But do you not think that I could discover them?

Socrates:: I am sure that you might, if you enquired about them.

Alcibiades:: And do you not think that I would enquire?

Socrates:: Yes; if you thought that you did not know them.

Alcibiades:: And was there not a time when I did so think?

Socrates:: Very good; and can you tell me how long it is since you thought that you did not know the nature of the just and the unjust? What do you say to a year ago? Were you then in a state of conscious ignorance and enquiry? or did you think that you knew? And please to answer truly, that our discussion may not be in vain.

Alcibiades:: Well, I thought that I knew.

Socrates:: And two years ago, and three years ago, and four years ago, you knew all the same?

Alcibiades:: I did.

Socrates:: And more than four years ago you were a child—were you not?

Alcibiades:: Yes.

Socrates:: And then I am quite sure that you thought you knew.

Alcibiades:: Why are you so sure?

Socrates:: Because I often heard you when a child, in your teacher's house, or elsewhere, playing at dice or some other game with the boys, not hesitating at all about the nature of the just and unjust; but very confident—crying and shouting that one of the boys was a rogue and a cheat, and had been cheating. Is it not true?

Alcibiades:: But what was I to do, Socrates, when anybody cheated me?

Socrates:: And how can you say, 'What was I to do'? if at the time you did not know whether you were wronged or not?

Alcibiades:: To be sure I knew; I was quite aware that I was being cheated.

Socrates:: Then you suppose yourself even when a child to have known the nature of just and unjust?

Alcibiades:: Certainly; and I did know then.

Socrates:: And when did you discover them—not, surely, at the time when you thought that you knew them?

Alcibiades:: Certainly not.

Socrates:: And when did you think that you were ignorant—if you consider, you will find that there never was such a time?

Alcibiades:: Really, Socrates, I cannot say.

Socrates:: Then you did not learn them by discovering them?

Alcibiades:: Clearly not.

Socrates:: But just before you said that you did not know them by learning; now, if you have neither discovered nor learned them, how and whence do you come to know them?

Alcibiades:: I suppose that I was mistaken in saying that I knew them through my own discovery of them; whereas, in truth, I learned them in the same way that other people learn.

Socrates:: So you said before, and I must again ask, of whom? Do tell me.

Alcibiades:: Of the many.

Socrates:: Do you take refuge in them? I cannot say much for your teachers.

Alcibiades:: Why, are they not able to teach?

Socrates:: They could not teach you how to play at draughts, which you would acknowledge, would you not, to be a much smaller matter than justice?

Alcibiades:: Yes.

Socrates:: And can they teach the better who are unable to teach the worse?

Alcibiades:: I think that they can; at any rate, they can teach many far better things than to play at draughts.

Socrates:: What things?

Alcibiades:: Why, for example, I learned to speak Greek of them, and I cannot say who was my teacher, or to whom I am to attribute my knowledge of Greek, if not to those good-for-nothing teachers, as you call them.

Socrates:: Why, yes, my friend; and the many are good enough teachers of Greek, and some of their instructions in that line may be justly praised.

Alcibiades:: Why is that?

Socrates:: Why, because they have the qualities which good teachers ought to have.

Alcibiades:: What qualities?

Socrates:: Why, you know that knowledge is the first qualification of any teacher?

Alcibiades:: Certainly.

Socrates:: And if they know, they must agree together and not differ?

Alcibiades:: Yes.

Socrates:: And would you say that they knew the things about which they differ?

Alcibiades:: No.

Socrates:: Then how can they teach them?

Alcibiades:: They cannot.

Socrates:: Well, but do you imagine that the many would differ about the nature of wood and stone? are they not agreed if you ask them what they are? and do they not run to fetch the same thing, when they want a piece of wood or a stone? And so in similar cases, which I suspect to be pretty nearly all that you mean by speaking Greek.

Alcibiades:: True.

Socrates:: These, as we were saying, are matters about which they are agreed with one another and with themselves; both individuals and states use the same words about them; they do not use some one word and some another.

Alcibiades:: They do not.

Socrates:: Then they may be expected to be good teachers of these things?

Alcibiades:: Yes.

Socrates:: And if we want to instruct any one in them, we shall be right in sending him to be taught by our friends the many?

Alcibiades:: Very true.

Socrates:: But if we wanted further to know not only which are men and which are horses, but which men or horses have powers of running, would the many still be able to inform us?

Alcibiades:: Certainly not.

Socrates:: And you have a sufficient proof that they do not know these things and are not the best teachers of them, inasmuch as they are never agreed about them?

Alcibiades:: Yes.

Socrates:: And suppose that we wanted to know not only what men are like, but what healthy or diseased men are like—would the many be able to teach us?

Alcibiades:: They would not.

Socrates:: And you would have a proof that they were bad teachers of these matters, if you saw them at variance?

Alcibiades:: I should.

Socrates:: Well, but are the many agreed with themselves, or with one another, about the justice or injustice of men and things?

Alcibiades:: Assuredly not, Socrates.

Socrates:: There is no subject about which they are more at variance?

Alcibiades:: None.

Socrates:: I do not suppose that you ever saw or heard of men quarrelling over the principles of health and disease to such an extent as to go to war and kill one another for the sake of them?

Alcibiades:: No, indeed.

Socrates:: But of the quarrels about justice and injustice, even if you have never seen them, you have certainly heard from many people, including Homer; for you have heard of the Iliad and Odyssey?

Alcibiades:: To be sure, Socrates.

Socrates:: A difference of just and unjust is the argument of those poems?

Alcibiades:: True.

Socrates:: Which difference caused all the wars and deaths of Trojans and Achaeans, and the deaths of the suitors of Penelope in their quarrel with Odysseus.

Alcibiades:: Very true.

Socrates:: And when the Athenians and Lacedaemonians and Boeotians fell at Tanagra, and afterwards in the battle of Coronea, at which your father Cleinias met his end, the question was one of justice—this was the sole cause of the battles, and of their deaths.

Alcibiades:: Very true.

Socrates:: But can they be said to understand that about which they are quarrelling to the death?

Alcibiades:: Clearly not.

Socrates:: And yet those whom you thus allow to be ignorant are the teachers to whom you are appealing.

Alcibiades:: Very true.

Socrates:: But how are you ever likely to know the nature of justice and injustice, about which you are so perplexed, if you have neither learned them of others nor discovered them yourself?

Alcibiades:: From what you say, I suppose not.

Socrates:: See, again, how inaccurately you speak, Alcibiades!

Alcibiades:: In what respect?

Socrates:: In saying that I say so.

Alcibiades:: Why, did you not say that I know nothing of the just and unjust?

Socrates:: No; I did not.

Alcibiades:: Did I, then?

Socrates:: Yes.

Alcibiades:: How was that?

Socrates:: Let me explain. Suppose I were to ask you which is the greater number, two or one; you would reply 'two'?

Alcibiades:: I should.

Socrates:: And by how much greater?

Alcibiades:: By one.

Socrates:: Which of us now says that two is more than one?

Alcibiades:: I do.

Socrates:: Did not I ask, and you answer the question?

Alcibiades:: Yes.

Socrates:: Then who is speaking? I who put the question, or you who answer me?

Alcibiades:: I am.

Socrates:: Or suppose that I ask and you tell me the letters which make up the name Socrates, which of us is the speaker?

Alcibiades:: I am.

Socrates:: Now let us put the case generally: whenever there is a question and answer, who is the speaker,—the questioner or the answerer?

Alcibiades:: I should say, Socrates, that the answerer was the speaker.

Socrates:: And have I not been the questioner all through?

Alcibiades:: Yes.

Socrates:: And you the answerer?

Alcibiades:: Just so.

Socrates:: Which of us, then, was the speaker?

Alcibiades:: The inference is, Socrates, that I was the speaker.

Socrates:: Did not some one say that Alcibiades, the fair son of Cleinias, not understanding about just and unjust, but thinking that he did understand, was going to the assembly to advise the Athenians about what he did not know? Was not that said?

Alcibiades:: Very true.

Socrates:: Then, Alcibiades, the result may be expressed in the language of Euripides. I think that you have heard all this 'from yourself, and not from me'; nor did I say this, which you erroneously attribute to me, but you yourself, and what you said was very true. For indeed, my dear fellow, the design which you meditate of teaching what you do not know, and have not taken any pains to learn, is downright insanity.

Alcibiades:: But, Socrates, I think that the Athenians and the rest of the Hellenes do not often advise as to the more just or unjust; for they see no difficulty in them, and therefore they leave them, and consider which course of action will be most expedient; for there is a difference between justice and expediency. Many persons have done great wrong and profited by their injustice; others have done rightly and come to no good.

Socrates:: Well, but granting that the just and the expedient are ever so much opposed, you surely do not imagine that you know what is expedient for mankind, or why a thing is expedient?

Alcibiades:: Why not, Socrates?—But I am not going to be asked again from whom I learned, or when I made the discovery.

Socrates:: What a way you have! When you make a mistake which might be refuted by a previous argument, you insist on having a new and different refutation; the old argument is a worn-out garment which you will no longer put on, but some one must produce another which is clean and new. Now I shall disregard this move of yours, and shall ask over again,—Where did you learn and how do you know the nature of the expedient, and who is your teacher? All this I comprehend in a single question, and now you will manifestly be in the old difficulty, and will not be able to show that you know the expedient, either because you learned or because you discovered it yourself. But, as I perceive that you are dainty, and dislike the taste of a stale argument, I will enquire no further into your knowledge of what is expedient or what is not expedient for the Athenian people, and simply request you to say why you do not explain whether justice and expediency are the same or different? And if you like you may examine me as I have examined you, or, if you would rather, you may carry on the discussion by yourself.

Alcibiades:: But I am not certain, Socrates, whether I shall be able to discuss the matter with you.

Socrates:: Then imagine, my dear fellow, that I am the demus and the ecclesia; for in the ecclesia, too, you will have to persuade men individually.

Alcibiades:: Yes.

Socrates:: And is not the same person able to persuade one individual singly and many individuals of the things which he knows? The grammarian, for example, can persuade one and he can persuade many about letters.

Alcibiades:: True.

Socrates:: And about number, will not the same person persuade one and persuade many?

Alcibiades:: Yes.

Socrates:: And this will be he who knows number, or the arithmetician?

Alcibiades:: Quite true.

Socrates:: And cannot you persuade one man about that of which you can persuade many?

Alcibiades:: I suppose so.

Socrates:: And that of which you can persuade either is clearly what you know?

Alcibiades:: Yes.

Socrates:: And the only difference between one who argues as we are doing, and the orator who is addressing an assembly, is that the one seeks to persuade a number, and the other an individual, of the same things.

Alcibiades:: I suppose so.

Socrates:: Well, then, since the same person who can persuade a multitude can persuade individuals, try conclusions upon me, and prove to me that the just is not always expedient.

Alcibiades:: You take liberties, Socrates.

Socrates:: I shall take the liberty of proving to you the opposite of that which you will not prove to me.

Alcibiades:: Proceed.

Socrates:: Answer my questions—that is all.

Alcibiades:: Nay, I should like you to be the speaker.

Socrates:: What, do you not wish to be persuaded?

Alcibiades:: Certainly I do.

Socrates:: And can you be persuaded better than out of your own mouth?

Alcibiades:: I think not.

Socrates:: Then you shall answer; and if you do not hear the words, that the just is the expedient, coming from your own lips, never believe another man again.

Alcibiades:: I won’t; but answer I will, for I do not see how I can come to any harm.

Socrates:: A true prophecy! Let me begin then by enquiring of you whether you allow that the just is sometimes expedient and sometimes not?

Alcibiades:: Yes.

Socrates:: And sometimes honorable and sometimes not?

Alcibiades:: What do you mean?

Socrates:: I am asking if you ever knew any one who did what was dishonorable and yet just?

Alcibiades:: Never.

Socrates:: All just things are honorable?

Alcibiades:: Yes.

Socrates:: And are honorable things sometimes good and sometimes not good, or are they always good?

Alcibiades:: I rather think, Socrates, that some honorable things are evil.

Socrates:: And are some dishonorable things good?

Alcibiades:: Yes.

Socrates:: You mean in such a case as the following:—In time of war, men have been wounded or have died in rescuing a companion or kinsman, when others who have neglected the duty of rescuing them have escaped in safety?

Alcibiades:: True.

Socrates:: And to rescue another under such circumstances is honorable, in respect of the attempt to save those whom we ought to save; and this is courage?

Alcibiades:: True.

Socrates:: But evil in respect of death and wounds?

Alcibiades:: Yes.

Socrates:: And the courage which is shown in the rescue is one thing, and the death another?

Alcibiades:: Certainly.

Socrates:: Then the rescue of one's friends is honorable in one point of view, but evil in another?

Alcibiades:: True.

Socrates:: And if honorable, then also good: Will you consider now whether I may not be right, for you were acknowledging that the courage which is shown in the rescue is honorable? Now is this courage good or evil? Look at the matter thus: which would you rather choose, good or evil?

Alcibiades:: Good.

Socrates:: And the greatest goods you would be most ready to choose, and would least like to be deprived of them?

Alcibiades:: Certainly.

Socrates:: What would you say of courage? At what price would you be willing to be deprived of courage?

Alcibiades:: I would rather die than be a coward.

Socrates:: Then you think that cowardice is the worst of evils?

Alcibiades:: I do.

Socrates:: As bad as death, I suppose?

Alcibiades:: Yes.

Socrates:: And life and courage are the extreme opposites of death and cowardice?

Alcibiades:: Yes.

Socrates:: And they are what you would most desire to have, and their opposites you would least desire?

Alcibiades:: Yes.

Socrates:: Is this because you think life and courage the best, and death and cowardice the worst?

Alcibiades:: Yes.

Socrates:: And you would term the rescue of a friend in battle honorable, in as much as courage does a good work?

Alcibiades:: I should.

Socrates:: But evil because of the death which ensues?

Alcibiades:: Yes.

Socrates:: Might we not describe their different effects as follows:—You may call either of them evil in respect of the evil which is the result, and good in respect of the good which is the result of either of them?

Alcibiades:: Yes.

Socrates:: And they are honorable in so far as they are good, and dishonorable in so far as they are evil?

Alcibiades:: True.

Socrates:: Then when you say that the rescue of a friend in battle is honorable and yet evil, that is equivalent to saying that the rescue is good and yet evil?

Alcibiades:: I believe that you are right, Socrates.

Socrates:: Nothing honorable, regarded as honorable, is evil; nor anything base, regarded as base, good.

Alcibiades:: Clearly not.

Socrates:: Look at the matter yet once more in a further light: he who acts honorably acts well?

Alcibiades:: Yes.

Socrates:: And he who acts well is happy?

Alcibiades:: Of course.

Socrates:: And the happy are those who obtain good?

Alcibiades:: True.

Socrates:: And they obtain good by acting well and honorably?

Alcibiades:: Yes.

Socrates:: Then acting well is a good?

Alcibiades:: Certainly.

Socrates:: And happiness is a good?.

Alcibiades:: Yes.

Socrates:: Then the good and the honorable are again identified.

Alcibiades:: Manifestly.

Socrates:: Then, if the argument holds, what we find to be honorable we shall also find to be good?

Alcibiades:: Certainly.

Socrates:: And is the good expedient or not?

Alcibiades:: Expedient.

Socrates:: Do you remember our admissions about the just?

Alcibiades:: Yes; if I am not mistaken, we said that those who acted justly must also act honorably.

Socrates:: And the honorable is the good?

Alcibiades:: Yes.

Socrates:: And the good is expedient?

Alcibiades:: Yes.

Socrates:: Then, Alcibiades, the just is expedient?

Alcibiades:: I should infer so.

Socrates:: And all this I prove out of your own mouth, for I ask and you answer?

Alcibiades:: I must acknowledge it to be true.

Socrates:: And having acknowledged that the just is the same as the expedient, are you not, let me ask, prepared to ridicule any one who, pretending to understand the principles of justice and injustice, gets up to advise the noble Athenians or the ignoble Peparethians, that the just may be the evil?

Alcibiades:: I solemnly declare, Socrates, that I do not know what I am saying. Verily, I am in a strange state, for when you put questions to me I am of different minds in successive instants.

Socrates:: And are you not aware of the nature of this perplexity, my friend?

Alcibiades:: Indeed I am not.

Socrates:: Do you suppose that if some one were to ask you whether you have two eyes or three, or two hands or four, or anything of that sort, you would then be of different minds in successive instants?

Alcibiades:: I begin to distrust myself, but still I do not suppose that I should.

Socrates:: You would feel no doubt; and for this reason—because you would know?

Alcibiades:: I suppose so.

Socrates:: And the reason why you involuntarily contradict yourself is clearly that you are ignorant?

Alcibiades:: Very likely.

Socrates:: And if you are perplexed in answering about just and unjust, honorable and dishonorable, good and evil, expedient and inexpedient, the reason is that you are ignorant of them, and therefore in perplexity. Is not that clear?

Alcibiades:: I agree.

Socrates:: But is this always the case, and is a man necessarily perplexed about that of which he has no knowledge?

Alcibiades:: Certainly he is.

Socrates:: And do you know how to ascend into heaven?

Alcibiades:: Certainly not.

Socrates:: And in this case, too, is your judgment perplexed?

Alcibiades:: No.

Socrates:: Do you see the reason why, or shall I tell you?

Alcibiades:: Tell me.

Socrates:: The reason is, that you not only do not know, my friend, but you do not think that you know.

Alcibiades:: There again; what do you mean?

Socrates:: Ask yourself; are you in any perplexity about things of which you are ignorant? You know, for example, that you know nothing about the preparation of food.

Alcibiades:: Very true.

Socrates:: And do you think and perplex yourself about the preparation of food: or do you leave that to some one who understands the art?

Alcibiades:: The latter.

Socrates:: Or if you were on a voyage, would you bewilder yourself by considering whether the rudder is to be drawn inwards or outwards, or do you leave that to the pilot, and do nothing?

Alcibiades:: It would be the concern of the pilot.

Socrates:: Then you are not perplexed about what you do not know, if you know that you do not know it?

Alcibiades:: I imagine not.

Socrates:: Do you not see, then, that mistakes in life and practice are likewise to be attributed to the ignorance which has conceit of knowledge?

Alcibiades:: Once more, what do you mean?

Socrates:: I suppose that we begin to act when we think that we know what we are doing?

Alcibiades:: Yes.

Socrates:: But when people think that they do not know, they entrust their business to others?

Alcibiades:: Yes.

Socrates:: And so there is a class of ignorant persons who do not make mistakes in life, because they trust others about things of which they are ignorant?

Alcibiades:: True.

Socrates:: Who, then, are the persons who make mistakes? They cannot, of course, be those who know?

Alcibiades:: Certainly not.

Socrates:: But if neither those who know, nor those who know that they do not know, make mistakes, there remain those only who do not know and think that they know.

Alcibiades:: Yes, only those.

Socrates:: Then this is ignorance of the disgraceful sort which is mischievous?

Alcibiades:: Yes.

Socrates:: And most mischievous and most disgraceful when having to do with the greatest matters?

Alcibiades:: By far.

Socrates:: And can there be any matters greater than the just, the honorable, the good, and the expedient?

Alcibiades:: There cannot be.

Socrates:: And these, as you were saying, are what perplex you?

Alcibiades:: Yes.

Socrates:: But if you are perplexed, then, as the previous argument has shown, you are not only ignorant of the greatest matters, but being ignorant you fancy that you know them?

Alcibiades:: I fear that you are right.

Socrates:: And now see what has happened to you, Alcibiades! I hardly like to speak of your evil case, but as we are alone I will: My good friend, you are wedded to ignorance of the most disgraceful kind, and of this you are convicted, not by me, but out of your own mouth and by your own argument; wherefore also you rush into politics before you are educated. Neither is your case to be deemed singular. For I might say the same of almost all our statesmen, with the exception, perhaps, of your guardian, Pericles.

Alcibiades:: Yes, Socrates; and Pericles is said not to have got his wisdom by the light of nature, but to have associated with several of the philosophers; with Pythocleides, for example, and with Anaxagoras, and now in advanced life with Damon, in the hope of gaining wisdom.

Socrates:: Very good; but did you ever know a man wise in anything who was unable to impart his particular wisdom? For example, he who taught you letters was not only wise, but he made you and any others whom he liked wise.

Alcibiades:: Yes.

Socrates:: And you, whom he taught, can do the same?

Alcibiades:: True.

Socrates:: And in like manner the harper and gymnastic-master?

Alcibiades:: Certainly.

Socrates:: When a person is enabled to impart knowledge to another, he thereby gives an excellent proof of his own understanding of any matter.

Alcibiades:: I agree.

Socrates:: Well, and did Pericles make any one wise; did he begin by making his sons wise?

Alcibiades:: But, Socrates, if the two sons of Pericles were simpletons, what has that to do with the matter?

Socrates:: Well, but did he make your brother, Cleinias, wise?

Alcibiades:: Cleinias is a madman; there is no use in talking of him.

Socrates:: But if Cleinias is a madman and the two sons of Pericles were simpletons, what reason can be given why he neglects you, and lets you be as you are?

Alcibiades:: I believe that I am to blame for not listening to him.

Socrates:: But did you ever hear of any other Athenian or foreigner, bond or free, who was deemed to have grown wiser in the society of Pericles,—as I might cite Pythodorus, the son of Isolochus, and Callias, the son of Calliades, who have grown wiser in the society of Zeno, for which privilege they have each of them paid him the sum of a hundred minae to the increase of their wisdom and fame.

Alcibiades:: I certainly never did hear of any one.

Socrates:: Well, and in reference to your own case, do you mean to remain as you are, or will you take some pains about yourself?

Alcibiades:: With your aid, Socrates, I will. And indeed, when I hear you speak, the truth of what you are saying strikes home to me, and I agree with you, for our statesmen, all but a few, do appear to be quite uneducated.

Socrates:: What is the inference?

Alcibiades:: Why, that if they were educated they would be trained athletes, and he who means to rival them ought to have knowledge and experience when he attacks them; but now, as they have become politicians without any special training, why should I have the trouble of learning and practicing? For I know well that by the light of nature I shall get the better of them.

Socrates:: My dear friend, what a sentiment! And how unworthy of your noble form and your high estate!

Alcibiades:: What do you mean, Socrates; why do you say so?

Socrates:: I am grieved when I think of our mutual love.

Alcibiades:: At what?

Socrates:: At your fancying that the contest on which you are entering is with people here.

Alcibiades:: Why, what others are there?

Socrates:: Is that a question which a magnanimous soul should ask?

Alcibiades:: Do you mean to say that the contest is not with these?

Socrates:: And suppose that you were going to steer a ship into action, would you only aim at being the best pilot on board? Would you not, while acknowledging that you must possess this degree of excellence, rather look to your antagonists, and not, as you are now doing, to your fellow combatants? You ought to be so far above these latter, that they will not even dare to be your rivals; and, being regarded by you as inferiors, will do battle for you against the enemy; this is the kind of superiority which you must establish over them, if you mean to accomplish any noble action really worthy of yourself and of the state.

Alcibiades:: That would certainly be my aim.

Socrates:: Verily, then, you have good reason to be satisfied, if you are better than the soldiers; and you need not, when you are their superior and have your thoughts and actions fixed upon them, look away to the generals of the enemy.

Alcibiades:: Of whom are you speaking, Socrates?

Socrates:: Why, you surely know that our city goes to war now and then with the Lacedaemonians and with the great king?

Alcibiades:: True enough.

Socrates:: And if you meant to be the ruler of this city, would you not be right in considering that the Lacedaemonian and Persian king were your true rivals?

Alcibiades:: I believe that you are right.

Socrates:: Oh no, my friend, I am quite wrong, and I think that you ought rather to turn your attention to Midias the quail-breeder and others like him, who manage our politics; in whom, as the women would remark, you may still see the slaves' cut of hair, cropping out in their minds as well as on their pates; and they come with their barbarous lingo to flatter us and not to rule us. To these, I say, you should look, and then you need not trouble yourself about your own fitness to contend in such a noble arena: there is no reason why you should either learn what has to be learned, or practice what has to be practiced, and only when thoroughly prepared enter on a political career.

Alcibiades:: There, I think, Socrates, that you are right; I do not suppose, however, that the Spartan generals or the great king are really different from anybody else.

Socrates:: But, my dear friend, do consider what you are saying.

Alcibiades:: What am I to consider?

Socrates:: In the first place, will you be more likely to take care of yourself, if you are in a wholesome fear and dread of them, or if you are not?

Alcibiades:: Clearly, if I have such a fear of them.

Socrates:: And do you think that you will sustain any injury if you take care of yourself?

Alcibiades:: No, I shall be greatly benefited.

Socrates:: And this is one very important respect in which that notion of yours is bad.

Alcibiades:: True.

Socrates:: In the next place, consider that what you say is probably false.

Alcibiades:: How so?

Socrates:: Let me ask you whether better natures are likely to be found in noble races or not in noble races?

Alcibiades:: Clearly in noble races.

Socrates:: Are not those who are well born and well bred most likely to be perfect in virtue?

Alcibiades:: Certainly.

Socrates:: Then let us compare our antecedents with those of the Lacedaemonian and Persian kings; are they inferior to us in descent? Have we not heard that the former are sprung from Heracles, and the latter from Achaemenes, and that the race of Heracles and the race of Achaemenes go back to Perseus, son of Zeus?

Alcibiades:: Why, so does mine go back to Eurysaces, and he to Zeus!

Socrates:: And mine, noble Alcibiades, to Daedalus, and he to Hephaestus, son of Zeus. But, for all that, we are far inferior to them. For they are descended 'from Zeus' through a line of kings—either kings of Argos and Lacedaemon, or kings of Persia, a country which the descendants of Achaemenes have always possessed, besides being at various times sovereigns of Asia, as they now are; whereas, we and our fathers were but private persons. How ridiculous would you be thought if you were to make a display of your ancestors and of Salamis the island of Eurysaces, or of Aegina, the habitation of the still more ancient Aeacus, before Artaxerxes, son of Xerxes. You should consider how inferior we are to them both in the derivation of our birth and in other particulars. Did you never observe how great is the property of the Spartan kings? And their wives are under the guardianship of the Ephori, who are public officers and watch over them, in order to preserve as far as possible the purity of the Heracleid blood. Still greater is the difference among the Persians; for no one entertains a suspicion that the father of a prince of Persia can be any one but the king. Such is the awe which invests the person of the queen, that any other guard is needless. And when the heir of the kingdom is born, all the subjects of the king feast; and the day of his birth is for ever afterwards kept as a holiday and time of sacrifice by all Asia; whereas, when you and I were born, Alcibiades, as the comic poet says, the neighbors hardly knew of the important event. After the birth of the royal child, he is tended, not by a good-for-nothing woman-nurse, but by the best of the royal eunuchs, who are charged with the care of him, and especially with the fashioning and right formation of his limbs, in order that he may be as shapely as possible; which being their calling, they are held in great honor. And when the young prince is seven years old he is put upon a horse and taken to the riding-masters, and begins to go out hunting. And at fourteen years of age he is handed over to the royal schoolmasters, as they are termed: these are four chosen men, reputed to be the best among the Persians of a certain age; and one of them is the wisest, another the justest, a third the most temperate, and a fourth the most valiant. The first instructs him in the magianism of Zoroaster, the son of Oromasus, which is the worship of the Gods, and teaches him also the duties of his royal office; the second, who is the justest, teaches him always to speak the truth; the third, or most temperate, forbids him to allow any pleasure to be lord over him, that he may be accustomed to be a freeman and king indeed,—lord of himself first, and not a slave; the most valiant trains him to be bold and fearless, telling him that if he fears he is to deem himself a slave; whereas Pericles gave you, Alcibiades, for a tutor Zopyrus the Thracian, a slave of his who was past all other work. I might enlarge on the nurture and education of your rivals, but that would be tedious; and what I have said is a sufficient sample of what remains to be said. I have only to remark, by way of contrast, that no one cares about your birth or nurture or education, or, I may say, about that of any other Athenian, unless he has a lover who looks after him. And if you cast an eye on the wealth, the luxury, the garments with their flowing trains, the anointing with myrrh, the multitudes of attendants, and all the other bravery of the Persians, you will be ashamed when you discern your own inferiority; or if you look at the temperance and orderliness and ease and grace and magnanimity and courage and endurance and love of toil and desire of glory and ambition of the Lacedaemonians—in all these respects you will see that you are but a child in comparison of them. Even in the matter of wealth, if you value yourself upon that, I must reveal to you how you stand; for if you form an estimate of the wealth of the Lacedaemonians, you will see that our possessions fall far short of theirs. For no one here can compete with them either in the extent and fertility of their own and the Messenian territory, or in the number of their slaves, and especially of the Helots, or of their horses, or of the animals which feed on the Messenian pastures. But I have said enough of this: and as to gold and silver, there is more of them in Lacedaemon than in all the rest of Hellas, for during many generations gold has been always flowing in to them from the whole Hellenic world, and often from the barbarian also, and never going out, as in the fable of Aesop the fox said to the lion, 'The prints of the feet of those going in are distinct enough;' but who ever saw the trace of money going out of Lacedaemon? and therefore you may safely infer that the inhabitants are the richest of the Hellenes in gold and silver, and that their kings are the richest of them, for they have a larger share of these things, and they have also a tribute paid to them which is very considerable. Yet the Spartan wealth, though great in comparison of the wealth of the other Hellenes, is as nothing in comparison of that of the Persians and their kings. Why, I have been informed by a credible person who went up to the king [at Susa], that he passed through a large tract of excellent land, extending for nearly a day's journey, which the people of the country called the queen's girdle, and another, which they called her veil; and several other fair and fertile districts, which were reserved for the adornment of the queen, and are named after her several habiliments. Now, I cannot help thinking to myself, What if some one were to go to Amestris, the wife of Xerxes and mother of Artaxerxes, and say to her, There is a certain Dinomache, whose whole wardrobe is not worth fifty minae—and that will be more than the value—and she has a son who is possessed of a three-hundred acre patch at Erchiae, and he has a mind to go to war with your son—would she not wonder to what this Alcibiades trusts for success in the conflict? 'He must rely,' she would say to herself, 'upon his training and wisdom—these are the things which Hellenes value.' And if she heard that this Alcibiades who is making the attempt is not as yet twenty years old, and is wholly uneducated, and when his lover tells him that he ought to get education and training first, and then go and fight the king, he refuses, and says that he is well enough as he is, would she not be amazed, and ask, ‘On what, then, does the youth rely?’ And if we replied: He relies on his beauty, and stature, and birth, and mental endowments, she would think that we were mad, Alcibiades, when she compared the advantages which you possess with those of her own people. And I believe that even Lampido, the daughter of Leotychides, the wife of Archidamus and mother of Agis, all of whom were kings, would have the same feeling; if, in your present uneducated state, you were to turn your thoughts against her son, she too would be equally astonished. But how disgraceful, that we should not have as high a notion of what is required in us as our enemies’ wives and mothers have of the qualities which are required in their assailants! O my friend, be persuaded by me, and hear the Delphian inscription, ‘Know thyself’—not the men whom you think, but these kings are our rivals, and we can only overcome them by pains and skill. And if you fail in the required qualities, you will fail also in becoming renowned among Hellenes and Barbarians, which you seem to desire more than any other man ever desired anything.

Alcibiades:: I entirely believe you; but what are the sort of pains which are required, Socrates,—can you tell me?

Socrates:: Yes, I can; but we must take counsel together concerning the manner in which both of us may be most improved. For what I am telling you of the necessity of education applies to myself as well as to you; and there is only one point in which I have an advantage over you.

Alcibiades:: What is that?

Socrates:: I have a guardian who is better and wiser than your guardian, Pericles.

Alcibiades:: Who is he, Socrates?

Socrates:: God, Alcibiades, who up to this day has not allowed me to converse with you; and he inspires in me the faith that I am especially designed to bring you to honor.

Alcibiades:: You are jesting, Socrates.

Socrates:: Perhaps; at any rate, I am right in saying that all men greatly need pains and care, and you and I above all men.

Alcibiades:: You are not far wrong about me.

Socrates:: And certainly not about myself.

Alcibiades:: But what can we do?

Socrates:: There must be no hesitation or cowardice, my friend.

Alcibiades:: That would not become us, Socrates.

Socrates:: No, indeed, and we ought to take counsel together: for do we not wish to be as good as possible?

Alcibiades:: We do.

Socrates:: In what sort of virtue?

Alcibiades:: Plainly, in the virtue of good men.

Socrates:: Who are good in what?

Alcibiades:: Those, clearly, who are good in the management of affairs.

Socrates:: What sort of affairs? Equestrian affairs?

Alcibiades:: Certainly not.

Socrates:: You mean that about them we should have recourse to horsemen?

Alcibiades:: Yes.

Socrates:: Well; naval affairs?

Alcibiades:: No.

Socrates:: You mean that we should have recourse to sailors about them?

Alcibiades:: Yes.

Socrates:: Then what affairs? And who do them?

Alcibiades:: The affairs which occupy Athenian gentlemen.

Socrates:: And when you speak of gentlemen, do you mean the wise or the unwise?

Alcibiades:: The wise.

Socrates:: And a man is good in respect of that in which he is wise?

Alcibiades:: Yes.

Socrates:: And evil in respect of that in which he is unwise?

Alcibiades:: Certainly.

Socrates:: The shoemaker, for example, is wise in respect of the making of shoes?

Alcibiades:: Yes.

Socrates:: Then he is good in that?

Alcibiades:: He is.

Socrates:: But in respect of the making of garments he is unwise?

Alcibiades:: Yes.

Socrates:: Then in that he is bad?

Alcibiades:: Yes.

Socrates:: Then upon this view of the matter the same man is good and also bad?

Alcibiades:: True.

Socrates:: But would you say that the good are the same as the bad?

Alcibiades:: Certainly not.

Socrates:: Then whom do you call the good?

Alcibiades:: I mean by the good those who are able to rule in the city.

Socrates:: Not, surely, over horses?

Alcibiades:: Certainly not.

Socrates:: But over men?

Alcibiades:: Yes.

Socrates:: When they are sick?

Alcibiades:: No.

Socrates:: Or on a voyage?

Alcibiades:: No.

Socrates:: Or reaping the harvest?

Alcibiades:: No.

Socrates:: When they are doing something or nothing?

Alcibiades:: When they are doing something, I should say.

Socrates:: I wish that you would explain to me what this something is.

Alcibiades:: When they are having dealings with one another, and using one another's services, as we citizens do in our daily life.

Socrates:: Those of whom you speak are ruling over men who are using the services of other men?

Alcibiades:: Yes.

Socrates:: Are they ruling over the signal-men who give the time to the rowers?

Alcibiades:: No; they are not.

Socrates:: That would be the office of the pilot?

Alcibiades:: Yes.

Socrates:: But, perhaps you mean that they rule over flute-players, who lead the singers and use the services of the dancers?

Alcibiades:: Certainly not.

Socrates:: That would be the business of the teacher of the chorus?

Alcibiades:: Yes.

Socrates:: Then what is the meaning of being able to rule over men who use other men?

Alcibiades:: I mean that they rule over men who have common rights of citizenship, and dealings with one another.

Socrates:: And what sort of an art is this? Suppose that I ask you again, as I did just now, What art makes men know how to rule over their fellow-sailors,—how would you answer?

Alcibiades:: The art of the pilot.

Socrates:: And, if I may recur to another old instance, what art enables them to rule over their fellow-singers?

Alcibiades:: The art of the teacher of the chorus, which you were just now mentioning.

Socrates:: And what do you call the art of fellow-citizens?

Alcibiades:: I should say, good counsel, Socrates.

Socrates:: And is the art of the pilot evil counsel?

Alcibiades:: No.

Socrates:: But good counsel?

Alcibiades:: Yes, that is what I should say,—good counsel, of which the aim is the preservation of the voyagers.

Socrates:: True. And what is the aim of that other good counsel of which you speak?

Alcibiades:: The aim is the better order and preservation of the city.

Socrates:: And what is that of which the absence or presence improves and preserves the order of the city? Suppose you were to ask me, what is that of which the presence or absence improves or preserves the order of the body? I should reply, the presence of health and the absence of disease. You would say the same?

Alcibiades:: Yes.

Socrates:: And if you were to ask me the same question about the eyes, I should reply in the same way, 'the presence of sight and the absence of blindness;' or about the ears, I should reply, that they were improved and were in better case, when deafness was absent, and hearing was present in them.

Alcibiades:: True.

Socrates:: And what would you say of a state? What is that by the presence or absence of which the state is improved and better managed and ordered?

Alcibiades:: I should say, Socrates:—the presence of friendship and the absence of hatred and division.

Socrates:: And do you mean by friendship agreement or disagreement?

Alcibiades:: Agreement.

Socrates:: What art makes cities agree about numbers?

Alcibiades:: Arithmetic.

Socrates:: And private individuals?

Alcibiades:: The same.

Socrates:: And what art makes each individual agree with himself?

Alcibiades:: The same.

Socrates:: And what art makes each of us agree with himself about the comparative length of the span and of the cubit? Does not the art of measure?

Alcibiades:: Yes.

Socrates:: Individuals are agreed with one another about this; and states, equally?

Alcibiades:: Yes.

Socrates:: And the same holds of the balance?

Alcibiades:: True.

Socrates:: But what is the other agreement of which you speak, and about what? what art can give that agreement? And does that which gives it to the state give it also to the individual, so as to make him consistent with himself and with another?

Alcibiades:: I should suppose so.

Socrates:: But what is the nature of the agreement?—answer, and faint not.

Alcibiades:: I mean to say that there should be such friendship and agreement as exists between an affectionate father and mother and their son, or between brothers, or between husband and wife.

Socrates:: But can a man, Alcibiades, agree with a woman about the spinning of wool, which she understands and he does not?

Alcibiades:: No, truly.

Socrates:: Nor has he any need, for spinning is a female accomplishment.

Alcibiades:: Yes.

Socrates:: And would a woman agree with a man about the science of arms, which she has never learned?

Alcibiades:: Certainly not.

Socrates:: I suppose that the use of arms would be regarded by you as a male accomplishment?

Alcibiades:: It would.

Socrates:: Then, upon your view, women and men have two sorts of knowledge?

Alcibiades:: Certainly.

Socrates:: Then in their knowledge there is no agreement of women and men?

Alcibiades:: There is not.

Socrates:: Nor can there be friendship, if friendship is agreement?

Alcibiades:: Plainly not.

Socrates:: Then women are not loved by men when they do their own work?

Alcibiades:: I suppose not.

Socrates:: Nor men by women when they do their own work?

Alcibiades:: No.

Socrates:: Nor are states well administered, when individuals do their own work?

Alcibiades:: I should rather think, Socrates, that the reverse is the truth.

Socrates:: What! do you mean to say that states are well administered when friendship is absent, the presence of which, as we were saying, alone secures their good order?

Alcibiades:: But I should say that there is friendship among them, for this very reason, that the two parties respectively do their own work.

Socrates:: That was not what you were saying before; and what do you mean now by affirming that friendship exists when there is no agreement? How can there be agreement about matters which the one party knows, and of which the other is in ignorance?

Alcibiades:: Impossible.

Socrates:: And when individuals are doing their own work, are they doing what is just or unjust?

Alcibiades:: What is just, certainly.

Socrates:: And when individuals do what is just in the state, is there no friendship among them?

Alcibiades:: I suppose that there must be, Socrates.

Socrates:: Then what do you mean by this friendship or agreement about which we must be wise and discreet in order that we may be good men? I cannot make out where it exists or among whom; according to you, the same persons may sometimes have it, and sometimes not.

Alcibiades:: But, indeed, Socrates, I do not know what I am saying; and I have long been, unconsciously to myself, in a most disgraceful state.

Socrates:: Nevertheless, cheer up; at fifty, if you had discovered your deficiency, you would have been too old, and the time for taking care of yourself would have passed away, but yours is just the age at which the discovery should be made.

Alcibiades:: And what should he do, Socrates, who would make the discovery?

Socrates:: Answer questions, Alcibiades; and that is a process which, by the grace of God, if I may put any faith in my oracle, will be very improving to both of us.

Alcibiades:: If I can be improved by answering, I will answer.

Socrates:: And first of all, that we may not peradventure be deceived by appearances, fancying, perhaps, that we are taking care of ourselves when we are not, what is the meaning of a man taking care of himself? and when does he take care? Does he take care of himself when he takes care of what belongs to him?

Alcibiades:: I should think so.

Socrates:: When does a man take care of his feet? Does he not take care of them when he takes care of that which belongs to his feet?

Alcibiades:: I do not understand.

Socrates:: Let me take the hand as an illustration; does not a ring belong to the finger, and to the finger only?

Alcibiades:: Yes.

Socrates:: And the shoe in like manner to the foot?

Alcibiades:: Yes.

Socrates:: And when we take care of our shoes, do we not take care of our feet?

Alcibiades:: I do not comprehend, Socrates.

Socrates:: But you would admit, Alcibiades, that to take proper care of a thing is a correct expression?

Alcibiades:: Yes.

Socrates:: And taking proper care means improving?

Alcibiades:: Yes.

Socrates:: And what is the art which improves our shoes?

Alcibiades:: Shoemaking.

Socrates:: Then by shoemaking we take care of our shoes?

Alcibiades:: Yes.

Socrates:: And do we by shoemaking take care of our feet, or by some other art which improves the feet?

Alcibiades:: By some other art.

Socrates:: And the same art improves the feet which improves the rest of the body?

Alcibiades:: Very true.

Socrates:: Which is gymnastic?

Alcibiades:: Certainly.

Socrates:: Then by gymnastic we take care of our feet, and by shoemaking of that which belongs to our feet?

Alcibiades:: Very true.

Socrates:: And by gymnastic we take care of our hands, and by the art of graving rings of that which belongs to our hands?

Alcibiades:: Yes.

Socrates:: And by gymnastic we take care of the body, and by the art of weaving and the other arts we take care of the things of the body?

Alcibiades:: Clearly.

Socrates:: Then the art which takes care of each thing is different from that which takes care of the belongings of each thing?

Alcibiades:: True.

Socrates:: Then in taking care of what belongs to you, you do not take care of yourself?

Alcibiades:: Certainly not.

Socrates:: For the art which takes care of our belongings appears not to be the same as that which takes care of ourselves?

Alcibiades:: Clearly not.

Socrates:: And now let me ask you what is the art with which we take care of ourselves?

Alcibiades:: I cannot say.

Socrates:: At any rate, thus much has been admitted, that the art is not one which makes any of our possessions, but which makes ourselves better?

Alcibiades:: True.

Socrates:: But should we ever have known what art makes a shoe better, if we did not know a shoe?

Alcibiades:: Impossible.

Socrates:: Nor should we know what art makes a ring better, if we did not know a ring?

Alcibiades:: That is true.

Socrates:: And can we ever know what art makes a man better, if we do not know what we are ourselves?

Alcibiades:: Impossible.

Socrates:: And is self-knowledge such an easy thing, and was he to be lightly esteemed who inscribed the text on the temple at Delphi? Or is self-knowledge a difficult thing, which few are able to attain?

Alcibiades:: At times I fancy, Socrates, that anybody can know himself; at other times the task appears to be very difficult.

Socrates:: But whether easy or difficult, Alcibiades, still there is no other way; knowing what we are, we shall know how to take care of ourselves, and if we are ignorant we shall not know.

Alcibiades:: That is true.

Socrates:: Well, then, let us see in what way the self-existent can be discovered by us; that will give us a chance of discovering our own existence, which otherwise we can never know.

Alcibiades:: You say truly.

Socrates:: Come, now, I beseech you, tell me with whom you are conversing?—with whom but with me?

Alcibiades:: Yes.

Socrates:: As I am, with you?

Alcibiades:: Yes.

Socrates:: That is to say, I, Socrates, am talking?

Alcibiades:: Yes.

Socrates:: And Alcibiades is my hearer?

Alcibiades:: Yes.

Socrates:: And I in talking use words?

Alcibiades:: Certainly.

Socrates:: And talking and using words have, I suppose, the same meaning?

Alcibiades:: To be sure.

Socrates:: And the user is not the same as the thing which he uses?

Alcibiades:: What do you mean?

Socrates:: I will explain; the shoemaker, for example, uses a square tool, and a circular tool, and other tools for cutting?

Alcibiades:: Yes.

Socrates:: But the tool is not the same as the cutter and user of the tool?

Alcibiades:: Of course not.

Socrates:: And in the same way the instrument of the harper is to be distinguished from the harper himself?

Alcibiades:: It is.

Socrates:: Now the question which I asked was whether you conceive the user to be always different from that which he uses?

Alcibiades:: I do.

Socrates:: Then what shall we say of the shoemaker? Does he cut with his tools only or with his hands?

Alcibiades:: With his hands as well.

Socrates:: He uses his hands too?

Alcibiades:: Yes.

Socrates:: And does he use his eyes in cutting leather?

Alcibiades:: He does.

Socrates:: And we admit that the user is not the same with the things which he uses?

Alcibiades:: Yes.

Socrates:: Then the shoemaker and the harper are to be distinguished from the hands and feet which they use?

Alcibiades:: Clearly.

Socrates:: And does not a man use the whole body?

Alcibiades:: Certainly.

Socrates:: And that which uses is different from that which is used?

Alcibiades:: True.

Socrates:: Then a man is not the same as his own body?

Alcibiades:: That is the inference.

Socrates:: What is he, then?

Alcibiades:: I cannot say.

Socrates:: Nay, you can say that he is the user of the body.

Alcibiades:: Yes.

Socrates:: And the user of the body is the soul?

Alcibiades:: Yes, the soul.

Socrates:: And the soul rules?

Alcibiades:: Yes.

Socrates:: Let me make an assertion which will, I think, be universally admitted.

Alcibiades:: What is it?

Socrates:: That man is one of three things.

Alcibiades:: What are they?

Socrates:: Soul, body, or both together forming a whole.

Alcibiades:: Certainly.

Socrates:: But did we not say that the actual ruling principle of the body is man?

Alcibiades:: Yes, we did.

Socrates:: And does the body rule over itself?

Alcibiades:: Certainly not.

Socrates:: It is subject, as we were saying?

Alcibiades:: Yes.

Socrates:: Then that is not the principle which we are seeking?

Alcibiades:: It would seem not.

Socrates:: But may we say that the union of the two rules over the body, and consequently that this is man?

Alcibiades:: Very likely.

Socrates:: The most unlikely of all things; for if one of the members is subject, the two united cannot possibly rule.

Alcibiades:: True.

Socrates:: But since neither the body, nor the union of the two, is man, either man has no real existence, or the soul is man?

Alcibiades:: Just so.

Socrates:: Is anything more required to prove that the soul is man?

Alcibiades:: Certainly not; the proof is, I think, quite sufficient.

Socrates:: And if the proof, although not perfect, be sufficient, we shall be satisfied;—more precise proof will be supplied when we have discovered that which we were led to omit, from a fear that the enquiry would be too much protracted.

Alcibiades:: What was that?

Socrates:: What I meant, when I said that absolute existence must be first considered; but now, instead of absolute existence, we have been considering the nature of individual existence, and this may, perhaps, be sufficient; for surely there is nothing which may be called more properly ourselves than the soul?

Alcibiades:: There is nothing.

Socrates:: Then we may truly conceive that you and I are conversing with one another, soul to soul?

Alcibiades:: Very true.

Socrates:: And that is just what I was saying before—that I, Socrates, am not arguing or talking with the face of Alcibiades, but with the real Alcibiades; or in other words, with his soul.

Alcibiades:: True.

Socrates:: Then he who bids a man know himself, would have him know his soul?

Alcibiades:: That appears to be true.

Socrates:: He whose knowledge only extends to the body, knows the things of a man, and not the man himself?

Alcibiades:: That is true.

Socrates:: Then neither the physician regarded as a physician, nor the trainer regarded as a trainer, knows himself?

Alcibiades:: He does not.

Socrates:: The husbandmen and the other craftsmen are very far from knowing themselves, for they would seem not even to know their own belongings? When regarded in relation to the arts which they practice they are even further removed from self-knowledge, for they only know the belongings of the body, which minister to the body.

Alcibiades:: That is true.

Socrates:: Then if temperance is the knowledge of self, in respect of his art none of them is temperate?

Alcibiades:: I agree.

Socrates:: And this is the reason why their arts are accounted vulgar, and are not such as a good man would practice?

Alcibiades:: Quite true.

Socrates:: Again, he who cherishes his body cherishes not himself, but what belongs to him?

Alcibiades:: That is true.

Socrates:: But he who cherishes his money, cherishes neither himself nor his belongings, but is in a stage yet further removed from himself?

Alcibiades:: I agree.

Socrates:: Then the money-maker has really ceased to be occupied with his own concerns?

Alcibiades:: True.

Socrates:: And if any one has fallen in love with the person of Alcibiades, he loves not Alcibiades, but the belongings of Alcibiades?

Alcibiades:: True.

Socrates:: But he who loves your soul is the true lover?

Alcibiades:: That is the necessary inference.

Socrates:: The lover of the body goes away when the flower of youth fades?

Alcibiades:: True.

Socrates:: But he who loves the soul goes not away, as long as the soul follows after virtue?

Alcibiades:: Yes.

Socrates:: And I am the lover who goes not away, but remains with you, when you are no longer young and the rest are gone?

Alcibiades:: Yes, Socrates; and therein you do well, and I hope that you will remain.

Socrates:: Then you must try to look your best.

Alcibiades:: I will.

Socrates:: The fact is, that there is only one lover of Alcibiades the son of Cleinias; there neither is nor ever has been seemingly any other; and he is his darling,—Socrates, the son of Sophroniscus and Phaenarete.

Alcibiades:: True.

Socrates:: And did you not say, that if I had not spoken first, you were on the point of coming to me, and enquiring why I only remained?

Alcibiades:: That is true.

Socrates:: The reason was that I loved you for your own sake, whereas other men love what belongs to you; and your beauty, which is not you, is fading away, just as your true self is beginning to bloom. And I will never desert you, if you are not spoiled and deformed by the Athenian people; for the danger which I most fear is that you will become a lover of the people and will be spoiled by them. Many a noble Athenian has been ruined in this way. For the demus of the great-hearted Erechtheus is of a fair countenance, but you should see him naked; wherefore observe the caution which I give you.

Alcibiades:: What caution?

Socrates:: Practice yourself, sweet friend, in learning what you ought to know, before you enter on politics; and then you will have an antidote which will keep you out of harm's way.

Alcibiades:: Good advice, Socrates, but I wish that you would explain to me in what way I am to take care of myself.

Socrates:: Have we not made an advance? for we are at any rate tolerably well agreed as to what we are, and there is no longer any danger, as we once feared, that we might be taking care not of ourselves, but of something which is not ourselves.

Alcibiades:: That is true.

Socrates:: And the next step will be to take care of the soul, and look to that?

Alcibiades:: Certainly.

Socrates:: Leaving the care of our bodies and of our properties to others?

Alcibiades:: Very good.

Socrates:: But how can we have a perfect knowledge of the things of the soul?—For if we know them, then I suppose we shall know ourselves. Can we really be ignorant of the excellent meaning of the Delphian inscription, of which we were just now speaking?

Alcibiades:: What have you in your thoughts, Socrates?

Socrates:: I will tell you what I suspect to be the meaning and lesson of that inscription. Let me take an illustration from sight, which I imagine to be the only one suitable to my purpose.

Alcibiades:: What do you mean?

Socrates:: Consider; if some one were to say to the eye, 'See thyself' as you might say to a man, 'Know thyself' what is the nature and meaning of this precept? Would not his meaning be:—That the eye should look at that in which it would see itself?

Alcibiades:: Clearly.

Socrates:: And what are the objects in looking at which we see ourselves?

Alcibiades:: Clearly, Socrates, in looking at mirrors and the like.

Socrates:: Very true; and is there not something of the nature of a mirror in our own eyes?

Alcibiades:: Certainly.

Socrates:: Did you ever observe that the face of the person looking into the eye of another is reflected as in a mirror; and in the visual organ which is over against him, and which is called the pupil, there is a sort of image of the person looking?

Alcibiades:: That is quite true.

Socrates:: Then the eye, looking at another eye, and at that in the eye which is most perfect, and which is the instrument of vision, will there see itself?

Alcibiades:: That is evident.

Socrates:: But looking at anything else either in man or in the world, and not to what resembles this, it will not see itself?

Alcibiades:: Very true.

Socrates:: Then if the eye is to see itself, it must look at the eye, and at that part of the eye where sight which is the virtue of the eye resides?

Alcibiades:: True.

Socrates:: And if the soul, my dear Alcibiades, is ever to know herself, must she not look at the soul; and especially at that part of the soul in which her virtue resides, and to any other which is like this?

Alcibiades:: I agree, Socrates.

Socrates:: And do we know of any part of our souls more divine than that which has to do with wisdom and knowledge?

Alcibiades:: There is none.

Socrates:: Then this is that part of the soul which resembles the divine; and he who looks at this and at the whole class of things divine, will be most likely to know himself?

Alcibiades:: Clearly.

Socrates:: And self-knowledge we agree to be wisdom?

Alcibiades:: True.

Socrates:: But if we have no self-knowledge and no wisdom, can we ever know our own good and evil?

Alcibiades:: How can we, Socrates?

Socrates:: You mean, that if you did not know Alcibiades, there would be no possibility of your knowing that what belonged to Alcibiades was really his?

Alcibiades:: It would be quite impossible.

Socrates:: Nor should we know that we were the persons to whom anything belonged, if we did not know ourselves?

Alcibiades:: How could we?

Socrates:: And if we did not know our own belongings, neither should we know the belongings of our belongings?

Alcibiades:: Clearly not.

Socrates:: Then we were not altogether right in acknowledging just now that a man may know what belongs to him and yet not know himself; nay, rather he cannot even know the belongings of his belongings; for the discernment of the things of self, and of the things which belong to the things of self, appear all to be the business of the same man, and of the same art.

Alcibiades:: So much may be supposed.

Socrates:: And he who knows not the things which belong to himself, will in like manner be ignorant of the things which belong to others?

Alcibiades:: Very true.

Socrates:: And if he knows not the affairs of others, he will not know the affairs of states?

Alcibiades:: Certainly not.

Socrates:: Then such a man can never be a statesman?

Alcibiades:: He cannot.

Socrates:: Nor an economist?

Alcibiades:: He cannot.

Socrates:: He will not know what he is doing?

Alcibiades:: He will not.

Socrates:: And will not he who is ignorant fall into error?

Alcibiades:: Assuredly.

Socrates:: And if he falls into error will he not fail both in his public and private capacity?

Alcibiades:: Yes, indeed.

Socrates:: And failing, will he not be miserable?

Alcibiades:: Very.

Socrates:: And what will become of those for whom he is acting?

Alcibiades:: They will be miserable also.

Socrates:: Then he who is not wise and good cannot be happy?

Alcibiades:: He cannot.

Socrates:: The bad, then, are miserable?

Alcibiades:: Yes, very.

Socrates:: And if so, not he who has riches, but he who has wisdom, is delivered from his misery?

Alcibiades:: Clearly.

Socrates:: Cities, then, if they are to be happy, do not want walls, or triremes, or docks, or numbers, or size, Alcibiades, without virtue?

Alcibiades:: Indeed they do not.

Socrates:: And you must give the citizens virtue, if you mean to administer their affairs rightly or nobly?

Alcibiades:: Certainly.

Socrates:: But can a man give that which he has not?

Alcibiades:: Impossible.

Socrates:: Then you or any one who means to govern and superintend, not only himself and the things of himself, but the state and the things of the state, must in the first place acquire virtue.

Alcibiades:: That is true.

Socrates:: You have not therefore to obtain power or authority, in order to enable you to do what you wish for yourself and the state, but justice and wisdom.

Alcibiades:: Clearly.

Socrates:: You and the state, if you act wisely and justly, will act according to the will of God?

Alcibiades:: Certainly.

Socrates:: As I was saying before, you will look only at what is bright and divine, and act with a view to them?

Alcibiades:: Yes.

Socrates:: In that mirror you will see and know yourselves and your own good?

Alcibiades:: Yes.

Socrates:: And so you will act rightly and well?

Alcibiades:: Yes.

Socrates:: In which case, I will be security for your happiness.

Alcibiades:: I accept the security.

Socrates:: But if you act unrighteously, your eye will turn to the dark and godless, and being in darkness and ignorance of yourselves, you will probably do deeds of darkness.

Alcibiades:: Very possibly.

Socrates:: For if a man, my dear Alcibiades, has the power to do what he likes, but has no understanding, what is likely to be the result, either to him as an individual or to the state—for example, if he be sick and is able to do what he likes, not having the mind of a physician—having moreover tyrannical power, and no one daring to reprove him, what will happen to him? Will he not be likely to have his constitution ruined?

Alcibiades:: That is true.

Socrates:: Or again, in a ship, if a man having the power to do what he likes, has no intelligence or skill in navigation, do you see what will happen to him and to his fellow-sailors?

Alcibiades:: Yes; I see that they will all perish.

Socrates:: And in like manner, in a state, and where there is any power and authority which is wanting in virtue, will not misfortune, in like manner, ensue?

Alcibiades:: Certainly.

Socrates:: Not tyrannical power, then, my good Alcibiades, should be the aim either of individuals or states, if they would be happy, but virtue.

Alcibiades:: That is true.

Socrates:: And before they have virtue, to be commanded by a superior is better for men as well as for children?

Alcibiades:: That is evident.

Socrates:: And that which is better is also nobler?

Alcibiades:: True.

Socrates:: And what is nobler is more becoming?

Alcibiades:: Certainly.

Socrates:: Then to the bad man slavery is more becoming, because better?

Alcibiades:: True.

Socrates:: Then vice is only suited to a slave?

Alcibiades:: Yes.

Socrates:: And virtue to a freeman?

Alcibiades:: Yes.

Socrates:: And, O my friend, is not the condition of a slave to be avoided?

Alcibiades:: Certainly, Socrates.

Socrates:: And are you now conscious of your own state? And do you know whether you are a freeman or not?

Alcibiades:: I think that I am very conscious indeed of my own state.

Socrates:: And do you know how to escape out of a state which I do not even like to name to my beauty?

Alcibiades:: Yes, I do.

Socrates:: How?

Alcibiades:: By your help, Socrates.

Socrates:: That is not well said, Alcibiades.

Alcibiades:: What ought I to have said?

Socrates:: By the help of God.

Alcibiades:: I agree; and I further say, that our relations are likely to be reversed. From this day forward, I must and will follow you as you have followed me; I will be the disciple, and you shall be my master.

Socrates:: O that is rare! My love breeds another love: and so like the stork I shall be cherished by the bird whom I have hatched.

Alcibiades:: Strange, but true; and henceforward I shall begin to think about justice.

Socrates:: And I hope that you will persist; although I have fears, not because I doubt you; but I see the power of the state, which may be too much for both of us.

# Alcibiades I

[or ON THE NATURE OF MAN: “obstetric”]

Translated by Lamb.

CHARACTERS

Socrates, Alcibiades

Socrates:: Son of Cleinias, I think it must surprise you that I, the first of all your lovers, am the only one of them who has not given up his suit and thrown you over, and whereas they have all pestered you with their conversation I have not spoken one word to you for so many years. The cause of this has been nothing human, but a certain spiritual opposition, of whose power you shall be informed at some later time. However, it now opposes me no longer, so I have come to you, as you see; and I am in good hopes that it will not oppose me again in the future. Now I have been observing you all this time, and have formed a pretty good notion of your behavior to your lovers: for although they were many and high-spirited, everyone of them has found your spirit too strong for him and has run away. Let me explain the reason of your spirit being too much for them. You say you have no need of any man in any matter; for your resources are so great, beginning with the body and ending with the soul, that you lack nothing.

You think, in the first place, that you are foremost in beauty and stature—and you are not mistaken in this, as is plain for all to see—and in the second place, that you are of the most gallant family in your city, the greatest city in Greece, and that there you have, through your father, very many of the best people as your friends and kinsmen, who would assist you in case of need, and other connections also, through your mother, who are not a whit inferior to these, nor fewer. And you reckon upon a stronger power than all those that I have mentioned, in Pericles, son of Xanthippus, whom your father left as guardian of you and your brother when he died, and who is able to do whatever he likes not only in this city but all over Greece and among many great nations of the barbarians. And I will add besides the wealth of your house: but on this, I observe, you presume least of all. Well, you puff yourself up on all these advantages, and have overcome your lovers, while they in their inferiority have yielded to your might, and all this has not escaped you; so I am very sure that you wonder what on earth I mean by not getting rid of my passion, and what can be my hope in remaining when the rest have fled.

Alcibiades:: Perhaps also, Socrates, you are not aware that you have only just anticipated me. For I, in fact, had the intention of coming and asking you first that very same question—what is your aim and expectation in bothering me by making a particular point of always turning up wherever I may be. For I really do wonder what can be your object, and should be very glad if you would tell me.

Socrates:: Then you will listen to me, presumably, with keen attention if, as you say, you long to know what I mean, and I have in you a listener who will stay to hear me out.

Alcibiades:: Why, to be sure: only speak.

Socrates:: Look to it, then; for it would be no wonder if I should make as much difficulty about stopping as I have made about starting.

Alcibiades:: My good sir, speak; for I will listen.

Socrates:: Speak I must, I suppose. Now, although it is hard for a lover to parley with a man who does not yield to lovers, I must make bold nevertheless to put my meaning into words. For if I saw you, Alcibiades, content with the things I set forth just now, and minded to pass your life in enjoying them, I should long ago have put away my love, so at least I persuade myself: but as it is, I shall propound to your face quite another set of your thoughts, whereby you will understand that I have had you continually before my mind. For I believe, if some god should ask you: “Alcibiades, do you prefer to live with your present possessions, or to die immediately if you are not to have the chance of acquiring greater things?” I believe you would choose to die. But let me tell you what I imagine must be the present hope of your life. You think that if you come shortly before the Athenian Assembly—which you expect to occur in a very few days—you will stand forth and prove to the people that you are more worthy of honor than either Pericles or anyone else who has ever existed, and that having proved this you will have the greatest power in the state; and that if you are the greatest here, you will be the same among all the other Greeks, and not only Greeks, but all the barbarians who inhabit the same continent with us. And if that same god should say to you again, that you are to hold sway here in Europe, but are not to be allowed to cross over into Asia and to interfere with the affairs of that region, I believe you would be equally loth to live on those sole conditions either—if you are not to fill, one may say, the whole world with your name and your power; and I fancy that, except Cyrus and Xerxes, you think there has never existed a single man who was of any account. So then that this is your hope, I know well enough; I am not merely guessing. And I daresay you will reply, since you know that what I say is true: “Well, Socrates, and what has that to do with your point?” I am going to tell you, dear son of Cleinias and Deinomache. Without me it is impossible for all those designs of yours to be crowned with achievement; so great is the power I conceive myself to have over your affairs and over you, and it is for this very reason, I believe, that the god has so long prevented me from talking with you, while I was waiting to see when he would allow me. For as you have hopes of proving yourself in public to be invaluable to the state and, having proved it, of winning forthwith unlimited power, so do I hope to win supreme power over you by proving that I am invaluable to you, and that neither guardian nor kinsman nor anyone else is competent to transmit to you the power that you long for except me, with the god's help, however. In your younger days, to be sure, before you had built such high hopes, the god, as I believe, prevented me from talking with you, in order that I might not waste my words: but now he has set me on; for now you will listen to me.

Alcibiades:: You seem to me far more extraordinary, Socrates, now that you have begun to speak, than before, when you followed me about in silence; though even then you looked strange enough. Well, as to my intending all this or not, you have apparently made your decision, and any denial of mine will not avail me to persuade you. Very good: but supposing I have intended ever so much what you say, how are you the sole means through which I can hope to attain it? Can you tell me?

Socrates:: Are you asking whether I can make a long speech, such as you are used to hearing? No, my gift is not of that sort. But I fancy I could prove to you that the case is so, if you will consent to do me just one little service.

Alcibiades:: Why, if you mean a service that is not troublesome, I consent.

Socrates:: Do you consider it troublesome to answer questions put to you?

Alcibiades:: No, I do not.

Socrates:: Then answer.

Alcibiades:: Ask.

Socrates:: Well, you have the intentions which I say you have, I suppose?

Alcibiades:: Be it so. if you like, in order that I may know what you will say next.

Socrates:: Now then: you intend, as I say, to come forward as adviser to the Athenians in no great space of time; well, suppose I were to take hold of you as you were about to ascend the platform, and were to ask you: “Alcibiades, on what subject do the Athenians propose to take advice, that you should stand up to advise them? Is it something about which you have better knowledge than they?” What would be your reply?

Alcibiades:: I should say, I suppose, it was something about which I knew better than they.

Socrates:: Then you are a good adviser on things about which you actually know.

Alcibiades:: To be sure.

Socrates:: And you know only the things you have learnt from others or discovered yourself?

Alcibiades:: What could I know besides?

Socrates:: And can it be that you would ever have learnt or discovered anything without being willing either to learn it or to inquire into it yourself?

Alcibiades:: No.

Socrates:: Well then, would you have been willing to inquire into or learn what you thought you knew?

Alcibiades:: No, indeed.

Socrates:: So there was a time when you did not think that you knew what you now actually know.

Alcibiades:: There must have been.

Socrates:: Well, but I know pretty nearly the things that you have learnt: tell me if anything has escaped me. You learnt, if I recollect, writing and harping and wrestling, as for fluting, you refused to learn it. These are the things that you know, unless perhaps there is something you have been learning unobserved by me; and this you were not, I believe, if you so much as stepped out of doors either by night or by day.

Alcibiades:: No, I have taken no other lessons than those.

Socrates:: Then tell me, will it be when the Athenians are taking advice how they are to do their writing correctly that you are to stand up and advise them?

Alcibiades:: Upon my word, not I.

Socrates:: Well, about strokes on the lyre?

Alcibiades:: Not at all.

Socrates:: Nor in fact are they accustomed to deliberate on throws in wrestling either at the Assembly.

Alcibiades:: No, to be sure.

Socrates:: Then what will be the subject of the advice? For I presume it will not be about building.

Alcibiades:: No, indeed.

Socrates:: For a builder will give better advice than you in that matter.

Alcibiades:: Yes.

Socrates:: Nor yet will it be about divination?

Alcibiades:: No.

Socrates:: For there again a diviner will serve better than you.

Alcibiades:: Yes.

Socrates:: Whether he be short or tall, handsome or ugly, nay, noble or ignoble.

Alcibiades:: Of course.

Socrates:: For on each subject the advice comes from one who knows, not one who has riches.

Alcibiades:: Of course.

Socrates:: And whether their mentor be poor or rich will make no difference to the Athenians when they deliberate for the health of the citizens; all that they require of their counselor is that he be a physician.

Alcibiades:: Naturally.

Socrates:: Then what will they have under consideration if you are to be right in standing up, when you do so, as their counselor?

Alcibiades:: Their own affairs, Socrates.

Socrates:: Do you mean with regard to shipbuilding, and the question as to what sort of ships they ought to get built?

Alcibiades:: No, I do not, Socrates.

Socrates:: Because, I imagine, you do not understand shipbuilding. Is that, and that alone, the reason?

Alcibiades:: That is just the reason.

Socrates:: Well, on what sort of affairs of their own do you mean that they will be deliberating?

Alcibiades:: On war, Socrates, or on peace, or on any other of the state's affairs.

Socrates:: Do you mean that they will be deliberating with whom they ought to make peace, and on whom they ought to make war, and in what manner?

Alcibiades:: Yes.

Socrates:: And on whom it is better to do so, ought they not?

Alcibiades:: Yes.

Socrates:: And at such time as it is better?

Alcibiades:: Certainly.

Socrates:: And for so long as they had better?

Alcibiades:: Yes.

Socrates:: Now if the Athenians should deliberate with whom they should wrestle close, and with whom only at arm's length, and. in what manner, would you or the wrestling-master be the better adviser?

Alcibiades:: The wrestling-master, I presume.

Socrates:: And can you tell me what the wrestling-master would have in view when he advised as to the. persons with whom they ought or ought not to wrestle close, and when and in what manner? What I mean is something like this: ought they not to wrestle close with those with whom it is better to do so?

Alcibiades:: Yes.

Socrates:: And so far as is better, too?

Alcibiades:: So far.

Socrates:: And at such time also as is better?

Alcibiades:: Certainly.

Socrates:: But again, when one sings, one has sometimes to accompany the song with harping and stepping?

Alcibiades:: Yes, one has.

Socrates:: And at such time as is better?

Alcibiades:: Yes.

Socrates:: And so far as is better?

Alcibiades:: I agree.

Socrates:: Well now, since you applied the term “better” to the two cases of harping for accompaniment of a song and close wrestling, what do you call the “better” in the case of harping, to correspond with what in the case of wrestling I call gymnastic? What do you call the other?

Alcibiades:: I do not understand.

Socrates:: Well, try to copy me: for my answer gave you, I think, what is correct in every instance; and that is correct, I presume, which proceeds by rule of the art, is it not?

Alcibiades:: Yes.

Socrates:: And was not the art here gymnastic?

Alcibiades:: To be sure.

Socrates:: And I said that the better in the case of wrestling was gymnastic.

Alcibiades:: You did.

Socrates:: And I was quite fair?

Alcibiades:: I think so.

Socrates:: Come then, in your turn—for it would befit you also, I fancy, to argue fairly—tell me, first, what is the art which includes harping and singing and treading the measure correctly? What is it called as a whole? You cannot yet tell me?

Alcibiades:: No, indeed.

Socrates:: Well, try another way: who are the goddesses that foster the art?

Alcibiades:: The Muses, you mean, Socrates?

Socrates:: I do. Now, just think, and say by what name the art is called after them.

Alcibiades:: Music, I suppose you mean.

Socrates:: Yes, I do. And what is that which proceeds correctly by its rule? As in the other case I was correct in mentioning to you gymnastic as that which goes by the art, so I ask you, accordingly, what you say in this case. What manner of proceeding is required?

Alcibiades:: A musical one, I suppose.

Socrates:: You are right. Come then, what is it that you term "better," in respect of what is better in waging war and being at peace? Just as in our other instances you said that the "better" implied the more musical and again, in the parallel case, the more gymnastical, try now if you can tell me what is the "better" in this case.

Alcibiades:: But I am quite unable.

Socrates:: But surely that is disgraceful; for if you should speak to somebody as his adviser on food, and say that one sort was better than another, at this time and in this quantity, and he then asked you— What do you mean by the "better," Alcibiades?—in a matter like that you could tell him you meant the more wholesome, although you do not set up to be a physician; yet in a case where you set up to have knowledge and are ready to stand up and advise as though you knew, are you not ashamed to be unable, as appears, to answer a question upon it? Does it not seem disgraceful?

Alcibiades:: Very.

Socrates:: Then consider and do your best to tell me the connection of "better" in being at peace or at war with those to whom we ought to be so disposed.

Alcibiades:: Well, I am considering, but I fail to perceive it.

Socrates:: But you must know what treatment it is that we allege against each other when we enter upon a war, and what name we give it when we do so?

Alcibiades:: I do: we say we are victims of deceit or violence or spoliation.

Socrates:: Enough: how do we suffer each of these things? Try and tell me what difference there is between one way and another.

Alcibiades:: Do you mean by that, Socrates, whether it is in a just way or an unjust way?

Socrates:: Precisely.

Alcibiades:: Why, there you have all the difference in the world.

Socrates:: Well then, on which sort are you going to advise the Athenians to make war—those who are acting unjustly, or those who are doing what is just?

Alcibiades:: That is a hard question: for even if someone decides that he must go to war with those who are doing what is just, he would not admit that they were doing so.

Socrates:: For that would not be lawful, I suppose?

Alcibiades:: No, indeed; nor is it considered honorable either.

Socrates:: So you too will appeal to these things in making your speeches?

Alcibiades:: Necessarily.

Socrates:: Then must not that "better" about which I was asking in reference to making or not making war, on those on whom we ought to or not, and when we ought to or not, be simply and solely the juster?

Alcibiades:: Apparently it is.

Socrates:: How now, friend Alcibiades? Have you overlooked your own ignorance of this matter, or have I overlooked your learning it and taking lessons of a master who taught you to distinguish the more just and the more unjust? And who is he? Inform me in my turn, in order that you may introduce me to him as another pupil.

Alcibiades:: You are joking, Socrates.

Socrates:: No, I swear by our common God of Friendship, whose name I would by no means take in vain. Come, if you can, tell me who the man is.

Alcibiades:: But what if I cannot? Do you think I could not know about what is just and unjust in any other way?

Socrates:: Yes, you might, supposing you discovered it.

Alcibiades:: But do you not think I might discover it?

Socrates:: Yes, quite so, if you inquired.

Alcibiades:: And do you not think I might inquire?

Socrates:: I do, if you thought you did not know.

Alcibiades:: And was there not a time when I held that view?

Socrates:: Well spoken. Then can you tell me at what time it was that you thought you did not know what is just and unjust? Pray, was it a year ago that you were inquiring, and thought you did not know? Or did you think you knew? Please answer truly, that our debates may not be futile.

Alcibiades:: Well, I thought I knew.

Socrates:: And two years, and three years, and four years back, were you not of the same mind?

Alcibiades:: I was.

Socrates:: But, you see, before that time you were a child, were you not?

Alcibiades:: Yes.

Socrates:: So I know well enough that then you thought you knew.

Alcibiades:: How do you know it so well?

Socrates:: Many a time I heard you, when as a child you were dicing or playing some other game at your teacher's or elsewhere, instead of showing hesitation about what was just and unjust, speak in very loud and confident tones about one or other of your playmates, saying he was a rascal and a cheat who played unfairly. Is not this a true account?

Alcibiades:: But what was I to do, Socrates, when somebody cheated me?

Socrates:: Yet if you were ignorant then whether you were being unfairly treated or not, how can you ask — ”What are you to do?

Alcibiades:: Well, but on my word, I was not ignorant: no, I clearly understood that I was being wronged.

Socrates:: So you thought you knew, even as a child, it seems, what was just and unjust.

Alcibiades:: I did; and I knew too.

Socrates:: At what sort of time did you discover it? For surely it was not while you thought you knew.

Alcibiades:: No, indeed.

Socrates:: Then when did you think you were ignorant? Consider; I believe you will fail to find such a time.

Alcibiades:: Upon my word, Socrates, I really cannot say.

Socrates:: So you do not know it by discovery.

Alcibiades:: Not at all, apparently.

Socrates:: But you said just now that you did not know it by learning either; and if you neither discovered nor learnt it, how do you come to know it, and whence?

Alcibiades:: Well, perhaps that answer I gave you was not correct, that I knew it by my own discovery.

Socrates:: Then how was it done?

Alcibiades:: I learnt it, I suppose, in the same way as everyone else.

Socrates:: Back we come to the same argument. From whom? Please tell me.

Alcibiades:: From the many.

Socrates:: They are no very serious teachers with whom you take refuge, if you ascribe it to the many!

Alcibiades:: Why, are they not competent to teach?

Socrates:: Not how to play, or not to play, draughts; and yet that, I imagine, is a slight matter compared with justice. What? Do you not think so?

Alcibiades:: Yes.

Socrates:: Then if they are unable to teach the slighter, can they teach the more serious matter?

Alcibiades:: I think so: at any rate, there are many other things that they are able to teach, more serious than draughts.

Socrates:: What sort of things?

Alcibiades:: For instance, it was from them that I learnt to speak Greek, and I could not say who was my teacher, but can only ascribe it to the same people who, you say, are not serious teachers.

Socrates:: Ah, gallant sir, the many may be good teachers of that, and they can justly be praised for their teaching of such subjects.

Alcibiades:: And why?

Socrates:: Because in those subjects they have the equipment proper to good teachers.

Alcibiades:: What do you mean by that?

Socrates:: You know that those who are going to teach anything should first know it themselves, do you not?

Alcibiades:: Of course.

Socrates:: And that those who know should agree with each other and not differ?

Alcibiades:: Yes.

Socrates:: But if they differ upon anything, will you say that they know it?

Alcibiades:: No, indeed.

Socrates:: Then how can they be teachers of it?

Alcibiades:: By no means.

Socrates:: Well now, do you find that the many differ about the nature of stone or wood? If you ask one of them, do they not agree on the same answer, and make for the same things when they want to get a piece of stone or wood? It is just the same, too, with everything of the sort: for I am pretty nearly right in understanding you to mean just this by knowing how to speak Greek, am I not?

Alcibiades:: Yes.

Socrates:: And on these matters, as we stated, they not only agree with each other and with themselves in private, but states also use in public the same terms about them to each other, without any dispute?

Alcibiades:: They do.

Socrates:: Then naturally they will be good teachers of these matters.

Alcibiades:: Yes.

Socrates:: And if we should wish to provide anyone with knowledge of them, we should be right in sending him to be taught by “the many” that you speak of?

Alcibiades:: Certainly.

Socrates:: But what if we wished to know not only what men were like or what horses were like, but which of them were good runners or not? Would the many still suffice to teach us this?

Alcibiades:: No, indeed.

Socrates:: And you have ample proof that they do not know this, and are not proficient teachers of it, in their not agreeing about it at all with themselves?

Alcibiades:: I have.

Socrates:: And what if we wished to know not only what men were like, but what healthy or diseased men were like? Would the many suffice to teach us?

Alcibiades:: No, indeed.

Socrates:: And you would have proof of their being bad teachers of that, if you saw them differing about it?

Alcibiades:: I should.

Socrates:: Well then, do you now find that the many agree with themselves or each other about just and unjust men or things?

Alcibiades:: Far from it, on my word, Socrates.

Socrates:: In fact, they differ most especially on these points?

Alcibiades:: Very much so.

Socrates:: And I suppose you never yet saw or heard of people differing so sharply on questions of health or the opposite as to fight and kill one another in battle because of them.

Alcibiades:: No, indeed.

Socrates:: But on questions of justice or injustice I am sure you have; and if you have not seen them, at any rate you have heard of them from many people, especially Homer. For you have heard the Odyssey and the Iliad?

Alcibiades:: I certainly have, of course, Socrates.

Socrates:: And these poems are about a difference of just and unjust?

Alcibiades:: Yes.

Socrates:: And from this difference arose the fights and deaths of the Achaeans, and of the Trojans as well, and of the suitors of Penelope in their strife with Odysseus.

Alcibiades:: That is true.

Socrates:: And I imagine that when the Athenians and Spartans and Boeotians lost their men at Tanagra, and later at Coronea, among whom your own father perished, the difference that caused their deaths and fights was solely on a question of just and unjust, was it not?

Alcibiades:: That is true.

Socrates:: Then are we to say that these people understand those questions, on which they differ so sharply that they are led by their mutual disputes to take these extreme measures against each other?

Alcibiades:: Apparently not.

Socrates:: And you refer me to teachers of that sort, whom you admit yourself to be without knowledge?

Alcibiades:: It seems I do.

Socrates:: Then how is it likely that you should know what is just and unjust, when you are so bewildered about these matters and are shown to have neither learnt them from anyone nor discovered them for yourself?

Alcibiades:: By what you say, it is not likely.

Socrates:: There again, Alcibiades, do you see how unfairly you speak?

Alcibiades:: In what?

Socrates:: In stating that I say so.

Alcibiades:: Why, do you not say that I do not know about the just and unjust?

Socrates:: Not at all.

Alcibiades:: Well, do I say it?

Socrates:: Yes.

Alcibiades:: How, pray?

Socrates:: I will show you, in the following way. If I ask you which is the greater number, one or two, you will answer “two”?

Alcibiades:: Yes, I shall.

Socrates:: How much greater?

Alcibiades:: By one.

Socrates:: Then which of us says that two are one more than one?

Alcibiades:: I.

Socrates:: And I was asking, and you were answering?

Alcibiades:: Yes.

Socrates:: Then is it I, the questioner, or you the answerer, that are found to be speaking about these things?

Alcibiades:: I.

Socrates:: And what if I ask what are the letters in “Socrates” and you tell me? Which will be the speaker?

Alcibiades:: I.

Socrates:: Come then, tell me, as a principle, when we have question and answer, which is the speaker—the questioner, or the answerer?

Alcibiades:: The answerer, I should say, Socrates.

Socrates:: And throughout the argument so far, I was the questioner?

Alcibiades:: Yes.

Socrates:: And you the answerer?

Alcibiades:: Quite so.

Socrates:: Well then, which of us has spoken what has been said?

Alcibiades:: Apparently, Socrates, from what has been admitted, it was I.

Socrates:: And it was said that Alcibiades, the fair son of Cleinias, did not know about just and unjust, but thought he did, and intended to go to the Assembly as adviser to the Athenians on what he knows nothing about; is not that so?

Alcibiades:: Apparently.

Socrates:: Then, to quote Euripides, the result is, Alcibiades, that you may be said to have "heard it from yourself, not me," and it is not I who say it, but you, and you tax me with it in vain. And indeed what you say is quite true. For it is a mad scheme this, that you meditate, my excellent friend—of teaching things that you do not know, since you have taken no care to learn them.

Alcibiades:: I think, Socrates, that the Athenians and the rest of the Greeks rarely deliberate as to which is the more just or unjust course: for they regard questions of this sort as obvious; and so they pass them over and consider which course will prove more expedient in the result. For the just and the expedient, I take it, are not the same, but many people have profited by great wrongs that they have committed, whilst others, I imagine, have had no advantage from doing what was right.

Socrates:: What then? Granting that the just and the expedient are in fact as different as they can be, you surely do not still suppose you know what is expedient for mankind, and why it is so?

Alcibiades:: Well, what is the obstacle, Socrates,—unless you are going to ask me again from whom I learnt it, or how I discovered it for myself?

Socrates:: What a way of going on! If your answer is incorrect, and a previous argument can be used to prove it so, you claim to be told something new, and a different line of proof, as though the previous one were like a poor worn-out coat which you refuse to wear any longer; you must be provided instead with something clean and unsoiled in the way of evidence. But I shall ignore your sallies in debate, and shall none the less ask you once more, where you learnt your knowledge of what is expedient, and who is your teacher, asking in one question all the things I asked before; and now you will clearly find yourself in the same plight, and will be unable to prove that you know the expedient either through discovery or through learning. But as you are dainty, and would dislike a repeated taste of the same argument, I pass over this question of whether you know or do not know what is expedient for the Athenians: but why have you not made it clear whether the just and the expedient are the same or different? If you like, question me as I did you, or if you prefer, argue out the matter in your own way.

Alcibiades:: But I am not sure I should be able, Socrates, to set it forth to you.

Socrates:: Well, my good sir, imagine I am the people in Assembly; even there, you know, you will have to persuade each man singly, will you not?

Alcibiades:: Yes.

Socrates:: And the same man may well persuade one person singly, and many together, about things that he knows, just as the schoolmaster, I suppose, persuades either one or many about letters?

Alcibiades:: Yes.

Socrates:: And again, will not the same man persuade either one or many about number?

Alcibiades:: Yes.

Socrates:: And this will be the man who knows—the arithmetician?

Alcibiades:: Quite so.

Socrates:: And you too can persuade a single man about things of which you can persuade many?

Alcibiades:: Presumably.

Socrates:: And these are clearly things that you know.

Alcibiades:: Yes.

Socrates:: And the only difference between the orator speaking before the people and one who speaks in a conversation like ours is that the former persuades men in a number together of the same things, and the latter persuades them one at a time?

Alcibiades:: It looks like it.

Socrates:: Come now, since we see that the same man may persuade either many or one, try your unpracticed hand on me, and endeavor to show that the just is sometimes not expedient.

Alcibiades:: You are insolent, Socrates!

Socrates:: This time, at any rate, I am going to have the insolence to persuade you of the opposite of that which you decline to prove to me.

Alcibiades:: Speak, then.

Socrates:: Just answer my questions.

Alcibiades:: No, you yourself must be the speaker.

Socrates:: What? Do you not wish above all things to be persuaded?

Alcibiades:: By all means, to be sure.

Socrates:: And you would best be persuaded if you should say “the case is so”?

Alcibiades:: I agree.

Socrates:: Then answer; and if you do not hear your own self say that the just is expedient, put no trust in the words of anyone again.

Alcibiades:: I will not: but I may as well answer; for I do not think I shall come to any harm.

Socrates:: You are quite a prophet! Now tell me, do you consider some just things to be expedient, and others not?

Alcibiades:: Yes.

Socrates:: And again, some noble, and some not?

Alcibiades:: What do you mean by that question?

Socrates:: I would ask whether anyone ever seemed to you to be doing what was base and yet just.

Alcibiades:: Never.

Socrates:: Well, are all just things noble?

Alcibiades:: Yes.

Socrates:: And what of noble things, in their turn? Are they all good, or some only, while others are not?

Alcibiades:: In my opinion, Socrates, some noble things are evil.

Socrates:: And some base things are good?

Alcibiades:: Yes.

Socrates:: Do you mean as in one of the many cases where men have gone to rescue a comrade or kinsman in battle, and have been either wounded or killed, while those who did not go to the rescue, as duty bade, have got off safe and sound?

Alcibiades:: Precisely.

Socrates:: And such a rescue you call noble, in respect of the endeavor to save those whom it was one’s duty to save; and this is courage, is it not?

Alcibiades:: Yes.

Socrates:: But you call it evil, in respect of the deaths and wounds?

Alcibiades:: Yes.

Socrates:: And is not the courage one thing, and the death another?

Alcibiades:: Certainly.

Socrates:: Then it is not in the same respect that rescuing one's friends is noble and evil?

Alcibiades:: Apparently not.

Socrates:: Then see if, inasmuch as it is noble, it is also good; for in the present case you were admitting that the rescue was noble in respect of its courage: now consider this very thing, courage, and say whether it is good or bad. Consider it in this way: which would you choose to have, good things or evil?

Alcibiades:: Good.

Socrates:: And most of all, the greatest goods, and of such things you would least allow yourself to be deprived?

Alcibiades:: To be sure.

Socrates:: Then what do you say of courage? At what price would you allow yourself to be deprived of it?

Alcibiades:: I would give up life itself if I had to be a coward.

Socrates:: Then you regard cowardice as the uttermost evil.

Alcibiades:: I do.

Socrates:: On a par with death, it seems.

Alcibiades:: Yes.

Socrates:: And life and courage are the extreme opposites of death and cowardice?

Alcibiades:: Yes.

Socrates:: And you would most desire to have the former, and least the latter?

Alcibiades:: Yes.

Socrates:: Is that because you think the former best, and the latter worst?

Alcibiades:: To be sure.

Socrates:: So you reckon courage among the best things, and death among the worst.

Alcibiades:: I do.

Socrates:: Then the rescue of one's friends in battle, inasmuch as it is noble in respect of the working of good by courage, you have termed noble?

Alcibiades:: Apparently.

Socrates:: But evil, in respect of the working of evil by death?

Alcibiades:: Yes.

Socrates:: So we may fairly describe each of these workings as follows: as you call either of them evil because of the evil it produces, so you must call it good because of the good it produces.

Alcibiades:: I believe that is so.

Socrates:: And again, are they noble inasmuch as they are good, and base inasmuch as they are evil?

Alcibiades:: Yes.

Socrates:: Then in saying that the rescue of one's friends in battle is noble and yet evil, you mean just the same as if you called the rescue good, but evil.

Alcibiades:: I believe what you say is true, Socrates.

Socrates:: So nothing noble, in so far as it is noble, is evil, and nothing base, in so far as it is base, is good.

Alcibiades:: Apparently.

Socrates:: Now then, consider it again in this way: whoever does nobly, does well too, does he not?

Alcibiades:: Yes.

Socrates:: And are not those who do well happy?

Alcibiades:: Of course.

Socrates:: And they are happy because of the acquisition of good things?

Alcibiades:: Certainly.

Socrates:: And they acquire these by doing well and nobly?

Alcibiades:: Yes.

Socrates:: So doing well is good?

Alcibiades:: Of course.

Socrates:: And welfare is noble?

Alcibiades:: Yes.

Socrates:: Hence we have seen again that noble and good are the same thing.

Alcibiades:: Apparently.

Socrates:: Then whatever we find to be noble we shall find also to be good, by this argument at least.

Alcibiades:: We must.

Socrates:: Well then, are good things expedient or not?

Alcibiades:: Expedient.

Socrates:: And do you remember what our admissions were about just things?

Alcibiades:: I think we said that those who do just things must do noble things.

Socrates:: And that those who do noble things must do good things?

Alcibiades:: Yes.

Socrates:: And that good things are expedient?

Alcibiades:: Yes.

Socrates:: Hence just things, Alcibiades, are expedient.

Alcibiades:: So it seems.

Socrates:: Well now, are not you the speaker of all this, and I the questioner?

Alcibiades:: I seem to be, apparently.

Socrates:: So if anyone stands up to advise either the Athenians or the Peparethians, imagining that he understands what is just and unjust, and says that just things are sometimes evil, could you do other than laugh him to scorn, since you actually say yourself that just and expedient are the same?

Alcibiades:: But by Heaven, Socrates, I do not even know what I am saying, I feel altogether in such a strange state! For from moment to moment I change my view under your questioning.

Socrates:: And are you unaware, my friend, what this feeling is?

Alcibiades:: I am, quite.

Socrates:: Well, do you suppose that if someone should ask you whether you have two eyes or three, two hands or four, or anything else of that sort, you would answer differently from moment to moment, or always the same thing?

Alcibiades:: I begin to have misgivings about myself, but still I think I should make the same answer.

Socrates:: And the reason would be, because you know?

Alcibiades:: I think so.

Socrates:: Then if you involuntarily give contradictory answers, clearly it must be about things of which you are ignorant.

Alcibiades:: Very likely.

Socrates:: And you say you are bewildered in answering about just and unjust, noble and base, evil and good, expedient and inexpedient? Now, is it not obvious that your bewilderment is caused by your ignorance of these things?

Alcibiades:: I agree.

Socrates:: Then is it the case that when a man does not know a thing he must needs be bewildered in spirit regarding that thing?

Alcibiades:: Yes, of course.

Socrates:: Well now, do you know in what way you can ascend to heaven?

Alcibiades:: On my word, not I.

Socrates:: Is that too a kind of question about which your judgment is bewildered?

Alcibiades:: No, indeed.

Socrates:: Do you know the reason, or shall I state it?

Alcibiades:: State it.

Socrates:: It is, my friend, that while not knowing the matter you do not suppose that you know it.

Alcibiades:: Here again, how do you mean?

Socrates:: Do your share, in seeing for yourself. Are you bewildered about the kind of thing that you do not know and are aware of not knowing? For instance, you know, I suppose, that you do not know about the preparation of a tasty dish?

Alcibiades:: Quite so.

Socrates:: Then do you think for yourself how you are to prepare it, and get bewildered, or do you entrust it to the person who knows?

Alcibiades:: I do the latter.

Socrates:: And what if you should be on a ship at sea? Would you think whether the tiller should be moved inwards or outwards, and in your ignorance bewilder yourself, or would you entrust it to the helmsman, and be quiet?

Alcibiades:: I would leave it to him.

Socrates:: So you are not bewildered about what you do not know, so long as you know that you do not know?

Alcibiades:: It seems I am not.

Socrates:: Then do you note that mistakes in action also are due to this ignorance of thinking one knows when one does not?

Alcibiades:: Here again, how do you mean?

Socrates:: We set about acting, I suppose, when we think we know what we are doing?

Alcibiades:: Yes.

Socrates:: But when people think they do not know, I suppose they hand it over to others?

Alcibiades:: To be sure.

Socrates:: And so that kind of ignorant person makes no mistakes in life, because they entrust such matters to others?

Alcibiades:: Yes.

Socrates:: Who then are those who make mistakes? For, I take it, they cannot be those who know.

Alcibiades:: No, indeed.

Socrates:: But since it is neither those who know, nor those of the ignorant who know that they do not know, the only people left, I think, are those who do not know, but think that they do?

Alcibiades:: Yes, only those.

Socrates:: Then this ignorance is a cause of evils, and is the discreditable sort of stupidity?

Alcibiades:: Yes.

Socrates:: And when it is about the greatest matters, it is most injurious and base?

Alcibiades:: By far.

Socrates:: Well then, can you mention any greater things than the just, the noble, the good, and the expedient?

Alcibiades:: No, indeed.

Socrates:: And it is about these, you say, that you are bewildered?

Alcibiades:: Yes.

Socrates:: But if you are bewildered, is it not clear from what has gone before that you are not only ignorant of the greatest things, but while not knowing them you think that you do?

Alcibiades:: I am afraid so.

Socrates:: Alack then, Alcibiades, for the plight you are in! I shrink indeed from giving it a name, but still, as we are alone, let me speak out. You are wedded to stupidity, my fine friend, of the vilest kind; you are impeached of this by your own words, out of your own mouth; and this, it seems, is why you dash into politics before you have been educated. And you are not alone in this plight, but you share it with most of those who manage our city’s affairs, except just a few, and perhaps your guardian, Pericles.

Alcibiades:: Yes, you know, Socrates, they say he did not get his wisdom independently, but consorted with many wise men, such as Pythocleides and Anaxagoras; and now, old as he is, he still confers with Damon for that very purpose.

Socrates:: Well, but did you ever find a man who was wise in anything and yet unable to make another man wise in the same things as himself? For instance, the man who taught you letters was wise himself, and also made you wise, and anyone else he wished to, did he not?

Alcibiades:: Yes.

Socrates:: And you too, who learnt from him, will be able to make another man wise?

Alcibiades:: Yes.

Socrates:: And the same holds of the harper and the trainer?

Alcibiades:: Certainly.

Socrates:: For, I presume, it is a fine proof of ones knowing anything that one knows, when one is able to point to another man whom one has made to know it.

Alcibiades:: I agree.

Socrates:: Well then, can you tell me whom Pericles made wise? One of his sons, to begin with?

Alcibiades:: But what if the two sons of Pericles were simpletons, Socrates?

Socrates:: Well, Cleinias, your brother.

Alcibiades:: But why should you mention Cleinias, a madman?

Socrates:: Well, if Cleinias is mad and the two sons of Pericles were simpletons, what reason are we to assign, in your case, for his allowing you to be in your present condition?

Alcibiades:: I believe I am myself to blame for not attending to him.

Socrates:: But tell me of any other Athenian or foreigner, slave or freeman, who is accounted to have become wiser through converse with Pericles; as I can tell you that Pythodorus son of Isolochus, and Callias, son of Calliades, became through that of Zeno; each of them has paid Zeno a hundred minae, and has become both wise and distinguished.

Alcibiades:: Well, upon my word, I cannot.

Socrates:: Very good: then what is your intention regarding yourself? Will you remain as you are, or take some trouble?

Alcibiades:: We must put our heads together, Socrates. And indeed, as soon as you speak, I take the point and agree. For the men who manage the city’s affairs, apart from a few, do strike me as uneducated.

Socrates:: Then what does that mean?

Alcibiades:: That if they were educated, I suppose anyone who undertook to contend against them would have to get some knowledge and practice first, as he would for a match with athletes: but now, seeing that these men have gone in for politics as amateurs, what need is there for me to practice and have the trouble of learning? For I am sure that my natural powers alone will give me an easy victory over them.

Socrates:: Ho, ho, my good sir, what a thing to say! How unworthy of your looks and your other advantages!

Alcibiades:: What is your meaning now, Socrates? What is the connection?

Socrates:: I am grieved for you, and for my love.

Alcibiades:: Why, pray?

Socrates:: That you should expect your contest to be with the men we have here.

Alcibiades:: Well, but with whom is it to be?

Socrates:: Is that a worthy question to be asked by a man who considers himself high-spirited?

Alcibiades:: How do you mean? Is not my contest with these men?

Socrates:: Well, suppose you were intending to steer a warship into action, would you be content to be the best hand among the crew at steering or, while regarding this skill as a necessary qualification, would you keep your eye on your actual opponents in the fight, and not, as now, on your fellow-fighters? These, I conceive, you ought so far to surpass that they would not feel fit to be your opponents, but only to be your despised fellow-fighters against the enemy, if you mean really to make your mark with some noble action that will be worthy both of yourself and of the city.

Alcibiades:: Why, I do mean to.

Socrates:: So you think it quite fitting for you to be satisfied if you are better than the soldiers, but neglect to keep your eye on the enemy's leaders with a view to showing yourself better than they are, or to plan and practice against them!

Alcibiades:: Of whom are you speaking now, Socrates?

Socrates:: Do you not know that our city makes war occasionally on the Spartans and on the Great King?

Alcibiades:: That is true.

Socrates:: And if you are minded to be the head of our state, you would be right in thinking that your contest is with, the kings of Sparta and of Persia?

Alcibiades:: That sounds like the truth.

Socrates:: No, my good friend; you ought rather to keep your eye on Meidias the quail-filliper and others of his sort—who undertake to manage the city's affairs, while they still have the slavish hair, as the women would say, showing in their minds through their lack of culture, and have not yet got rid of it; who, moreover, have come with their outlandish speech to flatter the state, not to rule it—to these, I tell you, should your eyes be turned; and then you can disregard yourself, and need neither learn what is to be learnt for the great contest in which you are to be engaged, nor practice what requires practice, and so ensure that you are perfectly prepared before entering upon a political career.

Alcibiades:: Why, Socrates, I believe you are right; though I think neither the Spartan generals nor the Persian king are at all different from other people.

Socrates:: But, my excellent friend, consider what this notion of yours means.

Alcibiades:: In regard to what?

Socrates:: First of all, do you think you would take more pains over yourself if you feared them and thought them terrible, or if you did not?

Alcibiades:: Clearly, if I thought them terrible.

Socrates:: And do you think you will come to any harm by taking pains over yourself?

Alcibiades:: By no means; rather that I shall get much benefit.

Socrates:: And on this single count that notion of yours is so much to the bad.

Alcibiades:: True.

Socrates:: Then, in the second place, observe the probability that it is false.

Alcibiades:: How so?

Socrates:: Is it probable that noble races should produce better natures, or not?

Alcibiades:: Clearly, noble races would.

Socrates:: And will not the well-born, provided they are well brought up, probably be perfected in virtue?

Alcibiades:: That must be so.

Socrates:: Then let us consider, by comparing our lot with theirs, whether the Spartan and Persian kings appear to be of inferior birth. Do we not know that the former are descendants of Hercules and the latter of Achaemenes, and that the line of Hercules and the line of Achaemenes go back to Perseus, son of Zeus?

Alcibiades:: Yes, and mine, Socrates, to Eurysaces, and that of Eurysaces to Zeus!

Socrates:: Yes, and mine, noble Alcibiades, to Daedalus, and Daedalus to Hephaestus, son of Zeus! But take the lines of those people, going back from them: you have a succession of kings reaching to Zeus—on the one hand, kings of Argos and Sparta; on the other, of Persia, which they have always ruled, and frequently Asia also, as at present; whereas we are private persons ourselves, and so were our fathers. And then, suppose that you had to make what show you could of your ancestors, and of Salamis as the native land of Eurysaces, or of Aegina as the home of the yet earlier Aeacus, to impress Artaxerxes, son of Xerxes, how you must expect to be laughed at! Why, I am afraid we are quite outdone by those persons in pride of birth and upbringing altogether. Or have you not observed how great are the advantages of the Spartan kings, and how their wives are kept under statutory ward of the ephors, in order that every possible precaution may be taken against the king being born of any but the

Heracleidae? And the Persian king is so pre-eminent that no one has a suspicion that an heir could have been born of anybody but the king; and hence the king's wife has nothing to guard her except fear. When the eldest son, the heir to the throne, is born, first of all the king's subjects who are in his palace have a feast, and then for ever after on that date the whole of Asia celebrates the king's birthday with sacrifice and feasting: but when we are born, as the comic poet says, "even the neighbors barely notice it," Alcibiades. After that comes the nurture of the child, not at the hands of a woman-nurse of little worth, but of the most highly approved eunuchs in the king's service, who are charged with the whole tendance of the new-born child, and especially with the business of making him as handsome as possible by molding his limbs into a correct shape; and while doing this they are in high honor. When the boys are seven years old they are given horses and have riding lessons, and they begin to follow the chase. And when the boy reaches fourteen years he is taken over by the royal tutors, as they call them there: these are four men chosen as the most highly esteemed among the Persians of mature age, namely, the wisest one, the justest one, the most temperate one, and the bravest one. The first of these teaches him the magian lore of Zoroaster, son of Horomazes; and that is the worship of the gods: he teaches him also what pertains to a king. The justest teaches him to be truthful all his life long; the most temperate, not to be mastered by even a single pleasure, in order that he may be accustomed to be a free man and a veritable king, who is the master first of all that is in him, not the slave; while the bravest trains him to be fearless and undaunted, telling him that to be daunted is to be enslaved. But you, Alcibiades, had a tutor set over you by Pericles from amongst his servants, who was so old as to be the most useless of them, Zopyrus the Thracian. I might describe to you at length the nurture and education of your competitors, were it not too much of a task; and besides, what I have said suffices to show the rest that follows thereon. But about your birth, Alcibiades, or nurture or education, or about those of any other Athenian, one may say that nobody cares, unless it be some lover whom you chance to have. And again, if you chose to glance at the wealth, the luxury, the robes with sweeping trains, the anointing with myrrh, the attendant troops of menials, and all the other refinements of the Persians, you would be ashamed at your own case, on perceiving its inferiority to theirs.

Should you choose, again, to look at the temperance and orderliness, the forbearance and placidity, the magnanimity and discipline, the courage and endurance, and the toil-loving, success-loving, honor-loving spirit of the Spartans, you would count yourself but a child in all these things. If again you regard wealth, and think yourself something in that way, I must not keep silence on this point either, if you are to realize where you stand. For in this respect you have only to look at the wealth of the Spartans, and you will perceive that our riches here are far inferior to theirs. Think of all the land that they have both in their own and in the Messenian country: not one of our estates could compete with theirs in extent and excellence, nor again in ownership of slaves, and especially of those of the helot class, nor yet of horses, nor of all the flocks and herds that graze in Messene. However, I pass over all these things: but there is more gold and silver privately held in Lacedaemon than in the whole of Greece; for during many generations treasure has been passing in to them from every part of Greece, and often from the barbarians also, but not passing out to anyone; and just as in the fable of

Aesop, where the fox remarked to the lion on the direction of the footmarks, the traces of the money going into Lacedaemon are clear enough, but nowhere are any to be seen of it coming out; so that one can be pretty sure that those people are the richest of the Greeks in gold and silver, and that among themselves the richest is the king; for the largest and most numerous receipts of the kind are those of the kings, and besides there is the levy of the royal tribute in no slight amount, which the Spartans pay to their kings. Now, the Spartan fortunes, though great compared with the wealth of other Greeks, are naught beside that of the Persians and their king. For I myself was once told by a trustworthy person, who had been up to their court, that he traversed a very large tract of excellent land, nearly a day's journey, which the inhabitants called the girdle of the king's wife, and another which was similarly called her veil; and many other fine and fertile regions reserved for the adornment of the consort; and each of these regions was named after some part of her apparel. So I imagine, if someone should say to the king's mother Amestris, who was wife of Xerxes, "The son of Deinomache intends to challenge your son; the mother's dresses are worth perhaps fifty minae at the outside, while the son has under three hundred acres at Erchiae," she would wonder to what on earth this Alcibiades could be trusting, that he proposed to contend against Artaxerxes; and I expect she would remark—"The only possible things that the man can be trusting to for his enterprise are industry and wisdom; for these are the only things of any account among the Greeks." Whereas if she were informed that this Alcibiades who is actually making such an attempt is, in the first place, as yet barely twenty years old, and secondly, altogether uneducated; and further, that when his lover tells him that he must first learn, and take pains over himself, and practice, before he enters on a contest with the king, he refuses, and says he will do very well as he is; I expect she would ask in surprise, “On what, then, can the youngster rely?” And if we told her, “On beauty, stature, birth, wealth, and mental gifts,” she would conclude we were mad, Alcibiades, when she compared the advantages of her own people in all these respects. And I imagine that even Lampido, daughter of Leotychides and wife of Archidamus and mother of Agis, who have all been kings, would wonder in the same way, when she compared her peoples resources, at your intention of having a contest with her son despite your bad upbringing. And yet, does it not strike you as disgraceful that our enemies’ wives should have a better idea of the qualities that we need for an attempt against them than we have ourselves? Ah, my remarkable friend, listen to me and the Delphic motto, Know thyself; for these people are our competitors, not those whom you think; and there is nothing that will give us ascendancy over them save only pains and skill. If you are found wanting in these, you will be found wanting also in achievement of renown among Greeks and barbarians both; and of this I observe you to be more enamored than anyone else ever was of anything.

Alcibiades:: Well then, what are the pains that I must take, Socrates? Can you enlighten me? For I must say your words are remarkably like the truth.

Socrates:: Yes, I can: but we must put our heads together, you know, as to the way in which we can improve ourselves to the utmost. For observe that when I speak of the need of being educated I am not referring only to you, apart from myself; since my case is identical with yours except in one point.

Alcibiades:: What is that?

Socrates:: My guardian is better and wiser than your one, Pericles.

Alcibiades:: Who is he, Socrates?

Socrates:: God, Alcibiades, who until this day would not let me converse with you; and trusting in him I say that through no other man but me will you attain to eminence.

Alcibiades:: You are jesting, Socrates.

Socrates:: Perhaps; I am right, however, in saying that we need to take pains—all men rather badly, but we two very badly indeed.

Alcibiades:: As to me, you are not wrong.

Socrates:: Nor, I fear, as to myself either.

Alcibiades:: Then what can we do?

Socrates:: There must be no crying off or skulking, my good friend.

Alcibiades:: No, for that would indeed be unseemly, Socrates.

Socrates:: It would; so let us consider in common. Now tell me: we say, do we not, that we wish to be as good as possible?

Alcibiades:: Yes.

Socrates:: In what excellence?

Alcibiades:: Clearly that which is the aim of good men.

Socrates:: Good in what?

Alcibiades:: Clearly, good in the management of affairs.

Socrates:: What sort of affairs? Horsemanship?

Alcibiades:: No, no.

Socrates:: Because we should apply to horsemen?

Alcibiades:: Yes.

Socrates:: Well, seamanship, do you mean?

Alcibiades:: No.

Socrates:: Because we should apply to seamen?

Alcibiades:: Yes.

Socrates:: Well, what sort of thing? The business of what men?

Alcibiades:: Of Athenian gentlemen.

Socrates:: Do you mean by “gentlemen” the intelligent or the unintelligent?

Alcibiades:: The intelligent.

Socrates:: And everyone is good in that wherein he is intelligent?

Alcibiades:: Yes.

Socrates:: And bad wherein he is unintelligent?

Alcibiades:: Of course.

Socrates:: Then is the shoemaker intelligent in the making of foot-gear?

Alcibiades:: Certainly.

Socrates:: So he is good in that article?

Alcibiades:: Good.

Socrates:: Well now, is not the shoemaker unintelligent in the making of clothes?

Alcibiades:: Yes.

Socrates:: So he is bad in that?

Alcibiades:: Yes.

Socrates:: Then, on this showing, the same man is both bad and good.

Alcibiades:: Apparently.

Socrates:: Well, can you say that good men are also bad?

Alcibiades:: No, indeed.

Socrates:: But whoever do you mean by the good?

Alcibiades:: I mean those who are able to rule in the city.

Socrates:: Not, I presume, over horses?

Alcibiades:: No, no.

Socrates:: But over men?

Alcibiades:: Yes.

Socrates:: When they are sick?

Alcibiades:: No.

Socrates:: Or at sea?

Alcibiades:: I say, no.

Socrates:: Or harvesting?

Alcibiades:: No.

Socrates:: Doing nothing, or doing something?

Alcibiades:: Doing something, I say.

Socrates:: Doing what? Try and let me know.

Alcibiades:: Well, men who do business with each other and make use of one another, as is our way of life in our cities.

Socrates:: Then you speak of ruling over men who make use of men?

Alcibiades:: Yes.

Socrates:: Over boatswains who make use of rowers?

Alcibiades:: No, no.

Socrates:: Because that is the pilot's distinction?

Alcibiades:: Yes.

Socrates:: Well, do you mean ruling over men who are flute-players, and who lead the singing and make use of dancers?

Alcibiades:: No, no.

Socrates:: Because, again, that is the chorus-teacher's function?

Alcibiades:: To be sure.

Socrates:: But whatever do you mean by being able to rule over men who make use of men?

Alcibiades:: I mean ruling over men in the city who share in it as fellow-citizens, and do business with each other.

Socrates:: Well, what art is this? Suppose I should ask you over again, as I did just now, what art makes men know how to rule over fellow-sailors?

Alcibiades:: The pilot's.

Socrates:: And what knowledge—to repeat what was said a moment ago—makes them rule over their fellow-singers?

Alcibiades:: That which you just mentioned, the chorus-teacher's.

Socrates:: Well now, what do you call the knowledge of one's fellow-citizens?

Alcibiades:: Good counsel, I should say, Socrates.

Socrates:: Well, and is the pilot's knowledge evil counsel?

Alcibiades:: No, no.

Socrates:: Rather good counsel?

Alcibiades:: So I should think, for the preservation of his passengers.

Socrates:: Quite right. And now, for what is the good counsel of which you speak?

Alcibiades:: For the better management and preservation of the city.

Socrates:: And what is it that becomes present or absent when we get this better management and preservation? If, for example, you should ask me, "What is it that becomes present or absent when the body is better managed and preserved?"—I should reply, "Health becomes present, and disease absent." Do not you think so too?

Alcibiades:: Yes.

Socrates:: And if, again, you asked me, “What becomes present in a better condition of the eyes?” —I should answer in just the same way, “Sight becomes present, and blindness absent.” So, in the case of the ears, deafness is caused to be absent, and hearing to be present, when they are improved and getting better treatment.

Alcibiades:: Correct.

Socrates:: Well then, what is it that becomes present or absent when a state is improved and has better treatment and management?

Alcibiades:: To my mind, Socrates, friendship with one another will be there, while hatred and faction will be absent.

Socrates:: Now, by friendship do you mean agreement or disagreement?

Alcibiades:: Agreement.

Socrates:: And what art is it that causes states to agree about numbers?

Alcibiades:: Arithmetic.

Socrates:: And what of individuals? Is it not the same art?

Alcibiades:: Yes.

Socrates:: And it makes each single person agree with himself?

Alcibiades:: Yes.

Socrates:: And what art makes each of us agree with himself as to which is the longer, a span or a cubit? Is it not mensuration?

Alcibiades:: Of course.

Socrates:: And it makes both individuals and states agree with each other?

Alcibiades:: Yes.

Socrates:: And what about the balance? Is it not the same here too?

Alcibiades:: It is.

Socrates:: Then what is that agreement of which you speak, and about what? And what art secures it? And is it the same in an individual as in a state, when one agrees with oneself and with another?

Alcibiades:: Most likely.

Socrates:: Well, what is it? Do not flag in your answers, but do your best to tell me.

Alcibiades:: I suppose I mean the friendship and agreement that you find when a father and mother love their son, and between brother and brother, and husband and wife.

Socrates:: Then do you suppose, Alcibiades, that a husband can possibly agree with his wife about wool-work, when he does not understand it, and she does?

Alcibiades:: Oh, no.

Socrates:: Nor has he any need, since that is a woman's accomplishment.

Alcibiades:: Yes.

Socrates:: Or again, could a woman agree with a man about soldiering, when she has not learnt it?

Alcibiades:: Oh, no.

Socrates:: Because, I expect you will say again, that is a man's affair.

Alcibiades:: I would.

Socrates:: Then, by your account, there are some accomplishments belonging to women, and some to men?

Alcibiades:: Of course.

Socrates:: So in these, at any rate, there is no agreement between men and women.

Alcibiades:: No.

Socrates:: And hence no friendship either, if, as we said, friendship is agreement.

Alcibiades:: Apparently not.

Socrates:: So women are not loved by men, in so far as they do their own work.

Alcibiades:: It seems not.

Socrates:: Nor are men by women, in so far as they do theirs.

Alcibiades:: No.

Socrates:: And states, therefore, are not well ordered in so far as each person does his own business?

Alcibiades:: I think they are, Socrates.

Socrates:: How can you say that? Without the presence of friendship, which we say must be there if states are well ordered, as otherwise they are not?

Alcibiades:: But it seems to me that friendship arises among them just on that account—that each of the two parties does its own business.

Socrates:: It was not so a moment since: but now, what do you mean this time? Does friendship arise where there is no agreement? And is it possible that agreement should arise where some know about the business, but others do not?

Alcibiades:: Impossible.

Socrates:: And are they doing what is just or unjust, when each man does his own business?

Alcibiades:: What is just, of course.

Socrates:: And when the citizens do what is just in the city, does not friendship arise among them?

Alcibiades:: Again I think that must be so, Socrates.

Socrates:: Then whatever do you mean by that friendship or agreement about which we must be wise and well-advised in order that we may be good men? For I am unable to learn either what it is, or in whom; since it appears that the same persons sometimes have it, and sometimes not, by your account.

Alcibiades:: Well, by Heaven, Socrates, I do not even know what I mean myself, and I fear that for some time past I have lived unawares in a very disgraceful condition.

Socrates:: But you must take heart. For had you perceived your plight at fifty, it would be hard for you to take pains with yourself; whereas here you are at the time of life when one ought to perceive it.

Alcibiades:: Then what should one do on perceiving it, Socrates?

Socrates:: Answer the questions asked, Alcibiades: only do that, and with Heaven's favor—if we are to put any trust in my divination—you and I shall both be in better case.

Alcibiades:: That shall be, so far as my answering can avail.

Socrates:: Come then, what is "taking pains over oneself"—for we may perchance be taking, unawares, no pains over ourselves, though we think we are—and when does a man actually do it? Does he take pains over himself at the same time as over his own things?

Alcibiades:: I at least believe so.

Socrates:: Well now, when does a man take pains over his feet? Is it when he takes pains over what belongs to his feet?

Alcibiades:: I do not understand.

Socrates:: Is there anything you can name as belonging to the hand? For instance, does a ring belong to any other part of a man but the finger?

Alcibiades:: No, indeed.

Socrates:: And so the shoe also belongs to the foot, in the same way?

Alcibiades:: Yes.

Socrates:: And likewise clothes and coverlets belong to the whole body?

Alcibiades:: Yes.

Socrates:: Now when we take pains over our shoes, we take pains over our feet?

Alcibiades:: I do not quite understand, Socrates.

Socrates:: Well, but, Alcibiades, you speak of taking proper pains over this or that matter, do you not?

Alcibiades:: I do.

Socrates:: And do you call it proper pains when someone makes a thing better?

Alcibiades:: Yes.

Socrates:: Then what art makes shoes better?

Alcibiades:: Shoe-making.

Socrates:: So by shoe-making we take pains over our shoes?

Alcibiades:: Yes.

Socrates:: And over our foot too by shoe-making? Or by that art whereby we make feet better?

Alcibiades:: By that art.

Socrates:: And is it not the same one for making our feet as for making the whole body better?

Alcibiades:: I think so.

Socrates:: And is not that gymnastic?

Alcibiades:: Certainly.

Socrates:: So by gymnastic we take pains over our foot, but by shoe-making over what belongs to our foot?

Alcibiades:: Quite so.

Socrates:: And by gymnastic over our hands, but by ring-engraving over what belongs to the hand?

Alcibiades:: Yes.

Socrates:: And by gymnastic over the body, but by weaving and the rest over what belongs to the body?

Alcibiades:: Absolutely so.

Socrates:: Then for taking pains over a thing itself and over what belongs to it we use different arts.

Alcibiades:: Apparently.

Socrates:: So when you take pains over your belongings you are not taking pains over yourself.

Alcibiades:: Not at all.

Socrates:: For the arts, it seems, that one used for taking pains over oneself and over ones belongings would not be the same.

Alcibiades:: Apparently not.

Socrates:: Come then, whatever kind of art can we use for taking pains over ourselves?

Alcibiades:: I cannot say.

Socrates:: Well, so much at least has been admitted, that it is not one which would help us to make a single one of our possessions better, but one which would help to make ourselves so?

Alcibiades:: That is true.

Socrates:: Now, should we ever have known what art makes a shoe better, if we had not known a shoe?

Alcibiades:: Impossible.

Socrates:: Nor could we know what art makes rings better, if we had no cognizance of a ring.

Alcibiades:: True.

Socrates:: Well then, could we ever know what art makes the man himself better, if we were ignorant of what we are ourselves?

Alcibiades:: Impossible.

Socrates:: Well, and is it an easy thing to know oneself, and was it a mere scamp who inscribed these words on the temple at Delphi; or is it a hard thing, and not a task for anybody?

Alcibiades:: I have often thought, Socrates, that it was for anybody; but often, too, that it was very hard.

Socrates:: But, Alcibiades, whether it is easy or not, here is the fact for us all the same: if we have that knowledge, we are like to know what pains to take over ourselves; but if we have it not, we never can.

Alcibiades:: That is so.

Socrates:: Come then, in what way can the same-in-itself be discovered? For thus we may discover what we are ourselves; whereas if we remain in ignorance of it we must surely fail.

Alcibiades:: Rightly spoken.

Socrates:: Steady, then, in Heaven's name! To whom are you talking now? To me, are you not?

Alcibiades:: Yes.

Socrates:: And I in turn to you?

Alcibiades:: Yes.

Socrates:: Then the talker is Socrates?

Alcibiades:: To be sure.

Socrates:: And the hearer, Alcibiades?

Alcibiades:: Yes.

Socrates:: And Socrates uses speech in talking?

Alcibiades:: Of course.

Socrates:: And you call talking and using speech the same thing, I suppose.

Alcibiades:: To be sure.

Socrates:: But the user and the thing he uses are different, are they not?

Alcibiades:: How do you mean?

Socrates:: For instance, I suppose a shoemaker uses a round tool, and a square one, and others, when he cuts.

Alcibiades:: Yes.

Socrates:: And the cutter and user is quite different from what he uses in cutting?

Alcibiades:: Of course.

Socrates:: And in the same way what the harper uses in harping will be different from the harper himself?

Alcibiades:: Yes.

Socrates:: Well then, that is what I was asking just now—whether the user and what he uses are always, in your opinion, two different things.

Alcibiades:: They are.

Socrates:: Then what are we to say of the shoemaker? Does he cut with his tools only, or with his hands as well?

Alcibiades:: With his hands as well.

Socrates:: So he uses these also?

Alcibiades:: Yes.

Socrates:: Does he use his eyes, too, in his shoemaking?

Alcibiades:: Yes.

Socrates:: And we admit that the user and what he uses are different things?

Alcibiades:: Yes.

Socrates:: Then the shoemaker and the harper are different from the hands and eyes that they use for their work?

Alcibiades:: Apparently.

Socrates:: And man uses his whole body too?

Alcibiades:: To be sure.

Socrates:: And we said that the user and what he uses are different?

Alcibiades:: Yes.

Socrates:: So man is different from his own body?

Alcibiades:: It seems so.

Socrates:: Then whatever is man?

Alcibiades:: I cannot say.

Socrates:: Oh, but you can—that he is the user of the body.

Alcibiades:: Yes.

Socrates:: And the user of it must be the soul?

Alcibiades:: It must.

Socrates:: And ruler?

Alcibiades:: Yes.

Socrates:: Now, here is a remark from which no one, I think, can dissent.

Alcibiades:: What is it?

Socrates:: That man must be one of three things.

Alcibiades:: What things?

Socrates:: Soul, body, or both together as one whole.

Alcibiades:: Very well.

Socrates:: But yet we have admitted that what actually rules the body is man?

Alcibiades:: We have.

Socrates:: And does the body rule itself?

Alcibiades:: By no means.

Socrates:: Because we have said that it is ruled.

Alcibiades:: Yes.

Socrates:: Then that cannot be what we are seeking.

Alcibiades:: It seems not.

Socrates:: Well then, does the combination of the two rule the body, so that we are to regard this as man?

Alcibiades:: Perhaps it is.

Socrates:: The unlikeliest thing in the world: for if one of the two does not share in the rule, it is quite inconceivable that the combination of the two can be ruling.

Alcibiades:: You are right.

Socrates:: But since neither the body nor the combination of the two is man, we are reduced, I suppose, to this: either man is nothing at all, or if something, he turns out to be nothing else than soul.

Alcibiades:: Precisely so.

Socrates:: Well, do you require some yet clearer proof that the soul is man?

Alcibiades:: No, I assure you: I think it is amply proved.

Socrates:: And if it is tolerably, though not exactly, we are content; exact knowledge will be ours later, when we have discovered the thing that we passed over just now because it would involve much consideration.

Alcibiades:: What is that?

Socrates:: The point suggested in that remark a moment ago, that we should first consider the same-in-itself; but so far, instead of the same, we have been considering what each single thing is in itself. And perhaps we shall be satisfied with that: for surely we cannot say that anything has more absolute possession of ourselves than the soul.

Alcibiades:: No, indeed.

Socrates:: And it is proper to take the view that you and I are conversing with each other, while we make use of words, by intercourse of soul with soul?

Alcibiades:: Quite so.

Socrates:: Well, that is just what we suggested a little while ago—that Socrates, in using words to talk with Alcibiades, is holding speech, not with your face, it would seem, but with Alcibiades—that is, with his soul.

Alcibiades:: I believe so.

Socrates:: Then he who enjoins a knowledge of oneself bids us become acquainted with the soul.

Alcibiades:: So it seems.

Socrates:: And anyone who gets to know something belonging to the body knows the things that are his, but not himself.

Alcibiades:: That is so.

Socrates:: Then no physician, in so far as he is a physician, knows himself, nor does any trainer, in so far as he is a trainer.

Alcibiades:: It seems not.

Socrates:: And farmers, and craftsmen generally, are far from knowing themselves. For these people, it would seem, do not even know their own things, but only things still more remote than their own things, in respect of the arts which they follow; since they know but the things of the body, with which it is tended.

Alcibiades:: That is true.

Socrates:: So if knowing oneself is temperance, none of these people is temperate in respect of his art.

Alcibiades:: None, I agree.

Socrates:: And that is why these arts are held to be sordid, and no acquirements for a good man.

Alcibiades:: Quite so.

Socrates:: Then once again, whoever tends his body tends his own things, but not himself?

Alcibiades:: It looks rather like it.

Socrates:: But whoever tends his money tends neither himself nor his own things, but only things yet more remote than his own things?

Alcibiades:: I agree.

Socrates:: So that the money-maker has ceased to do his own business.

Alcibiades:: Correct.

Socrates:: And if anyone is found to be a lover of Alcibiades' body, he has fallen in love, not with Alcibiades, but with something belonging to Alcibiades?

Alcibiades:: That is true.

Socrates:: Your lover is rather he who loves your soul?

Alcibiades:: He must be, apparently, by our argument.

Socrates:: And he who loves your body quits you, and is gone, as soon as its bloom is over?

Alcibiades:: Apparently.

Socrates:: Whereas he who loves your soul will not quit you so long as it makes for what is better?

Alcibiades:: So it seems.

Socrates:: And I am he who does not quit you, but remains with you when your body's prime is over, and the rest have departed.

Alcibiades:: Yes, and I am glad of it, Socrates, and hope you will not go.

Socrates:: Then you must endeavor to be as handsome as you can.

Alcibiades:: Well, I shall endeavor.

Socrates:: You see how you stand: Alcibiades, the son of Cleinias, it seems, neither had nor has any lover except one only, and that a cherished one, Socrates, the son of Sophroniscus and Phaenarete.

Alcibiades:: True.

Socrates:: And you said that I only just anticipated you in coming to you, for otherwise you would have come to me first for the purpose of inquiring why I am the only one who does not leave you?

Alcibiades:: Yes, that was so.

Socrates:: Then the reason was that I was the only lover of you, whereas the rest were lovers of what is yours; and that is passing its prime, while you are beginning to bloom. So now, if you are not blighted and deformed by the Athenian people, I shall never forsake you. For my chiefest fear is of your being blighted by becoming a lover of the people, since many a good Athenian has come to that ere now. For fair of face is "the people of great-hearted Erechtheus"; but you should get a view of it stripped: so take the precaution that I recommend.

Alcibiades:: What is it?

Socrates:: Exercise yourself first, my wonderful friend, in learning what you ought to know before entering on politics; you must wait till you have learnt, in order that you may be armed with an antidote and so come to no harm.

Alcibiades:: Your advice seems to me good, Socrates; but try to explain in what way we can take pains over ourselves.

Socrates:: Well, we have made one step in advance; for there is a pretty fair agreement now as to what we are, whereas we were afraid we might fail of this and take pains, without knowing it, over something other than ourselves.

Alcibiades:: That is so.

Socrates:: And the next step, we see, is to take care of the soul, and look to that.

Alcibiades:: Clearly.

Socrates:: While handing over to others the care of our bodies and our coffers.

Alcibiades:: Quite so.

Socrates:: Then how shall we obtain the most certain knowledge of it? For if we know that, it seems we shall know ourselves also. In Heaven's name, do we fail to comprehend the wise words of the Delphic inscription, which we mentioned just now?

Alcibiades:: With what intent do you say that, Socrates?

Socrates:: I will tell you what I suspect to be the real advice which that inscription gives us. I rather think there are not many illustrations of it to be found, but only in the case of sight.

Alcibiades:: What do you mean by that?

Socrates:: Consider in your turn: suppose that, instead of speaking to a man, it said to the eye of one of us, as a piece of advice—"See thyself,"—how should we apprehend the meaning of the admonition? Would it not be, that the eye should look at something in looking at which it would see itself?

Alcibiades:: Clearly.

Socrates:: Then let us think what object there is anywhere, by looking at which we can see both it and ourselves.

Alcibiades:: Why, clearly, Socrates, mirrors and things of that sort.

Socrates:: Quite right. And there is also something of that sort in the eye that we see with?

Alcibiades:: To be sure.

Socrates:: And have you observed that the face of the person who looks into another's eye is shown in the optic confronting him, as in a mirror, and we call this the pupil, for in a sort it is an image of the person looking?

Alcibiades:: That is true.

Socrates:: Then an eye viewing another eye, and looking at the most perfect part of it, the thing wherewith it sees, will thus see itself.

Alcibiades:: Apparently.

Socrates:: But if it looks at any other thing in man or at anything in nature but what resembles this, it will not see itself.

Alcibiades:: That is true.

Socrates:: Then if an eye is to see itself, it must look at an eye, and at that region of the eye in which the virtue of an eye is found to occur; and this, I presume, is sight.

Alcibiades:: That is so.

Socrates:: And if the soul too, my dear Alcibiades, is to know herself, she must surely look at a soul, and especially at that region of it in which occurs the virtue of a soul—wisdom, and at any other part of a soul which resembles this?

Alcibiades:: I agree, Socrates.

Socrates:: And can we find any part of the soul that we can call more divine than this, which is the seat of knowledge and thought?

Alcibiades:: We cannot.

Socrates:: Then this part of her resembles God, and whoever looks at this, and comes to know all that is divine, will gain thereby the best knowledge of himself.

Alcibiades:: Apparently.

Socrates:: And self-knowledge we admitted to be temperance.

Alcibiades:: To be sure.

Socrates:: So if we have no knowledge of ourselves and no temperance, shall we be able to know our own belongings, good or evil?

Alcibiades:: How can that be, Socrates?

Socrates:: For I expect it seems impossible to you that without knowing Alcibiades you should know that the belongings of Alcibiades are in fact his.

Alcibiades:: Impossible indeed, upon my word.

Socrates:: Nor could we know that our belongings are ours if we did not even know ourselves?

Alcibiades:: How could we?

Socrates:: And so, if we did not so much as know our belongings, we could not know the belongings of our belongings either?

Alcibiades:: Apparently not.

Socrates:: Then we were not quite correct in admitting just now that there are people who, without knowing themselves, know their belongings, while others know their belongings' belongings. For it seems to be the function of one man and one art to discern all three—himself, his belongings, and the belongings of his belongings.

Alcibiades:: It looks like it.

Socrates:: And anyone who is ignorant of his belongings will be similarly ignorant, I suppose, of the belongings of others.

Alcibiades:: Quite so.

Socrates:: And if ignorant of others' affairs, he will be ignorant also of the affairs of states.

Alcibiades:: He must be.

Socrates:: Then such a man can never be a statesman.

Alcibiades:: No, indeed.

Socrates:: No, nor an economist either.

Alcibiades:: No, indeed.

Socrates:: Nor will he know what he is doing.

Alcibiades:: No, I agree.

Socrates:: And will not he who does not know make mistakes?

Alcibiades:: To be sure.

Socrates:: And when he makes mistakes, will he not do ill both in private and in public?

Alcibiades:: Of course.

Socrates:: And doing ill he will be wretched?

Alcibiades:: Yes, very.

Socrates:: And what of those for whom he is doing so?

Alcibiades:: They will be wretched also.

Socrates:: Then it is impossible to be happy if one is not temperate and good.

Alcibiades:: Impossible.

Socrates:: So it is the bad men who are wretched.

Alcibiades:: Yes, very.

Socrates:: And hence it is not he who has made himself rich that is relieved of wretchedness, but he who has made himself temperate.

Alcibiades:: Apparently.

Socrates:: So it is not walls or warships or arsenals that cities need, Alcibiades, if they are to be happy, nor numbers, nor size, without virtue.

Alcibiades:: No, indeed.

Socrates:: And if you are to manage the city's affairs properly and honorably, you must impart virtue to the citizens.

Alcibiades:: Of course.

Socrates:: But could one possibly impart a thing that one had not?

Alcibiades:: How, indeed?

Socrates:: Then you or anyone else who is to be governor and curator, not merely of himself and his belongings in private, but of the state and its affairs, must first acquire virtue himself.

Alcibiades:: That is true.

Socrates:: Hence it is not license or authority for doing what one pleases that you have to secure to yourself or the state, but justice and temperance.

Alcibiades:: Apparently.

Socrates:: For you and the state, if you act justly and temperately, will act so as to please God.

Alcibiades:: Naturally.

Socrates:: And, as we were saying in what went before, you will act with your eyes turned on what is divine and bright.

Alcibiades:: Apparently.

Socrates:: Well, and looking thereon you will behold and know both yourselves and your good.

Alcibiades:: Yes.

Socrates:: And so you will act aright and well?

Alcibiades:: Yes.

Socrates:: Well now, if you act in this way, I am ready to warrant that you must be happy.

Alcibiades:: And I can rely on your warranty.

Socrates:: But if you act unjustly, with your eyes on the godless and dark, the probability is that your acts will resemble these through your ignorance of yourselves.

Alcibiades:: That is probable.

Socrates:: For if a man, my dear Alcibiades, is at liberty to do what he pleases, but is lacking in mind, what is the probable result to him personally, or to the state as well? For instance, if he is sick and at liberty to do what he pleases—without a medical mind, but with a despot's power which prevents anyone from even reproving him—what will be the result? Will not his health, in all likelihood, be shattered?

Alcibiades:: That is true.

Socrates:: Again, in a ship, if a man were at liberty to do what he chose, but were devoid of mind and excellence in navigation, do you perceive what must happen to him and his fellow-sailors?

Alcibiades:: I do: they must all perish.

Socrates:: And in just the same way, if a state, or any office or authority, is lacking in excellence or virtue, it will be overtaken by failure?

Alcibiades:: It must.

Socrates:: Then it is not despotic power, my admirable Alcibiades, that you ought to secure either to yourself or to the state, if you would be happy, but virtue.

Alcibiades:: That is true.

Socrates:: And before getting virtue, to be governed by a superior is better than to govern, for a man as well as a child.

Alcibiades:: Apparently.

Socrates:: And the better is also nobler?

Alcibiades:: Yes.

Socrates:: And the nobler more becoming?

Alcibiades:: Of course.

Socrates:: Then it becomes a bad man to be a slave, since it is better.

Alcibiades:: Yes.

Socrates:: So vice is a thing that becomes a slave.

Alcibiades:: Apparently.

Socrates:: And virtue becomes a free man.

Alcibiades:: Yes.

Socrates:: And we should shun, my good friend, all slavishness?

Alcibiades:: Most certainly, Socrates.

Socrates:: And do you now perceive how you stand? Are you on the side of the free, or not?

Alcibiades:: I think I perceive only too clearly.

Socrates:: Then do you know how you may escape from the condition in which you now find yourself? Let us not give it a name, where a handsome person is concerned!

Alcibiades:: I do.

Socrates:: How?

Alcibiades:: If it be your wish, Socrates.

Socrates:: That is not well said, Alcibiades.

Alcibiades:: Well, what should I say?

Socrates:: If it be God’s will.

Alcibiades:: Then I say it. And yet I say this besides, that we are like to make a change in our parts, Socrates, so that I shall have yours and you mine. For from this day onward it must be the case that I am your attendant, and you have me always in attendance on you.

Socrates:: Ah, generous friend! So my love will be just like a stork; for after hatching a winged love in you it is to be cherished in return by its nestling.

Alcibiades:: Well, that is the position, and I shall begin here and now to take pains over justice.

Socrates:: I should like to think you will continue to do so; yet I am apprehensive, not from any distrust of your nature, but in view of the might of the state, lest it overcome both me and you.

## **The First Alcibiades.**

Translated by Mr. Sydenham.

*PERSONS OF THE DIALOGUE:*

Socrates, Alcibiades.

SCENE, (most probably) THE LYCEUM.

Socrates:: SON of Clinias! you wonder, I suppose, that I, who was the earliest of your admirers, now, when all the rest have forsaken you, am the only one who still retains unalterably the same sentiments; and yet, that for so many years I have never spoken so much as a word to you, whilst the others were pressing through crowds of people to converse with you. This reserve and distance in my behavior have been owing to no human regards, but to an impediment thrown in my way by a dæmoniacal nature, the power and force of which you shall by and by be made acquainted with. But now, seeing that this power no longer operates to hinder my approach. I am come thus to accost you; and am in good hopes too, that for the future the dæmon will give no opposition to my desire of conversing with you. All this while, however, being but a spectator, I have been able tolerably well to observe and consider your behavior with regard to your admirers. And I find, that, though they have been numerous, and such persons too as thought highly of themselves, there is not one whom you have not driven away from you by your superior haughtiness and imagined elevation. The reasons of your being exalted so highly in your own opinion, I am desirous of laying before you. They are these; You presume, that in no affair whatever you need assistance from any other party: for that what you have of your own, whether of outward advantages or inward accomplishments, is so great as to be all sufficient. In the first place, you think yourself excelling in the handsomeness of your person and in the fineness of your figure. And in this opinion it is evident to every one who has eyes that you are not mistaken. In the next place, you dwell on these thoughts: that you are descended from families the most illustrious in the state to which you belong; that this state is the greatest of any in Greece; that you have friends here, and relations on your father's side, very numerous and very powerful, ready to assist you on every occasion; and that your relations on your mother's side are not inferior to them, either in power or in number. But a greater strength than from all these whom I have mentioned, taken together, you think that you derive from Pericles, the son of Xanthippus, whom your father left guardian to yourself and to your brother: Pericles, who is able to do what he pleases; and that, not only at Athens, but throughout all Greece, and with many and great families abroad. To all these advantages I shall add the greatness of your estate; though, indeed, on this advantage you seem to value yourself less than you do on any other. Elevated as you are in your own mind on these accounts, you have looked down on your admirers: and they, conscious of their comparative meanness, have bowed their heads, and have retired. This you are very sensible of: and therefore I well know that you wonder what I can have in my thoughts, or what hopes I can entertain, seeing that I quit you not, but continue my attachment to you still, when your other admirers have all forsaken you.

Alcibiades:: This however, Socrates, perhaps you do not know, that you have been a little beforehand with me. For I really had it in my mind to address you first, and to ask you these very questions: What can possibly be your meaning, and with what views or expectations is it, that you continually press on me, and, wherever I am, are assiduous to be there yourself? for I do in truth wonder, what your business can be with me, and should be very glad to be informed.

Socrates:: You will hear me then, ’tis to be supposed, with willingness and attention, if you really are desirous, as you say you are, of knowing what I have in my thoughts. I speak therefore as to a person disposed to hear, and to stay till he has heard all.

Alcibiades:: I am entirely so disposed: it is your part to speak.

Socrates:: But observe this: you must not wonder, if, as I found it difficult to make a beginning, I should find it no less difficult to make an end.

Alcibiades:: My good man, say all you have to say; for I shall not fail to attend to you.

Socrates:: I must say it then: and though it is a hard talk for any man to address the person whom he loves or admires, if that person be superior to flattery, yet I must adventure boldly to speak my mind. If, Alcibiades, I had observed you satisfied with those advantages of yours, which I just now enumerated; if you had appeared to indulge the fancy of spending your whole life in the enjoyment of them; I persuade myself, that my love and admiration of you would have long since left me. But that you entertain thoughts very different from such as those, I shall now show, and shall lay your own mind open before yourself. By these means you will also plainly perceive, how constantly and closely my mind has attended to you. My opinion of you then is this: That, if any of the gods were to put this question to you,—“Alcibiades!” were he to say, “whether do you choose to live in the possession of all the things which are at present yours; or do you prefer immediate death, if you are not permitted ever to acquire things greater?” in this case, it appears to me that you would make death your option. But what kind of expectations you live in, I shall now declare. You think, that, if you speedily make your appearance before the Athenian people in assembly, and this you purpose to do within a few days, you shall be able to convince them, that you merit higher honors than were ever bestowed on Pericles, or any other person in any age: and having convinced them of this, you think that you will arrive at the chief power in the state; and if here at home, that you will then have the greatest weight and influence abroad; and not only so with the rest of the Grecian states, but with the barbarian nations too, as many as inhabit the same continent with us. And further: if the deity whom I before spoke of, allowing you larger limits, were to say to you, that “you must be contented with being the master here in Europe; for that ‘twill not be permitted you to pass over into Asia, nor to concern yourself with the administration of any affairs there it appears to me, that neither on these terms, thus limited, would you think life eligible; nor on any terms, indeed, that fell short of filling, in a manner, the whole world with your renown, and of being every where lord and master. I believe you deem no man that ever lived, excepting Cyrus and Xerxes, worth the speaking of. In fine, that you entertain such hopes as I have mentioned, I know with certainty, and speak not from mere conjecture. Now you, perhaps, conscious of the truth of what I have spoken, might say, What is all this to the account you promised to give me, of the reasons for which your attachment to me still continues? I will tell you then, dear son of Clinias and Dinomache! That all these thoughts of yours should ever come to an end, is impossible without my help,—so great power I think myself to have with regard to your affairs and to yourself too. For this reason, I have long been of opinion, that the god did not as yet permit me to hold any conversation with you; and I waited for the time when he would give me leave. For, as you entertain hopes of proving to the people, that your value to them is equal to whatever they can give you; and as you expect that, having proved this point, you shall immediately obtain whatever power you desire; in the same manner, do I expect to have the greatest power and influence over you, when I shall have proved that I am valuable to you more than any other thing is; and that neither guardian, nor relation, nor any other person, is able to procure you the power you long for, except myself; with the assistance, however, of the god. So long therefore as you was yet too young, and before you had your mind filled with those swelling hopes, I believe that the god would not permit me to have discourse with you, because you would not have regarded me, and I consequently should have discoursed in vain; but that he has now given me free leave, for that you would now hearken to me.

Alcibiades:: Much more unaccountable and absurd do you appear to me now, Socrates, since you have begun to open yourself, than when you followed me every where without speaking to me a word: and yet you had all the appearance of being a man of that sort then. As to what you have said, whether I entertain those thoughts in my mind, or not, you, it seems, know with certainty: so that, were I to say I did not, the denial would not avail me, nor persuade you to believe me. Admitting it then, and supposing that I indulge the hopes you mentioned ever so much, how they may be accomplished by means of you, and that without your help they never can, are you able to prove to me?

Socrates:: Do you ask me, whether I am able to prove it to you in a long harangue, such a one as you are accustomed to hear? I have no abilities in that way. But yet I should be able, as I think, to prove to you, that those pretentions of mine are not vain, if you would be willing but to do me one small piece of service.

Alcibiades:: If that service be not difficult to be done, I am willing.

Socrates:: Do you think it difficult, or not, to make answers to such questions as are proposed to you?

Alcibiades:: Not difficult.

Socrates:: Be ready then to answer.

Alcibiades:: Do you then propose your questions.

Socrates:: May I propose them, with a supposition that you have those thoughts in your mind which I attribute to you?

Alcibiades:: Be it so, if you choose it; that I may know what further you have to say.

Socrates:: Well then. You have it in your mind, as I said, to appear in presence of the Athenians within a short time, with intention to harangue them and give them your advice. If therefore, when you are just ready to mount the rostrum, I were to stop you, and to say thus, "Since the Athenians are here met in assembly, on purpose to deliberate on some of their affairs, what, I pray you, are to be the subjects of their deliberation, now that you rise up to give them your counsel? Must not the subjects be such as you are better acquainted with than they?" what answer would you make me?

Alcibiades:: I certainly should answer, that the subjects were such as I knew better than others who were present.

Socrates:: On those subjects, then, which you happen to have knowledge in you are a good counselor?

Alcibiades:: Without doubt.

Socrates:: Have you knowledge in those things only which you have either learnt from others, or found out yourself?

Alcibiades:: What things other than those is it possible that I should have any knowledge in?

Socrates:: And is it possible that ever you should have learnt, or have found out, any thing which you was not willing to learn, or to search out by yourself?

Alcibiades:: It is not.

Socrates:: And was you ever at any time willing to learn, or did you ever at any time seek to know, any things in which you imagined yourself to be already knowing?

Alcibiades:: No, certainly.

Socrates:: In those things which you now happen to know, was there once a time when you did not think yourself knowing?

Alcibiades:: That must have been.

Socrates:: Now, what the things are which you have learnt, I tolerably well know. But if you have been taught any thing without my knowledge, tell me what. To the best of my memory, you have been taught grammar, the gymnic exercises, and to play on stringed instruments of music: for on wind instruments, besides, you refused to learn. This is the sum total of all your knowledge; unless you have learnt any thing else in some place or other, which I have not discovered: and I think, that neither by day nor yet by night did you ever stir out of doors but I was acquainted with all your motions.

Alcibiades:: 'Tis true that I have not gone to any other masters than to such as taught the arts which you have mentioned.

Socrates:: Well then. When the Athenians are consulting together about the grammar of their language, how to write or speak it with propriety, at these times is it that you will rise up to give them your advice?

Alcibiades:: By Jove, not I.

Socrates:: But is it then when they are in debate about striking chords on the lyre?

Alcibiades:: By no means should I make a speech on such a subject.

Socrates:: It cannot be on the subject of wrestling neither: because they never use to deliberate on this subject in their public assemblies.

Alcibiades:: Certainly not.

Socrates:: On what subject, then, of their consultations is it that you intend the giving them your advice? It cannot be when building is the subject.

Alcibiades:: No, certainly.

Socrates:: Because in this case a builder would give them better advice than you could.

Alcibiades:: True.

Socrates:: Nor yet is it when they consult together concerning divination.

Alcibiades:: It is not.

Socrates:: For a diviner would, in this case be a better counselor than you.

Alcibiades:: Without doubt.

Socrates:: And that, whether he was a tall or a short man; whether his person was handsome or deformed; and whether his family was noble or ignoble.

Alcibiades:: How should it be other wise?

Socrates:: For to give good advice in any case whatever, belongs, I suppose, only to a person skilled in the subject, and not to a fine gentleman.

Alcibiades:: Beyond all question.

Socrates:: And whether the man who gives them his advice be rich or poor, it will make no difference to the Athenians, when they are consulting about the health of the city; but they will always inquire after a physician only to consult with.

Alcibiades:: They will be right in so doing.

Socrates:: Now, on what subject is it, when they are met in consultation together, that you will do right in rising up and giving them your counsel?

Alcibiades:: 'Tis when they are in consultation, Socrates, about their own affairs.

Socrates:: About increasing their navy, do you mean? what sort of vessels they should provide, and in what manner they should have them built?

Alcibiades:: I mean no such thing, Socrates.

Socrates:: Because you are ignorant, I presume, in the art of ship-building, Is not this the reason? Or is there any other, why you would choose in such a consultation to sit silent?

Alcibiades:: That is the only reason.

Socrates:: What affairs of their own then do you mean?

Alcibiades:: I mean, Socrates, when: they are deliberating about the makings war, or the making peace; or concerning any other affairs of state.

Socrates:: Do you mean, when they are deliberating on these points, with whom 'tis proper for them to make peace, and with whom to engage in war, and in what way 'tis proper to carry on that war? Is this what you mean?'

Alcibiades:: It is.

Socrates:: And you will agree, that ’tis proper to make peace or war with those people with whom ’tis best so to do?

Alcibiades:: Certainly.

Socrates:: And at that time when ’tis best?

Alcibiades:: By all means.

Socrates:: And to continue it so long as ’tis best to continue it?

Alcibiades:: To be sure.

Socrates:: Now, suppose that the Athenians were deliberating about the exercise of wrestling, with what sort of persons it is proper to come to close quarters, and with whom to engage at arm’s length, and in what way, would you give the best counsel in this case, or would a master of the exercises?

Alcibiades:: Such a master, certainly.

Socrates:: Can you tell me now, what end such a master would have, in his view, when he gave his counsel on these points, with whom it is proper to wrestle closely, and with whom not so? at what times it is proper, and in what manner? My meaning is to ask you these questions: Whether is it proper to wrestle closely with those persons with whom it is best so to wrestle, or is it not?

Alcibiades:: It is.

Socrates:: Whether as much also as is best?

Alcibiades:: As much.

Socrates:: Whether at those times too when ’tis best?

Alcibiades:: Without doubt.

Socrates:: But further: Ought not a singer sometimes, in singing, to touch his lute, and to move his feet?

Alcibiades:: He ought.

Socrates:: Ought he not to do so at those times when ’tis best so to do?

Alcibiades:: Certainly.

Socrates:: And to continue the doing so as long as ’tis best to continue it?

Alcibiades:: I agree.

Socrates:: Well now. Since you agree with me that there is a best in both these actions, in fingering the lute whilst singing, and in the exercise of close wrestling, by what name call you that which is the best in fingering the lute? As that which is the best in wrestling I call gymnastical, what name now do you give to that which is best done in that other action?

Alcibiades:: I do not apprehend your meaning.

Socrates:: Try to copy after the pattern which I shall now give you. Supposing, then, that I had been asked this question, “In wrestling, how is that performed which is performed best?” I should answer, ’tis performed in every respect rightly. Now, in wrestling, that performance is right which is according to the rules of art. Is it not?

Alcibiades:: It is.

Socrates:: And the art, in this case, is it not gymnastic?

Alcibiades:: Without dispute.

Socrates:: I said, that that which is the best in wrestling is gymnastical.

Alcibiades:: You did.

Socrates:: And was it not well said?

Alcibiades:: I think it was.

Socrates:: Come then. Do you in like manner (For it would not ill become you likewise to discourse well) say, in the first place, What is the art, to which belong the playing on the harp, the singing, and the moving at the same time, rightly all; the whole of this art, by what name is it called? Are you not yet able to tell?

Alcibiades:: Indeed I am not.

Socrates:: Try in this way then. What goddesses are those who preside over this art?

Alcibiades:: The Muses mean you, Socrates?

Socrates:: I do. Consider now, what name is given to their art—a name derived from them.

Alcibiades:: I suppose you mean music.

Socrates:: The very thing. What then is that which is performed rightly, according to this art? Just as in the other case I told you, that whatever was performed rightly according to the rules of that other art, was gymnastical; in this case now, after the same manner, whatever is performed agreeably to the rules of this art, how do you say it must be performed?

Alcibiades:: Musically, I think.

Socrates:: You say well. Let us now proceed further; and tell me, what name you give to that which is best in making war; and what name to that which is best in making peace: just as, in the former cases, the best in one of them you called the more musical, in the other the more gymnastical. Try now in these cases likewise to name that which is the best.

Alcibiades:: I find myself quite unable to tell what it is.

Socrates:: 'Tis a shame to you that you are so. For, suppose you were speaking and giving your opinion concerning the superiority of one kind of food to another, and should say, that such or such a kind of food was the best at this season, and such or such a quantity of it; and suppose a man should thereupon question you thus, “What do you mean by the best, Alcibiades?” on these subjects you would be able to give him an answer, and to tell him, that by the best you meant the most wholesome; and this you would say, notwithstanding that you do not profess to be a physician. And yet, on a subject: which you profess to have the knowledge of, and rise up to give your judgment and advice on, as if you had this knowledge, are you not ashamed, when you are questioned, as I think you are, on this very subject, to be unable to give an answer, and to tell what is that which is the best? And must not this inability appear to others shameful in you?

Alcibiades:: Certainly it must.

Socrates:: Consider thoughtfully now, and tell me, What is the end or aim of that which is done best in the making or the continuing of peace, and likewise in the going to war with those with whom it is proper?

Alcibiades:: Well, I do consider; but cannot think of what it is.

Socrates:: Know you not, when we go to war, what it is which both the parties accuse each other of during their military preparations, and what names they give to the causes of their quarrels?

Alcibiades:: I do. They accuse each other of deceiving, or of offering violence, or of taking away some of their possessions.

Socrates:: But observe: How do they say they have been thus treated? Try to tell me what difference there is in the manner of this treatment they give to each other.

Alcibiades:: Do you mean, whether they thus treat each other justly or unjustly?

Socrates:: This is the very difference I mean.

Alcibiades:: These different manners of ill treatment differ totally and entirely.

Socrates:: Well then. With whom would you counsel the Athenians to engage in war? whether with those who treat them ill unjustly, or with those who treat them as they deserve?

Alcibiades:: A question, this, of very serious import. For, if any man should entertain a thought of the propriety of going to war with such as act uprightly, he would not dare to own it.

Socrates:: Because it is not lawful, I suppose, to engage in such a war.

Alcibiades:: By no means is it so, neither seems it to be beautiful.

Socrates:: With a view therefore to these things, and to what is just, you will make your speeches to the people.

Alcibiades:: There is a necessity for bringing my arguments from these topics.

Socrates:: That best then, concerning which I just now asked you what it was,—the best on these subjects,—whether it is proper to go to war or not, with whom it is proper, and with whom not,—at what times it is proper, and when not,—does the best on these subjects appear to be any other thing than that which is the most agreeable to justice? or does it not?

Alcibiades:: It appears to be no other thing.

Socrates:: How is this, friend Alcibiades? Is it a secret to yourself, that you are ignorant in the science of justice? or else, Is it a secret to me, that you have learnt it, and have gone to some master, who has taught you to distinguish between what is the most agreeable to justice, and what is the most repugnant to it? If this which I last mentioned be the case, who is this master? Tell me; that I too may go and learn of him, through your recommendation.

Alcibiades:: You banter, Socrates.

Socrates:: Not so; by the guardian-god of friendship to both of us, you and me, whose deity I would least of all invoke for witness to a falsehood! If then you have any master who teaches you that science, let me know who he is.

Alcibiades:: And what if I have not? Do you think that I could by no other means have attained the knowledge of what is just, and what is unjust?

Socrates:: I think that you would, if you had discovered it by yourself.

Alcibiades:: Are you then of opinion that I could not have discovered it by myself?

Socrates:: I am entirely of opinion that you might, if ever you had sought for it.

Alcibiades:: Do you presume, then, that I have never sought for it?

Socrates:: I should presume that you had, if ever you had thought yourself ignorant of it.

Alcibiades:: Was there not then a time when I so thought?

Socrates:: Well said. Can you tell me, then, at what time you did not imagine yourself to know what things are just, and what are unjust?' For, come, let me ask you: Was it last year, when you inquired into these subjects, and did not imagine yourself already knowing in them? or did you at that time think that you had such knowledge? Answer truly now, that our argument may come to some conclusion.

Alcibiades:: Well then. I did at that time presume myself to be knowing in those subjects.

Socrates:: And in all the third year back from this present, in all the fourth too, and all the fifth, did you not presume of yourself the same?

Alcibiades:: I did.

Socrates:: And earlier than the time I mentioned last, you was but a boy.

Alcibiades:: True.

Socrates:: And in your days of boyhood I am well assured that you thought yourself knowing in those subjects.

Alcibiades:: How are you so sure of that?

Socrates:: Often in the schools, when you was a boy, and in other places too whenever you was playing at dice, or was a party in any other play, I have heard you talking about what things were just or unjust—not as if you had any doubts on those subjects, but very strenuously and boldly pronouncing, that such or such a one of your playmates was a wicked boy, and a rogue, and was guilty of a piece of injustice. Is not all this true?

Alcibiades:: Well. But what else was I to do, when any of them injured me?

Socrates:: Right. But if you had happened to be ignorant of this very point, whether you was injured or not, would you say, "What in such a case was I to do?"

Alcibiades:: But, by Jove, I was not ignorant of that point; for I clearly saw that I was injured.

Socrates:: You thought yourself, it seems, therefore, when you was a boy, knowing in the science of what is just and what is unjust?

Alcibiades:: I did so; and knowing in it I was too.

Socrates:: At what time was it that you first discovered it? for certainly it was not at a time when you thought yourself knowing in it.

Alcibiades:: That, ’tis clear, could not be.

Socrates:: At what time then was it that you thought yourself ignorant in it? Consider: but that time you will never find.

Alcibiades:: By Jove, Socrates, I am not able to tell when.

Socrates:: You did not acquire that knowledge, then, by any discovery of your own?

Alcibiades:: That does not at all appear to have been the case.

Socrates:: And besides, you acknowledged but just before, that you did not acquire it by being taught. If then you neither discovered it of yourself, nor was taught it by any other person, how or whence have you this knowledge?

Alcibiades:: Well. But I was wrong in my answers, when I supposed that I had found out that knowledge by myself.

Socrates:: In what way then did you acquire it?

Alcibiades:: I learnt it, I presume, in the same way in which others do.

Socrates:: We are now come round again to the same question as before; From whom did you learn it? Inform me.

Alcibiades:: From the people.

Socrates:: To no good teachers have you recourse for the origin of your knowledge, in referring it to the people.

Alcibiades:: Why so? Are not they capable of teaching?

Socrates:: Not so much as what movements are proper, and what improper, to make in a game at tables. And yet the knowledge of these things is meaner and more inconsiderable, in my opinion, than the knowledge of what things are just, and what are unjust. Do not you think so too?

Alcibiades:: I do.

Socrates:: Incapable, therefore, as they are of teaching meaner things, can they teach things higher and of more importance?

Alcibiades:: I think they can, Nay, it is certain that they are capable of teaching many things of more importance than the movements in a game at tables.

Socrates:: What things do you mean?

Alcibiades:: Such as, for instance, to speak the Greek language: for I myself learnt it from them. Nor could I name any other teacher of that language that I ever had; but must refer my being able to speak it to those very persons who you say are no good teachers.

Socrates:: Well, my noble sir: in this matter, indeed, the people are good teachers, and as such may justly be recommended.

Alcibiades:: Why particularly in this?

Socrates:: Because in this they possess all the requisites necessary to every good teacher.

Alcibiades:: What requisites do you mean?

Socrates:: Do you not know, that those who are to teach any thing must in the first place have the knowledge of it themselves? Must they not?

Alcibiades:: Without doubt.

Socrates:: And must not all those who have the knowledge of any thing agree together on that subject, and not differ in their opinions of it?

Alcibiades:: Certainly.

Socrates:: But where they differ among themselves in their opinions, would you say that they have, all of them, knowledge in those subjects?

Alcibiades:: Certainly not.

Socrates:: Of such things, then, how can they be good teachers?

Alcibiades:: By no means can they.

Socrates:: Well now. Do the people seem to you to differ among themselves about the meaning of the words stone and wood? Ask whom you will, are they not all agreed in the same opinion? And when they are bid to take up a stone, or apiece of wood, do they not all go to the same kind of things? And do they not all apprehend alike, what kind of things every other such word signifies? For I presume this is what you mean by knowledge of the Greek language: is it not?

Alcibiades:: It is.

Socrates:: Now, on these subjects, as we said before, do not the people of our city agree among themselves? And among the several cities of Greece is there any difference of opinion? Do the same words, in different places, signify different things?

Alcibiades:: They do not.

Socrates:: On these subjects, therefore, agreeably to our argument, the people should be good teachers.

Alcibiades:: It is true.

Socrates:: If then we had a mind to have any person instructed in this matter, we should do right in sending him, for such instruction, amongst the multitude of the people?

Alcibiades:: Quite right.

Socrates:: But what if we had a mind to have that person taught, not only to know men from horses by the different words denoting them in the Greek language, but, beside this, to know what horses are fit for the race, and what are unfit? is the multitude able to teach this also?

Alcibiades:: Certainly, not.

Socrates:: And you admit this to be a sufficient proof of their ignorance in this matter, and of their inability to teach, that they agree not in their opinions on this head?

Alcibiades:: I do.

Socrates:: And what if we would have him learn, not only by what word in our language men are distinguished from other things, but, further, to know what men are healthy and who are unhealthy? whether should we deem the multitude to be the proper teachers for him?

Alcibiades:: By no means.

Socrates:: And it would be an evidence to you of their being bad teachers on this subject, if you saw them disagreeing in their opinions?

Alcibiades:: It would.

Socrates:: And how is it now on the subject of justice? Do you find the multitude agreeing one with another, or even the same person always of the same mind, concerning either men or actions, who are the honest, or what is just?

Alcibiades:: Less than on any other subject, by Jove, Socrates, are they agreed with regard to this.

Socrates:: What? do you then think they differ on this subject more than upon any other?

Alcibiades:: By far do they.

Socrates:: You have never, I suppose, seen or heard of men, in any age, who contended for their several opinions concerning the wholesome and the unwholesome in food, with so much zeal as to fight and kill one another on that account?

Alcibiades:: Never.

Socrates:: But concerning just and unjust in actions, that their disputes have carried them to such extremities, I am sure, if you have not seen, you have at least heard from many reports, and particularly from those of Homer; for you have heard both the Odyssey and the Iliad read to you.

Alcibiades:: Thoroughly well, Socrates, am I versed in both.

Socrates:: And is not the subject of both these poems the diversity of opinions with regard to what is just and what is unjust?

Alcibiades:: It is.

Socrates:: And did not this diversity of opinions produce fighting and slaughter between the Greeks and Trojans, and between Ulysses and the wooers of Penelope?

Alcibiades:: True.

Socrates:: And I believe that the deaths of those Athenians, Lacedæmonians and Bœotians, who perished at Tanagra, and of those who afterwards died at Coronea, amongst whom was Clinias your father, were not owing to differences on any other subject than this, what was just and what unjust.

Alcibiades:: You are in the right.

Socrates:: Shall we say then that these people had knowledge in that subject on which they differed with so much vehemence, as in support of their different opinions to suffer from each other the utmost effects of hatred?

Alcibiades:: It appears they had not.

Socrates:: Do you not then refer to such a sort of teachers as you yourself acknowledge to be ignorant?

Alcibiades:: I do, it seems.

Socrates:: How therefore is it probable that you should have the knowledge to discern what is just from what is unjust, when your account of them is so vague, and when you appear neither to have been taught that knowledge, by any other person, nor to have found it out yourself?

Alcibiades:: According to what you say, ’tis not probable.

Socrates:: Are you sensible that, what you said last was not said fairly, Alcibiades?

Alcibiades:: What was unfair?

Socrates:: Your assertion that I said those things of you which were said.

Alcibiades:: What? did not you say that I had not the knowledge to discern what was just from what was unjust?

Socrates:: Not I, indeed.

Alcibiades:: Who was it then that said so? was it I myself?!

Socrates:: It was.

Alcibiades:: Make that appear.

Socrates:: You will see it in this way. If I ask you concerning one and two, which is the greater number, you will say that two is.

Alcibiades:: I shall.

Socrates:: How much greater is it?

Alcibiades:: Greater by one.

Socrates:: Now whether of us is it who says that two is a greater number or more than one by one?

Alcibiades:: It is I myself.

Socrates:: Did not I ask the question, and did not you give an answer to it?

Alcibiades:: True: it was so.

Socrates:: On this subject, then, who appears to have made any assertion? Do I, who only asked a question? or do you, who gave the answer?

Alcibiades:: I.

Socrates:: And if I ask you how many letters compose the name of Socrates, and you tell me, which of us is it who declares how many?

Alcibiades:: I.

Socrates:: In a word, whenever any question is asked, and an answer to it is given, say, who is it that makes an assertion, the party that asks the question, or the party that gives the answer?

Alcibiades:: The party that gives the answer, in my opinion, Socrates.

Socrates:: Through the whole of our past discourse was not I the party that asked the questions?

Alcibiades:: You was.

Socrates:: And was not you the party that gave the answers?

Alcibiades:: I was.

Socrates:: Well then. Whether of us two made the assertions?

Alcibiades:: From what I have admitted, Socrates, I myself appear to have been that person.

Socrates:: In those assertions was it not said that Alcibiades, the fine son of Clinias, had not the knowledge to discern what was just and what was unjust, but imagined that he had; and that he was about going into the assembly to give the Athenians his counsel and advice upon subjects which he knew nothing of? Is not this true?

Alcibiades:: It appears so to be.

Socrates:: That which Euripides says may therefore well be applied to the condition you are now in, Alcibiades. You are in danger of being found to have heard all this which has been said of you from yourself, and not from me. For, not I, but you, was the assertor of it; and you lay the blame of it on me without reason.

Alcibiades:: Indeed, Socrates, you are in the right.

Socrates:: Mad therefore is the undertaking, my good sir, which you entertain thoughts of attempting, to teach others what you are ignorant of yourself from your having neglected to learn it.

Alcibiades:: I believe, Socrates, that the Athenians, as well as other Grecian states, seldom deliberate in council about justice or injustice in any affair before them; because these things they presume obvious and plain to all men. Laying aside therefore the consideration of this point, they consider which way it will be most for their interest to take. For I suppose that justice and interest are not the same thing; seeing that many have found it their interest to have done things the most unjust, and that others have gained no advantage from having acted with honesty.

Socrates:: Well. Suppose interest to be a thing ever so different from justice, do you imagine now that you know what is a man’s interest, and why this or that thing is so?

Alcibiades:: What should hinder me, Socrates, from knowing it? unless you will make a doubt of this too, by asking me, from whom I learned this knowledge, or how I discovered it myself.

Socrates:: How strangely you deal with me in this? If you say any thing wrong, when ’tis possible to prove it wrong by the same arguments used in confuting what you before said amiss, you would have new matter introduced, and different arguments made use of, to prove you in the wrong again: as if the former proofs were worn out like old clothes, and you could no longer put them on, but one must bring you a fresh proof never used before. But without taking further notice of your evasions, I shall repeat the same question, and ask you from what learning you came to know what was a man’s interest, and who taught you this knowledge; and all the other questions asked before I ask you again, summing them up in one. It is evident now, that your answers will amount to the very same as they did before; and that you will not be able to show by what means you attained the knowledge of what is advantageous to a man? or conducive to his good; either how you found it out yourself, or from whom you learned it. However, seeing that you are squeamish, and decline the tasting of the same arguments again, I wave the inquiry into this point, whether you have or not the knowledge of what is the interest of the Athenians. But this other point, whether the same actions are just and advantageous; or whether what ’tis just to do, differs from what ’tis a man’s interest to do; why should not you prove, by putting questions to me, in the same manner as I did to you? or, if you had rather, make a discourse upon that subject wholly by yourself.

Alcibiades:: But I know not if I should be able, Socrates, to make such a discourse to you.

Socrates:: Why, my good friend, suppose me to be the assembly and the people. And, were you addressing your discourse to them, it would be proper for you to persuade every single man of them. Would it not?

Alcibiades:: It would.

Socrates:: Does it not belong, then, to the same person to be able to persuade one single man by himself, and to persuade many men assembled together, in speaking on any subject with which he is well acquainted? as, for instance, a teacher of grammar is equally well able to persuade one man and many men, when letters are the subject of his discourse.

Alcibiades:: True.

Socrates:: And when numbers are the subject, would not the same person, who persuades many, persuade one as well?

Alcibiades:: He would.

Socrates:: And must not this person be one who is well acquainted with numbers? must he not be an arithmetician?

Alcibiades:: Most certainly.

Socrates:: And would not you also, in speaking on any subjects, if you are able to persuade many of the truth of what you say, be able to persuade a single one?

Alcibiades:: 'Tis probable that I should.

Socrates:: But these subjects it is plain must be such as you are well acquainted with.

Alcibiades:: Undoubtedly.

Socrates:: Is there any other difference, then, between a speaker in the assembly of the people and a speaker in such conversation as this of ours, than merely so much as this—the former endeavors to persuade a collection of many men—the latter to persuade men one by one?

Alcibiades:: There appears to be no other.

Socrates:: Come then. Since it apparently belongs to the same person to persuade a multitude and to persuade a single man, practice your skill on me, and undertake to prove to me that in some cases that which is just is not a man's interest.

Alcibiades:: You are very saucy, Socrates.

Socrates:: And I am now going to be so saucy as to convince you of the truth of a position quite contrary to that which you decline the proving of to me.

Alcibiades:: Begin then.

Socrates:: Do you but answer to the questions which I shall put to you.

Alcibiades:: Not so: but do you yourself say plainly what you have to say.

Socrates:: Why so? Would you not choose to be entirely well persuaded of the truth of it, if it be true?

Alcibiades:: By all means, certainly.

Socrates:: And would you not, if you yourself were to assert it, have the most entire persuasion of its truth?

Alcibiades:: I think so.

Socrates:: Answer then to my questions: and if you do not hear from your own mouth, that to act justly is to act for one's own advantage, believe no other person who asserts that position.

Alcibiades:: I shall not: and I consent to answer your questions. For no harm I think will come to me that way.

Socrates:: You think as if you had the spirit of divination. Tell me, then: Do you say that some just actions are advantageous to the man who performs them, and that some are not so?

Alcibiades:: I do.

Socrates:: And do you say also, that some just actions are beautiful, and that some are not so?

Alcibiades:: What mean you by this question?

Socrates:: Whether did you ever think that a man acted basely and yet justly at the same time?

Alcibiades:: I never thought so.

Socrates:: You think then that all actions which are just are also beautiful?

Alcibiades:: I do.

Socrates:: But what, as to actions which are beautiful? Whether do you think that all of these are good to the performer, or that some of them are so, and some not so?

Alcibiades:: For my part, Socrates, I think that some beautiful actions are evil to the performer of them.

Socrates:: And that some base actions are good to the performer?

Alcibiades:: I do.

Socrates:: Do you mean such actions as these?—Many men by aiding in battle some friend or near relation have been wounded mortally; whilst others, by withholding their aid when they ought to have given it, have come off safe and sound.

Alcibiades:: A just instance of what I mean.

Socrates:: That aid then of theirs you call beautiful with respect to their endeavoring to save those whom they ought to defend. Now such an action proceeds from fortitude, does it not?.

Alcibiades:: It does.

Socrates:: But evil you call it also with respect to the wounds and death which it procured them, do you not?

Alcibiades:: I do.

Socrates:: And are not fortitude and death two different things?

Alcibiades:: Certainly.

Socrates:: To aid a friend, therefore, is not both beautiful and evil in the same respect?

Alcibiades:: It appears that ’tis not.

Socrates:: Consider now whether it be not good in the same respect in which it is beautiful; as in this particular which we mentioned. For, with respect to fortitude, you agreed with me that ‘twas beautiful and handsome to give such aid. This very thing then, fortitude, consider whether it be a good or an evil. And consider it in this way;—which kind of things would you choose to have your own, whether good things or evil things?

Alcibiades:: Good things.

Socrates:: And would you not choose the best things too?

Alcibiades:: Most of all things.

Socrates:: And would you not choose to part with them least of all?

Alcibiades:: Undoubtedly.

Socrates:: What say you then of fortitude? at what price would you choose to part with it?

Alcibiades:: I would not accept of life, not I, to live a coward.

Socrates:: You think, then, that cowardice is evil in the utmost degree?

Alcibiades:: That do I.

Socrates:: On a par, as it seems, with death.

Alcibiades:: It is so.

Socrates:: Are not life and fortitude the most of all things opposite to death and cowardice?

Alcibiades:: They are.

Socrates:: And would you choose to have those most of all things, and these least of all things?

Alcibiades:: Certainly.

Socrates:: Is it because you deem those the best of all things, and these the worst?

Alcibiades:: For this very reason.

Socrates:: Viewing then the giving of aid in battle to such as are dear to us in that light in which it appears beautiful—viewing it with regard to the practice of that virtue which you acknowledge to be one of the best of things, you gave it the epithet of beautiful?

Alcibiades:: It appears I did so.

Socrates:: But with regard to its operating evil, the evil of death, you gave it the epithet of evil?

Alcibiades:: True.

Socrates:: Is it not then just and right to denominate every action thus? If, with regard to the evil which it operates, you call it evil, ought it not, with regard to the good which it operates, to be also called good?

Alcibiades:: I think it ought.

Socrates:: In the same respect, then, in which it is good, is it not beautiful? and in the same respect in which it is evil, is it not base?

Alcibiades:: It is.

Socrates:: In saying, then, that the aiding of our friends in battle is an action beautiful indeed, but that yet 'tis evil, you say exactly the same thing as if you called it an action, good indeed, but yet evil.

Alcibiades:: I think you are in the right, Socrates.

Socrates:: Nothing therefore which is beautiful, so far as it is beautiful, is evil; nor is any thing which is base, so far as it is base, good.

Alcibiades:: Evidently it is not.

Socrates:: Further now consider it in this way:—whoever acts beautifully, does he not act well too?

Alcibiades:: He does.

Socrates:: And those who act well, are they not happy?

Alcibiades:: Without doubt.

Socrates:: And are they not happy by being possessed of good things?

Alcibiades:: Most certainly.

Socrates:: And are they not possessed of these good things by acting well and beautifully?

Alcibiades:: They are.

Socrates:: To act well, therefore, is in the rank of good things?

Alcibiades:: Beyond a doubt.

Socrates:: And is not acting well a beautiful thing also?

Alcibiades:: It is.

Socrates:: Again therefore we have found, that one and the same thing is both beautiful and good?

Alcibiades:: We have.

Socrates:: Whatever then we should find to be a beautiful thing, we shall find it to be a good thing too, according to this reasoning?

Alcibiades:: It must be so.

Socrates:: And what? are good things advantageous? or are they not?

Alcibiades:: They are.

Socrates:: Do you remember, now, what we agreed in concerning things which are just?

Alcibiades:: I imagine that you mean this,—that those persons who do things which are just must of necessity do things which at the same time are beautiful.

Socrates:: And did we not agree in this too,—that those who do things which are beautiful do things which are also good?

Alcibiades:: We did.

Socrates:: And good things, you say, are advantageous?

Alcibiades:: True.

Socrates:: Things therefore which are just, O Alcibiades! are things which are advantageous.

Alcibiades:: It seems they are.

Socrates:: Well now; are not you the person who asserts these things? and am not I the questioner concerning them?

Alcibiades:: So it appears.

Socrates:: Whoever then rises up to speak in any council, whether it be of Athenians or Peparethians, imagining that he discerns what is just and what is unjust, if he should say that he knows justice to be sometimes evil and detrimental, would you not laugh at his pretensions to knowledge? since you yourself are found to be the very person who asserts that the same things are both just and advantageous?

Alcibiades:: Now, by the Gods, Socrates, for my part, I know not what to say to it; but am quite like a man distracted. For sometimes I am of one opinion, just while you are putting your questions to me, and presently after am of another.

Socrates:: Are you ignorant now, my friend, what condition you are in?

Alcibiades:: Entirely ignorant.

Socrates:: Do you imagine, then, that if any person were to ask you, how many eyes you had, whether two or three,—or how many hands, whether two or four,—or any other such question,—you would sometimes answer one thing, and at other times another? or would you always give the same answer?

Alcibiades:: I confess that I am now doubtful of myself; but I do believe that I should always give the same answer.

Socrates:: And is not your knowledge of the subject the cause of that consistency there would be in your answers?

Alcibiades:: I believe it is.

Socrates:: When therefore you give contrary answers to one and the same question, without choosing to prevaricate, ’tis evident that you have no knowledge of the subject.

Alcibiades:: Probably so.

Socrates:: Now you say that, to questions concerning things just or unjust, beautiful or base, good or evil, advantageous or otherwise, you should answer sometimes one thing and sometimes another. Is it not then evident, that your ignorance in these subjects is the cause of this inconsistency of yours?

Alcibiades:: It appears so to me myself.

Socrates:: Is not this then the true state of the case? On every subject which a man has not the knowledge of, must not his soul be wavering in her opinions?

Alcibiades:: Most undoubtedly.

Socrates:: Well now. Do you know by what means you may mount up to heaven?

Alcibiades:: By Jupiter, not I.

Socrates:: Is your opinion doubtful and wavering on this subject?

Alcibiades:: Not at all.

Socrates:: Do you know the reason why it is not? or shall I tell it you?

Alcibiades:: Do you tell me.

Socrates:: 'Tis this, my friend: it is because you neither know nor imagine that you know the way up to heaven.

Alcibiades:: How is that the reason? Explain yourself.

Socrates:: Let you and I consider it together. Concerning any affairs which you are ignorant of, and are at the same time convinced that you are so, do you waver in your opinions? For instance, in the affair of dressing meats and making sauces, you are, I presume, well acquainted with your ignorance.

Alcibiades:: Perfectly well.

Socrates:: Do you form any opinions then yourself on these affairs of cookery, and waver in those opinions? or do you leave those matters to such as are skilled in them?

Alcibiades:: I do as you mentioned last.

Socrates:: And what if you were in a ship under sail, would you form any opinion, whether the rudder ought to be turned toward the ship or from it, and be unsettled in that opinion for want of knowledge in the affair? or would you leave it to the pilot, and not trouble yourself about it?

Alcibiades:: To the pilot I should leave it.

Socrates:: Concerning affairs then which you are ignorant of, and are no stranger to your own ignorance in those respects, you are not wavering in your opinions?

Alcibiades:: I believe I am not.

Socrates:: Do you perceive that errors, committed in the doing of any thing, are all to be ascribed to this kind of ignorance in a man,—his imagining that he knows what he knows not?

Alcibiades:: How do you mean?

Socrates:: Whenever we undertake to act in any affair, it is only when we imagine we know what to do.

Alcibiades:: Certainly.

Socrates:: And such as have no opinion of their own knowledge in the affair resign it up to others to act for them.

Alcibiades:: How should they do otherwise?

Socrates:: Ignorant persons of this kind live therefore without committing errors, because they give up the management of those affairs in which they are ignorant into the hands of others.

Alcibiades:: True.

Socrates:: What kind of persons, then, are those who err and act amiss? for certainly they are not such as know how to act.

Alcibiades:: By no means.

Socrates:: Since then they are neither the knowing, nor those of the ignorant who know that they are ignorant, are any other persons left than of that kind who are ignorant, but imagine themselves knowing?

Alcibiades:: None other than these.

Socrates:: This kind of ignorance, therefore, is the cause of wrong doings, and is the only kind which is culpable.

Alcibiades:: Very true.

Socrates:: And where it concerns things of greatest moment, is it not in these cases the most of any mischievous and shameful?

Alcibiades:: By far the most so.

Socrates:: Well then. Can you name any things of greater moment than those which are honest, and beautiful, and good, and advantageous?

Alcibiades:: Certainly none.

Socrates:: Is it not on these subjects that you acknowledge yourself to waver in your opinions?

Alcibiades:: It is.

Socrates:: And, if you are thus wavering, is it not evident from our past conclusions, not only that you are ignorant in subjects of the greatest moment, but that amidst this ignorance you imagine that you know them?

Alcibiades:: I fear it is so.

Socrates:: Fie upon it, Alcibiades! What a condition then are you in! a condition which I am loth to name: but however, since we are alone, it must be spoken out. You are involved, my good sir, in that kind of ignorance which is the most shameful, according to the result of our joint reasoning, and according to your own confession. From this kind of ignorance it is, that you are eager to engage in politics before you have learnt the elements of that science. Indeed, you are not the only person in this sad condition; for in the same state of ignorance are the numerous managers of our civil affairs, all of them, except perhaps Pericles, your guardian, and a few more.

Alcibiades:: And, Socrates, to confirm this opinion of yours, Pericles is said to have become wise, not spontaneously or of himself: on the contrary, ’tis reported of him that he had had the advantage of enjoying the conversation of many wise men, particularly of Pythoclides and Anaxagoras: and even at this time, old as he is, he is intimate with Damon for this very purpose.

Socrates:: But what? have you ever seen a man who was wise in any art whatever, and yet was unable to make another man wise in the same art? as, for instance, the master who taught you grammar was himself wise in that art; and in the same art he made you wise; as he also made every other person whom he undertook to teach. Did he not?

Alcibiades:: He did.

Socrates:: And you, who have learnt from him that kind of wisdom, would not you be able to teach it to another person?

Alcibiades:: Certainly I should.

Socrates:: And is not the same thing, true of a music-master and of a master in the exercises?

Alcibiades:: Perfectly so.

Socrates:: For this undoubtedly is a fair proof of the knowledge of such as are knowing in any subject whatever, their being able to produce their scholars, and to show these to be knowing in the same.

Alcibiades:: I think so too.

Socrates:: Well then. Can you name to me any one whom Pericles has made a wise man? his own sons has he? to begin with them.

Alcibiades:: But what if the sons of Pericles were silly fellows, Socrates?

Socrates:: Clinias then, your brother?

Alcibiades:: Why should you mention Clinias, a man out of his senses?

Socrates:: Since Clinias then is out of his senses, and since the sons of Pericles were silly fellows, to what defect in your disposition shall we impute, the little care taken by Pericles to improve you?

Alcibiades:: I presume that I myself am in the fault, that of not giving due attention to him.

Socrates:: But name any person else, an Athenian or a foreigner, either a slave or a free man, who is indebted, to the instructions of Pericles for becoming wiser than he was: as I can name to you those, who from the lessons of Zeno have improved in wisdom,—Pythodorus the son of Isolochus, and Callias the son of Calliades; each of whom, at the price of a hundred minæ, paid to Zeno, became eminent for wisdom.

Alcibiades:: Now, by Jupiter, I cannot.

Socrates:: Very well. What then do you think of doing about yourself? whether to rest satisfied in the condition which you are now in, or to apply yourself to some means of improvement?

Alcibiades:: Concerning this, Socrates, I would consult with you. For I apprehend what you have said, and admit the truth of it. Those who have the administration of the state, except a few of them, seem indeed to me too not to have had a proper education.

Socrates:: Well; and what conclusion do you draw from thence?

Alcibiades:: This,—that if they, through their education, were well qualified to govern, a man who should undertake to enter the lists in contest with them, ought to come to the engagement duly prepared by discipline and exercise, as in other combats. But now, seeing that such persons as these, raw and undisciplined as they are, have attained to the management of state affairs, what need is there for a man to exercise himself in such matters, or to give himself the trouble of acquiring knowledge in them? For I well know, that by dint of natural abilities I shall excel them by far, and get above them.

Socrates:: Fie upon it, my fine young gentleman! What a declaration is this which you have made! how unworthy of your personal qualities, and of the other advantages you are possessed of!

Alcibiades:: I should be glad, Socrates, to know why you think it unworthy of me, and in what respect.

Socrates:: You offer an affront, not only to the regard which I have for you, but to the opinion too which you have of yourself.

Alcibiades:: How so?

Socrates:: In that you think of entering the lists to contend with these men here at Athens.

Alcibiades:: Whom then am I to contend with?

Socrates:: Does this question become a man to ask who thinks his mind to be great and elevated?

Alcibiades:: How do you mean? Is it not with these very persons that I am to stand in competition?

Socrates:: Let me ask you this question;—Whether, if you had any thoughts of commanding a ship of war, would you deem it sufficient for you to excel the mariners who were to be under your command, in the skill belonging to a commander? or, presuming yourself qualified with this due præ-excellence. would you direct your eye to those only whom you are in fact to combat against,—and not, as you now do, to such as are to combat together with you? For to these men certainly you ought to be so much superior, that they should never be your associates in competition against any, but your inferior assistants in combating against the enemy;—if you really think of exhibiting any noble exploits worthy of yourself and of your country.

Alcibiades:: And such a thought I assure you that I entertain.

Socrates:: Is it then at all worthy of you, to be contented with being a better man than your fellow-soldiers,—and not to have your eye directed toward the leaders of those whom you have to struggle with, studying how to become a better man than they, and employing yourself in exercises which are proper with a view to them?

Alcibiades:: What persons do you mean, Socrates?

Socrates:: Do you not know, that our city is every now and then at war with the Lacedæmonians, and with the Great King?

Alcibiades:: True.

Socrates:: If then you have it in your mind to be the leader of this city, would you not think rightly in thinking that you will have the kings of Sparta and of Persia to contend against?

Alcibiades:: I suspect that you are in the right.

Socrates:: And yet you, my good sir, on the contrary, are to fix your view on Midias, a feeder of quails, and on other such persons, who undertake to manage affairs of state, still wearing the badge of slavery, as the women would term it, in their souls, through their ignorance of the Muses; and not having yet thrown it off, but retaining their old sentiments, and manners still barbarian, are come to flatter the people, not to govern them. Ought you now to emulate these men whom I am speaking of, and disregard yourself? Ought you to neglect the acquiring of all such knowledge, as only is acquired through learning, when you have so great a combat to sustain? Or ought you to omit the exercising yourself in all such actions as are well performed only through practice? Should you not be furnished with all the qualifications requisite for the government of the state before you undertake to govern it?

Alcibiades:: Indeed, Socrates, I believe you are in the right: but however, I imagine the commanders of the Spartan armies, and the Persian monarch, to be just such men as the others whom you have mentioned.

Socrates:: But, my very good sir, consider this imagination of yours, what evils attend on it.

Alcibiades:: In what respects?

Socrates:: In the first place, What opinion concerning your antagonists do you think would engage you to take most care about yourself? whether the opinion of their being formidable, or the contrary?

Alcibiades:: The opinion without doubt of their being formidable.

Socrates:: And do you think it would do you any harm to take care about yourself?

Alcibiades:: None at all; but on the contrary great good.

Socrates:: The want of this great good, then, is one of the evils which attend on that imagination?

Alcibiades:: It is true.

Socrates:: Consider if there be not probably another too; and that is the falsity of it.

Alcibiades:: How do you prove that?

Socrates:: Whether is it probable that persons, the most excellent in their natural dispositions, are to be found amongst those who descend from ancestors the noblest? or is it not?

Alcibiades:: Undoubtedly it is.

Socrates:: And is it not probable that such as have excellent dispositions from nature, if they meet with a suitable education, should become accomplished an virtue?

Alcibiades:: Of necessity they must.

Socrates:: Let us consider now, in comparing their advantages with our own, whether the kings of Sparta and of Persia seem to be descended from meaner ancestors than we are. Know we not that those are descendants of Hercules, and these of Achæmenes? that the begetting of Hercules is attributed to Jupiter, and the ancestry of Achæmenes to Perseus the son of Jupiter?

Alcibiades:: And the family which I am of, O Socrates! descends from Eurysaces; and the descent of Eurysaces was from Jupiter.

Socrates:: And the family which I am of, my noble Alcibiades! descends from Dædalus; and the descent of Dædalus was from Vulcan, the son of Jupiter. But the pedigree of those with whom we set ourselves in comparison, beginning from the persons who now reign, exhibits a race of kings, all of them sons of kings, in a direct line quite up to Jupiter; those whom I first mentioned, kings of Argos and Lacedæmon; the others, kings of Persia perpetually, and often of all Asia, as they are at present: whereas we are but private men, ourselves and our fathers. If you then were to boast of your ancestors, and pompously say that Salamis was the hereditary dominion of Eurysaces, or, to ascend higher in your ancestry, that Æacus governed in his native country Ægina, can you imagine how ridiculous you would appear in the eyes of Artaxerxes, the son of Xerxes? Consider besides, whether we may not be found inferior to those great men, not only in the pride of ancestry, but also in the care taken of our birth and breeding. Are you not sensible of the singular advantages which attend the progeny of the Spartan kings in this respect, that their wives have a guard of state appointed for them by the Ephori; to the end that no king of theirs may be the issue of stolen embraces, or have for his real father any other man than a descendant of Hercules? And as to the Persian king, so greatly is he our superior with regard to this point, that none of his subjects entertain the least suspicion of his having any other father than the king his predecessor. The consort therefore of the king of Persia is under, no restraint but that of her own dread of the evil consequences, should she dishonor the king's bed. Further, when the king's eldest son, the heir apparent to the crown, is born, all the king's subjects in the city of his residence keep that day an original feast-day: and from thenceforward the anniversary of that day is celebrated with sacrifices and feasts by all Asia. But when we came first into the world, alas, Alcibiades! our very neighbors, as the comic poet says, *little knew what happened*. After this the child is brought up, not by some insignificant nurse, but by the best eunuchs about the king's person. And these have it in their charge to take care of the royal infant in every respect, but especially to contrive the means of his becoming as handsome as possible in his person, by so fashioning his pliant limbs, and giving such a direction to their growth, that they may be straight and for executing this office well they are highly honored. When the young princes have attained the age of seven years, they are provided with horses and with riding-masters, and are initiated in the exercise of hunting. At fourteen years of age they are put into the hands of those who are called the royal preceptors. And these are chosen out from such as are deemed the most excellent of the Persians, men of mature age, four in number; excelling severally in wisdom, justice, temperance, and fortitude. By the first of these they are taught the magic of Zoroaster the son of Oromazes, by which magic is meant the worship of the Gods: and the same person instructs them likewise in the art of government. He who excels in the science of justice teaches them to follow truth in every part of their conduct throughout life. The person who excels in temperance enures the young prince not to be governed by sensual pleasure of any kind, that he may acquire the habits of a free man, and of a real king; by governing first all his own appetites, instead of being their slave. And the fourth, he who excels in fortitude forms his royal pupil to be fearless and intrepid; for that his mind, under the power of fear, would be a slave. But, Alcibiades, for your preceptor Pericles appointed one of his domestics, too old to be fit for any other service, Zopyrus of Thrace. I would recount to you the other articles of the breeding and instruction given to your antagonists, if the narration would not be too long; and besides this, the articles already mentioned are sufficient indications of those others which they infer and draw along with them. But your birth, Alcibiades, your breeding and institution, or any other circumstances attending you, scarce any one of the Athenians is at all solicitous about, unless there be some man who happens to have an especial regard for you. Further; if you would consider the treasures of the Persian kings, the sumptuous furniture of their palaces and tables, their wardrobes of apparel, the long trains of their garments, and the fragrance of their unguents, their numerous retinue of attendants, and the rest of their magnificence, in comparing all this with what you have of the same kind yourself, you would evidently perceive how much you fall short of them, and would be ashamed at the comparison. If, on the other hand, you would consider the Lacedæmonians, their sobriety and modesty, how simple their way of living, and how easily they are satisfied, their magnanimity and observance of order, their manly endurance of pain and love of labor, their emulation to excel, and their love of honor, you would think yourself a child to them in all these excellencies. Besides this, if you make riches any part of your consideration, and in this respect imagine yourself a person of consequence, let us not pass over this point neither unexamined; if by any means you can be made sensible in what rank you stand. If you choose then to consider the Lacedæmonians with regard to wealth, you will find that what we have here in Attica falls far short of theirs. For the lands which they possess in their own country, and in Messenia, are such as that no person here would dispute their superiority in this respect, whether he considers the quantity or the value of those lands, the number of their other slaves, besides such as the Helotes, or the number of their horses, and other cattle in the pasture-grounds of Messenia. But, setting aside all this, you will find that, as to gold and silver, there is not so much amongst all the Grecians as there is amongst the Lacedæmonians in private hands. For gold and silver have now for many generations been flowing into them from all parts of Greece, and often too from foreign countries; but there is no reflux any way. That therefore which the fox said to the lion in a fable of Æsop's, may justly be applied to them; the footsteps of money coming into Lacedæmon are easy to be discovered, as being all turned towards it; but the tracks of money going out of it are no where to be discerned. Thus it may easily be conceived, that of all the Grecians the richest in gold and silver are the Lacedæmonians, and that of all the Lacedæmonians the richest is their king. For of such comings-in a larger share, and oftener, is received by kings than by other men. And besides this, the taxes paid, by the Lacedæmonians to their kings bring them in a large revenue. But whatever wealth the Lacedæmonians have, though great if compared with that of any other Grecians, yet in comparison with the riches of the Persians, and especially of their king, 'tis nothing. For I once heard a man of credit, who had been at the capital city of Persia, say, that in going up to it, he travelled almost a day's journey through a large and fertile territory, which the inhabitants of it called the Queen's Girdle; that there was another extensive tract of land called the Queen's Veil; and that many other fair and fruitful countries were appropriated to provide the rest of the queen's apparel; each of those countries having its name from that part of the apparel which the revenue of it furnished. So that, were any person to tell the queen-mother, Amastris, the consort formerly of Xerxes, that the son of Dinomache had it in his head to lead an army against her son;—and were she told at the same time that Dinomache's whole attire might be worth perhaps fifty minæ; supposing it to be of the most costly kind; and that this son of hers had land in the district of Erchia, containing not so much as three hundred acres;—she I suppose would wonder in what kind of things this Alcibiades could place so much confidence as to think of contending with Artaxerxes. And I imagine that she would say, it is impossible that this man should undertake such an affair with any other confidence than what he places in the prudence and skill which he is master of: for that the Grecians have nothing else worthy of account. Because if she was to hear further, that this same Alcibiades in the first place had not completed the twentieth year of his age; in the next place that he was utterly uninstructed; and besides this, that, when a friend of his advised him first to acquire the knowledge, the prudence, and the habits, necessary for the execution of his designs, before he offered to attack the king, he refused to hearken to this advice, and said, that even in his present condition he was prepared sufficiently;—I believe she would be astonished, and would ask, What kind of a thing it could be then in which the youth put his confidence? Upon this, were we to tell her,—In his handsome and fine person, in his birth and family, in his riches, and in the natural faculties of his mind,—she would think us, Alcibiades, out of our senses, when she reflected on all the advantages which her son enjoyed of the same kinds. No less do I imagine that Lampido, daughter of Leotychidas, wife of Archidamus, and mother of Agis, who, all of them in their turns, succeeded to the crown of Sparta, she too would wonder, in reflecting on their greatness, were she told, that you had taken it into your head to make war against her son, so ill instructed as you are. And now do you not think it shameful, if the wives of our enemies consider more prudently for us than we do for ourselves, what sort of persons we ought to be before we venture to attack such enemies? Hearken therefore, my good sir, to the advice which I give you, in agreement with the Delphic inscription, Know thyself: since your antagonists are to be, not those whom you imagine, but these whom I have told you of: and these you never can excel in any other point than skill and application; in which articles if you are found deficient, you will fail of that reputation and renown, as well with Grecians as Barbarians, which I think you long for with more ardor than any other man does for whatever is the object of his wishes.

Alcibiades:: Can you teach me then, O Socrates, what sort of application I ought to use? for you seem to be entirely right in all which you have spoken.

Socrates:: Something I have indeed to say upon that subject. But let us enter into a joint consultation, you and I, about the means of becoming, both of us, better men. For when I say, there is a necessity for instruction, I mean it of myself as well as of you: since only one difference there is between you and me.

Alcibiades:: What is that?

Socrates:: He who is my guardian is better and wiser than Pericles, who is yours.

Alcibiades:: And who is yours, O Socrates?

Socrates:: A GOD, O Alcibiades! he who permitted me not before this day to enter into any discourse with you: he it is, on whose dictates to me I rely, when I am bold to say, that you will acquire the renown you long for, by no other means than through me.

Alcibiades:: You are in jest, Socrates.

Socrates:: Perhaps so: but I speak the truth however in good earnest when I say that we stand in need of instruction, or rather, that all men want it; but that you and I have very especial need of it.

Alcibiades:: In saying that I have need of it, you are not mistaken.

Socrates:: Neither am I, in saying that I myself have.

Alcibiades:: What then must we do?

Socrates:: We must not despair, nor give ourselves up to indolence, my friend.

Alcibiades:: By no means, Socrates, does it become us so to do.

Socrates:: Indeed it does not. We must therefore consider of the affair, you and I together. Now then answer to my questions. We profess to be desirous of becoming as excellent as possible: do we not?

Alcibiades:: We do.

Socrates:: In what kind of excellence?

Alcibiades:: In that certainly which belongs to men of merit.

Socrates:: Of merit in what respect?

Alcibiades:: In the management of business and affairs, undoubtedly.

Socrates:: But what business do you mean? The business of a jockey?

Alcibiades:: Clearly not.

Socrates:: For then we should go for instruction to those who understand the management of horses.

Alcibiades:: Certainly we should.

Socrates:: Do you then mean of a mariner?

Alcibiades:: I do not.

Socrates:: For in that case we should apply to those who understand navigation.

Alcibiades:: Certainly so.

Socrates:: But what business or affairs then? and by what sort of men are these affairs managed?

Alcibiades:: I mean such affairs as are managed by men of honor and merit amongst the Athenians.

Socrates:: Men of honor and merit do you call such as have understanding, or such as are void of understanding?

Alcibiades:: Such as have understanding.

Socrates:: In whatever business a man has understanding, in that has he not merit?

Alcibiades:: He has.

Socrates:: And in whatever business be is void of understanding, is he not in that void of merit?

Alcibiades:: Without doubt.

Socrates:: Whether hath a shoe-maker understanding in the business of making shoes?

Alcibiades:: He certainly has.

Socrates:: In this respect therefore he has merit.

Alcibiades:: He has.

Socrates:: Well; but is not a shoe-maker void of understanding in the business of making clothes?

Alcibiades:: No doubt of it.

Socrates:: In this respect therefore he is void of merit.

Alcibiades:: He is so.

Socrates:: The same man therefore, according to this account, is at the same time void of merit and possessed of merit.

Alcibiades:: It appears so.

Socrates:: Would you say, then, that men possessed of merit are at the same time void of merit?

Alcibiades:: That cannot be.

Socrates:: What kind of men then do you mean by the men of merit?

Alcibiades:: I mean such as have abilities to govern at Athens.

Socrates:: Not to govern horses, I presume.

Alcibiades:: No, certainly.

Socrates:: But to govern men.

Alcibiades:: That is my meaning.

Socrates:: But what men do you mean? Men who are sick?

Alcibiades:: I do not mean these.

Socrates:: Men then who are going a voyage?

Alcibiades:: I mean not such men.

Socrates:: Men then who are gathering the harvest?

Alcibiades:: Nor such neither.

Socrates:: But men who do nothing do you mean? or men who do something?

Alcibiades:: Men who do something.

Socrates:: Who do what? try if you can make me sensible of your precise meaning.

Alcibiades:: Well then. I mean men who have commerce one with another, and make use of one another's aid and assistance in that kind of life which we lead in cities.

Socrates:: You speak then of such as have abilities to govern men, who make use of other men to aid and assist them.

Alcibiades:: I do.

Socrates:: Do you mean the governing of men who make use of mariners in the rowing of galleys, and give them the proper orders?

Alcibiades:: I mean no such thing.

Socrates:: For ability to govern such men belongs to the commander of a galley.

Alcibiades:: True.

Socrates:: Do you then mean the governing of men who are musicians, and lead the song to other men, making use of chorus-singers and dancers?

Alcibiades:: I mean not this neither.

Socrates:: For this skill belongs to the master of the whole choir.

Alcibiades:: Right.

Socrates:: In speaking then of ability to govern men who make use of other men, what kind of use do you mean? or in what way?

Alcibiades:: Fellow-citizens, I mean, partakers of the same polity, and engaged in mutual commerce for mutual help and benefit. I speak of ability to govern these.

Socrates:: What art then is that which gives this ability? as if I were to ask you, on the subject: just now mentioned—the knowing how to govern men embarked in the same voyage—What art is it that gives this knowledge?

Alcibiades:: The art of commanding ships.

Socrates:: And what science is that which gives the power of governing those others whom we mentioned,—those who have parts in the same song?

Alcibiades:: That which belongs, as just now you said, to the master of the whole choir.

Socrates:: And by what name do you call that science which gives ability to govern those who partake of the same polity?

Alcibiades:: Prudence I call it for my part, Socrates.

Socrates:: What? do you think then that want of prudence is proper for the commander of a ship?

Alcibiades:: Certainly not so.

Socrates:: But rather that prudence is.

Alcibiades:: I think it is, so far as it regards the safety of those who are sailing in the ship.

Socrates:: It is well said: and that other science, that which you call prudence, what end does that regard?

Alcibiades:: The good government and safety of the commonwealth.

Socrates:: And what is it which the commonwealth enjoys when it is governed best and preserved in safety? and what is it from which it is then preserved? as, if you were to ask me this question, What is it which the body enjoys when it is best taken care of, and preserved in safety? and from what is it then preserved? I would say that then it enjoys health, and is preserved from disease Are not you of the same opinion?

Alcibiades:: I am.

Socrates:: And, if you were to ask me further, What do the eyes enjoy when the best care is taken of them? and from what are they then preserved? I would answer in like manner as before, that they enjoyed their sight, and were preserved from blindness. So likewise of the ears; when they are preserved from deafness, and have their hearing perfect, they are then in their best condition, and are taken the best care of.

Alcibiades:: Right.

Socrates:: Well, now; what does the commonwealth enjoy, and from what is it preserved, when ’tis in its best condition, has the best care taken of it, and is best preserved?

Alcibiades:: It seems to me, Socrates, that the members of it then enjoy mutual amity, and are preserved from enmity and factions.

Socrates:: By amity do you mean their being of the same mind, or of different minds?

Alcibiades:: Their being of the same mind.

Socrates:: Now through what science is it that different civil states are of the same mind concerning numbers?

Alcibiades:: Through the science of arithmetic.

Socrates:: Well; and is it not through that very science that private persons are of the same mind one with another?

Alcibiades:: It is.

Socrates:: And that any person too, by himself, continues always in the same mind, is it not through his possessing that science?

Alcibiades:: It is.

Socrates:: And through what science is it that a single individual is always of the same mind concerning a span and a cubit, whether of the two is the greater measure? is it not through the science of mensuration?

Alcibiades:: Without doubt.

Socrates:: And is it not so too between different private persons and civil states?

Alcibiades:: It is.

Socrates:: And how concerning weights? does not the same hold true in this case?

Alcibiades:: I agree it does.

Socrates:: But now the sameness of mind which you speak of, what is that? What is the subject-matter of it? and through what science is it procured? I ask you likewise whether the same science which procures it for the public procures it no less for private persons; and whether it operates that effect in a man considered by himself as well as between one man and another.

Alcibiades:: Probably it does.

Socrates:: What science or art then is it? Do not labor for an answer, but speak readily what you think.

Alcibiades:: I think it to be such an amity and sameness of mind, that which we are speaking of, as there is between a father and a mother in loving their child, and as there is between brother and brother, and between man and wife.

Socrates:: Do you then think it possible, Alcibiades, for a man to be of the same mind with his wife on the subject of weaving, when he is ignorant and she is knowing in the art?

Alcibiades:: By no means.

Socrates:: Nor ought he neither. For ’tis a piece of knowledge belonging only to women.

Alcibiades:: Certainly.

Socrates:: Well; and can a woman be of the same mind with her husband on the subject of fighting in battle among the infantry, when she has never learnt the art?

Alcibiades:: Certainly she cannot.

Socrates:: For the knowledge of this you would perhaps say belonged only to men.

Alcibiades:: I should so.

Socrates:: Some pieces of knowledge, therefore, properly belong to women; others to men according to your account.

Alcibiades:: No doubt can be made of it.

Socrates:: On those subjects therefore which are not common to both the sexes there is no sameness of mind, between husbands and their wives.

Alcibiades:: There is not any.

Socrates:: Neither then is there any friendship; if friendship consist in sameness of mind.

Alcibiades:: It appears there is not.

Socrates:: So far therefore as women are attentive to their own business they are not beloved by their husbands.

Alcibiades:: It seems they are not.

Socrates:: Neither are men beloved by their wives,—so far as their minds are engaged in their own business.

Alcibiades:: It seems they are not.

Socrates:: Neither then do citizens live well together in cities, when each of them minds only his own business.

Alcibiades:: Nay, Socrates; for my part I imagine that they do,—so far as they are thus employed.

Socrates:: How say you? What, without friendship between them, by means of which we said that civil states were in a happy condition, and without which we said they could not flourish?

Alcibiades:: But it seems to me that friendship is on this very account produced between them, because every one gives his whole attention to his own business.

Socrates:: It did not seem so to you just now. But how do you explain at present what you said,—that friendship was produced by sameness of mind? Whether is it possible that fellow-citizens can be all of the same mind on subjects in which some of them are knowing, and others ignorant?

Alcibiades:: It is not possible.

Socrates:: And do they do their duty, and act as they ought, or not, when each of them attends to his own business?

Alcibiades:: As they ought, undoubtedly.

Socrates:: When the citizens then of any city act as they ought, and all of them do their duty, is not friendship produced between them?

Alcibiades:: It must be so I think, Socrates.

Socrates:: What kind of friendship, or sameness of mind, do you then mean, in the procuring of which you say that wisdom and prudence are requisite to make us men of virtue and merit? For I can neither learn from you what it is, nor what objects it regards. But sometimes it seems to regard the same objects, and sometimes not, according to your account of it.

Alcibiades:: Now by the Gods, Socrates, I know not what I mean, myself. But am in danger of appearing to have been, of a long time, in a shameful state of mind, without being sensible of it.

Socrates:: Now therefore you ought to take courage. For if fifty years of your life had elapsed before you had discovered the real state of your mind, an application of it to the care of yourself would have been a difficult task for you. But you are now at the very time of life in which such a discovery should be made, to be of any advantage to you.

Alcibiades:: What then am I to do, Socrates, now that I am made sensible of my condition?

Socrates:: Only to answer to the questions I shall put to you, Alcibiades. And if you will so do, you and I, by the favor of God, if any credit may be given to a prophecy of mine, shall both of us be the better for it.

Alcibiades:: Your prophecy shall be accomplished, as far as the accomplishment depends on my answering to your questions.

Socrates:: Come on then. What is it to take care of oneself? That we may not falsely imagine, as we often do, that we are taking care of ourselves, and know not that all the while we are other wise employed. And when is it that a man is taking that care? Whether when he is taking care of what appertains to him, is he then taking care of himself?

Alcibiades:: For my part I must own I think so.

Socrates:: And when is it, think you, that a man is taking care of his feet? whether is it then when he is taking care of the things appertaining to his feet?

Socrates:: I do not apprehend your meaning.

Socrates:: Do you acknowledge something to be appertaining to the hand,—a ring, for instance? Or does it appertain to any other part of the human body than a finger?

Alcibiades:: Certainly not.

Socrates:: And does not a shoe appertain to the foot in like manner?

Alcibiades:: It does.

Socrates:: Whether then at the time of our taking care of our shoes are we taking care immediately of our feet?

Alcibiades:: I do not quite apprehend you, Socrates.

Socrates:: Do you acknowledge that whatever be the subject of our care, a right care of it may be taken?

Alcibiades:: I do.

Socrates:: I ask you then, whether you think that a man takes a right care of whatever is the subject of his care, when he improves it and makes it better?

Alcibiades:: I answer yes.

Socrates:: What art now is that by which our shoes are improved and made better?

Alcibiades:: The shoe-maker’s art.

Socrates:: By the shoe-maker’s art therefore it is that we take a right care of our shoes.

Alcibiades:: True.

Socrates:: And is it also by the shoe-maker’s art that we take a right care of our feet? or is it by that art by which we improve our feet and make them better?

Alcibiades:: It is by this art.

Socrates:: And do we not improve and make better our feet by the same art by which we improve and make better the rest of our body?

Alcibiades:: I believe we do.

Socrates:: And is not this the gymnastic art?

Alcibiades:: Undoubtedly.

Socrates:: By the gymnastic art therefore we take care of the foot, and by the shoe-maker’s art we take care of what is appurtenant to the foot.

Alcibiades:: Exactly so.

Socrates:: And in like manner by the gymnastic art we take care of our hands, and by the art of engraving rings we take care of what is appurtenant to the hand.

Alcibiades:: Certainly.

Socrates:: By the gymnastic art also we take care of our bodies; but ’tis by the weaver’s art and some others that we take care of things appurtenant to the body.

Alcibiades:: I agree with you entirely.

Socrates:: By one kind of knowledge therefore we take care of things themselves, and by a different kind of knowledge we take care of things only appurtenant to those things which are the principal.

Alcibiades:: It appears so.

Socrates:: You are not therefore taking care of yourself when you are taking care only of the appurtenances to yourself.

Alcibiades:: At that time ’tis very true I am not.

Socrates:: For one and the same art, it seems, doth not take care of a thing itself, and of the appurtenances to that thing besides.

Alcibiades:: It appears to be not the same art.

Socrates:: Now then, by what kind of art might we take care of ourselves?

Alcibiades:: I have nothing to answer to this question.

Socrates:: So much, however, we are agreed in, that it is not an art by which we improve or better any thing which is ours; but an art by which we improve and better our very selves.

Alcibiades:: I acknowledge it.

Socrates:: Could we ever know what art would improve or amend a shoe, if we knew not what a shoe was?

Alcibiades:: Impossible.

Socrates:: Neither could we know what art would make better rings for the finger, if ignorant what a ring for the finger was.

Alcibiades:: True.

Socrates:: Well; and can we ever know what art would improve or make a man’s self better, so long as we are ignorant of what we ourselves are?

Alcibiades:: Impossible.

Socrates:: Let me ask you, then, whether it happens to be an easy thing to know oneself; and whether he was some person of mean attainments in knowledge, he who put up this inscription in the temple at Pytho: or is it a piece of knowledge difficult to be attained, and not obvious to every one?

Alcibiades:: To me, Socrates, it has often seemed easy and obvious to every one, and often too, at other times, a thing of the greatest difficulty.

Socrates:: But whether in itself it be an easy thing or not, with respect to us, Alcibiades, the state of the case is this;—had we attained to that piece of knowledge, we should perhaps know what it is to take care of ourselves; but never can we know this so long as we remain ignorant of that.

Alcibiades:: These are truths which I acknowledge.

Socrates:: Come then. By what means might it be found what is the very self of every thing? for so we might perhaps find what we ourselves are: but so long as we continue in the dark as to that point, it will be no way possible to know ourselves.

Alcibiades:: You are certainly in the right.

Socrates:: Attend now, I conjure you in the name of Jupiter: With whom is it that you are at this present time discoursing? Is it not with me?

Alcibiades:: It is.

Socrates:: And am not I discoursing with you?

Alcibiades:: You are.

Socrates:: It is Socrates then who is discoursing and arguing:

Alcibiades:: Quite true.

Socrates:: And Alcibiades is attentive to his arguments.

Alcibiades:: He is.

Socrates:: Is it not by reason that Socrates thus argues in discourse?

Alcibiades:: Undoubtedly.

Socrates:: And is not to argue in discourse the same thing as to reason?

Alcibiades:: Quite the same.

Socrates:: But is not the person who uses a thing, different from the thing, which he uses?

Alcibiades:: How do you mean?

Socrates:: As a shoe-maker, for instance, cuts his leather with the sheers, and the paring knife, and other tools.

Alcibiades:: Well; he does so.

Socrates:: Is not then the shoe-maker, who cuts the leather and uses those tools in cutting it, different from the tools which he uses?

Alcibiades:: Without doubt.

Socrates:: Are not, in like manner, the instruments on which a musician plays, different things from the musician himself?

Alcibiades:: Certainly.

Socrates:: It was in this sense that just now I asked you whether you thought that, in all cases, the person who used a thing was different from the thing which he used.

Alcibiades:: I think he is.

Socrates:: Now then, to resume the instance of the shoe-maker; what say we? does he cut the leather with his tools only, or also with his hands?

Alcibiades:: With his hands also.

Socrates:: He therefore uses also these.

Alcibiades:: He does.

Socrates:: And does he not use his eyes also when he is cutting the leather?

Alcibiades:: He does.

Socrates:: And we are agreed, that the person who makes use of any things is different from the things which he makes use of.

Alcibiades:: We are.

Socrates:: The shoe-maker then, and the musician, are different from the hands and eyes with which they perform their operations.

Alcibiades:: It is apparent.

Socrates:: And does not a man use also his whole body?

Alcibiades:: Most certainly.

Socrates:: Now the user is different from the thing used.

Alcibiades:: True.

Socrates:: A man therefore is a being different from his body.

Alcibiades:: It seems so.

Socrates:: What sort of being then is man?

Alcibiades:: I know not.

Socrates:: But you know that man is some being who makes use of the body.

Alcibiades:: True.

Socrates:: Does any being make use of the body other than the soul?

Alcibiades:: None other.

Socrates:: And does it not so do by governing the body?

Alcibiades:: It does.

Socrates:: Further. I suppose that no man would ever think otherwise than this.

Alcibiades:: Than what?

Socrates:: That a man himself was one of these three things.

Alcibiades:: What three things?

Socrates:: Soul, or body, or a compound of them both, constituting one whole.

Alcibiades:: What besides could be imagined?

Socrates:: Now we agreed that the being which governs the body is the man.

Alcibiades:: We did.

Socrates:: What being then is the man? Doth the body itself govern itself?

Alcibiades:: By no means.

Socrates:: For the body we said was governed.

Alcibiades:: True.

Socrates:: The body then cannot be that being which we are in search of.

Alcibiades:: It seems not.

Socrates:: But whether does the compound being govern the body? and whether is this the man?

Alcibiades:: Perhaps it is.

Socrates:: Least of any of the three can this be so. For of two parties, one of which is the party governed, there is no possibility that both of them should govern jointly.

Alcibiades:: Right.

Socrates:: Since then neither the body, nor the compound of soul and body together, is the man, it remains, I think, either that a man's self is nothing at all, or; if it be any thing, it must be concluded that the man is no other thing than soul.

Alcibiades:: Clearly so.

Socrates:: Needs it then, to be proved to you still more clearly, that the soul is the very man?

Alcibiades:: It needs not, by Jupiter: for the proofs already brought seem to me sufficient.

Socrates:: If it be proved tolerably well, though not accurately, ’tis sufficient for us. For we shall then perhaps, and not before, have an accurate knowledge of man’s self, when we shall have discovered what we just now passed by as a matter which required much consideration.

Alcibiades:: What is that?

Socrates:: That of which was said some such thing as this,—that in the first place we should consider what is self itself: whereas, instead of this, we have been considering what is the proper self of every man. And this indeed for our purpose will perhaps suffice. For we could by no means ever say that any thing was more peculiarly and property oneself, than is the soul.

Alcibiades:: Certainly, we could not.

Socrates:: May we not then fairly thus determine,—that we are conversing one with another, by means of reason, you and I, soul with soul?

Alcibiades:: Quite fairly.

Socrates:: This therefore was our meaning when we said a little before, that Socrates discoursed with Alcibiades, making use of reason: we meant, it seems, that he directed his words and arguments, not to your outward person, but to Alcibiades himself, that is to the soul.

Alcibiades:: It seems so to me too.

Socrates:: He therefore enjoins a man to recognize the soul, he who give him this injunction,—to know himself.

Alcibiades:: That is probably his meaning.

Socrates:: Whoever then has a knowledge only of his body, has indeed attained the knowledge of what is his, but not the knowledge of himself.

Alcibiades:: Just so.

Socrates:: None therefore of the physicians, so far as he is only a physician, knows himself: neither does any master of the exercises, so far as he is such a master and nothing more.

Alcibiades:: It seems they do not.

Socrates:: Far from knowing themselves then are husbandmen, and other artificers or workmen. For such men as these are ignorant it seems of the things which are theirs, and knowing only in subjects still more remote, the mere appurtenances to those things which are theirs, so far as their several arts lead them. For they are acquainted only with things appurtenant to the body, to the culture and service of which body these things administer.

Alcibiades:: What you say is true.

Socrates:: If therefore wisdom consist in the knowledge of oneself, none of these artificers are wise men by their skill in their respective arts.

Alcibiades:: I think they are not.

Socrates:: On this account it is that these arts seem mechanical and mean, and not the learning fit for a man of a virtuous merit.

Alcibiades:: Entirely true.

Socrates:: To return to our subject: whoever then employs his care in the service of his body, takes care indeed of what is his, but not of himself.

Alcibiades:: There is danger of its being found so.

Socrates:: And whoever is attentive to the improvement of his wealth, is not taking care either of himself or of what is his, but of things still more remote, the mere appurtenances to what is his.

Alcibiades:: It seems so to me too.

Socrates:: The man therefore, who is intent on getting money, is so far not acting for his own advantage.

Alcibiades:: Rightly concluded.

Socrates:: It follows also, that whoever was an admirer of the outward person of Alcibiades, did not admire Alcibiades, but something which belongs to Alcibiades.

Alcibiades:: You say what is true.

Socrates:: But whoever is your admirer is the admirer of your soul.

Alcibiades:: It appears to follow of necessity from our reasoning.

Socrates:: And hence it is, that the admirer of your outward person, when the flower of it is all fallen, departs and forsakes you.

Alcibiades:: So it appears.

Socrates:: But the admirer of a soul departs not, so long as that soul goes on to improve itself.

Alcibiades:: Probably so.

Socrates:: I am he then who forsakes you not, but abides by you, when, the flower of youth having left you, the rest, of your followers have left you and are gone.

Alcibiades:: It is kindly done of you, Socrates: and never do you forsake me.

Socrates:: Exert all your endeavors then, to be as excellent a man as possible.

Alcibiades:: I will do my best.

Socrates:: For the state of your case is this:—Alcibiades, the son of Clinias, never it seems had any admirer, neither has he now, besides one only, and therefore to be cherished, this Socrates here, the son of Sophroniscus and Phænarete.

Alcibiades:: 'Tis true.

Socrates:: Did you not say that I had been a little beforehand with you when I accosted you; for that you had it in your mind to address me first; as you wanted to ask me, why of all your admirers I was the only one who forsook you not?

Alcibiades:: I did say so: and that was the very case.

Socrates:: This then was the reason: 'twas because I was the only person who admired you; the others admired that which is yours. That which is yours has already dropt its flower; and the spring-season of it is past: whereas you yourself are but beginning to flourish. If therefore the Athenian populace corrupt you not, and make you less fair, I never shall forsake you. But this is what I chiefly fear, that you may come to admire and court the populace, and be corrupted by them, and we should lose you: since many of the Athenians, men of virtuous merit too, have been thus corrupted before now. For the people of magnanimous Erectheus has an outward person fair and engaging to behold. But we ought to strip it of all its showy dress, and view it naked. Use therefore the caution which I give you.

Alcibiades:: What caution?

Socrates:: In the first place, my friend, exercise yourself; and acquire the knowledge of those things which are necessary to be learnt by every man who engages in political affairs: but engage not in them until you are thus exercised and thus instructed: that you may come to them prepared with an antidote, and suffer no harm from the poison of the populace.

Alcibiades:: What you say, Socrates, to me seems right. But explain, if you can, more clearly, how or in what way we should take care of ourselves.

Socrates:: Is not this then sufficiently clear to us from what has been already said? For what we are, has been tolerably well agreed on. Indeed before that point was settled we feared lest we should mistake it, and imagine that we were taking care of ourselves, when the object of our care all the while was some other thing.

Alcibiades:: This is true.

Socrates:: Upon that it was concluded by both of us that we ought to take care of the soul, and that to this we should direct all our attention and regard.

Alcibiades:: It was evident.

Socrates:: And that the care of our bodies and our possessions should be delivered over to others.

Alcibiades:: We could not doubt it.

Socrates:: In what way then may we attain to know the soul itself with the greatest clearness? For, when we know this, it seems we shall know ourselves. Now, in the name of the Gods, whether are we not ignorant of the right meaning of that Delphic inscription just now mentioned?

Alcibiades:: What meaning? What have you in your thoughts, O Socrates! when you ask this question?

Socrates:: I will tell you what I suspect that this inscription means, and what particular thing it advises us to do. For a just resemblance of it is, I think, not to be found wherever one pleases; but in one only thing, the sight.

Alcibiades:: How do you mean?

Socrates:: Consider it jointly now with me. Were a man to address himself to the outward human eye, as if it were some other man; and were he to give it this counsel “See yourself;” what particular thing should we suppose that he advised the eye to do? Should we not suppose that ‘twas to look at such a thing, as that the eye, by looking at it, might see itself?

Alcibiades:: Certainly we should.

Socrates:: What kind of thing then do we think of, by looking at which we see the thing at which we look, and at the same time see ourselves?

Alcibiades:: ’Tis evident, O Socrates, that for this purpose we must look at mirrors, and other things of the like kind.

Socrates:: You are right. And has not the eye itself, with which we see, something of the same kind belonging to it?

Alcibiades:: Most certainly it has.

Socrates:: You have observed, then, that the face of the person who looks in the eye of another person, appears visible to himself in the eye-sight of the person opposite to him, as in a mirror? And we therefore call this the pupil, because it exhibits the image of that person who looks in it.

Alcibiades:: What you say is true.

Socrates:: An eye therefore beholding an eye, and looking in the most excellent part of it, in that with which it sees, may thus see itself?

Alcibiades:: Apparently so.

Socrates:: But if the eye look at any other part of the man, or at any thing whatever, except what this part of the eye happens to be like, it will not see itself.

Alcibiades:: It is true.

Socrates:: If therefore the eye would see itself, it must look in an eye, and in that place of the eye, too, where the virtue of the eye is naturally seated; and the virtue of the eye is sight.

Alcibiades:: Just so.

Socrates:: Whether then is it not true, my friend Alcibiades, that the soul, if she would know herself, must look at soul, and especially at that place in the soul in which wisdom, the virtue of the soul, is ingenerated; and also at whatever else this virtue of the soul resembles?

Alcibiades:: To me, O Socrates, it seems true.

Socrates:: Do we know of any place in the soul more divine than that which is the seat of knowledge and intelligence?

Alcibiades:: We do not.

Socrates:: This therefore in the soul resembles the divine nature. And a man, looking at this, and recognizing all that which is divine, and God and wisdom, would thus gain the most knowledge of himself.

Alcibiades:: It is apparent.

Socrates:: And to know oneself, we acknowledge to be wisdom.

Alcibiades:: By all means.

Socrates:: Shall we not say, therefore, that as mirrors are clearer, purer, and more splendid than that which is analogous to a mirror in the eye, in like manner God is purer and more splendid than that which is best in our soul?

Alcibiades:: It is likely, Socrates.

Socrates:: Looking therefore at God, we should make use of him as the most beautiful mirror, and among human concerns we should look at the virtue of the soul; and thus, by so doing, shall we not especially see and know our very selves?

Alcibiades:: Yes.

Socrates:: If then we are not wise, but are ignorant of ourselves, can we know what our good is, and what our evil?

Alcibiades:: How is it possible that we should, Socrates?

Socrates:: For perhaps it appears impossible for a man who knows not Alcibiades himself, to know any thing which relates to Alcibiades, as having that relation.

Alcibiades:: Impossible it is, by Jupiter.

Socrates:: Neither then can any thing which is our own, be known by us to be our own, any other way than through the knowledge of ourselves.

Alcibiades:: How should we?

Socrates:: And if we know not that which is ours, neither can we know any of the appurtenances to what is ours.

Alcibiades:: It appears we cannot.

Socrates:: We therefore were not at all right in admitting, as we did just now, that certain persons there were, who knew not themselves, but who knew what belonged to them, and was theirs. Neither can such as know not themselves know the appurtenances to what is theirs. For it seems, that ’tis the province of one and the same person, and is from one and the same science, to know himself, to know the things which are his, and to know the appurtenances to those things.

Alcibiades:: I believe it will be found so.

Socrates:: And whoever is ignorant of what belongs to himself and is his own, must be like wise ignorant of what belongs to other men and is theirs.

Alcibiades:: Undoubtedly.

Socrates:: And if he is ignorant of what belongs to other men, will he not be ignorant also of what belongs to the public, and to other civil states?

Alcibiades:: He must be so.

Socrates:: Such a man, therefore, cannot be a politician.

Alcibiades:: Certainly he cannot.

Socrates:: Neither will he be fit to manage a family.

Alcibiades:: Certainly not.

Socrates:: Nor will he have any certain knowledge of any thing which he is doing.

Alcibiades:: He will not.

Socrates:: And will not the man who knows not what he is doing, do amiss?

Alcibiades:: Certainly so.

Socrates:: And doing amiss, will he not act ill, both as a private person, and as a member of the public?

Alcibiades:: No doubt of it.

Socrates:: And the man who acts ill, is he not in a bad condition?

Alcibiades:: A very bad one.

Socrates:: And in what condition will they be who have an interest in his conduct?

Alcibiades:: In a very bad one they too.

Socrates:: It is not possible therefore that any man, should be happy if he be not wise and good.

Alcibiades:: It is not possible.

Socrates:: Those then who are bad men are in a bad condition.

Alcibiades:: A very bad one indeed.

Socrates:: Not even by riches therefore is a man delivered out of a miserable condition; nor by any other thing than wisdom and virtue.

Alcibiades:: Apparently so.

Socrates:: Fortifications therefore, and shipping, and harbors, will be of no avail to the happiness of any civil states; neither will the multitude of their people, nor the extent of their territories; if they want virtue.

Alcibiades:: Of none at all.

Socrates:: If then you would manage the affairs of the city well and rightly, you must impart virtue to the citizens.

Alcibiades:: Beyond question.

Socrates:: But can a man impart to others that which he has not himself?

Alcibiades:: How should he?

Socrates:: You yourself therefore in the first place should acquire virtue, as should also every other man who has any thoughts of governing, and managing, not himself only, and his own private affairs, but the people also, and the affairs of the public.

Alcibiades:: True.

Socrates:: Not arbitrary power therefore, nor command, ought you to procure, neither for yourself nor for the city, but justice and prudence.

Alcibiades:: It is evident.

Socrates:: For, if ye act justly and prudently, your own conduct, and that of the city too, will be pleasing unto God.

Alcibiades:: 'Tis highly probable.

Socrates:: And ye will thus act, by looking, as we said before, at that which is divine and splendid.

Alcibiades:: Evidently so.

Socrates:: And, further, by directing your sight hither, ye will behold and know what is your own good.

Alcibiades:: True.

Socrates:: Will ye not then act both rightly and well?

Alcibiades:: Certainly.

Socrates:: And acting thus I will insure happiness both to yourself and to the city.

Alcibiades:: You will be a safe insurer.

Socrates:: But acting unjustly, as looking to that which is without God, and dark, 'tis highly probable that ye will perform actions similar to what ye behold, actions dark and atheistical, as being ignorant of yourselves.

Alcibiades:: In all probability that would be the case.

Socrates:: For, O my friend Alcibiades! if a man have the power of doing what he pleases, and at the same time want intellect, what will be the probable consequence of such arbitrary power, to himself, if he is a private person, and to the state also, if he governs it? As in the case of a bodily disease, if the sick person, without having medical knowledge, had the power of doing what he pleased, and if he tyrannized so as that no person would dare to reprove him, what would be the consequence? Would it not be, in all probability, the destruction of his body?

Alcibiades:: It would indeed.

Socrates:: And in the affair of a sea voyage, if a man, void of the knowledge and skill belonging to a sea commander, had the power of acting and directing in the vessel as he thought proper, do you conceive what would be the consequence, both to himself and to the companions of his voyage?

Alcibiades:: I do; that they would all be lost.

Socrates:: Is it otherwise then in the administration of the state, or in any offices of command or power? If virtue be wanting in the persons who are appointed to them, will not the consequence be an evil and destructive conduct?

Alcibiades:: It must.

Socrates:: Arbitrary power, then, my noble Alcibiades! is not the thing which you are to aim at procuring,—neither for yourself, nor yet for the commonwealth; but virtue, if you mean either your own private happiness or that of the public.

Alcibiades:: True.

Socrates:: And before one acquires virtue, it is better to be under good government than it is to govern,—better not only for a child, but for a man.

Alcibiades:: Evidently so.

Socrates:: Is not that which is better, more beautiful also?

Alcibiades:: It is.

Socrates:: And is not that which is more beautiful, more becoming?

Alcibiades:: Without doubt.

Socrates:: It becomes a bad man therefore to be a slave: For it is better for him so to be.

Alcibiades:: Certainly.

Socrates:: Vice therefore is a thing servile, and becoming only to the condition of a slave.

Alcibiades:: Clearly.

Socrates:: And virtue is a thing liberal, and becoming to a gentleman.

Alcibiades:: It is.

Socrates:: Ought we not, my friend, to shun every thing which is servile, and becoming only to a slave?

Alcibiades:: The most of all things, O Socrates!

Socrates:: Are you sensible of the present state of your own mind? Do you find it liberal, and such as becomes a gentleman, or not?

Alcibiades:: I think I am very fully sensible of what it is.

Socrates:: Do you know then, by what means you may escape from that condition in which you are now,—not to name what it is, when it happens to be the case of a man of honor?

Alcibiades:: I do.

Socrates:: By what?

Alcibiades:: Through you, Socrates, if you please.

Socrates:: That is not well said, Alcibiades!

Alcibiades:: What ought I then to say?

Socrates:: You ought to say, If God pleases.

Alcibiades:: I adopt those words then for my own. And I shall add to them these further;—that we shall be in danger, Socrates, of changing parts,—I of assuming yours,—and you of bearing mine. For it is not possible for me to avoid the following you every where from this day forward, with as much assiduity as if I was your guardian,—and you my pupil.

Socrates:: My friendship then for you, noble Alcibiades! may be compared justly to a stork; if, having hatched in your heart, and there cherished, a winged love, it is afterwards to be by this love, in return, cherished and supported.

Alcibiades:: And this you will find to be the very case: for I shall begin from henceforward to cultivate the science of justice.

Socrates:: I wish you may persevere. But I am terribly afraid for you: not that I in the least distrust the goodness of your disposition; but perceiving the torrent of the times, I fear you may be borne away with it, in spite of your own resistance, and of my endeavors in your aid.

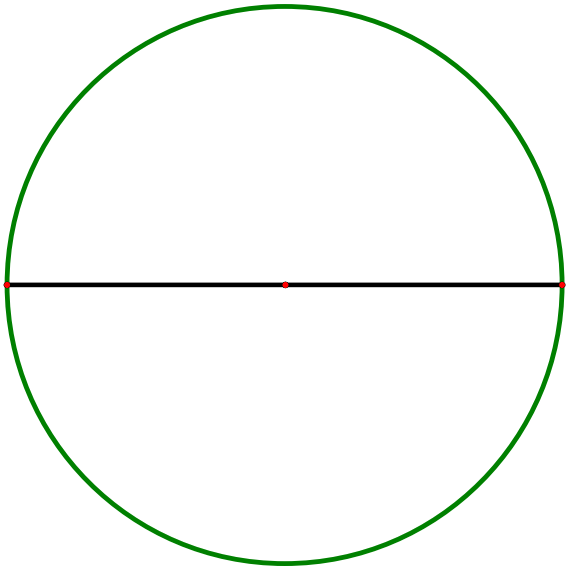
## Parmenides

Wednesday, April 1, 2020

Plato is going to introduce the reader to using standard paradigms from commonly available perceptibles while reasoning. In this dialog, Plato is going to work the elements of a thing in terms of names used in Common Grammar and he is going to encourage the reader to refer to examples in order to think about what is being demonstrated.

In geometry, we have two distinct methods of denoting the elements of a thing in terms of an arithmetic identity, one-to-one, by a simple segment:

or geometric identity as one-to-many, by the circle:



So, if or when you start to learn the analog grammar of geometry, you can refer to the two tools of writing the grammar, straightedge and compass, or during your evolution of understanding you may learn to comprehend these two tools in terms of the elements of a thing in terms of the intelligible identities they make expressible in the grammar, arithmetic and geometric.

You are encourage to use both of these figures, draw them as you read through the dialog to come to understand the principles of predication in reference to the convention of names in our logic systems.

More modern scholars have attempted this using what has been called Venn Diagrams, however, when one is illiterate, those paradigms will not help them if they do not also have a standard concept of grammar itself. As Plato demonstrates, if you cannot follow by these basic paradigms, you end up speaking gibberish even though you are not aware of it. This is why, Venn Diagrammers cannot figure out why they always end up contradicting themselves, they draw something like a circle in a circle, not realizing that they made their first mistake exampled in this dialog by the sail covering the sailors. One is confusing an arithmetic identity with a geometric identity.

# **Parmenides.**

or

On Idealities.

Translated by George Burges, M. A.

PERSONS OF THE DIALOGUE.

Cephalus, Adeimantus, Antipho, Glauco,
Pythodorus, Socrates, Zeno, Parmenides.

Cephalus:: When we arrived at Athens from home, from Clazomenæ, we happened to meet with Adeimantus and Glaucon in the place of assembly. And Adeimantus, taking me by the hand, said;

Adeimantus:: Hail, Cephalus; and if you are here in want of any thing over which we have any power, mention it to me.

Cephalus:: Nay, I came for this very purpose, to beg of you a favor.

Adeimantus:: Will you then, state your request?

Cephalus:: What was the name of your brother by the same mother? for I do not remember it: for he was a child when I first came here from Clazomenæ; and it is now a long time since then. His father's name was, I think, Pyrilampes.

Adeimantus:: Just so, and his brother's was Antipho. But why do you especially ask?

Cephalus:: These, my fellow-citizens, are much given to philosophy, and have heard that this Antipho had frequently met with one Pythodorus, a friend of Zeno; and that having frequently heard from Pythodorus the conversations which Socrates, Zeno, and Parmenides held with each other, he had remembered them.

Adeimantus:: You speak the truth.

Cephalus:: These then, we beg to hear.

Adeimantus:: This, is no difficult matter. For, although young, he has exercised himself greatly in them; since he now, after the example of his grandfather, who is his namesake, applies himself much to equestrian affairs. But, if it seems good, we will go to him: for he is just gone home from hence; and dwells hard by, in Melita.

Cephalus:: So saying, we went, and caught him at home, giving orders to a coppersmith to make him a bit. But as soon as he was at liberty, and his brothers told him the cause of our coming, he recognized me through my previous sojourn at this place, and he embraced me; and on our begging him to go through the conversations, he at first shrunk back, for he said it would be a troublesome task; but afterwards, however, he detailed them.

Cephalus:: Antipho then said that Pythodorus had told him that Zeno and Parmenides once came to the great Panathenæa; that Parmenides was then a rather old man, with very hoary locks, but of a handsome and noble aspect, and full sixty-five years of age; but that Zeno was nearly forty years old, very tall and graceful to behold, and was reported to have been the bosom friend of Parmenides; he said, too, that they lodged with Pythodorus, in the Cerameicus, beyond the walls; whither also Socrates came, and many others with him, who were eager to hear the writings of Zeno; for then for the first time they had been brought by the strangers; but that Socrates was at that time very young. That Zeno therefore himself read the writings to them; and Pythodorus further related that Parmenides happened to be gone out; and that of the discourses so read there remained only a very small portion, when he himself entered, and Parmenides with him and Aristotle, who was one of the Thirty Tyrants; and that he heard but a little at that time; but that nevertheless he had often heard the whole discourse previously from Zeno.

He added that Socrates, on hearing the discourses, entreated him to read again the first hypothesis of his first discourse; and that, when it was read, Socrates said—

Socrates:: How do you, Zeno, assert this, that if the things existing are many, the same things must be both similar and dissimilar? But that this is impossible. For neither can things dissimilar be similar, nor things similar be dissimilar. Is not this what you assert?

Zeno:: It is.

Socrates:: If then it is impossible for dissimilars to be similar, and similars dissimilar, it is impossible likewise for many things to exist? For if there were many, they would undergo impossibilities. Is this what your discourses mean? Is it any thing else than to contest, contrary to all that is usually asserted, that "the many" does not exist? And do you fancy that each of your discourses is a proof of this very doctrine? so that you conceive you have produced as many proofs as you have written discourses, to show that "the many" does not exist? say you thus, or do I not rightly understand you?

Zeno:: No; but you understand quite well the meaning of the whole work.

Socrates:: I perceive, Parmenides, that Zeno here wishes not only to be familiar with you in other bonds of friendship, but in your writings likewise. For Zeno has, in a certain manner, written the same as yourself; but by some change he endeavors to deceive us, as if asserting something different. For you in your poems assert that the universe is "one;" and you produce beautiful and excellent arguments in support of this opinion. But Zeno says that "the many" does not exist, and he too produces very many and mighty proofs. With regard then to the fact, that you assert that "the one" exists, and he, that "the many" does not exist; and that each of you speak so as to appear to have said not an atom of the same things, although you both assert nearly the same, it seems to me that what has been said by you is above us the rest.

Zeno:: It is so, Socrates. But you do not perfectly comprehend the truth of my writings; although, like the dogs of Laconia, you excellently pursue and track out what is there asserted. But this in the first place lies hid from you, that this discourse is not in every respect of so solemn a cast, that it was written, as you say, with the set purpose of being concealed from mankind, as if effecting something great; yet you have spoken something of what has happened; and in truth, these writings are a kind of support to the doctrine of Parmenides against those who endeavor to ridicule it, by saying that if "one" exists, it would follow that such an assertion would suffer many things of a laughable kind, and contrary to itself. This writing therefore contradicts those, who assert that "the many" exists; and it gives in return these and many other reasons; as it intends to show that the hypothesis, which asserts the existence of "the many," would suffer things still more laughable than that, which says of if "many" exist, or of "one" existence, should a person go through the question sufficiently. Through some such love of contention was this discourse composed by me, when a youth; but some one stole it after it was written, so that it was out of my power to deliberate whether it should be brought out into the light or not. Hence it lies hid from you, Socrates, that it was written by a young person through the love of contention, and not, as you fancy, by an older one, through the love of renown, since, as I have said, you have not made a bad guess.

Socrates:: I receive the account; and I think the case is as you have stated. But tell me this too. Do you not think there is a certain form of similitude, existing itself by itself? and that another is contrary to this, which is dissimilar? and that you and me, and other things, which we call many, participate in these two? and that some things, participating in similitude, become similar in that respect and so far as they participate? but that others, which participate in dissimilitude, become dissimilar? and that those which participate in both become both? But if all things participate in both, which are contrary to each other, and that similar and dissimilar to each other exist through participating of both, what is the wonder? For, if any one should show that similars themselves become dissimilar, or dissimilars similar, I should think it would be a prodigy. But if he shows that such things, as participate in both of these, suffer likewise both these, it does not appear to me, Zeno, that there would be any thing absurd in the case; nor again, if any one should show that all things are one, through their participating in “the one,” and that very same things are many, through their participating in multitude. But I should very much wonder if any one should show that what is one, is itself many, and on the other hand, that what are many is one; and in a similar manner concerning all the rest. It would indeed be worthy of wonder, if he should show that both the genera themselves and the species in them suffered these contrary affections. But what is there wonderful, if any one should show that I am both one thing and many, by saying, that when he wishes to prove I am many, that the parts on the right hand of me are different from those on the left, the anterior from the posterior, and in like manner the upward from the downward parts—for I think that I participate in multitude—but when he desires to show that I am one, he will say, that, we being seven in number, I am one man, and participate in “the one”? so that he would by this means prove both to be true. If then any one should endeavor to show that stones, wood, and all such things, are. both many and one, we would say that he shows such things as are many and one, but not that “the one” is many, nor “the many” one; and that he does not say any thing wonderful, but what we should all confess. But if any one should, in the first place, distribute the species of things, concerning which I have just been speaking, separating them according to their very selves, such as similitude and dissimilitude, and multitude and the one, and standing and motion, and the rest of this kind, and should afterwards show that these things can in themselves be mixed and separated, I should, Zeno, be marvelously astonished. But it appears to me that you have very manfully made this your business; yet I should be much more astonished if any one could solve this very same difficulty, which is involved on all sides in species themselves; and, as you have gone through in the case of things sensible to the sight, so should he go through in the case of things comprehended by reason.

Cephalus:: On Socrates saying this, Pythodorus observed that he thought that Parmenides and Zeno were at each remark annoyed; but they gave the greatest attention to him, Socrates, and frequently looking at each other smiled, as wondering at Socrates. Hence on his ceasing to speak, Parmenides said—

Parmenides:: How worthy, Socrates, are you of admiration for your ardor in what relates to reasoning! Tell me then, have you thus separated, as you say, certain species apart by themselves, and likewise those, that participate in them, apart? And does similitude itself appear to you to be separate from that similitude which we possess, and “one” and “many,” and all such other things as you have just now heard of from Zeno?

Socrates:: To me, it does.

Parmenides:: And does it appear to you, that these things too exist, such as a species of justice, itself by itself, and of the beautiful and the good, and all things of such a kind?

Socrates:: Yes.

Parmenides:: What, is there a species of man separate from us and all the things, such as we are, some species itself of man, or of fire, or water?

Socrates:: I have often been in doubt, Parmenides, on this point; whether it is necessary to speak of these in the same manner as of those, or in a different manner.

Parmenides:: And do you doubt, Socrates, whether it is necessary to say that of each individual thing, as may appear to be ridiculous, such as hair, clay, and filth, or any thing else the most worthless and vile, there is a species apart, as being different from those which we take into our hands?

Socrates:: By no means; but I think that things are as we see them: but consider lest it be not very absurd to think that there is a certain form of these? Already it has at some time disturbed me, lest there be something of the same kind in the case of every thing. But afterwards, when I have been standing in this way, I rapidly take myself off, fearing lest, falling into an abyss of trifling, I should utterly perish and be lost. But, returning from thence to what we have just now asserted as possessing species, I have passed my time in busying myself about them.

Parmenides:: For, you are as yet but a young man, Socrates, and Philosophy has not yet laid hold of you, as she will yet lay hold of you, according to my thinking, when you shall not despise any of these things: but now, through your juvenile age, you still look to the opinions of men. Tell me then this. Does it appear to you, as you say, that there are certain species, of which these the rest participating retain their appellations; as, for instance, that such things as participate in similitude are similars; in greatness, are great; and in beauty and justice, are beautiful and just?

Socrates:: Entirely so.

Parmenides:: Does not every thing which participates, either participate in the whole species, or only in a part of it? Or can there be any other mode of participation besides these?

Socrates:: How can there be?

Parmenides:: Does it then appear to you that the whole species in each individual of many things is one? Or how?

Socrates:: What, prevents it, Parmenides, from being so?

Parmenides:: Being, therefore, one and the same in things many and separate from each other, it will be at the same time whole, and thus it will be separate itself from itself.

Socrates:: It would not be so, if, just as the day, being one and the same, is present in many places at the same time, and yet is not the more separate from itself; in the same manner, if every species may be at once one and the same in all.

Parmenides:: Pleasantly indeed, do you, Socrates, make one and the same thing to be in many places; just as if, covering many men with a sail-cloth, you should say that there is one whole over many; or do you think that you would not assert something of this kind?

Socrates:: Perhaps so.

Parmenides:: Will then the whole sail-cloth be over each person, or one part of it over one person, and another over another?

Socrates:: A part.

Parmenides:: Then, these species, Socrates, are divisible; and that which participates in them, would participate only in a part of them; and there would no longer be in each a whole, but only a part of each.

Socrates:: So it seems.

Parmenides:: Are you then willing to assert that one species is in truth divided, and that it is still one?

Socrates:: By no means.

Parmenides:: For see, whether, if you should divide magnitude itself, and if each of the many things which are great, should be great by a part of magnitude, less than magnitude itself, it would not appear absurd.

Socrates:: Entirely so.

Parmenides:: What then? Will each little thing, by taking a part of the equal, have that, which, to a thing less than the equal itself, will be the thing having equal to some thing?

Socrates:: It is impossible.

Parmenides:: But some one of us will possess a part of the small; and the small itself will be greater than this, inasmuch as it is a part of itself; and thus the small itself will be greater: but that to which the part taken away shall be added, will become smaller, but not greater than before.

Socrates:: This cannot be.

Parmenides:: After what manner then, Socrates, can the other things participate in species, if they are able to participate neither according to parts, nor according to wholes?

Socrates:: It does not appear to me, by Zeus, to be at all an easy matter to define in a question of this kind.

Parmenides:: What then? How stands the case with you in regard to this?

Socrates:: To what?

Parmenides:: I think that you consider every species as one, on some such account as this. When some things many in number seem to you to be great, there seems perhaps to be one and the same idea to you, who survey them all; from whence you consider the great to be one.

Socrates:: You speak the truth.

Parmenides:: But what, as regards the great itself, and the other things which are great, if you look upon them all in like manner through the soul, will not, on the other hand, a certain one thing appear to you great, through which all these necessarily seem to be great?

Socrates:: It seems so.

Parmenides:: Another species of magnitude will then become apparent, besides magnitude itself and its participants: and in addition to all these, another species, through which all these become great; each of your species will no longer be one, but infinite in number.

Socrates:: But, have a care, Parmenides, lest each of these species be nothing more than a mental conception, and that it is not meet for it to exist any where but in souls. For thus each would be one, nor would the consequences, just now mentioned, occur.

Parmenides:: What then, is each of these mental conceptions one, and is there a mental conception of nothing?

Socrates:: This is impossible.

Parmenides:: It is then of something?

Socrates:: Yes.

Parmenides:: Of a being or of a non-being?

Socrates:: Of a being.

Parmenides:: Is it not of some one thing, which that mental conception understands as being a one certain idea over all things?

Socrates:: Yes.

Parmenides:: Will not then that species, which is understood to be one, be always the same over all things?

Socrates:: This, on the other hand, seems to be necessary.

Parmenides:: But what. Is it not necessary, since you say that the other things participate in species, either that each should seem to you to be from mental conceptions, and that all of them understand, or that being mental conceptions, they understand nothing?

Socrates:: But this, has no reason for it. But this appears, Parmenides, to me to be for the most part the case. That these species stand, as it were, patterns in nature; but that the other things are similar to them, and are their resemblances: and that this participation of species by the other things, is nothing more than an assimilation to them.

Parmenides:: If then any thing becomes similar to the species, can it be possible for that species not to be similar to the assimilated, so far as it is rendered similar? Or is there any method by which the similar would not be similar to the similar?

Socrates:: There is not.

Parmenides:: Is there not, therefore, a great necessity for the similar to participate in one and the same form as the similar?

Socrates:: There is a necessity.

Parmenides:: But will not that, through the participation of which the similars become similars, be species itself?

Socrates:: Entirely so.

Parmenides:: It is not, therefore, possible for a thing to be similar to the species, nor the species to another. For otherwise another species will always appear by the side of the species; and should this again become similar to another, another would appear; and a new species would never cease to be continually produced, if the species should be produced similar to its participant.

Socrates:: You speak most truly.

Parmenides:: Hence, then, the other things do not participate in species through similitude; but it is necessary to seek after something else, through which they do participate.

Socrates:: So it seems.

Parmenides:: See you then, Socrates, how great is the difficulty, should any one define species as existing themselves by themselves?

Socrates:: Very much so.

Parmenides:: Know then well that you do not apprehend at all, so to speak, how great is the difficulty, if, separating each of the things existing, you should lay down one species.

Socrates:: How so?

Parmenides:: There are many and other doubts; but this is the greatest. Should any one assert that it is not proper for the species to be known, if they are such as we have said they ought to be, a person would not have it in his power to demonstrate to the party asserting this, that he is deceived; unless he who doubts is skilled in many things, and is of a good disposition, and willing to follow the demonstrator, while busied in many proofs, and these far-fetched; while he who holds, as a matter of necessity, that they are not to be known, will be unpersuaded.

Socrates:: In what way, Parmenides?

Parmenides:: Because, Socrates, I think that both you and any other person, who lays down that the essence of each species exists itself by itself, would allow, in the first place, that not one of them exists in us.

Socrates:: For, how could it still exist itself by itself?

Parmenides:: You speak well. But do not such ideas as are, with relation to each other, such as they are, possess also their essence with respect to themselves, and not with reference to things existing among us, whether they are resemblances, or in whatever manner a person may set them down; by the names of each of which, while we participate in them, we are called? but the things existing among us, and which are synonymous to those, exist, on the other hand, with reference to themselves, and not with relation to the species; and belong to themselves, but not to those which receive from them a common appellation.

Socrates:: How say you?

Parmenides:: As if, some one of us should be the master or slave of any one; for a slave is surely not the slave of a master, who is abstractedly speaking a master, nor is a master the master of a slave, who is abstractedly speaking a slave; but being a man, both these are of a man; but master itself is that, which it is from its relation to slavery itself; and slavery itself is in a similar manner slavery with reference to mastery itself. But what are in us do not possess any power, as regards those, nor those any, as regards us; but they exist, as I say, from themselves, and with relation to themselves; and those by us in a similar manner with relation to themselves. Or do you not understand what I am saying?

Socrates:: I understand, perfectly.

Parmenides:: Would not science itself, which is a thing science, be a science of that itself which is a thing truth.

Socrates:: Certainly.

Parmenides:: But would each of the sciences which exists really, be the science of each of the things which exist really, or not?

Socrates:: Yes, it would.

Parmenides:: But would not the science which is among us be the science of the truth which is? And again, would not each science that is among us, turn out to be the science of things existing among us?

Socrates:: It is necessary.

Parmenides:: But, as you have admitted, we do not possess species themselves, nor is it possible for them to exist among us.

Socrates:: For it is not.

Parmenides:: But each of the genera, which really exist, are surely known by the species itself of its proper science.

Socrates:: Yes.

Parmenides:: But this species we do not possess.

Socrates:: For we do not.

Parmenides:: No species therefore is known by us, since we do not participate in science itself?

Socrates:: It appears it is not.

Parmenides:: Therefore the beautiful itself, which exists really, and the good itself, and all the things which we have considered as being ideas, are unknown to us?

Socrates:: It nearly seems so.

Parmenides:: Now look at this, which is yet still more dreadful.

Socrates:: What?

Parmenides:: Would you say, or not, that, if there is a certain species itself of science, it would be much more accurate than the science which is among us? and beauty itself, and every thing else in the same manner?

Socrates:: Certainly.

Parmenides:: If then any thing else participates in science itself, would you not say that no one possesses the most accurate science more than a god?

Socrates:: It is necessary to say so.

Parmenides:: But will a god, possessing science itself, be able to know the matters among us?

Socrates:: Why not?

Parmenides:: Because, it has been, Socrates, confessed by us, that those species do not possess the power, which they possess, in relation to those among us, nor those among us in relation to them; but that each possess their power in relation to themselves.

Socrates:: It was so confessed.

Parmenides:: If then there is this the most exact mastery with the deity, and this the most exact science, their mastery will not rule over us, nor will their science know us, nor aught of the things among us; and similarly we do not rule over them by our rule, nor do we know aught of things divine by our science. And again, according to the same reasoning, they will neither, though gods, be our masters, nor have any knowledge of human affairs.

Socrates:: But have a care, lest the reasoning be not very wonderful, should it deprive the deity of the power of knowing.

Parmenides:: These, and very many others, Socrates, in addition to these, it is necessary for the species to undergo, if there are these ideas of things existing, and if any one shall define each species, as being something itself; so that the hearer may be in a difficulty, and, doubting, contend that such species do not exist; or if they do exist ever so much, that there is a great necessity for them to be unknown by human nature; and that he who says so, seems to say something to the purpose; and to be, as we just now stated, a person wonderfully difficult to be persuaded, and that there is need of a person naturally clever to be able to perceive that there is a certain genus of each thing, and an essence existing itself by itself: but of a person still more wonderful, who shall discover himself, and be able to teach another to distinguish all these in a sufficient manner.

Socrates:: I agree with you, Parmenides, for you speak entirely to my mind.

Parmenides:: But however, if any one, Socrates, on the contrary, will not admit that there are species of existing things, looking to what has been now said, and to other things of the same kind, nor will define the species of each thing as being something itself, he will not have where to turn his thoughts, while he does not permit the idea of each existing thing to be always the same; and by this means he will entirely destroy the power of speaking logically. Some such thing as this you seem to me to have perceived even more.

Socrates:: You speak the truth.

Parmenides:: What then will you do with respect to philosophy? Where will you turn yourself, if these are unknown?

Socrates:: Indeed I do not seem to myself to see clearly at present.

Parmenides:: Before you exercised yourself, you endeavored, Socrates, betimes to define what is the beautiful, the just, and the good, and each of the other species: for I lately perceived, and I heard you discoursing with this Aristotle here. Beautiful and divine, be assured, is that ardor of yours, by which you rush onwards to rational conversations. But draw yourself out, and exercise yourself still more while you are yet young, on account of the ardor appearing useless to the many, and being called by them a mere idle talking; for if you do not, the truth will escape you completely.

Socrates:: What then, is the method of the exercise, Parmenides?

Parmenides:: That, which you have heard from Zeno, except this, I admired you while asserting, contrary to Zeno, that you did not permit a person in the things seen by the eye to look into the aberration about them, but about those, which a person could especially lay hold of by reason, and would consider to be species.

Socrates:: For it appears to me that in this way it would be not difficult to prove that the things existing are both similar and dissimilar, and suffering any other state whatever.

Parmenides:: You speak well: but it is necessary for you to do this likewise; not only to make a supposition, whether each thing exists, and to consider the consequences from the supposition, but also, if it does not exist, to suppose this same thing, if you wish to be more exercised in this matter.

Socrates:: How say you?

Parmenides:: As if, you should wish to exercise yourself in the hypothesis which Zeno has laid down, that, “if there are many things,” what must happen both to “the many,” with respect to themselves, and to “the one;” and to “the one” with respect to itself, and to “the many:” and “if many are not,” to consider again what will happen both to “the one” and to “the many,” with respect to themselves and to each other: and again, if you made the supposition “if similitude is,” or “if it is not,” what will on each supposition happen both to the things supposed and to the others, with respect to themselves and to each other; and the same reasoning must be concerning “the dissimilar,” and “motion” and “standing,” and “generation” and “destruction,” and “entity” and “nonentity;” and, in one word, concerning every thing which you suppose either to be or not to be, or suffering any other state whatever, it is necessary to consider what will happen both to itself and to each individual of the other things, which you may select, and towards many, and towards all things in a similar manner; and again, how the other things are related to themselves, and to another, which you may select, whether you suppose that, which is the subject of your supposition, as existing or not existing; if you are about to be exercised in a masterly manner, and to perceive thoroughly the truth.

Socrates:: You are speaking, Parmenides, of an impossible occupation nor do I very well understand you. But why do you not go through a certain supposition yourself, that I may learn the better?

Parmenides:: You enjoin, Socrates, a great task upon a man so old as myself.

Socrates:: But why do not you then, Zeno, go through it for us?

Cephalus:: And then Pythodorus stated that Zeno laughing said—

Zeno:: Let us, Socrates, request Parmenides himself; for see lest it be no trifling matter, as he says; or do you not perceive how great a task you are enjoining? If then we were many it would not be proper to make such a request; for it is unbecoming, especially for a man of such an age, to speak things of this kind before many. For the many are ignorant that, without this discursiveness and wandering through all things, it is impossible for the mind to meet with the truth, and to keep possession of it. I therefore, Parmenides, do, together with Socrates, make the request in order that I too may after a long time hear it.

Cephalus:: On Zeno so saying, Antiphon said that Pythodorus related that he too, and Aristotle, and the rest, entreated Parmenides to declare what he had said, and not to do otherwise.

Parmenides:: There is a necessity then, for me to comply; although I seem to myself to suffer the fate of the horse of Ibycus, to whom as being a competitor and rather old, when about to contend in a chariot race, and fearing through his experience for the event, Ibycus compares himself by saying, “Thus I too, who am so old, am forced to the contests of love to go;” so I, upon recollection, appear to myself to feel a great fear how I, at such an age, must swim through such and so great a sea of words; yet I must gratify you, since, as Zeno says, we are by ourselves. Whence then shall we begin; and what shall we first of all suppose? Or are you willing, since it seems good to play a business-like game, for me to begin from myself, and my own hypothesis, by supposing, with respect to "the one itself," if one "is," or "is not," what must happen?

Zeno:: By all means.

Parmenides:: Who then, will answer me? Will the youngest? For he will have very little trouble; for he will answer what he thinks; and his answer will be at the same time a resting-place for me.

Aristoteles:: I am prepared, in this point, for you, Parmenides; for you mean me, when speaking of the youngest. Ask me then, as one who will answer you.

Parmenides:: Be it so. If "one" is, is it not that "the one" will not be many?

Aristoteles:: For how can it be?

Parmenides:: There must then be of it neither a part nor a whole.

Aristoteles:: How so?

Parmenides:: Is not a part a part of a whole?

Aristoteles:: Yes.

Parmenides:: But what is a whole? Would not that, to which no part is wanting, be a whole?

Aristoteles:: Entirely so.

Parmenides:: On both sides then "the one" would be composed of parts, as being a whole and having parts?

Aristoteles:: It is necessary.

Parmenides:: And so in both ways "the one" will be many, but not one.

Aristoteles:: True.

Parmenides:: But it must be not many, but one.

Aristoteles:: It must.

Parmenides:: Hence, it will neither be a whole, nor possess parts, if “the one” is one.

Aristoteles:: It will not.

Parmenides:: If then it has no parts, it has neither beginning, nor middle, nor end; for such as these would be its parts?

Aristoteles:: Right.

Parmenides:: But end and beginning are the bounds of each thing?

Aristoteles:: How not?

Parmenides:: “The one” therefore is infinite, if it has neither beginning nor end?

Aristoteles:: Infinite.

Parmenides:: And therefore without figure; for it neither participates of the round nor the straight.

Aristoteles:: How so?

Parmenides:: For the round figure is that, the extremities of which are on all sides equally distant from the middle.

Aristoteles:: Yes.

Parmenides:: And the straight is that, the middle of which is situated before both the extremes?

Aristoteles:: It is so.

Parmenides:: Would not then “the one” have parts, and be many, whether it participates in a straight figure or a round?

Aristoteles:: Entirely so.

Parmenides:: It is therefore neither straight nor circular, since it has not parts.

Aristoteles:: Right.

Parmenides:: And being such, it will be no where; for it would be neither in another, nor in itself.

Aristoteles:: How so?

Parmenides:: Being in another, it would somehow be surrounded circularly by that, in which it might be, and it would be touched by many things in many places. But it is impossible for “the one,” being without parts, and not participating in a circle, to be touched in a circle in many places.

Aristoteles:: It is impossible.

Parmenides:: But being itself in itself, it would be likewise surrounding itself; since it is no other than itself, if it were in itself: for it is impossible for a thing to be in that, which does not surround it.

Aristoteles:: It is impossible.

Parmenides:: Would not then that, which contains, be one thing, and that which is contained, another? For the same whole cannot at the same time suffer and do both these: and thus “the one” would no longer be one, but two.

Aristoteles:: It certainly would not.

Parmenides:: “The one,” therefore, is not any where, being neither in itself nor in another.

Aristoteles:: It is not.

Parmenides:: But consider, whether, being in this state, it is possible for it to stand or be moved.

Aristoteles:: Why can it not?

Parmenides:: Because being moved it would be carried on or be changed; for these alone are the kinds of motion.

Aristoteles:: Certainly.

Parmenides:: But “the one” being changed from itself, it is impossible surely for it to be still one.

Aristoteles:: Impossible.

Parmenides:: It is not then moved as regards a change.

Aristoteles:: It appears it is not.

Parmenides:: But is it by being carried on?

Aristoteles:: Perhaps so.

Parmenides:: And yet if “the one” is carried on, it would be either carried round in the same circle, or it would change from one place to another.

Aristoteles:: Necessarily so.

Parmenides:: But ought not that, which is carried round in a circle, to stand firm in the middle, and to have the other parts of itself carried about the middle? But what method is there for that, which has neither a middle nor parts, to be carried circularly about the middle?

Aristoteles:: There is none.

Parmenides:: But by changing its position it is sometimes here and other times there, and is moved?

Aristoteles:: If indeed it were moved.

Parmenides:: Has it not appeared to be impossible for “the one” to be in any thing?

Aristoteles:: It has.

Parmenides:: Is it not much more impossible for it to be in the act of being in any thing?

Aristoteles:: I do not understand how.

Parmenides:: If any thing is in the act of being in any thing, is it not necessary for it to be not yet in it, since it is in the act of being; nor yet entirely out of it, if it be already in the act of being?

Aristoteles:: It is necessary.

Parmenides:: If then any other thing suffers this state, that alone would suffer it, which possesses parts; for one part of it would be in that thing, but another out of it; but it will not be possible for that, which has no parts, to be by any means wholly within or without any thing.

Aristoteles:: It is true.

Parmenides:: But is it not much more impossible for that, which neither has parts nor happens to be a whole, to be in the act of being in any thing; since it can neither exist in the act of being according to parts, nor according to a whole?

Aristoteles:: So it appears.

Parmenides:: Hence it does not change its place, neither by going any where, nor in the act of being in any thing, nor in being carried round in the same, nor in being changed.

Aristoteles:: It does not appear it does.

Parmenides:: “The one” therefore is immovable, according to every kind of motion.

Aristoteles:: Immovable.

Parmenides:: But we have likewise asserted that it is impossible for “the one” to be in any thing.

Aristoteles:: We have said so.

Parmenides:: It can never therefore be in “the same.”

Aristoteles:: Why so?

Parmenides:: Because it would be already in that, in which it is as if in “the same.”

Aristoteles:: Entirely so.

Parmenides:: But the one itself can neither be in itself nor in another.

Aristoteles:: It cannot.

Parmenides:: The one therefore is never in “the same.”

Aristoteles:: It does not appear that is.

Parmenides:: But that which is never in “the same,” is neither at rest nor stands still.

Aristoteles:: For it cannot.

Parmenides:: “The one,” therefore, as it appears, neither stands still nor is it moved.

Aristoteles:: It does not appear indeed.

Parmenides:: Nor will it be the same either with “different,” or with itself; nor again different either from itself or from “different.”

Aristoteles:: How so?

Parmenides:: Being different from itself, it would surely be different from “one,” and so would not be “one.”

Aristoteles:: True.

Parmenides:: And if it should be the same with “different,” it would be that “different”, and would not be itself; so that “one” would thus be not what it is, but different from “one.”

Aristoteles:: It would not indeed.

Parmenides:: It will then be not the same with “different” or different from itself?

Aristoteles:: It will not.

Parmenides:: But it will not be different from “different,” while it is “one.” For it does not belong to “one” to be different from any thing, but to be “different” alone, and to nothing else.

Aristoteles:: Right.

Parmenides:: In consequence, then, of its being “one,” it will not be “different;” or do you think it can?

Aristoteles:: Certainly not.

Parmenides:: But if it is not different through this, neither will it be through itself. But if not different in any way, it will be different from nothing.

Aristoteles:: Right.

Parmenides:: Nor yet will it be the same with itself.

Aristoteles:: How not?

Parmenides:: The nature of "the one" is surely this of "the same."

Aristoteles:: How?

Parmenides:: Because, when any thing becomes the same with any thing, it does not become one.

Aristoteles:: But what then?

Parmenides:: That, which becomes the same with many things, must necessarily become many, and not one.

Aristoteles:: True.

Parmenides:: But if "the one" and "the same" differed in no respect, whenever any thing became "the same," it would always become "one," and whenever it became "the one" it would be "the same."

Aristoteles:: Entirely so.

Parmenides:: If then "the one" shall be "the same" to itself, it will not be "one" to itself; and thus "one" will not be "one."

Aristoteles:: But this indeed is impossible.

Parmenides:: It is impossible, therefore, for "the one" to be either different from "different," or the same with itself.

Aristoteles:: Impossible.

Parmenides:: And thus "the one" would be neither different nor the same, either with respect to itself or different.

Aristoteles:: It would not.

Parmenides:: But neither will it be similar to any thing, or dissimilar either to itself or to different.

Aristoteles:: Why so?

Parmenides:: Because the “similar” somehow has the accident of “same.”

Aristoteles:: Certainly.

Parmenides:: But it has been seen that “the same” is naturally separate from “the one.”

Aristoteles:: It has been so seen.

Parmenides:: But if “the one” should suffer any thing apart from being “the one,” it would suffer the being more than one; but this is impossible.

Aristoteles:: Certainly.

Parmenides:: In no respect then can “the one” suffer the being “the same,” either with another or with itself.

Aristoteles:: It does not appear it can.

Parmenides:: Nor can it therefore be similar either to another or to itself.

Aristoteles:: It seems it cannot.

Parmenides:: Nor yet has “the one” suffered the being “different;” for thus it would suffer the being more than one.

Aristoteles:: For it would more.

Parmenides:: But that which suffers the being different either from itself or from another, will be dissimilar either to itself or to another, if that which suffers the being the same is similar.

Aristoteles:: Right.

Parmenides:: But “the one,” as it appears, since it in no respect suffers the being “different,” would in no respect be dissimilar either to itself or to another.

Aristoteles:: It would not.

Parmenides:: “The one,” therefore, would be neither similar nor dissimilar, either to another or to itself.

Aristoteles:: It does not appear that it would.

Parmenides:: But since it is such, it will neither be equal nor unequal, either to itself or to another.

Aristoteles:: How so?

Parmenides:: Being equal, it would be of the same measure as that to which it is equal.

Aristoteles:: Certainly.

Parmenides:: But being greater or less than the things, with which it is commensurate, it will have more measures than the less quantities, but fewer than the greater.

Aristoteles:: Certainly.

Parmenides:: But of those, with which it is incommensurable, with respect to the one part, it will consist of lesser; and with respect to the other, of greater measures.

Aristoteles:: How should it not?

Parmenides:: Is it not therefore impossible for that which does not participate in “the same,” to consist either of the same measures, or of any thing else whatever the same?

Aristoteles:: It is impossible.

Parmenides:: It would therefore be equal neither to itself nor to another, if it does not consist of the same measures.

Aristoteles:: It appears not.

Parmenides:: But if it consists of more or fewer measures, it will be of as many parts as there are measures; and thus again it will no longer be “one,” but as many as there are measures.

Aristoteles:: Right.

Parmenides:: But even if it should be of one measure, it would become equal to that measure. But it has been seen to be impossible for one itself to be equal to any thing.

Aristoteles:: It has been seen.

Parmenides:: “The one” therefore neither participates in one measure, nor in many, nor in a few, nor in any way participates in “the same,” nor will it ever, as it seems, be equal to itself or to another; nor, on the other hand, greater or less either than itself or “different.”

Aristoteles:: It is in every respect so.

Parmenides:: But what, does “the one” seem to be older or younger than any thing, or to be of the same age with any thing?

Aristoteles:: Why should it not?

Parmenides:: If it had in any respect the same age, either with itself or with another, it would participate in the similitude and equality of time, in which properties we have asserted “the one” does not participate either similitude or equality.

Aristoteles:: We so asserted.

Parmenides:: And this also we asserted, that it participates neither in dissimilitude nor inequality.

Aristoteles:: Entirely so.

Parmenides:: How then, being such, can it be either older or younger than any thing, or of the same age with any thing?

Aristoteles:: By no means.

Parmenides:: “The one” therefore will be neither younger, nor older, nor of the same age, either with itself or with another.

Aristoteles:: It does not appear it would.

Parmenides:: Would it not then be impossible for “the one” to exist at all in time, if it be such? Or, is it not necessary that, if any thing exists in time, it should always become older than itself?

Aristoteles:: It is necessary.

Parmenides:: But is not the older always older than the younger?

Aristoteles:: What then?

Parmenides:: That which is in the act of being older than itself, is at the same time in the act of being younger than itself, if it is about to have that through which it is in the act of being older.

Aristoteles:: How say you?

Parmenides:: Thus. It is requisite that nothing should exist in the act of being at variance one with another, when it is already at variance; but that being now at variance, to be so now; and having been, to have been so formerly, and being about to be, to be so hereafter; but being in the act, to neither have been, nor to will be, nor to be at all at variance, but to be in the act, and not otherwise to exist.

Aristoteles:: It is necessary.

Parmenides:: But the older is at variance with the younger, and with nothing else.

Aristoteles:: Certainly.

Parmenides:: Hence, that which is in the act of being older than itself, must necessarily at the same time be in the act of being younger than itself.

Aristoteles:: It seems so.

Parmenides:: But likewise to be in the act of being for a time not longer than itself, nor shorter; but for a time equal to itself to be in the act of being, and to be, and to have been, and to be about to be.

Aristoteles:: For these are necessary.

Parmenides:: It is necessary therefore, as it appears, for such things as are in time, and participate in some such thing, to be, each of them, itself the same age with itself, and to be in the act of being both older at the same time and younger than itself.

Aristoteles:: It nearly seems so.

Parmenides:: But in none of these accidents is there any share for “the one.”

Aristoteles:: There is no share.

Parmenides:: Neither then has it any share of time, nor does it exist in any time.

Aristoteles:: It does not, indeed, as the reasoning holds.

Parmenides:: What then, do not the terms “was,” and “Has been produced,” and “was in the act of being,” seem to signify a participation in what formerly existed.

Aristoteles:: Very much so.

Parmenides:: And do not the terms “will be,” and “will be in the act of being,” and “will be generated,” signify a participation in time that is about to be hereafter?

Aristoteles:: Yes.

Parmenides:: And do not the terms “is,” and “is in the act of being,” signify a participation in time that is now present?

Aristoteles:: Entirely so.

Parmenides:: If then “the one” participates not at all in any time, it never has been, nor has been in the act of being, nor was ever nor has it been now generated, nor is it in the act of being, nor is, nor will be in the act of being hereafter, nor will be generated, nor will be.

Aristoteles:: It is most true.

Parmenides:: Is it possible then for any thing to participate in being, except according to some one of these?

Aristoteles:: It is not.

Parmenides:: In no way then does “the one” participate in being.

Aristoteles:: It appears not.

Parmenides:: “The one” therefore in no way is.

Aristoteles:: It seems not.

Parmenides:: Nor is it then in such a state as to be one; for it would be a being, and participate in being; but, as it seems, the one neither is one, nor is it at all, if one must trust to reasoning of this kind.

Aristoteles:: It seems nearly so.

Parmenides:: But to that which is not, can there be any thing either for itself or from itself?

Aristoteles:: How can there?

Parmenides:: Hence there is not for it a name, or discourse, or any science, or perception, or opinion.

Aristoteles:: It appears not.

Parmenides:: Hence it cannot either be named, or spoken of, or conceived by opinion, or known, nor does it perceive any thing of those really existing.

Aristoteles:: So it seems.

Parmenides:: Is it possible then for this to be the case respecting “the one?”

Aristoteles:: It seems to me not possible.

Parmenides:: Are you then willing for us to return again from the beginning to our supposition, if by chance any thing shall appear to us, on returning, in a different light?

Aristoteles:: I am very willing.

Parmenides:: Did we not say then, that if “one is,” whatever may be the consequences from that supposition, we must admit them. Is it not so?

Aristoteles:: Yes.

Parmenides:: Consider now from the beginning. If “one is,” is it possible for it to be, and yet not participate in being?

Aristoteles:: It is not.

Parmenides:: Would not being then be a property of “the one,” although not the same as “the one?” for, if it were the same, it would not be the being of it, nor would “the one” participate in being; but it would be all one to say “one is,” and “one one.” But now our supposition is not, “if one is one,” what must be the consequence, but “if one is.” Is it not so?

Aristoteles:: Entirely so.

Parmenides:: Is it not then that the term “is” means something different from the term “one?”

Aristoteles:: Necessarily.

Parmenides:: If then a person summarily asserts that “one is,” would this be no other assertion than that the one participates in being.

Aristoteles:: Certainly.

Parmenides:: Let us say then again, if “one is,” what will be the consequence? Consider then, if it is not necessary for this supposition to signify that “one” is existing of such a kind as to possess parts?

Aristoteles:: How?

Parmenides:: Thus. If the term “it is” is said of “the one being,” and “the one” said of “the being which is one,” and both being and the one are not the same, but belong to that same thing which we have supposed to be “the one,” is it not necessary that the whole being one should be it, but that its parts should be “one” and “being?”

Aristoteles:: It is necessary.

Parmenides:: Whether then should we call each of these parts a part alone? Or must we call a part a part of the whole?

Aristoteles:: Of the whole.

Parmenides:: Whatever then is one, is a whole, and possesses a part.

Aristoteles:: Entirely so.

Parmenides:: What then, of these parts of the one being both “one” and “being,” do either desert each the other, so that “one” is wanting to “being,” and “being” wanting to “one”?

Aristoteles:: It would not be.

Parmenides:: Again, each of the parts contains both “one” and “being;” and the least part is composed of two parts; and thus perpetually by the same reasoning, whatever becomes a part possesses these two parts perpetually; for “one” always contains “being,” and “being, one;” so that, two things being produced, one never is.

Aristoteles:: Entirely so.

Parmenides:: Would not then “the one” existing thus become an infinite multitude.

Aristoteles:: So it seems.

Parmenides:: Proceed still further by this road.

Aristoteles:: By what?

Parmenides:: We have said that the one participates in “being,” so far as it is being.

Aristoteles:: We have said so.

Parmenides:: And on this account “one being” appears to be “many.”

Aristoteles:: It does so. What then?

Parmenides:: If one itself, which we say participates in being, we receive mentally, alone by itself, and apart from that in which we say it participates, will it appear to be one alone? Or will this very thing be many?

Aristoteles:: I think it will be one.

Parmenides:: But let us likewise look to another thing. It is necessary for its “being” to be one thing, and itself another, if “the one” itself is not “being;” but as being one it participated in “being.”

Aristoteles:: It is necessary.

Parmenides:: If then “being” is one thing, and “one” another, neither is “one” by its existence as one different from “being,” nor “being” by its existence as “being” different from “one but they are different from each other through that which is different and another.

Aristoteles:: Entirely so.

Parmenides:: So that “the different” is the same neither with “the one” nor with “the being.”

Aristoteles:: How can it?

Parmenides:: What then, if we should select from them, whether if you will “the being” and “the different,” or “the being” and “the one,” or “the one” and “the different,” should we not, in each selection, select certain two things, which it is proper to denominate both?

Aristoteles:: How so?

Parmenides:: Thus. It is possible to speak of “being.”

Aristoteles:: It is.

Parmenides:: And again, to speak of “one.”

Aristoteles:: And this likewise.

Parmenides:: Are not then either spoken of?

Aristoteles:: Yes.

Parmenides:: But what, when I say “being,” and “one,” do I not pronounce both?

Aristoteles:: Entirely so.

Parmenides:: And if I should say “being” and “different,” or “different” and “one,” should I not in each of these pronounce both perfectly?

Aristoteles:: Yes.

Parmenides:: But can those things which are properly denominated both, be both, and yet not two?

Aristoteles:: They cannot.

Parmenides:: And is there any method for each of things, that are two, not to be one?

Aristoteles:: There is not.

Parmenides:: Of these then, since each two exist together, each would be one.

Aristoteles:: It appears so.

Parmenides:: But if each of them is one, and any one whatever is placed together with them, by any kind of union whatever, do not they all become three?

Aristoteles:: Certainly.

Parmenides:: But are not three odd, and two even?

Aristoteles:: How should they not be?

Parmenides:: What then, being two, is it not necessary for twice to be? and being three, thrice; since twice one exists in two, and thrice one in three?

Aristoteles:: It is necessary.

Parmenides:: But if there are two and twice, is it not necessary that there should be twice two? And if there are three and thrice, that there should be thrice three?

Aristoteles:: How not?

Parmenides:: But what, if there are three and twice, and there are two and thrice, is it not necessary that there should be twice three and thrice two?

Aristoteles:: Entirely so.

Parmenides:: Hence, there would be the evenly even, and the oddly odd; and the oddly even, and the evenly odd.

Aristoteles:: It is so.

Parmenides:: If then this is the case, do you think that any number is left, which is not necessarily there?

Aristoteles:: By no means.

Parmenides:: If then "one" exists, it is necessary for number to exist likewise.

Aristoteles:: It is necessary.

Parmenides:: But if number exists, the many would exist, and an infinite multitude of beings; or is there not a number, infinite in multitude, and participating in "being?"

Aristoteles:: There is, by all means.

Parmenides:: If then every number participates in "being," would not each part also of number participate in "being?"

Aristoteles:: Yes.

Parmenides:: "Being" then has been distributed through all things, being many, and stands apart from nothing existing, whether the least or the greatest. Or is it not absurd even to ask this question? For how could "being" stand apart from any thing existing?

Aristoteles:: By no means.

Parmenides:: "Being" then is cut up into fractions the smallest possible, and the greatest, and existing in every degree, and is divided the most of all things, and the parts of "being" are infinite.

Aristoteles:: Such is the case.

Parmenides:: Very many, therefore, are its parts.

Aristoteles:: Very many, indeed.

Parmenides:: What then, is there any one of these, which is a part of “being,” and yet is not one part?

Aristoteles:: But how can this be?

Parmenides:: But if it is, I think there must always be a necessity for it, as long as it exists, to be a certain one thing; but that it cannot possibly be nothing.

Aristoteles:: There is a necessity.

Parmenides:: “The one,” therefore, is present to all and each part of “being,” deficient in neither a less or a greater part, or in any thing else.

Aristoteles:: It is so.

Parmenides:: Is then “one” a whole, existing in many places at the same time? Look into this.

Aristoteles:: I do look, and I see it is impossible.

Parmenides:: It is divided then, since it is not a whole; for it will not otherwise than in a divided state, be present to all the parts of “being.”

Aristoteles:: Certainly.

Parmenides:: But there is a great necessity for that, which is divisible, to be as many as are the parts.

Aristoteles:: There is a necessity.

Parmenides:: We did not then just now say truly, when we said that “being” was distributed into very many parts. For it is not divided into more parts than “one” itself, but into parts equal to those of “the one:” for neither is “being” wanting to “the one,” nor “the one” to “being;” but being two are always equalized through all things.

Aristoteles:: It appears to be entirely so.

Parmenides:: “One itself,” therefore, having been cut up into fractions by “being,” becomes many and infinite in multitude.

Aristoteles:: So it appears.

Parmenides:: Not only then is “the being” many, but it is likewise necessary for “the one,” when distributed by “being,” to be many.

Aristoteles:: Entirely so.

Parmenides:: Moreover, because the parts are parts of a whole, “the one” will be finite according as it is a whole. Or are not the parts included in the whole?

Aristoteles:: Necessarily so.

Parmenides:: But that which includes would be a bound.

Aristoteles:: How not?

Parmenides:: “The one” therefore is somehow both one and many, whole and parts, finite and infinite in multitude.

Aristoteles:: It appears so.

Parmenides:: As it is bounded then, has it not likewise extremes?

Aristoteles:: Of necessity.

Parmenides:: But what, if it be a whole, would it not have likewise a beginning, a middle, and an end? Or can there be any whole without these three? And if any one whatever of these be wanting to any thing, will that thing be willing to be any longer a whole?

Aristoteles:: It will not.

Parmenides:: “The one” then, as it seems, would possess a beginning, and end, and a middle.

Aristoteles:: It would.

Parmenides:: But the middle is equally distant from the extremes; for it would not otherwise be the middle.

Aristoteles:: It would not.

Parmenides:: And “the one” being such would, as it appears, participate in a certain figure, either straight or round, or mixed up of both.

Aristoteles:: It would so.

Parmenides:: Will it then, being such, not exist itself in itself and in another?

Aristoteles:: How?

Parmenides:: Each of the parts is surely in the whole, nor is any one out of the whole.

Aristoteles:: It is so.

Parmenides:: But all the parts are surrounded by the whole.

Aristoteles:: Yes.

Parmenides:: But “the one” is all the parts of itself; and is neither more nor less than all.

Aristoteles:: Certainly.

Parmenides:: Is not then the one the whole?

Aristoteles:: How not?

Parmenides:: If then all the parts are in the whole, and all the parts are the one, and the whole itself and all the parts are surrounded by the whole, “the one” would be surrounded by “the one,” and thus “the one” would be already in itself.

Aristoteles:: It appears so.

Parmenides:: But on the other hand, the whole is not in the parts, neither in all, nor in any one. For, if it were in all, it would necessarily be in one: for, if it were not in some one, it would not be able to be in all. But if this one is a portion of all the parts, and the whole is not in this, how can it be any longer in all the parts?

Aristoteles:: Not at all.

Parmenides:: Nor yet in any of the parts. For if the whole were in some of the parts, the greater would be in the lesser; which is impossible.

Aristoteles:: It is impossible.

Parmenides:: But since the whole is neither in many, nor in one, nor in all the parts, is it not necessary for it to be either in some other, or no where?

Aristoteles:: It is necessary.

Parmenides:: But if no where, will it not be nothing? And if it is a whole, since it is not in itself, is it not necessary for it to be in another?

Aristoteles:: Entirely so.

Parmenides:: So far therefore as “the one” is a whole, it is in another; but so far as all things are its parts, and itself all the parts, it is in itself; and thus “the one” will necessarily be in itself and in another.

Aristoteles:: Necessarily.

Parmenides:: But as “the one” is naturally such, is it not necessary for it to be both moved and to stand still?

Aristoteles:: How?

Parmenides:: It stands still, if it be in itself. For being in one and not departing from this, it will be in the same, through being in itself.

Aristoteles:: It will.

Parmenides:: But that which is always in the same must somehow necessarily stand still always.

Aristoteles:: Entirely so.

Parmenides:: What then, must not that, on the contrary, which is always in another, necessarily be never in the same? But if it be never in the same, can it ever stand still; and if it does not stand still, must it not be moved?

Aristoteles:: Certainly.

Parmenides:: It is necessary therefore for “the one,” being always in itself and in another, to be always moved and to stand still.

Aristoteles:: It appears so.

Parmenides:: It ought moreover to be the same with itself, and different from itself; and, in like manner, the same with and different from others, if it suffers what has been mentioned before.

Aristoteles:: How?

Parmenides:: Every thing somehow is in this state with relation to every thing. It is either the same or different: or if not the same or different, it will be a part of that, to which it is so related, or, it will be with respect to a part a whole.

Aristoteles:: It appears so.

Parmenides:: Is then “the one” a part of itself?

Aristoteles:: By no means.

Parmenides:: It will not then with respect to a part of itself be a whole, nor with respect to itself a part.

Aristoteles:: For it cannot.

Parmenides:: But is “one” therefore different from “the one?”

Aristoteles:: By no means.

Parmenides:: It will not then be different from itself.

Aristoteles:: Certainly not.

Parmenides:: If then it is neither different, nor a whole, nor yet a part, with respect to itself, is it not necessary for it to be the same with itself?

Aristoteles:: It is necessary.

Parmenides:: What then, is it not necessary for that, which is elsewhere than itself, while existing in the same with itself, to be different from itself, if indeed it shall be elsewhere?

Aristoteles:: It appears so to me.

Parmenides:: In this state does “the one” appear to be existing at the same time both in itself and in another.

Aristoteles:: So it seems.

Parmenides:: In this way then it appears that “the one” will be different from itself.

Aristoteles:: It does so.

Parmenides:: What then, if any thing is different from any thing, will it not be different from that which is different?

Aristoteles:: Necessarily so.

Parmenides:: But are not all such things, as are not one, different from “the one?” And is not “the one” different from such things as are not one?

Aristoteles:: How not?

Parmenides:: “The one” therefore will be different from the rest.

Aristoteles:: Different.

Parmenides:: See then, are not “the different” and “the same” contrary to each other.

Aristoteles:: How not?

Parmenides:: Is the same ever wont to be in the different, or the different in the same?

Aristoteles:: It is not wont.

Parmenides:: If therefore the different is never in the same, there is not one of existing things, in which the different exists for any time; for if it existed in any thing during any time whatever, during that time the different would be in the same. Is it not so?

Aristoteles:: It is so.

Parmenides:: But since it is never in the same, the different would never exist in any of existing things.

Aristoteles:: True.

Parmenides:: Neither therefore would the different exist in things which are not one, nor in “the one.”

Aristoteles:: It would not.

Parmenides:: Through ‘the different” therefore the one will not be different from things which are not one, nor things which are not one be different from “the one.”

Aristoteles:: Not indeed.

Parmenides:: Nor through themselves will they be different from each other, since they do not participate in “the different.”

Aristoteles:: For how can they?

Parmenides:: But if they are different neither through themselves, nor through “the different,” would they not escape entirely from being different from each other?

Aristoteles:: They would escape.

Parmenides:: But neither do things, which are not one, participate in “the one:” for they would be no longer not one, but in some way one.

Aristoteles:: True.

Parmenides:: Nor would things, which are not one, be number; for possessing number, they would thus be altogether not one.

Aristoteles:: They would not.

Parmenides:: But what, can things which are not one be parts of one? Or would not things, which are not one, in this way participate in “the one?”

Aristoteles:: They would participate.

Parmenides:: If then this is entirely “one,” but those not one, “the one” would not be a part of things, which are not one, nor a whole, as if they were a part; nor, on the contrary, would things, which are not one, be parts of “the one,” nor wholes as if the one were a part.

Aristoteles:: They will not.

Parmenides:: But we have said that things, which are neither parts, nor wholes, nor different from each other, will be the same with each other.

Aristoteles:: We have said so.

Parmenides:: Shall we then assert that “the one,” since it is in this state with respect to things which are not one, is the same with them?

Aristoteles:: Let us say so.

Parmenides:: “The one” then, as it appears, is both different from others and itself, and the same with them and with itself.

Aristoteles:: It appears very nearly so, at least from this reasoning.

Parmenides:: But is it also similar and dissimilar to itself and others?

Aristoteles:: Perhaps so.

Parmenides:: Since then it appears to be different from the others, the others likewise will be somehow different from it.

Aristoteles:: But what then?

Parmenides:: Will it not then be different from the others in the same manner as the others from it? And this neither more nor less?

Aristoteles:: For what should it be?

Parmenides:: If then neither more nor less, it will be similarly.

Aristoteles:: Certainly.

Parmenides:: In the manner then through which “the one” suffers to become different from the others, and the others similarly from it, in that manner would the one be suffering similarly to the others, and the others similarly to the one?

Aristoteles:: How say you?

Parmenides:: Thus. Do not you apply each name to something?

Aristoteles:: I do; what then?

Parmenides:: Could you pronounce the same name often or once?

Aristoteles:: I could.

Parmenides:: When therefore you pronounce a name once, do you speak of the thing, to which the name belongs; but not, if often? Or, is there not a great necessity for you always to speak of the same thing, whether you pronounce the same name once or often?

Aristoteles:: What then?

Parmenides:: Is not “different” a name applied to some thing?

Aristoteles:: Entirely so.

Parmenides:: When therefore you pronounce it, whether once or often, you do not apply this name to any other thing, but that of which it is the name.

Aristoteles:: Necessarily so.

Parmenides:: When we say then that “the others” are different from “the one,” and “the one” different from “the others,” twice pronouncing the name “different,” we do not at all apply the expression to any other nature but that of which it is the name.

Aristoteles:: Entirely so.

Parmenides:: In the way then that “the one” is different from “the others,” and “the others” from “the one,” according to the very thing which “the different” has, “the one” would suffer nothing else than what the others do, but just the same: but that which somehow suffers the same is similar. Is it not?

Aristoteles:: Yes.

Parmenides:: But in the way that “the one” suffers so as to be different from the others, according to that very way every thing would be similar to every thing; for every thing is different from every thing.

Aristoteles:: It appears so.

Parmenides:: Moreover the similar is contrary to the dissimilar.

Aristoteles:: It is.

Parmenides:: Is not “the different” too contrary to “the same?”

Aristoteles:: This also.

Parmenides:: Moreover this likewise has been made apparent, that “the one” is the same with and different from “the others.”

Aristoteles:: It has been made apparent.

Parmenides:: But to be the same with “others” is a contrary suffering to the being different from “the others.”

Aristoteles:: Entirely so.

Parmenides:: As far as it was different, it appeared to be similar.

Aristoteles:: Yes.

Parmenides:: So far then as it is the same, it will be dissimilar according to its suffering the contrary to that suffering which produces the similar: but did the different produce the similar?

Aristoteles:: Yes.

Parmenides:: The same therefore will render something dissimilar; or it will not be contrary to the different.

Aristoteles:: So it appears.

Parmenides:: “The one” therefore will be both similar and dissimilar to “the others;” so far as it is different it will be similar; but so far as it is the same, dissimilar.

Aristoteles:: It has, it seems, such reasoning.

Parmenides:: And it has this likewise.

Parmenides:: What?

Parmenides:: So far as it suffers the same, it does not suffer what is of a different kind; and not suffering what is of a different kind, it is not dissimilar; and not being dissimilar, it is similar: but so far as it suffers another thing, it is of a different kind; and being of a different kind, it is dissimilar.

Aristoteles:: You speak the truth.

Parmenides:: Since then “the one” is both the same with and different from “the others,” according to both and each of these cases, it will be similar and dissimilar to “the others.”

Aristoteles:: Entirely so.

Parmenides:: And will it not in a similar manner, since it has appeared to be both different from, and the same with, itself, appear, according to both these, and each, to be similar and dissimilar to itself?

Aristoteles:: Necessarily so.

Parmenides:: But consider now how “the one” subsists with respect to touching and not touching itself and “the others.”

Aristoteles:: I consider.

Parmenides:: For “the one” has somehow appeared to be in itself a whole.

Aristoteles:: Right.

Parmenides:: But is not “the one” in “the others” likewise?

Aristoteles:: Yes.

Parmenides:: So far then as “the one” is in “the others,” it will touch “the others but so far as it is in itself, it will be prevented from touching “the others;” but being in itself it will touch itself.

Aristoteles:: So it appears.

Parmenides:: And thus, indeed, “the one” will both touch itself and “the others.”

Aristoteles:: It will touch.

Parmenides:: But what will it be in this view? Must not every thing, which is about to touch any thing, lie close to that, which it is about to touch, and occupy that seat, which may be after that seat, in which that may lie, which it touches?

Aristoteles:: It is necessary.

Parmenides:: “The one,” therefore, if it is about to touch itself, ought to lie close to itself, and occupy the place close to that in which it is.

Aristoteles:: It ought so.

Parmenides:: Would not “the one,” if it were two, do this, and be in two places at once? But as long as it is one, it will not be wont to do so.

Aristoteles:: It will not.

Parmenides:: The same necessity therefore belongs to “the one,” to be neither two nor to touch itself.

Aristoteles:: The same.

Parmenides:: But neither will it touch the others.

Aristoteles:: Why?

Parmenides:: Because we have said, that when any thing is about to touch any thing, which is separate from it, it ought to be placed close to that which it is about to touch; but that there must be no third in the middle of them.

Aristoteles:: True.

Parmenides:: Two things therefore at the least are requisite, if contact is about to take place.

Aristoteles:: Certainly.

Parmenides:: But if a third is added close upon the two terms, there will now be three, but the contacts two.

Aristoteles:: Certainly.

Parmenides:: And thus one always being added, one contact will be likewise added; and the result is that the contacts will be less by one than the multitude of the numbers. For by how much the two first things exceeded the contacts, so as to be more in number than the contacts, by just so much does all the following number exceed the multitude of the contacts. For already hereafter one is added to the number, and one contact to the contacts.

Aristoteles:: Right.

Parmenides:: As many then as are in number the things existing, by so many, less by one, are the contacts always.

Aristoteles:: True.

Parmenides:: If then there is only one thing, and not a pair, there can be no contact.

Aristoteles:: How can there?

Parmenides:: Have we not said that the other things, different from “the one,” are neither one nor participate of it, since they are different?

Aristoteles:: We have.

Parmenides:: Number therefore is not in the others, since one is not in them.

Aristoteles:: How can it?

Parmenides:: The Others, therefore, are not one, or two, or any thing possessing the name of another number.

Aristoteles:: No.

Parmenides:: “The one,” therefore, is one alone, and could not be two.

Aristoteles:: It appears not.

Parmenides:: Contact, therefore, is not, when two are not.

Aristoteles:: It is not.

Parmenides:: “The one” therefore will neither touch “the others,” nor will “the others” touch “the one,” as there is no contact.

Aristoteles:: Certainly not.

Parmenides:: On all these accounts, therefore, “the one” will both touch and not touch others and itself.

Aristoteles:: So it appears.

Parmenides:: Is it not therefore equal and unequal to itself and “the others?”

Aristoteles:: How?

Parmenides:: If “the one” were greater or less than “the others,” or “the others” greater or less than “the one,” would it not follow that by “the one” being one, and “the others” different from “the one,” they would be not an atom greater or an atom less than each other, by those very existences? But if, in addition to their being such as they are, each possessed equality, they would be equal to each other. But if “the one” possessed magnitude, and “the others” smallness, or “the one” magnitude, but “the others” smallness, would not that, to whatever species magnitude was present, be the greater; and that, to whatever species smallness was present, be the less.

Aristoteles:: Necessarily so.

Parmenides:: Are there not therefore these two species, magnitude and smallness? For if they had no existence they surely could never be contrary to each other, and be inherent in things existing.

Aristoteles:: How should they?

Parmenides:: If then smallness is inherent in “the one,” it will either be inherent in the whole or in a part of it.

Aristoteles:: It is necessary.

Parmenides:: But what if it be inherent in the whole? Will it not either be extended on an equality through the whole of “the one,” or surround “the one?”

Aristoteles:: Plainly so.

Parmenides:: If smallness then is inherent on an equality in “the one,” will it not be equal to “the one;” but if it surrounds “the one,” will it not be greater?

Aristoteles:: How not?

Parmenides:: Can then smallness be equal to or greater than any thing, and produce the effects of magnitude and equality, but not on itself?

Aristoteles:: It is impossible.

Parmenides:: Smallness then will not be inherent in the whole of “the one;” but, if at all, in a part.

Aristoteles:: Certainly.

Parmenides:: Nor yet, on the other hand, in the whole part; for if not, it would produce the same effect as in the case of the whole; for it would either be equal to, or greater than, the part in which it is inherent.

Aristoteles:: It is necessary.

Parmenides:: Smallness then will not be in any thing existing, being inherent in neither a part nor a whole; nor will there be any thing small, except smallness itself.

Aristoteles:: It seems not.

Parmenides:: Neither will magnitude be in it. For there would be some other thing greater, and, besides magnitude itself, that in which magnitude is inherent, and this too, although it being not small, which it ought to exceed, if indeed it be great; but which in this case is impossible, since smallness is not inherent in any thing existing.

Aristoteles:: True.

Parmenides:: But magnitude itself is not greater than any thing else but smallness itself; nor is smallness less than any thing else but magnitude itself.

Aristoteles:: It is not.

Parmenides:: Neither then would “the others” be greater than “the one,” nor less, since they possess neither magnitude nor smallness; nor do these two possess any power either of exceeding or of being exceeded with respect to “the one,” but only with respect to each other; nor, on the contrary, will “the one” be either greater or less than these two, or “the others,” as it possesses neither magnitude nor smallness.

Aristoteles:: So indeed it appears.

Parmenides:: If then “the one” is neither greater nor less than “the others,” is it not necessary for it to neither exceed nor be exceeded by them?

Aristoteles:: It is necessary.

Parmenides:: Is there not also a great necessity for that, which neither exceeds nor is exceeded, to be on an equality? and if on an equality, to be equal?

Aristoteles:: How not?

Parmenides:: “The one” therefore will be in this state with respect to itself. Possessing neither magnitude nor smallness in itself, it would neither exceed nor be exceeded by itself; but being on an equality, it would be equal to itself.

Aristoteles:: Entirely so.

Parmenides:: “The one” therefore will be equal both to itself and “the others.”

Aristoteles:: So it appears.

Parmenides:: But being itself in itself, it would also be externally about itself; and surrounding itself, it would be greater than itself; but being surrounded, less than itself; and thus “the one” would be both greater and less than itself.

Aristoteles:: It would so.

Parmenides:: Is not this also necessary, that there is nothing beyond “the one” and “the others?”

Aristoteles:: How should it be otherwise?

Parmenides:: But ought not that, which has a being, to be always some where?

Aristoteles:: Yes.

Parmenides:: And does not that, which exists in another, exist as the less in the greater? For one thing cannot otherwise exist in another.

Aristoteles:: It cannot.

Parmenides:: But since there is nothing else apart from “the one” and “the others,” and it is necessary for these to be in something, is it not necessary for them to be in one another, the others in “the one,” and “the one” in the others; or that they should be no where?

Aristoteles:: It appears so.

Parmenides:: Because then “the one” is in “the others,” “the others” will be greater than “the one,” through surrounding it; and “the one” will be less than “the others,” by being surrounded. But because “the others” are in “the one,” “the one,” by the same reasoning, would be greater than “the others;” and “the others” less than “the one.”

Aristoteles:: It appears so.

Parmenides:: “The one,” therefore, is equal to, greater and less, than both itself and others.

Aristoteles:: It seems so.

Parmenides:: But if it is greater, equal, and less, it will be of equal, more, and fewer measures, both than itself and “the others;” and if of measures, also of the parts.

Aristoteles:: How should it not?

Parmenides:: Being, therefore, of equal, more, and fewer measures, it will also in number be more and less than itself and “the others;” and also, for the same reason, equal to itself and “the others.”

Aristoteles:: How?

Parmenides:: It would surely be of greater measures than are those things, than which it is greater; and it would be of as many parts as measures; and in the same manner, in the case of those than which it is less; and similarly in the case of those to which it is equal.

Aristoteles:: It is so.

Parmenides:: Since then “the one” is both greater, less, and equal to itself, will it not also contain measures equal to, more, and fewer than itself? And if of measures, will not this also be true of parts?

Aristoteles:: How not?

Parmenides:: If then it contains equal parts with itself, it will be equal in multitude to itself; but if more, more in multitude, and if fewer, less in multitude, than itself.

Aristoteles:: It appears so.

Parmenides:: But will not “the one” be in a similar state as regards “the others?” Because it appears to be greater in magnitude than them, is it not necessary for it to be more in number than “the others?” and, because less in magnitude, fewer in number? and because equal in magnitude, equal likewise in multitude to “the others?”

Aristoteles:: It is necessary.

Parmenides:: And thus again, as it seems, “the one” will be equal, more, and less in number, both than itself and “the others.”

Aristoteles:: It will so.

Parmenides:: Does “the one,” then, participate in time? And is it, and does it become, younger and older, itself than itself and “the others?” And again, neither younger nor older than itself and the others, although participating of time?

Aristoteles:: How?

Parmenides:: “To be” is surely its property, since it “is the one.”

Aristoteles:: Certainly.

Parmenides:: But what else is “to be” than a participation in “being” in conjunction with the present? Just as “it was” is a participation in “being” in conjunction with the past, and “it will be” with the future?

Aristoteles:: It is so.

Parmenides:: It must participate then in time, if it participates in “being.”

Aristoteles:: Entirely so.

Parmenides:: Must it not therefore participate in time while progressing?

Aristoteles:: Certainly.

Parmenides:: It is always, therefore, in the act of being older than itself, if it proceeds according to time.

Aristoteles:: It is necessary.

Parmenides:: Do we then remember that the older is always becoming older than that which is becoming younger?

Aristoteles:: We remember.

Parmenides:: Would not then “the one,” since it is becoming older than itself, become older than itself, while it is thus becoming younger?

Aristoteles:: Necessarily so.

Parmenides:: It becomes then both younger and older than itself.

Aristoteles:: Certainly.

Parmenides:: But is it not then older, when it is in the act of being according to the present time, which is between the “was” and the “will be:” for in proceeding from the “then” to “the hereafter,” it will not pass over “the now?”

Aristoteles:: It will not.

Parmenides:: Will it not then stop in the act of being older, when it arrives at “the now,” and is no longer in the act of being, but is already older? For as it proceeds it will never be laid hold of by “the now.” For that which is proceeding is in such a state as to touch both “the now” and “the hereafter,” leaving hold of “the now,” but laying hold of “the hereafter,” because it is in the act of being between “the hereafter” and “the now.”

Aristoteles:: True.

Parmenides:: But if it is necessary for whatever is in the act of being not to pass by “the now,” when it arrives at that point, it always stops in the act of being, and “is” then whatever it may happen to become.

Aristoteles:: It appears so.

Parmenides:: “The one,” then, when, in becoming older, it arrives at “the now,” stops in the act of being, and then “is” older.

Aristoteles:: Entirely so.

Parmenides:: “Is” it not then older than what it was becoming older? And was it not becoming older than itself?

Aristoteles:: Certainly.

Parmenides:: Now the older is older than the younger.

Aristoteles:: It is.

Parmenides:: “The one” then is younger than itself, when in becoming older, it arrives at “the now.”

Aristoteles:: Of necessity.

Parmenides:: But “the now” is always present with “the one,” through the whole of its being; for it is always “now,” as long as it “is.”

Aristoteles:: How not?

Parmenides:: “The one,” therefore, always is, and is in the act of being younger and older than itself.

Aristoteles:: So it appears.

Parmenides:: But "is the one," or is it in the act of being, for a time longer than or equal to itself?

Aristoteles:: An equal time.

Parmenides:: But that which either is in the act of being, or is for an equal time, has the same age.

Aristoteles:: How not?

Parmenides:: But that which has the same age is neither older nor younger.

Aristoteles:: It is neither.

Parmenides:: "The one," therefore, since it is in the act of being, and is for a time equal to itself, neither is nor is in the act of being younger or older than itself.

Aristoteles:: It appears to me not.

Parmenides:: But what of "the others?"

Aristoteles:: I have not what to say.

Parmenides:: But this at least you have to say, that "the others," if they are different things from "the one," and not a different thing, are more than "one." For that which is different would be one; but those that are different are more than one, and would possess multitude.

Aristoteles:: They would.

Parmenides:: But being a multitude they would participate in a greater number than "the one?"

Aristoteles:: How not? What then?

Parmenides:: Shall we say that the things more in number are, or have been, generated prior, or the less?

Aristoteles:: The less.

Parmenides:: The least then is the first. Now is not this "the one?"

Aristoteles:: Certainly.

Parmenides:: “The one,” therefore, was generated the first of all things possessing number: but all “the others” have number, if they are others and not another.

Aristoteles:: They have.

Parmenides:: But that which was first generated was, I think, prior in existence: but the others are posterior. But such as have been generated posterior, are younger than that which was generated prior; and thus “the others” would be younger than “the one,” and “the one” would be older than “the others.”

Aristoteles:: It would.

Parmenides:: But what is this? Could “the one” be generated contrary to its nature? or is this impossible?

Aristoteles:: Impossible.

Parmenides:: But “the one” has appeared to possess parts; and, if parts, a beginning, an end, and a middle.

Aristoteles:: Yes.

Parmenides:: Is not then the beginning generated first of all, both of “the one” and of each of “the others;” and after the beginning all “the others,” as far as the end?

Aristoteles:: What then?

Parmenides:: We will say moreover, that all the others are parts of the whole and of one; but that “the one,” together with the end, has been generated one and a whole.

Aristoteles:: We will say so.

Parmenides:: Now the end, I think, is generated the last of all, but “the one” is naturally generated together with this; so that, if it is necessary for “the one” to be generated not contrary to nature, it would, having been generated together with the end, be naturally generated the last of “the others.”

Aristoteles:: It appears so.

Parmenides:: “The one,” therefore, is younger than “the others,” but “the others” are older than “the one.” So again it appears to me. But what, must not the beginning or any other part whatever of “the one,” or of any thing else, if it is a part, and not parts, be necessarily one, since it is a part?

Aristoteles:: Necessarily.

Parmenides:: “The one,” therefore, would be generated together with the first part, while in the act of being, and together with the second; and is never wanting to any one of the other parts, while in the act of being, until, arriving at the extremity, it becomes one whole, having been left out neither from the middle, nor from the last, nor the first, nor from any other part whatever in its generation.

Aristoteles:: True.

Parmenides:: “The one,” therefore, will have the same age with “the others,” so that, if it be not “the one” contrary to its own nature, it would be generated neither prior nor posterior to “the others,” but together with them; and according to this reasoning, “the one” will neither be older nor younger than “the others,” nor “the others” than “the one:” but, according to the former reasoning, “the one” was both older and younger than “the others,” and they in a similar manner than it.

Aristoteles:: Entirely so.

Parmenides:: After this manner, then, “the one” is and has been generated. But what again shall we say of its becoming older and younger than the others, and of the others than “the one;” and again, that it neither becomes older nor younger? As we said respecting its being, shall we say in the same manner respecting its becoming to be? or otherwise?

Aristoteles:: I am not able to say.

Parmenides:: But I am able to say this; that, although one thing is older than another, yet it cannot become still older, than by that difference of age which it possessed as soon as it was produced; nor, on the other hand, can that which is younger become younger. For, equal things being added to unequals, whether they are times or any thing else, always cause them to differ by the same degree as that, by which they were distant at first.

Aristoteles:: How not?

Parmenides:: “That which is” therefore would never become older or younger than any being, if it is always different by an equal quantity from it in age: but this is and was older, and that younger; but is not becoming so.

Aristoteles:: True.

Parmenides:: “The one” likewise will never become either older or younger than “the others,” it being so already.

Aristoteles:: Never.

Parmenides:: But see whether in this way they become younger and older.

Aristoteles:: In what way?

Parmenides:: The same as that through which “the one” was made to appear older than “the others,” and “the others” older than “the one.”

Aristoteles:: What then?

Parmenides:: Since “the one” is older than “the others,” it has been generated during a longer time than “the others.”

Aristoteles:: Certainly.

Parmenides:: Now consider again, if we add an equal time to a longer and shorter time, does the longer differ from the shorter by an equal or by a smaller part?

Aristoteles:: By a smaller.

Parmenides:: Will not then “the one” differ from “the others” by an age as great subsequently as it did at first? but, receiving an equal time with “the others,” it will differ always in age less than before. Will it not be so?

Aristoteles:: Yes.

Parmenides:: But would not that, which differs less in age, with respect to any thing, than it did before, become younger than before, with respect to those, than which it was before older?

Aristoteles:: Younger.

Parmenides:: But if that is younger, will not, on the other hand, “the others” be older with respect to “the one” than before?

Aristoteles:: Entirely so.

Parmenides:: That, therefore, which was generated younger, would be in the act of becoming older, with respect to that which was before generated and is older; but it never is older, but is always in the act of becoming older than it; for the one advances to a younger, but the other to an older, state; and on the other hand, that which is older is in the act of becoming younger in the same manner than the younger. For both tending to that which is contrary to themselves, they are in the act of becoming contrary to each other; the younger becoming older than the older, and the older younger than the younger. But they would not be able to become so. For should they become so, they would no longer be in the act of becoming, but would be now. But now they are in the act of becoming younger and older than each other; and “the one” indeed is in the act of becoming younger than “the others,” because it has been made to appear to be older, and to have had a prior generation: but “the others” have been made to appear to be older than “the one,” because they have had a posterior generation. According to the same reasoning, “the others” likewise are similarly related with respect to “the one,” since they were made to appear to be older and to have had a prior generation.

Aristoteles:: So indeed it appears.

Parmenides:: So far then as neither becomes younger or older than the other, through their differing by an equal number from each other, “the one” will not become older or younger than “the others,” nor the others than “the one.” But so far as it is necessary for the prior to differ by a part ever another from the posterior, and the posterior from the prior, so far it is necessary for them to become older and younger than each other, and “the others” than “the one,” and “the one” than “the others?”

Aristoteles:: Entirely so.

Parmenides:: On all these accounts then “the one” is, and is in the act of becoming older and younger both than itself and “the others;” and again, it neither is nor is in the act of “becoming” older or younger than itself and “the others.”

Aristoteles:: It is perfectly so.

Parmenides:: But since “the one” participates in time, and in the act of becoming older and younger, is it not necessary for it to participate in “the then,” and “the hereafter,” and “the now,” if it participates in time?

Aristoteles:: It is necessary.

Parmenides:: “The one,” therefore, was, and will be, and is; and has been in the act of becoming, and is in the act of becoming, and will be in the act of becoming.

Aristoteles:: What then?

Parmenides:: And there would be something for it, and of it, and which was, and is, and will be.

Aristoteles:: Entirely so.

Parmenides:: Now there would be the knowledge and opinion and perception of it, if we now do all these things relating to it.

Aristoteles:: You speak rightly.

Parmenides:: There is likewise for it a name and a discourse; and it may be named and spoken of: and whatever circumstances of such a kind take place with regard to “the others,” take place with regard likewise to “the one.”

Aristoteles:: Such is entirely the case.

Parmenides:: Let us then speak of the third point. If “the one” is such as we have discussed, is it not necessary, since it is both one and many, and again neither one nor many, and participating in time, that because it is one, it should participate at one time in “being but that because it is not one, it should participate at no time in “being?”

Aristoteles:: It is necessary.

Parmenides:: Will it then be possible for it not to participate, when it does; or to participate, when it does not?

Aristoteles:: It will not be possible.

Parmenides:: It participates then at one time, and does not participate at another; for thus alone can it participate and not participate in the same.

Aristoteles:: Right.

Parmenides:: Is not this then the time when it participates in “being,” and again is freed from it? Or how is it possible for it to possess at one time the same thing, and at another time not, unless at some time it both receives and dismisses it?

Aristoteles:: Not otherwise.

Parmenides:: Do you not call the receiving of “being” by the term to be generated?

Aristoteles:: I do.

Parmenides:: And to be freed from “being” by the term to be destroyed?

Aristoteles:: Entirely so.

Parmenides:: “The one” then, as it seems, by receiving and dismissing “being,” is generated and destroyed.

Aristoteles:: Necessarily so.

Parmenides:: But since it is one and many, and is generated and destroyed, when it becomes one, is not the being many destroyed, and when it becomes many, is not the being one destroyed?

Aristoteles:: Entirely so.

Parmenides:: But, when it becomes one and many, must it not be separated and united?

Aristoteles:: It must.

Parmenides:: And when it becomes unlike and like, must it not be made like and unlike?

Aristoteles:: Certainly.

Parmenides:: And when it becomes greater, less, and equal, must it not be increased, and wasted away, and equalized?

Aristoteles:: It must so.

Parmenides:: But when from being moved it stands still, and when from standing still it changes into being moved, it is requisite surely for it to be not in one time.

Aristoteles:: How should it?

Parmenides:: But that which stood still before and is afterwards moved, and that which was moved before and afterwards stands still, cannot be thus affected without a change.

Aristoteles:: For how can it?

Parmenides:: But there is no time, in which any thing can at once be neither moved nor stand still.

Aristoteles:: There is not.

Parmenides:: But it cannot change without a change.

Aristoteles:: It is probable not.

Parmenides:: When, therefore, does it change? For it would change, neither while it stands still, nor while it is moved, nor while it is in time.

Aristoteles:: It would not.

Parmenides:: Is there then that strange thing, in which it would be, when it changes?

Aristoteles:: What thing?

Parmenides:: "The sudden." For "the sudden" seems to signify some such thing as changing from it to either. For there is no change from standing, while standing; nor a change from motion, while in motion; but that wonderful nature "the sudden" is situated between motion and standing, and is in no time; and into this and from this that, which is moved, changes for the purpose of standing still; and that which stands, for the purpose of being moved.

Aristoteles:: It nearly appears so.

Parmenides:: "The one," therefore, if it stands still and is moved, must change into either; for thus alone would it produce both these effects. But in changing, it changes suddenly; and when it changes, it would be in no time, and would neither stand still nor be moved.

Aristoteles:: It would not.

Parmenides:: Is then “the one” in this state also with respect to the other changes? and when it changes from being into being destroyed, or from non-being into the act of becoming, does it not then become a medium between certain movements and standings? and then it neither is nor is not, nor is in the act of becoming, nor is destroyed?

Aristoteles:: It appears so.

Parmenides:: And by the same reasoning, when it passes from one into many and from many into one, it is neither one nor many, nor is it separated nor united; and in passing from like to unlike, and from unlike to like, it is neither like nor unlike, nor is it made like nor unlike; and while it passes from small into great, and into equal and the contraries, it will be neither small nor great, nor unequal, nor increasing, nor wasting away, nor equalized.

Aristoteles:: It appears not.

Parmenides:: But all these accidents “the one” would suffer, if it is.

Aristoteles:: How not?

Parmenides:: But must we not consider what it is meet for “the others” to suffer, if “one” exists?

Aristoteles:: We must consider.

Parmenides:: Shall we state then, if “one” exists, what “the other” must suffer from “the one?”

Aristoteles:: Let us state.

Parmenides:: Since then “the others” are different from “the one,” they are not “the one:” for otherwise they would not be different from “the one?”

Aristoteles:: Right.

Parmenides:: Nor yet are “the others” entirely deprived of “the one,” but somehow participate in it.

Aristoteles:: In what way?

Parmenides:: Because “the others,” having parts, are different from “the one:” for if they had not parts, they would be entirely one.

Aristoteles:: Right.

Parmenides:: But parts, we have said, belong to that, which is a whole.

Aristoteles:: We said so.

Parmenides:: But it is necessary for a whole to be one composed of many, of which one the parts are parts: for each of the parts must not be a part of many, but of a whole.

Aristoteles:: How is this?

Parmenides:: If any thing should be a part of many, amongst which it is itself, it would surely be both a part of itself, which is impossible, and of each one of the others; since it is a part of all. For if it is not a part of one of these, it will be a part of the others, with the exception of this; and thus it will not be a part of each one; and not being a part of each, it will be a part of not one of the many; and being a part of not one of these the many, it is impossible for it to be any thing belonging to all those, of not one of which it is either a part, or any thing else.

Aristoteles:: So it appears.

Parmenides:: A part, therefore, is neither a part of the many nor of all; but of some one idea and of some one thing, which we call a whole, having become from all one thing complete. Of this a part would be a part.

Aristoteles:: Entirely so.

Parmenides:: If therefore the others have parts, they too would participate in a whole and one.

Aristoteles:: Certainly.

Parmenides:: One perfect whole then possessing parts, must necessarily be different from “the one.”

Aristoteles:: It is necessary.

Parmenides:: There is moreover the same reasoning respecting each of the parts: for it is necessary that this each part should participate in “the one.” For, if each of these is a part, the very being each signifies surely one thing, separated indeed from others, but existing by itself, if it shall be truly each.

Aristoteles:: Right.

Parmenides:: But it would participate in “the one,” as being evidently something else than “the one;” for otherwise it would not have participated, but would have been “the one itself.” But now it is surely impossible for any thing to be “the one,” except “the one itself.”

Aristoteles:: Impossible.

Parmenides:: But it is necessary for both the whole and the part to participate in “the one.” For the whole will be one thing of which the parts are parts; but on the other hand each part will be a part of the whole, of whatever whole it may be a part.

Aristoteles:: It is so.

Parmenides:: Will not then those things, which participate in “the one,” participate in it as being different from “the one?”

Aristoteles:: How not?

Parmenides:: But things different from “the one,” will surely be many. For if the things different from “the one” were neither one nor more than one, they would be nothing.

Aristoteles:: They would.

Parmenides:: But since the things, which participate in the one part and in the one whole, are more than one, is it not necessary for those very things, which participate in "the one," to be infinite in multitude?

Aristoteles:: How?

Parmenides:: Let us look at the matter in this way. Being neither one, nor participating in "the one," do they then not participate in it when they do participate?

Aristoteles:: Certainly.

Parmenides:: Are not multitudes those in which "the one" is not?

Aristoteles:: Multitudes, certainly.

Parmenides:: What then, if we should be willing in imagination to take away from these the least quantity we can, must not this quantity so taken away, be a multitude, and not one, since it does not participate in "the one?"

Aristoteles:: It must.

Parmenides:: To him then, who thus surveys ever the different nature of the species itself by itself, will not as much of it, as we may behold, be infinite in multitude?

Aristoteles:: Entirely so.

Parmenides:: And moreover, since each part becomes one part, the parts have a bound with respect to each other, and to the whole; and the whole with respect to the parts.

Aristoteles:: Perfectly so.

Parmenides:: It results then, to the things different from "the one," as it seems, that, from "the one" and themselves having a communion, something different is produced in themselves, which furnished them indeed a bound with respect to each other, but their own nature would be with respect to themselves infinity.

Aristoteles:: It appears so.

Parmenides:: Thus the things different from “the one,” both as wholes and according to parts, are infinite and participate in bound.

Aristoteles:: Entirely so.

Parmenides:: Are they not therefore similar and dissimilar, both to each other and to themselves?

Aristoteles:: Why?

Parmenides:: Because, so far as all of them are somehow infinite, according to their own nature, they would all in this way suffer the same.

Aristoteles:: Entirely.

Parmenides:: And so far as they all participate in a bound, they would in this way too suffer the same. But so far as they suffer the being bounded and infinite, they suffer these very accidents, being accidents contrary to each other.

Aristoteles:: Certainly.

Parmenides:: But contrary things are as much as possible dissimilar.

Aristoteles:: What then?

Parmenides:: According to each accident they would be similar to themselves and to each other; but according to both they are on both sides most contrary and dissimilar.

Aristoteles:: It nearly appears so.

Parmenides:: And thus “the others” themselves would be similar and dissimilar to themselves and to each other.

Aristoteles:: They would so.

Parmenides:: And they would be the same to, and different from, each other, and be moved and stand still; and we should, without difficulty find the things different from “the one,” suffering all contrary accidents, since they have been shown to suffer these.

Aristoteles:: You speak rightly.

Parmenides:: Shall we not then dismiss these things as evident, and again consider if “the one” is, whether the others different from “the one” are not likewise in this state, or after this manner alone?

Aristoteles:: Entirely so.

Parmenides:: Let us then say again as at the beginning, if “the one” is, what must the things different from “the one” suffer.

Aristoteles:: Let us say it.

Parmenides:: Is not then “the one” separate from “the others,” and are not “the others” separate from “the one?”

Aristoteles:: Why?

Parmenides:: Because there is nothing else “different” except these, namely, that which is different from “the one,” and that which is “different” from “the others;” for all is said, when “the one” and “the others” are said.

Aristoteles:: All, indeed.

Parmenides:: There is nothing else therefore except these, in which, as being the same, “the one” and “the others” would exist.

Aristoteles:: Nothing.

Parmenides:: “The one” and “the others” are therefore never in the same.

Aristoteles:: They are not.

Parmenides:: Are they then separate?

Aristoteles:: Yes.

Parmenides:: We have said moreover that “the truly one” has not any parts.

Aristoteles:: For how can it?

Parmenides:: Neither therefore will the whole of “the one” nor its parts be in “the others,” if it is separate from “the others,” and has no parts.

Aristoteles:: How not?

Parmenides:: In no way then will “the others” participate in “the one;” since they participate neither according to a certain part, nor according to the whole.

Aristoteles:: It seems not.

Parmenides:: By no means then are “the others” “one,” nor have they any one in themselves.

Aristoteles:: They have not.

Parmenides:: Neither, then, are “the others” many; for, if they were many, each of them, as being a part of a whole, would be one; but now the things different from “the one” are neither one nor many, nor a whole nor parts, since they in no respect participate in “the one.”

Aristoteles:: Right.

Parmenides:: “The others” then are of themselves neither two nor three, nor one in them, because they are entirely deprived of “the one.”

Aristoteles:: So it is.

Parmenides:: “The others,” therefore, are of themselves neither similar nor dissimilar to “the one,” nor are similitude and dissimilitude in them. For if they were similar and dissimilar, or possessed in themselves similitude and dissimilitude, the things different from “the one” would possess in themselves two species contrary to each other.

Aristoteles:: So it appears.

Parmenides:: But it is impossible for those to participate in any two things, which do not participate even in one.

Aristoteles:: Impossible.

Parmenides:: “The others” therefore are neither similar nor dissimilar, nor both. For, if they were similar or dissimilar, they would participate in one species of the different; and if they were both, they would participate in two contrary species: but this has been shown to be impossible.

Aristoteles:: True.

Parmenides:: They are therefore neither same nor different, nor moved, nor standing still, nor generated, nor destroyed, nor greater, nor less, nor equal, nor unequal, nor do they suffer any thing else of this kind. For, if the others could endure to suffer any such accident, they would participate in one, and two, and three, and in even and odd; in all which it has been shown it is impossible for them to participate; since they are in every way and entirely deprived of “the one.”

Aristoteles:: Most true.

Parmenides:: Hence, then, if “the one” exists, “the one” is all things and nothing, both as regards itself, and as regards “the others” in like manner.

Aristoteles:: Entirely so.

Parmenides:: Be it so. But if “the one” is not, must we not consider after this what ought to happen?

Aristoteles:: We must consider.

Parmenides:: What then would be this supposition, if “one is not?” Does it differ from this, “If that, which is not one, is non-existing?”

Aristoteles:: It does differ.

Parmenides:: Does it differ merely from, or is the saying, “If that which is not one, is non-existing,” entirely contrary to the saying, “If the one is not?”

Aristoteles:: Entirely the contrary.

Parmenides:: But what, should any one say, if magnitude is not, or if smallness is not, or any thing else of this kind, would he not show in each of these cases that he is speaking of that, which is not, as something different?

Aristoteles:: Entirely so.

Parmenides:: Would he not therefore now show that he is speaking of that which is not as something different from “the others,” when he says “if the one is not;” and do we understand what he is saying?

Aristoteles:: We do understand.

Parmenides:: In the first place then he speaks of something which may be known; and next of something different from “the others,” when he says “one;” whether he adds to it the term of “being” or “not being;” for that which is said not to be, is known none the less, and that it is different from “the others:” is it not so?

Aristoteles:: Necessarily so.

Parmenides:: Let us then say as at the beginning, “If the one is not,” what ought to occur. In the first place then this, as it seems, ought to occur to it; that either there should be a knowledge of it, or that nothing of what is said can be known, when any one says, “If one is non-existing.”

Aristoteles:: True.

Parmenides:: Must not this too happen, either that “the others” are different from it, or that even it cannot be said to be different from “the others?”

Aristoteles:: Entirely so.

Parmenides:: It has therefore diversity in addition to knowledge. For he does not speak of the diversity of “the others,” when he says that “the one” is different from “the others,” but of the diversity of “the one.”

Aristoteles:: It appears so.

Parmenides:: And yet the one which is non-existing, participates in “that,” and “some,” and “this,” and “these,” and every thing of this kind. For neither could “the one” be spoken of, nor things different from “the one,” nor would there be any thing for it, or belonging to it, nor could it be called any thing, if it had no share in something, or in the other things of this kind.

Aristoteles:: Right.

Parmenides:: But to be cannot be present to “the one,” if it non-exists; though nothing prevents it from participating in the many; nay, it must participate, if “the one” is that, and not another thing is not existing. If however it will not be either “the one” nor that, but the discourse about something else, it is meet to say nothing. But if “the one” is supposed as that thing and not as another to non-exist, it is necessary for it to participate in that and many other things.

Aristoteles:: Entirely so.

Parmenides:: Dissimilitude, therefore, is present to it with respect to “the others for “the others,” being different from “the one,” will also be foreign from it.

Aristoteles:: Certainly.

Parmenides:: But are not things foreign various?

Aristoteles:: How not?

Parmenides:: And are not things various dissimilars?

Aristoteles:: Dissimilars.

Parmenides:: If then they are dissimilars to “the one,” it is evident they would be dissimilars to that which is dissimilar.

Aristoteles:: It is evident.

Parmenides:: There would then be present to “the one” a dissimilitude with respect to which “the others” are dissimilar to it.

Aristoteles:: It seems so.

Parmenides:: But if there is to it a dissimilitude from “the others,” must there not be to it a similitude of itself?

Aristoteles:: How?

Parmenides:: If there be a dissimilitude of “the one” to “the one,” no discourse would take place about a thing of such a kind as “the one;” nor would the supposition be about “the one,” but about something different from “the one.”

Aristoteles:: Entirely so.

Parmenides:: But it ought not.

Aristoteles:: Certainly.

Parmenides:: There ought, then, to be a similitude of itself to “the one.”

Aristoteles:: There ought.

Parmenides:: But neither is “the one” equal to “the others.” For, if it were equal, it would be according to equality, similar to them; but both these are impossible, if “the one” is not.

Aristoteles:: Impossible.

Parmenides:: But since it is not equal to “the others,” is it not necessary for “the others” also to be not equal to it?

Aristoteles:: It is necessary.

Parmenides:: But are not things which are not equal unequal?

Aristoteles:: Certainly.

Parmenides:: And are not unequals unequal by that which is unequal?

Aristoteles:: How not?

Parmenides:: “The one,” therefore, participates in the inequality, according to which “the others” are unequal to it.

Aristoteles:: It does participate.

Parmenides:: But magnitude and smallness belong to inequality.

Aristoteles:: They do.

Parmenides:: Do magnitude and smallness then belong to one of this kind?

Aristoteles:: It nearly appears so.

Parmenides:: But magnitude and smallness are always separated from each other.

Aristoteles:: Entirely so.

Parmenides:: There is then always something between them.

Aristoteles:: Certainly.

Parmenides:: Can you mention any thing else between these, except equality?

Aristoteles:: Nothing else.

Parmenides:: To whatever thing therefore there is magnitude and smallness, to this there is equality also as a medium between the two.

Aristoteles:: It appears so.

Parmenides:: To “the one” then which is non-existing, equality, magnitude, and smallness, as it appears, belong.

Aristoteles:: So it seems.

Parmenides:: But it ought likewise to participate in a certain way in “being.”

Aristoteles:: How so?

Parmenides:: It ought to be in the state which we have mentioned? for, unless it be in that state, we should not speak the truth in saying that “the one” is not; but if we speak the truth, it is evident that we have spoken of things that exist. Is it not so?

Aristoteles:: It is so.

Parmenides:: But since we assert that we speak the truth, it is necessary for us to assert that we are speaking of things which exist.

Aristoteles:: It is necessary.

Parmenides:: “The one,” therefore, which does not exist, as it appears, does exist; for if it should non-exist while non-existing, but remit something of existence with respect to non-existence, it will immediately become existing.

Aristoteles:: Entirely so.

Parmenides:: It ought therefore to have, as the bond of nonexistence, an existence not existing, if it is about to non-exist; just as existence ought to have as a bond of existence a non-existence existing, in order that it may be perfectly to be. For thus especially existence would exist, and non-existence not exist, participating respectively the former in existence for the sake of “being” existing; but in nonexistence for the sake of “non-being” existing, if it is about to exist completely; the latter participating in non-existence for the sake of “non-being” not existing; but participating in existence for the sake of “being” existing; if non-existence is to non-exist completely.

Aristoteles:: Most truly so.

Parmenides:: Since then both to existence there is a share of non-existence, and to nonexistence a share of existence, is it not necessary for “the one” also, since it does not exist, to participate in existence for the purpose of non-existence?

Aristoteles:: It is necessary.

Parmenides:: Existence therefore appears to be “the one,” if it does not exist.

Aristoteles:: So it seems.

Parmenides:: And non-existence, if it does not exist.

Aristoteles:: How not?

Parmenides:: Can any thing then, which is in some state, be not in that state, when it does not change from that state?

Aristoteles:: It cannot.

Parmenides:: Every thing then of such a kind, which is and is not in such a state, indicates some change.

Aristoteles:: How not?

Parmenides:: Is change motion? or what shall we call it?

Aristoteles:: It is motion.

Parmenides:: But has not “the one” appeared to be both “being” and “not-being?”

Aristoteles:: Yes.

Parmenides:: It appears then to be and not to be in such a state.

Aristoteles:: It seems so.

Parmenides:: “The non-existing one” appears then to be moved, since it has a change from “being” into “not-being.”

Aristoteles:: It appears so.

Parmenides:: But if it be no where among beings, as it is not, since it is a not-being, it cannot change its place from any where to any where.

Aristoteles:: For it cannot.

Parmenides:: It will not then be moved by changing its place.

Aristoteles:: For it will not.

Parmenides:: Neither will it revolve in “the same;” for it will never touch “the same,” since the same is “being.” But it is impossible for “not-being” to reside in any “being.”

Aristoteles:: Impossible.

Parmenides:: “The one,” therefore, “which is not,” cannot revolve in that, in which it is not.

Aristoteles:: It cannot.

Parmenides:: Neither will “the one” be altered from itself, either into “being” or “not-being:” for our discourse would no longer be concerning the one, if it were altered from itself, but concerning something else.

Aristoteles:: Right.

Parmenides:: But if it is neither altered, nor revolves in the same, nor changes its place, can it still be moved in any way?

Aristoteles:: How can it?

Parmenides:: But it is necessary for that, which is unmoved, to be at rest; and for that, which is at rest, to stand still.

Aristoteles:: It is necessary.

Parmenides:: As it seems, therefore, “the one” which is not, both stands still and is moved.

Aristoteles:: It appears so.

Parmenides:: And yet if it be moved, there is a great necessity for it to be altered; for, so far as any thing is moved, it is no longer in the same state that it was, but in a different one.

Aristoteles:: So it is.

Parmenides:: “The one,” therefore, since it is moved, is also altered.

Aristoteles:: Yes.

Parmenides:: And yet being moved not at all, it would be not at all altered.

Aristoteles:: It would not.

Parmenides:: So far then as “the one” which is not, is moved, it is altered; but so far as it is not moved, it is not altered.

Aristoteles:: Certainly not.

Parmenides:: “The one,” therefore, which is not, is both altered and not altered.

Aristoteles:: It appears so.

Parmenides:: But is it not necessary for any thing, when it is altered, to be in the act of being different from what it was before, and to die away from its former state; but for a nature, which is not altered, to be neither in the act of being, nor of dying away?

Aristoteles:: It is necessary.

Parmenides:: “The one,” therefore, which is not, by being altered, is in the act of being, and of dying away; but at the same time, from its not being altered, it is not in the act of being or of dying away. And thus “the one,” which is not, is in the act of being and of dying, and is neither in the act of being nor of dying away.

Aristoteles:: For it is not otherwise.

Parmenides:: But let us again return to the beginning, about to see whether these things will appear to us as they do now, or otherwise.

Aristoteles:: It is necessary.

Parmenides:: Have we not already said, “If ‘the one is not, what ought to happen concerning it?”

Aristoteles:: Certainly.

Parmenides:: But when we say “it is not,” do we intend any thing else than the absence of “being” from that which we say is not?

Aristoteles:: Nothing else.

Parmenides:: Whether therefore, when we say that a thing “is not,” do we say that in a certain respect it is not, and that in a certain respect it is? or does the term “is not” simply signify that, what is not, is no where at all, and that it does not in any way participate in “being,” if it is not?

Aristoteles:: It signifies this most distinctly.

Parmenides:: Neither then can that, which is not, be, nor in any other way participate in “being.”

Aristoteles:: It cannot.

Parmenides:: But are the terms “to be generated” and “to be destroyed,” any thing else than for one thing to participate in “being,” and for another to lose “being?”

Aristoteles:: It is nothing else.

Parmenides:: The thing therefore to which no atom of “being” is present, can neither receive nor lose it.

Aristoteles:: How can it?

Parmenides:: “The one” therefore, since it is not at all, can neither possess, be freed from, nor participate in “being,” in any manner whatever.

Aristoteles:: This seems reasonable.

Parmenides:: “The one” which is not, is then neither destroyed nor in the act of being, if it participates not at all in being.

Aristoteles:: It appears not.

Parmenides:: Neither therefore is it at all altered; for if it thus suffered it would be in the act of being destroyed.

Aristoteles:: True.

Parmenides:: But if it is not altered, is it not also necessary for it to be not moved?

Aristoteles:: It is necessary.

Parmenides:: But that, which in no respect is, we will say cannot stand still; for that which stands still ought to be in some spot ever the same?

Aristoteles:: In the same; for how not?

Parmenides:: Thus then let us say, that “not-being” at no time either stands or is moved.

Aristoteles:: For it does not.

Parmenides:: Moreover not any of things existing is present to it; for participating in any of things existing it would participate in “being.”

Aristoteles:: It is evident.

Parmenides:: It has therefore neither magnitude, nor smallness, nor equality.

Aristoteles:: It has not.

Parmenides:: It has moreover neither similitude nor diversity, either with respect to itself or to others.

Aristoteles:: It appears not.

Parmenides:: What then, is it possible for it to have the other things, if nothing must be present to it?

Aristoteles:: It is not possible.

Parmenides:: To it then there are neither similars nor dissimilars, nor the same nor different.

Aristoteles:: There are not.

Parmenides:: But what, will there be, respecting a thing that is not, the term “at it,” or “to it,” or “of this,” or “to this,” or “of another,” or “to another,” or “formerly,” or “Hereafter,” or “now,” or “knowledge,” or “opinion,” or “perception,” or “discourse,” or “a name,” or any thing else belonging to things existing?

Aristoteles:: There will not.

Parmenides:: A not-one then is in this state.

Aristoteles:: What state?

Parmenides:: Not being seems to be in no state.

Aristoteles:: In no state.

Parmenides:: But let us still again say, if “one” is not, what must “the others” suffer.

Aristoteles:: Let us say.

Parmenides:: In a certain way “others” must exist themselves; for, if “others” do not exist, there would be nothing said about “the others.”

Aristoteles:: True.

Parmenides:: But if there is the discourse about “the others,” “the others” will be different: or do you not apply to the same thing the word “other” and the word “different?”

Aristoteles:: I do.

Parmenides:: But we surely say that the “different” is different from “different,” and “the other” is other than “other?”

Aristoteles:: Yes.

Parmenides:: To “the others,” therefore, if there are about to be “others,” there is something from which they will be “others.”

Aristoteles:: It is necessary.

Parmenides:: But what would this be? For they will not be different from “the one,” since it is not.

Aristoteles:: They will not.

Parmenides:: They are different therefore from each other; for this alone remains to them, or to be different from nothing.

Aristoteles:: Right.

Parmenides:: According to multitudes therefore, each is different from each other; for they cannot be different according to one, since “one” is not. But each mass of them, as it appears, is infinite in multitude; even although one should lay hold of that which appears to be the least, like a dream in sleep, many appear on a sudden, instead of one seeming to be; and instead of the smallest, a quantity very great as compared with the fractions formed out of it.

Aristoteles:: Most right.

Parmenides:: Masses of such kind existing, others will be mutually different from one another, if “others” are, while “one” is not.

Aristoteles:: Completely so.

Parmenides:: Will there not then be many masses, each appearing as one, but not being so, since “one” is not?

Aristoteles:: There will.

Parmenides:: There will likewise appear to be a number of them, if each is one, while there are many.

Aristoteles:: Entirely so.

Parmenides:: But the even and odd among them will appear not truly, if “one” shall not exist.

Aristoteles:: They will not.

Parmenides:: But likewise the smallest, as we have said, will seem to be in them. But this the smallest will appear to be many and great, as compared with each of the many and small.

Aristoteles:: How not?

Parmenides:: And each mass will be imagined to be equal to many and small quantities; for it will not appear to change from a greater to a less quantity, before it seems to arrive at something between them; and this would be a fancied notion of equality.

Aristoteles:: It is likely.

Parmenides:: Will it not also appear to have a bound with respect to another mass, having itself, with respect to itself, neither a beginning, nor a middle, nor an end?

Aristoteles:: In what way?

Parmenides:: Because when a person takes hold by his intellect of some one of these, as being one of these, there will always, prior to the beginning, appear another beginning, and after the end another end will be left behind; but in the middle there will be other things more in the middle than the middle; but smaller, on account of their not being able to take hold of each one of them, since “the one” is not.

Aristoteles:: This is most true.

Parmenides:: But every thing which a person can lay hold of by his intellect, must, I think, be broken into small pieces; for a mass would be ever laid hold of mentally without a one.

Aristoteles:: Entirely so.

Parmenides:: But is it not necessary for such a mass to appear to him, who beholds it at a distance and with a dull eye, to be one; but to him who surveys it near and with an acute mind, will not each appear to be infinite in multitude, if it is deprived of “the one,” not existing.

Aristoteles:: It is most necessary.

Parmenides:: Thus then each of “the others” ought to appear infinite and bounded, and one and many, if one does not exist, and “the others” besides “the one” do exist.

Aristoteles:: They ought.

Parmenides:: Will they then appear also to be similars and dissimilars?

Aristoteles:: In what way?

Parmenides:: Just as objects in a shaded picture appear all to be one to a person standing at a distance, they will seem to suffer the same accident, and to be similar.

Aristoteles:: Entirely so.

Parmenides:: But to him, who approaches nearer, they will appear to be many and different, and different from and dissimilar to themselves, through the fancied notion of diversity.

Aristoteles:: It is so.

Parmenides:: It is therefore necessary for the masses to appear to be similar and dissimilar to themselves and to each other.

Aristoteles:: Entirely so.

Parmenides:: And to be the same with, and different from, each other, and to touch and be apart from themselves, and be moved through all possible movements, and standing still every where, and be in the act of being and of destruction, and neither of these, and all of this kind, which it were easy for us to go through, if, though one does not exist, many do exist?

Aristoteles:: Most true.

Parmenides:: Once more then, returning again to the beginning, let us say, “If one is not,” but the things different from “the one,” what ought to happen.

Aristoteles:: Let us say.

Parmenides:: “The others” then are not one.

Aristoteles:: How should they be?

Parmenides:: Nor yet are they many; for in many there would be one likewise. For if none of these is one, all are nothing; so that there would be not even many.

Aristoteles:: True.

Parmenides:: One therefore not being in the others, the others are neither many nor one.

Aristoteles:: They are not.

Parmenides:: Nor do they appear to be either one or many.

Aristoteles:: Why not?

Parmenides:: Because “the others” have not in any way any communication at all with any of the things which are not, nor is any one of the non-existing present to “the others;” for there is no part to non-beings.

Aristoteles:: True.

Parmenides:: Neither therefore is there any opinion about that, which is not in “the others,” nor any fancied notion; nor does that “which is not,” become in any way the subject of opinion applicable to “the others.”

Aristoteles:: It does not.

Parmenides:: If therefore one does not exist, not any of “the others” is conceived in opinion to be one or many; for it is impossible to form an opinion of many without one.

Aristoteles:: It is impossible.

Parmenides:: If one therefore does not exist, neither do “the others” exist; nor is one or many conceived by opinion.

Aristoteles:: It seems not.

Parmenides:: Neither therefore do similars or dissimilars exist.

Aristoteles:: They do not.

Parmenides:: Nor the same nor different, nor things touching nor apart, nor such others, as we have already discussed, as appearing themselves; of these there neither is any one, nor do “the others” appear, if the one does not exist.

Aristoteles:: True.

Parmenides:: If then we summarily say, that “if one is not, nothing is,” shall we not rightly say?

Aristoteles:: Entirely so.

Parmenides:: Let both this then be asserted by us, and this also, as is reasonable, that whether one is or is not, both itself, and the others, are, with respect to themselves and to each other, all things entirely, and are not, and appear to be, and do not appear.

Aristoteles:: It is most true.

## **Parmenides.**

Translated by F. M. Cornford.

Socrates, Cephalus, Adeimantus, Zeno, Glaucon,
Parmenides, Antiphon, Aristoteles, Pythodorus

Cephalus:: After leaving our home at Clazomenae we arrived at Athens and met Adimantus and Glaucon in the market place. Adimantus took my hand.

Glaucon:: Welcome, Cephalus. If there is anything we can do for you here, you must let us know.

Cephalus:: Well, I have come for that very purpose. There is something you and your brother can do for me.

Glaucon:: Please tell us what it is.

Cephalus:: What, was the name of your half brother on the mother's side? I cannot remember. He was only a child, you know, when I was here before, and that is a long while ago now. His father's name was Pyrilampes, I think.

Glaucon:: Yes, and his own is Antiphon. But why do you ask?

Cephalus:: My companions here, are fellow citizens of mine, deeply interested in philosophy. They have been told that Antiphon has been much in the company of someone called Pythodorus, who was a friend of Zeno's, and that Pythodorus has related to him that conversation which Socrates once had with Zeno and Parmenides. Antiphon is said to have heard it so often that he can repeat it by heart.

Glaucon:: That is true.

Cephalus:: Well, that is what we want—to hear that conversation.

Glaucon:: There is no difficulty about that. Before he was grown up, Antiphon worked hard at getting that conversation by heart, though nowadays he takes after his grandfather of the same name and devotes most of his time to horses. If you like, let us go and see him. He has just gone home from here. His house is close by, in Melite.

Cephalus:: So we set out to walk there. We found Antiphon at home, giving instructions to a smith about making a bit or something of the sort. When he had done with the man, and his brothers began to tell him what we had come for, he recognized me from his memory of my earlier visit and said he was glad to see me. We then asked him to repeat the conversation. At first he was reluctant.

Antiphon:: It is no easy matter.

Cephalus:: However, he ended by telling us the whole story.

According to Antiphon, then, this was Pythodorus' account.

Pythodorus:: Zeno and Parmenides once came to Athens for the Great Panathenaea. Parmenides was a man of distinguished appearance. By that time he was well advanced in years, with hair almost white; he may have been sixty-five. Zeno was nearing forty, a tall and attractive figure. It was said that he had been Parmenides' favorite. They were staying with Pythodorus outside the walls in the Ceramicus. Socrates and a few others came there, anxious to hear a reading of Zeno's treatise, which the two visitors had brought for the first time to Athens. Socrates was then quite young. Zeno himself read it to them; Parmenides at the moment had gone out. The reading of the arguments was very nearly over when Pythodorus himself came in, accompanied by Parmenides and Aristoteles, the man who was afterward one of the Thirty; so they heard only a small part of the treatise. Pythodorus himself, however, had heard it read by Zeno before.

When Zeno had finished, Socrates asked him to read once more the first hypothesis of the first argument. He did so, and Socrates asked;

Socrates:: What does this statement mean, Zeno? 'If things are many,' you say, 'they must be both like and unlike. But that is impossible; unlike things cannot be like, nor like things unlike.' That is what you say, isn't it?

Zeno:: Yes.

Socrates:: And so, if unlike things cannot be like or like things unlike, it is also impossible that things should be a plurality; if many things did exist, they would have impossible attributes. Is this the precise purpose of your arguments—to maintain, against everything that is commonly said, that things are not a plurality? Do you regard every one of your arguments as evidence of exactly that conclusion, and so hold that, in each argument in your treatise, you are giving just one more proof that a plurality does not exist? Is that what you mean, or am I understanding you wrongly?

Zeno:: No, you have quite rightly understood the purpose of the whole treatise.

Socrates:: I see, Parmenides, that Zeno's intention is to associate himself with you by means of his treatise no less intimately than by his personal attachment. In a way, his book states the same position as your own; only by varying the form he tries to delude us into thinking that his thesis is a different one. You assert, in your poem, that the all is one, and for this you advance admirable proofs. Zeno, for his part, asserts that it is not a plurality, and he too has many weighty proofs to bring forward. You assert unity; he asserts no plurality; each expresses himself in such a way that your arguments seem to have nothing in common, though really they come to very much the same thing. That is why your exposition and his seem to be rather over the heads of outsiders like ourselves.

Zeno:: Yes, Socrates, but you have not quite seen the real character of my book. True, you are as quick as a Spartan hound to pick up the scent and follow the trail of the argument, but there is a point you have missed at the outset. The book makes no pretense of disguising from the public the fact that it was written with the purpose you describe, as if such deception were something to be proud of. What you have pointed out is only incidental; the book is in fact a sort of defense of Parmenides' argument against those who try to make fun of it by showing that his supposition, that there is a one, leads to many absurdities and contradictions. This book, then, is a retort against those who assert a plurality. It pays them back in the same coin with something to spare, and aims at showing that, on a thorough examination, their own supposition that there is a plurality leads to even more absurd consequences than the hypothesis of the one. It was written in that controversial spirit in my young days, and someone copied it surreptitiously, so that I had not even the chance to consider whether it should see the light or not. That is where you are mistaken, Socrates; you imagine it was inspired, not by a youthful eagerness for controversy, but by the more dispassionate aims of an older man, though, as I said, your description of it was not far wrong.

Socrates:: I accept that, and I have no doubt it is as you say. But tell me this. Do you not recognize that there exists, just by itself, a form of likeness and again another contrary form, unlikeness itself, and that of these two forms you and I and all the things we speak of as 'many' come to partake? Also, that things which come to partake of likeness come to be alike in that respect and just in so far as they do come to partake of it, and those that come to partake of unlikeness come to be unlike, while those which come to partake of both come to be both? Even if all things come to partake of both, contrary as they are, and by having a share in both are at once like and unlike one another, what is there surprising in that? If one could point to things which are simply ‘alike’ or ‘unlike’ proving to be unlike or alike, that no doubt would be a portent, but when things which have a share in both are shown to have both characters, I see nothing strange in that, Zeno, nor yet in a proof that all things are one by having a share in unity and at the same time many by sharing in plurality. But if anyone can prove that what is simply unity itself is many or that plurality itself is one, then I shall begin to be surprised.

And so in all other cases, if the kinds or forms themselves were shown to have these contrary characters among themselves, there would be good ground for astonishment, but what is there surprising in someone pointing out that I am one thing and also many? When he wants to show that I am many things, he can say that my right side is a different thing from my left, my front from my back, my upper parts from my lower, since no doubt I do partake of plurality. When he wants to prove that I am one thing, he will say that I am one person among the seven of us, since I partake also of unity. So both statements are true. Accordingly, if anyone sets out to show about things of this kind—sticks and stones, and so on—that the same thing is many and one, we shall say that what he is proving is that something is many and one, not that unity is many or that plurality is one; he is not telling us anything wonderful, but only what we should all admit. But, as I said just now, if he begins by distinguishing the forms apart just by themselves—likeness, for instance, and unlikeness, plurality and unity, rest and motion, and all the rest—and then shows that these forms among themselves can be combined with, or separated from, one another, then, Zeno, I should be filled with admiration. I am sure you have dealt with this subject very forcibly, but, as I say, my admiration would be much greater if anyone could show that these same perplexities are everywhere involved in the forms themselves—among the objects we apprehend in reflection, just as you and Parmenides have shown them to be involved in the things we see.

Pythodorus:: While Socrates was speaking, he was expecting every moment that Parmenides and Zeno would be annoyed, but they listened very attentively and kept on exchanging glances and smiles in admiration of Socrates. When he ended, Parmenides expressed this feeling.

Parmenides:: Socrates, your eagerness for discussion is admirable. And now tell me. Have you yourself drawn this distinction you speak of and separated apart on the one side forms themselves and on the other the things that share in them? Do you believe that there is such a thing as likeness itself apart from the likeness that we possess, and so on with unity and plurality and all the terms in Zeno's argument that you have just been listening to?

Socrates:: Certainly I do.

Parmenides:: And also in cases like these, is there, for example, a form of rightness or of beauty or of goodness, and of all such things?

Socrates:: Yes.

Parmenides:: And again, a form of man, apart from ourselves and all other men like us—a form of man as something by itself? Or a form of fire or of water?

Socrates:: I have often been puzzled about those things, Parmenides, whether one should say that the same thing is true in their case or not.

Parmenides:: Are you also puzzled, Socrates, about cases that might be thought absurd, such as hair or mud or dirt or any other trivial and undignified objects? Are you doubtful whether or not to assert that each of these has a separate form distinct from things like those we handle?

Socrates:: Not at all, In these cases, the things are just the things we see; it would surely be too absurd to suppose that they have a form. All the same, I have sometimes been troubled by a doubt whether what is true in one case may not be true in all. Then, when I have reached that point, I am driven to retreat, for fear of tumbling into a bottomless pit of nonsense. Anyhow, I get back to the things which we were just now speaking of as having forms, and occupy my time with thinking about them.

Parmenides:: That is because you are still young, Socrates, and philosophy has not yet taken hold of you so firmly as I believe it will someday. You will not despise any of these objects then, but at present your youth makes you still pay attention to what the world will think. However that may be, tell me this. You say you hold that there exist certain forms, of which these other things come to partake and so to be called after their names; by coming to partake of likeness or largeness or beauty or justice, they become like or large or beautiful or just?

Socrates:: Certainly.

Parmenides:: Then each thing that partakes receives as its share either the form as a whole or a part of it? Or can there be any other way of partaking besides this?

Socrates:: No, how could there be?

Parmenides:: Do you hold, then, that the form as a whole, a single thing, is in each of the many, or how?

Socrates:: Why should it not be in each, Parmenides?

Parmenides:: If so, a form which is one and the same will be at the same time, as a whole, in a number of things which are separate, and consequently will be separate from itself.

Socrates:: No, it would not, if it were like one and the same day, which is in many places at the same time and nevertheless is not separate from itself. Suppose any given form is in them all at the same time as one and the same thing in that way.

Parmenides:: I like the way you make out that one and the same thing is in many places at once, Socrates. You might as well spread a sail over a number of people and then say that the one sail as a whole was over them all. Don't you think that is a fair analogy?

Socrates:: Perhaps it is.

Parmenides:: Then would the sail as a whole be over each man, or only a part over one, another part over another?

Socrates:: Only a part.

Parmenides:: In that case, Socrates, the forms themselves must be divisible into parts, and the things which have a share in them will have a part for their share. Only a part of any given form, and no longer the whole of it, will be in each thing.

Socrates:: Evidently, on that showing.

Parmenides:: Are you, then, prepared to assert that we shall find the single form actually being divided? Will it still be one?

Socrates:: Certainly not.

Parmenides:: No, for consider this. Suppose it is largeness itself that you are going to divide into parts, and that each of the many large things is to be large by virtue of a part of largeness which is smaller than largeness itself. Will not that seem unreasonable?

Socrates:: It will indeed.

Parmenides:: And again, if it is equality that a thing receives some small part of, will that part, which is less than equality itself, make its possessor equal to something else?

Socrates:: No, that is impossible.

Parmenides:: Well, take smallness. Is one of us to have a portion of smallness, and is smallness to be larger than that portion, which is a part of it? On this supposition again smallness itself will be larger, and anything to which the portion taken is added will be smaller, and not larger, than it was before.

Socrates:: That cannot be so.

Parmenides:: Well then, Socrates, how are the other things going to partake of your forms, if they can partake of them neither in part nor as wholes?

Socrates:: Really, it seems no easy matter to determine in any way.

Parmenides:: Again, there is another question.

Socrates:: What is that?

Parmenides:: How do you feel about this? I imagine your ground for believing in a single form in each case is this. When it seems to you that a number of things are large, there seems, I suppose, to be a certain single character which is the same when you look at them all; hence you think that largeness is a single thing.

Socrates:: True.

Parmenides:: But now take largeness itself and the other things which are large. Suppose you look at all these in the same way in your mind's eye, will not yet another unity make its appearance—a largeness by virtue of which they all appear large?

Socrates:: So it would seem.

Parmenides:: If so, a second form of largeness will present itself, over and above largeness itself and the things that share in it, and again, covering all these, yet another, which will make all of them large. So each of your forms will no longer be one, but an indefinite number.

Socrates:: But, Parmenides, may it not be that each of these forms is a thought, which cannot properly exist anywhere but in a mind. In that way each of them can be one and the statements that have just been made would no longer be true of it.

Parmenides:: Then, is each form one of these thoughts and yet a thought of nothing?

Socrates:: No, that is impossible.

Parmenides:: So it is a thought of something?

Socrates:: Yes.

Parmenides:: Of something that is, or of something that is not?

Socrates:: Of something that is.

Parmenides:: In fact, of some one thing which that thought observes to cover all the cases, as being a certain single character?

Socrates:: Yes.

Parmenides:: Then will not this thing that is thought of as being one and always the same in all cases be a form?

Socrates:: That again seems to follow.

Parmenides:: And besides, according to the way in which you assert that the other things have a share in the forms, must you not hold either that each of those things consists of thoughts, so that all things think, or else that they are thoughts which nevertheless do not think?

Socrates:: That too is unreasonable. But, Parmenides, the best I can make of the matter is this—that these forms are as it were patterns fixed in the nature of things. The other things are made in their image and are likenesses, and this participation they come to have in the forms is nothing but their being made in their image.

Parmenides:: Well, if a thing is made in the image of the form, can that form fail to be like the image of it, in so far as the image was made in its likeness? If a thing is like, must it not be like something that is like it?

Socrates:: It must.

Parmenides:: And must not the thing which is like share with the thing that is like it in one and the same thing?

Socrates:: Yes.

Parmenides:: And will not that in which the like things share, so as to be alike, be just the form itself that you spoke of?

Socrates:: Certainly.

Parmenides:: If so, nothing can be like the form, nor can the form be like anything. Otherwise a second form will always make its appearance over and above the first form, and if that second form is like anything, yet a third. And there will be no end to this emergence of fresh forms, if the form is to be like the thing that partakes of it.

Socrates:: Quite true.

Parmenides:: It follows that the other things do not partake of forms by being like them; we must look for some other means by which they partake.

Socrates:: So it seems.

Parmenides:: You see then, Socrates, what great difficulties there are in asserting their existence as forms just by themselves?

Socrates:: I do indeed.

Parmenides:: I assure you, then, you have as yet hardly a notion of how great they will be, if you are going to set up a single form for every distinction you make among things.

Socrates:: How so?

Parmenides:: The worst difficulty will be this, though there are plenty more. Suppose someone should say that the forms, if they are such as we are saying they must be, cannot even be known. One could not convince him that he was mistaken in that objection, unless he chanced to be a man of wide experience and natural ability, and were willing to follow one through a long and remote train of argument. Otherwise there would be no way of convincing a man who maintained that the forms were unknowable.

Socrates:: Why so, Parmenides?

Parmenides:: Because, Socrates, I imagine that you or anyone else who asserts that each of them has a real being 'just by itself,' would admit, to begin with, that no such real being exists in our world.

Socrates:: True, for how could it then be just by itself?

Parmenides:: Very good. And further, those forms which are what they are with reference to one another have their being in such references among themselves, not with reference to those likenesses, or whatever we are to call them, in our world, which we possess and so come to be called by their several names. And, on the other hand, these things in our world which bear the same names as the forms are related among themselves, not to the forms, and all the names of that sort that they bear have reference to one another, not to the forms.

Socrates:: How do you mean?

Parmenides:: Suppose, for instance, one of us is master or slave of another; he is not, of course, the slave of master itself, the essential master, nor, if he is a master, is he master of slave itself, the essential slave, but, being a man, is master or slave of another man, whereas mastership itself is what it is [mastership] of slavery itself, and slavery itself is slavery to mastership itself. The significance of things in our world is not with reference to things in that other world, nor have these their significance with reference to us, but, as I say, the things in that world are what they are with reference to one another and toward one another, and so likewise are the things in our world. You see what I mean?

Socrates:: Certainly I do.

Parmenides:: And similarly knowledge itself, the essence of knowledge, will be knowledge of that reality itself, the essentially real.

Socrates:: Certainly.

Parmenides:: And again, any given branch of knowledge in itself will be knowledge of some department of real things as it is in itself, will it not?

Socrates:: Yes.

Parmenides:: Whereas the knowledge in our world will be knowledge of the reality in our world, and it will follow again that each branch of knowledge in our world must be knowledge of some department of things that exist in our world.

Socrates:: Necessarily.

Parmenides:: But, as you admit, we do not possess the forms themselves, nor can they exist in our world.

Socrates:: No.

Parmenides:: And presumably the forms, just as they are in themselves, are known by the form of knowledge itself?

Socrates:: Yes.

Parmenides:: The form which we do not possess.

Socrates:: True.

Parmenides:: Then, none of the forms is known by us, since we have no part in knowledge itself.

Socrates:: Apparently not.

Parmenides:: So beauty itself or goodness itself and all the things we take as forms in themselves are unknowable to us.

Socrates:: I am afraid that is so.

Parmenides:: Then here is a still more formidable consequence for you to consider.

Socrates:: What is that?

Parmenides:: You will grant, I suppose, that if there is such a thing as a form, knowledge itself, it is much more perfect than the knowledge in our world, and so with beauty and all the rest.

Socrates:: Yes.

Parmenides:: And if anything has part in this knowledge itself, you would agree that a god has a better title than anyone else to possess the most perfect knowledge?

Socrates:: Undoubtedly.

Parmenides:: Then will the god, who possesses knowledge itself, be able to know the things in our world?

Socrates:: Why not?

Parmenides:: Because we have agreed that those forms have no significance with reference to things in our world, nor have things in our world any significance with reference to them. Each set has it only among themselves.

Socrates:: Yes, we did.

Parmenides:: Then if this most perfect mastership and most perfect knowledge are in the god's world, the gods' mastership can never be exercised over us, nor their knowledge know us or anything in our world. Just as we do not rule over them by virtue of rule as it exists in our world and we know nothing that is divine by our knowledge, so they, on the same principle, being gods, are not our masters nor do they know anything of human concerns.

Socrates:: But surely, an argument which would deprive the gods of knowledge would be too strange.

Parmenides:: And yet, Socrates, these difficulties and many more besides are inevitably involved in the forms, if these characters of things really exist and one is going to distinguish each form as a thing just by itself. The result is that the hearer is perplexed and inclined either to question their existence, or to contend that, if they do exist, they must certainly be unknowable by our human nature. Moreover, there seems to be some weight in these objections, and, as we were saying, it is extraordinarily difficult to convert the objector. Only a man of exceptional gifts will be able to see that a form, or essence just by itself, does exist in each case, and it will require someone still more remarkable to discover it and to instruct another who has thoroughly examined all these difficulties.

Socrates:: I admit that, Parmenides. I quite agree with what you are saying.

Parmenides:: But on the other hand, if, in view of all these difficulties and others like them, a man refuses to admit that forms of things exist or to distinguish a definite form in every case, he will have nothing on which to fix his thought, so long as he will not allow that each thing has a character which is always the same, and in so doing he will completely destroy the significance of all discourse. But of that consequence I think you are only too well aware.

Socrates:: True.

Parmenides:: What are you going to do about philosophy, then? Where will you turn while the answers to these questions remain unknown?

Socrates:: I can see no way out at the present moment.

Parmenides:: That is because you are undertaking to define ‘beautiful,’ ‘just,’ ‘good,’ and other particular forms, too soon, before you have had a preliminary training. I noticed that the other day when I heard you talking here with Aristoteles. Believe me, there is something noble and inspired in your passion for argument, but you must make an effort and submit yourself, while you are still young, to a severer training in what the world calls idle talk and condemns as useless. Otherwise, the truth will escape you.

Socrates:: What form, then, should this exercise take, Parmenides?

Parmenides:: The form that Zeno used in the treatise you have been listening to. With this exception—there was one thing you said to him which impressed me very much—you would not allow the survey to be confined to visible things or to range only over that field; it was to extend to those objects which are specially apprehended by discourse and can be regarded as forms.

Socrates:: Yes, because in that other field there seems to be no difficulty about showing that things are both like and unlike and have any other character you please.

Parmenides:: You are right. But there is one thing more you must do. If you want to be thoroughly exercised, you must not merely make the supposition that such and such a thing is and then consider the consequences; you must also take the supposition that that same thing is not.

Socrates:: How do you mean?

Parmenides:: Take, if you like, the supposition that Zeno made-’*If there is a plurality of things.*’ You must consider what consequences must follow both for those many things with reference to one another and to the one, and also for the one with reference to itself and to the many. Then again, on the supposition that *there is not a plurality*, you must consider what will follow both for the one and for the many, with reference to themselves and to each other. Or, once more, if you suppose that ‘likeness exists,’ or ‘does not exist,’ what will follow on either supposition both for the terms supposed and for other things, with reference to themselves and to each other. And so again with unlikeness, motion, and rest, coming-to-be and perishing, and being and not-being themselves. In a word, whenever you suppose that anything whatsoever exists or does not exist or has any other character, you ought to consider the consequences with reference to itself and to any one of the other things that you may select, or several of them, or all of them together, and again you must study these others with reference both to one another and to any one thing you may select, whether you have assumed the thing to exist or not to exist, if you are really going to make out the truth after a complete course of discipline.

Socrates:: There would be no end to such an undertaking, Parmenides, and I don’t altogether understand. Why not enlighten me by illustrating the method on some supposition of your own choice?

Parmenides:: That is a heavy task, Socrates, to lay on a man of my age.

Socrates:: But you, Zeno, why don’t you give us the illustration?

Pythodorus:: Zeno laughed and replied;

Zeno:: Let us beg Parmenides himself to do it, Socrates. What he means is no light matter, I am afraid. You must see what a task you are setting. If we were a larger company, it would not be fair to ask him. Such a discourse would be unsuitable before a large audience, particularly in a man of his age, because most people are unaware that you cannot hit upon truth and gain understanding without ranging in this way over the whole field. So, Parmenides, I join with Socrates in his request, in the hope of sitting at your feet again myself after all these years.

Pythodorus:: After these words from Zeno, I joined with Aristoteles and the rest in begging Parmenides not to disappoint them, but to demonstrate the method he had in mind.

Parmenides:: I cannot refuse, although I feel like the old race horse in Ibycus, who trembles at the start of the chariot race, knowing from long experience what is in store for him. The poet compares his own reluctance on finding himself, so late in life, forced into the lists of love, and my memories too make me frightened of setting out, at my age, to traverse so vast and hazardous a sea. However, I must do as you wish, for after all, as Zeno says, we are all friends here. Where shall we begin, then? What supposition shall we start with? Would you like me, since we are committed to play out this laborious game, to begin with myself and my own original supposition? Shall I take the one itself and consider the consequences of assuming that there is, or is not, a one?

Zeno:: By all means.

Parmenides:: Then who will answer the questions I shall put? Shall it be the youngest? He will be likely to give the least trouble and to be the most ready to say what he thinks, and I shall get a moment’s rest while he is answering.

Aristoteles:: The youngest means me, Parmenides, and I am ready. Put your questions and I will answer them.

Parmenides:: Well then, if there is a one, of course the one will not be many. Consequently it cannot have any parts or be a whole. For a part is a part of a whole, and a whole means that from which no part is missing; so, whether you speak of it as ‘a whole’ or as ‘having parts,’ in either case the one would consist of parts and in that way be many and not one. But it is to be one and not many. Therefore, if the one is to be one, it will not be a whole nor have parts.

And, if it has no parts, it cannot have a beginning or an end or a middle, for such things would be parts of it. Further, the beginning and end of a thing are its limits. Therefore, if the one has neither beginning nor end, it is without limits.

Consequently the one has no shape; it is not either round or straight. Round is that whose extremity is everywhere equidistant from its center, and straight is that of which the middle is in front of both extremities. So if the one had either straight or round shape, it would have parts and so be many. Therefore, since it has no parts, it is neither straight nor round.

Further, being such as we have described, it cannot be anywhere, for it cannot be either (*a*) in another, or (*b*) in itself.

(*a*) If it were in another, it would be encompassed all round by that in which it was contained, and would have many contacts with it at many points, but there cannot be contact at many points all round with a thing which is one and has no parts and is not round.

(*b*) On the other hand, if it were in itself, it would have, to encompass it, none other than itself, since it would actually be within itself, and nothing can be within something without being encompassed by that thing. Thus the encompassing thing would be one thing, the encompassed another, for the same thing cannot as a whole both encompass and be encompassed at the same time, and so, in that case, the one would no longer be one, but two.

Therefore, the one is not anywhere, being neither in itself nor in another.

Next consider whether, such being its condition, it can be (*a*) in motion or (*b*) at rest.

(a) If it were in motion, it would have to be either moving in place or undergoing alteration, for there are no other kinds of motion.

Now, if the one alters, so as to become different from itself, it surely cannot still be one. Therefore, it does not move in the sense of suffering alteration.

Does it, then, move in place? If it does, then it must either turn round in the same place or shift from one place to another. If it turns round, it must rest on a center and have those parts which revolve round the center as different parts of itself. But a thing which a cannot have a center or parts cannot possibly be carried round on its center. If it moves at all, then, it must move by changing its place and coming to be in different places at different times. Now we saw that it could not be anywhere in anything. It is still more impossible that it should *come to be* in anything. If a thing is coming to be in something, it cannot be in that thing so long as it is still coming to be in it, nor yet can it be altogether outside it, since it is already coming to be in it. Accordingly this can happen only to a thing which has parts, for part of it will be already in the other thing and part of it outside at the same time, and a thing which has no parts surely cannot possibly *be*, at the same time, neither wholly inside nor wholly outside something. It is still more impossible that a thing which has no parts and is not a whole should *come to be* in anything, since it cannot do so either part by part or as a whole. Hence it does not change its place either by traveling anywhere and coming to be in something. or by revolving in the same place, or by changing.

Therefore the one is immovable in respect of every kind of motion.

(*b*) On the other hand, we also assert that it cannot actually be in anything. Consequently it can never be in the same [place or condition], because then it would be in that selfsame [place or condition], and we saw that it could not be either in itself or in anything else. The one, then, is never in the same [place or condition]. But what is never in the same [place or condition] is not at rest or stationary.

It appears, then, that the one is neither at rest nor in motion. Further the one cannot be either the same as another or the same as itself, nor yet other than itself or other than another.

(*a*) Were it other than itself, it would be other than one and so would not be one. (*b*) And if it were the same as another, it would be that other and not be itself, so that, in this case again, it would not be just what it is, one, but other than one.

Therefore the one will not be the same as another or other than itself.

(*c*) Nor can it be other than another, so long as it is one. To be other than something properly belongs, not to 'one,' but only to an 'other-than-another.' Consequently it will not be other in virtue of its being one, and so not in virtue of being itself, and so not as itself, and if as itself it is not in any sense other, it cannot be other than anything.

(*d*) Nor yet can it be the same as itself. For the character (φύσις) of unity is one thing, the character of sameness another. This is evident because when a thing becomes 'the same' as something, it does not become 'one.' For instance, if it becomes the same as the many, it must become many, not one, whereas if there were no difference whatever between unity and sameness, whenever a thing became 'the same,' it would always become one, and whenever one, the same. So if the one is to be the same as itself, it will not be one with itself, and thus will be one and not one, and that is impossible. Consequently it is equally impossible for the one to be either other than another or the same as itself.

Thus the one cannot be other than, or the same as, either itself or another.

Nor can the one be (*a*) like or (*b*) unlike anything, whether itself or another.

(*a*) A like thing is a thing which has an identical character. But we have seen that the character 'same' is distinct from the character 'one.' Now if the one has any character distinct from being one, it must have the character of being more things than one, and that is impossible. So it is quite impossible that the one should be a thing 'having the same character' as either another or itself.

Therefore the one cannot be like another or like itself.

(*b*) But neither is it true of the one that it is different, for, in that case again, it would be true of it that it was more things than one. But if ‘like’ means that of which the same thing is true, a thing that is unlike itself or another will be that which can be truly said to be different from itself or another. And the one, it appears, cannot be said to be different in any way. Consequently, the one is in no way unlike either itself or anything else.

Therefore the one cannot be like or unlike either another or itself. Further, the one, being such as we have described, will not be either (*a*) equal or (*b*) unequal either to itself or to another.

If it is equal, it will have the same number of measures as any thing to which it is equal. If greater or less, it will have more or fewer measures than things, less or greater than itself, which are commensurable with it. Or, if they are incommensurable with it, it will have smaller measures in the one case, greater in the other.

(*a*) Now a thing which has no sameness cannot have the same number of measures or of anything else. Therefore the one, not having the same number of measures, cannot be equal to itself or to another.

(*b*) On the other hand, if it had more or fewer measures, it would have as many parts as measures, and thus, once more, it would be no longer one, but as many as its measures. And if it were of one measure, it would be equal to that measure, whereas we saw that it could not be equal to anything.

Therefore, since it has neither one measure, nor many, nor few, and has no sameness at all, it appears that it can never be equal to itself or to another, nor yet greater or less than itself or another.

Again, can it be held that the one can be older or younger than anything or of the same age with anything?

If it is of the same age with itself or another, it will have equality of duration and likeness, and we have said that the one has neither likeness nor equality. We also said that it has no unlikeness or inequality. Such a thing cannot, then, be either older or younger than, or of the same age with, anything.

Therefore the one cannot be younger or older than, or of the same age with, either itself or another.

We may infer that the one, if it is such as we have described, cannot even occupy time at all. Whatever occupies time must always be becoming older than itself, and ‘older’ always means older than something younger. Consequently, whatever is becoming older than itself, if it is to have something *than* which it is becoming older, must also be at the same time becoming younger than itself. What I mean is this. If one thing is already different from another, there is no question of its becoming different; either they both are now, or they both have been, or they both will be, different. But if one is in process of becoming different, you cannot say that the other has been, or will be, or as yet is, different; it can only be in process of becoming different. Now the difference signified by ‘older’ is always a difference from something younger. Consequently, what is becoming older than itself must also at the same time be becoming younger than itself. Now, in the process of becoming it cannot take a longer or shorter time than itself; it must take the same time with itself, whether it is becoming, or is, or has been, or will be. So, it seems, any one of the things that occupy time and have a temporal character must be of the same age as itself and also be becoming at once both older and a younger than itself. But we saw that none of these characters can attach to the one.

Therefore the one has nothing to do with time and does not occupy any stretch of time.

Again, the words 'was,' 'has become,' 'was becoming' are understood to mean connection with past time; 'will be,' 'will be becoming,' 'will become,' with future time; 'is' and 'is becoming,' with time now present. Consequently, if the one has nothing to do with any time, it never has become or was becoming or was, nor can you say it has become now or is becoming or is, or that it will be becoming or will become or will be in the future. Now a thing can have being only in one of these ways. There is, accordingly, no way in which the one has being.

Therefore the one in no sense *is*.

It cannot, then, 'be' even to the extent of 'being' one, for then it would be a thing that is and has being. Rather, if we can trust such an argument as this, it appears that the one neither is one nor is at all.

And if a thing is not, you cannot say that it '*has'* anything or that there is anything '*of'* it. Consequently, it cannot *have* a name or be spoken of, nor can there be any knowledge or perception or opinion of it. It is not named or spoken of, not an object of opinion or of knowledge, not perceived by any creature.

Now can this possibly be the case with the one?

Aristoteles:: I do not think so.

Parmenides:: Shall we, then, go back to our hypothesis and reconsider it from the beginning, in the hope of bringing to light some different result?

'If a one is,' we say, we have to agree what sort of consequences follow concerning it. Start afresh, then, and consider. If a one *is*, it cannot be, and yet not *have* being. So there will also be the being which the one has, and this is not the same thing as the one; otherwise that being would not be *its* being, nor would it, the one, *have* that being, but to say ‘a one *is’* would be tantamount to saying ‘a one [*is*] *one*.’ But in fact the supposition whose consequences we are to consider is not ‘if a one [is] *one*,’ but ‘if a one *is*.’ This implies that ‘is’ and ‘one’ stand for different things. Thus the short statement ‘a one is’ simply means that the one has being.

Let us, then, once more state what will follow, if a one is. Consider whether this supposition does not necessarily imply that the one is such as to have parts. That follows in this way. Since ‘is’ is asserted to belong to this *one* which is, and ‘one’ is asserted to belong to this *being* which is one, and since ‘*being’* and ‘*one’* are not the same thing, but both belong to the same thing, namely that ‘one which is’ that we are supposing, it follows that it is ‘one being’ as a whole, and ‘one’ and ‘being’ will be its parts. So we must speak of each of these parts, not merely as a part, but as part of a whole.

Therefore, any ‘one that is’ is a whole and also has parts.

Again, take each of these two parts of the one being—its unity and its being. Unity can never be lacking to the part ‘being,’ nor being to the part ‘unity.’ Thus each of the two parts, in its turn, will possess both unity and being; any part proves to consist of at least two parts, and so on forever by the same reasoning. Whatever part we arrive at always possesses these two parts, for a ‘one’ always has being, and a ‘being’ always has unity. Hence any part always proves to be two and can never be one.

In this way, then, what is ‘one being’ must be unlimited in multitude.

We may also proceed in another way, as follows. We are saying that the one has being. That is why it is, and it was for that reason that a ‘one which is’ was seen to be a plurality. Now take just this ‘one’ which we are saying has being and conceive it just by itself alone apart from the being which we say it has. Will this ‘one’ itself be found to be merely one or also a plurality? Consider. The ‘one’ it self and its being must be *different* things since the one is not being, but, as one, *has* being. If, then, the one and its being are each different from the other, it is not in virtue of being one that the one is different from the being, nor is it in virtue of being ‘being’ that the being is other than the one; they differ from one another in virtue of being *different* or *other*. Thus [the term] ‘different’ is not identical with either ‘one’ or ‘being.’

Now suppose we take a selection of these terms, [say] ‘being’ and ‘different,’ or ‘being’ and ‘one,’ or ‘one’ and ‘different.’ In each case we are selecting a pair which may be spoken of as ‘both.’ I mean, we can speak of ‘being,’ and again of ‘one.’ We have thus named each member of a pair. And when I say ‘being and one’ or ‘being and different,’ or ‘different and one,’ and so on in every possible combination, I am in each case speaking of ‘both.’ And a pair that can properly be called ‘both’ must be *two*. And if a pair of things are two, each of them must be *one*. This applies to our terms. Since each set forms a couple, each term must be one. And if so, then, when any one is added to any pair, the sum will be *three*. And three is odd, two even. Now if there are two, there must also be *twice times*, if three, *three times*, since two is twice times one and three is three times one. And if there are two and twice times, three and three times, there must be *twice times two* and *three times three*. And, if there are three which occur twice and two which occur three times, there must be *twice times three* and *three times two*. Thus there will be even multiples of even sets, odd multiples of odd sets, odd multiples of even sets, and even multiples of odd sets. That being so, there is no number left, which must not necessarily be.

Therefore, if a one is, there must also be number.

Now, if number is, there must be many things, and indeed an unlimited plurality of things, that *are*, for we must admit that number, unlimited in plurality, also proves to have being. And if all number has being, each part of number must have being also. Thus being is distributed throughout all the members of a plurality of beings, and is lacking to none of these beings from the smallest to the greatest; indeed it is nonsense to suggest that anything that is should lack being. Thus being is parceled out among beings of every possible order from smallest to greatest; it is subdivided to the furthest possible point and has an illimitable number of parts. So its parts form the greatest of multitudes.

Again, among all these parts there cannot be any which *is* part of being and yet not *a* [one] part. If it *is*, then, so long as it is, it must always be some *one* part; it cannot be *no* [not one] part. Consequently, unity must belong to every part of being, and be lacking to none, smaller or greater. And unity, being one, cannot be in many places at once as a whole. And if not as a whole, it must be as divided into parts; only so can it be present to all the parts of being at the same time. Further, that which is divided into parts must be as many as its parts. So we were wrong to say just now that being was distributed into the 'greatest' multitude of parts. Its parts are not more numerous than those into which unity is distributed, but equal in number, for nothing that *is* lacks unity, and nothing that is *one* lacks being; the two maintain their equality all through. It appears, then, that unity itself is parceled out by being, and is not only many but indefinitely numerous.

Thus not only is a ‘one which is’ a plurality, but unity itself is distributed by being and is necessarily many.

Further, since its parts are parts of a whole, the one, in respect of its wholeness, will be limited. For the parts are contained by the whole, and a container must be a limit.

Therefore, a ‘one which is’ is both one and many, whole and parts, limited as well as indefinitely numerous.

Since it is limited, then, it will have extremities, and if a whole, it will have beginning, middle, and end. A thing cannot be a whole without all these three; if any one of them is lacking it will no longer be a whole. Thus the one will have beginning and end and middle. But the middle can only be what is equidistant from the extremities.

So a one, such as we have described, will have some shape, straight or round or a mixture of both.

Then, if it has these properties, it will be both (*a*) in itself and (*b*) in another.

(*a*) Each part is, of course, in the whole; none is outside the whole. And all the parts are contained by the whole. Now, the one is all its own parts, and neither more nor less than all. And the one is also the whole. Accordingly, since all the parts are in a whole, and the one is both all the parts and the whole, and all the parts are contained in the whole, the one must be contained by the one. In this sense it follows that one must be in itself.

(*b*) On the other hand, the whole is not in the parts, neither in all the parts nor in any part.

If it were in all, it would have to be also in one part, for if there were some one in which it was not, it could not be in all. But if this one part is one among all the parts, and the whole is not in this one, we can no longer say it is in all the parts.

But neither is it in *some* of the parts. If the whole were in some of the parts, the greater would be contained in the less, which is impossible.

If, then, the whole is not in several of its parts, nor in one, nor yet in all, it must be either in something else or nowhere at all. But if nowhere at all, it would be nothing, whereas it is a whole and so, since [as a whole] it is not in itself, it must be in something else.

Thus as a whole the one is in something else; as all the parts it is in itself, and thus the one must be both in itself and in another.

Now, if the one is of this character, it must be both (*a*) at rest and (*b*) in motion.

(a) It is at rest, since it is in itself. For if it is in one thing, and does not shift out of that thing, it will be in the same [place], namely itself, and that which is always in the same [place] must of course always be at rest.

(*b*) On the other hand, what is always in another must never be in the same, and therefore never at rest, and not being at rest, it must be in motion.

Therefore the one, being always both in itself and in another, must always be both in motion and at rest.

Further, if the one has the foregoing attributes, it must be (*a*) the same with itself and (*b*) different from itself, and similarly both (*c*) different from and (*d*) the same with the others.

(*a*) Anything is related to anything in one of the following ways. Either it is the same or different, or, if neither the same nor different, it must stand as part to whole, or as whole to part. Now the one cannot be part of itself, nor can it stand as whole to itself as part. Again the one is not different from one, and so not different from itself.

Therefore, since it is not different and does not stand to itself either as whole to part or as part to whole, it follows that it must be the same with itself.

(*b*) Again, if a thing is in a place the same with itself and also in a place other than that self, it must be different from itself; otherwise it could not be in a different place. But we saw that this was true of the one. It was at once in itself and in another.

In this respect, therefore, the one must be different from itself.

(*c*) Again, if something is different from something else, that something else must be different. Now, all the things which are 'not one' must be different from the one, and the one also must be different from them.

Therefore, the one is different from the others.

(*d*) Now consider. Sameness itself and difference are contrary to one another. So sameness will never be in what is different, nor difference in what is the same. And if difference will never be in what is the same, there is nothing that is in which difference is present for any length of time, for if it were in something for any length of time whatsoever, during that time difference would be in what is the same. And since it is never in what is the same, difference can never be in anything that is, and consequently neither in the 'not-ones' nor in the one. Therefore it is not difference that could make the one different from the 'not-ones,' or the 'not-ones' different from the one. Nor yet will they be different from one another by virtue of being themselves, if they do not possess difference.

Therefore, if neither their own character nor difference can make them different, every possibility of their being different escapes us.

Further, things which are ‘not one’ do not possess unity either; if they did, they would not be ‘not one,’ but in a sense one. So things which are ‘not one’ cannot be a number; if they had number, once more they would not be ‘not one’ in every sense. Again, the things which are ‘not one,’ cannot be parts of the one, because once more they would then possess unity. Consequently, if the one is one in every sense, and the things that are ‘not one’ are not one in every sense, the one cannot stand to the things that are ‘not one’ either as whole to parts or as part to whole, nor again can the things which are ‘not one’ be parts of the one or wholes of which the one is part. But we said that things which do not stand to one another either as parts or as wholes, and are not different from one another, must be the same with one another. Therefore, we must say that, since the one stands in this way to the things that are ‘not one,’ it is the same as they.

It appears, then, that the one is different both from the others and from itself, and also the same both with them and with itself.

Aristoteles:: The argument certainly seems to lead to that conclusion.

Parmenides:: Is the one also both like and unlike itself and the others?

(*a*) Since, as we have seen, the one is different from the others, the others also of course must be different from it. And it differs from them neither more nor less than they differ from it, but just *as* they do, and if neither more nor less, then in a like manner. Accordingly, in so far as it has the character of ‘being different’ from the others, and the others in just the same way have the character of ‘being different’ from it, in so far the one and the others will have the same character.

What I mean is this. When you use any word, you use it to stand for something. You can use it once or many times, but in either case you are speaking of the thing whose name it is. However many times you utter the same word, you must always mean the same thing. Now ‘different’ is a word that stands for something: so when you utter it, whether once or many times, you are using it to stand for, or naming, just that thing whose name it is. Hence when we say ‘the others are different from the one’ and ‘the one is different from the others,’ we use the word ‘different’ twice, but nevertheless we always use it to stand for just that character whose name it is. Consequently in so far as the one is different from the others and the others are different from the one, just in respect of having the character ‘different’ the one and the others have precisely the same character, and to have the same character is to be alike.

Thus, in so far as the one has the character of being different from the others, just in that respect it and they must be entirely alike, because they are entirely different.

(*b*) On the other hand, ‘like’ and ‘unlike’ are contraries, and so also are ‘different’ and ‘same.’ Now we have also seen that the one is the same as the others. And ‘being the same as the others’ is the contrary character to ‘being different from the others.’ And it has been shown that, in so far as the one is different, it is like them. Consequently, in so far as it is the same, it will be unlike them, in respect of the character contrary to that which made it like them, namely difference. Sameness, then, will make it unlike; otherwise sameness will not be the contrary of difference.

Therefore the one will be like and unlike the others—like in so far as different, unlike in so far as the same.

Aristoteles:: Yes, it seems possible to argue the case in that way.

Parmenides:: Yes, and it can also be argued as follows. We may say that in so far as the one has the character of being ‘the same’ [as the others], it has not a diverse character, and so is not unlike, and so is like. And in so far as it has the character of being ‘other’ [than the others], it has a diverse character, and so is unlike.

Therefore, because the one is the same as the others and because it is different, on both grounds together or on either singly it will be both like and unlike the others.

Similarly, in relation to itself. Since, as we have seen, it is both different from itself and the same with itself, on both grounds together and on either singly it will be both like itself and unlike itself.

Again, there is the question of the one having, or not having, contact with itself and with the others.

We have seen that the one is in itself as a whole. It is also in the others. Accordingly, (*a*) as being in the others, it will have contact with the others, and (*b*) as being in itself, while it will be precluded from contact with the others, it will have contact with itself.

In this way, then, the one will have contact both with itself and with the others.

From another point of view, if anything is to touch something it must be situated next to that thing, occupying the position adjacent to the position of the thing it touches.

(*c*) Accordingly, if the one is to touch itself, it must be situated next to itself, occupying the place adjacent to the place in which itself is. If the one were two, it might do this and be in two places at once, but not so long as it remains one.

Therefore the same necessity which forbids the one to be two forbids it to touch itself.

(*d*) On the other hand, the one will not touch the others either for this reason. We are asserting that, in order to have contact, a thing must be distinct from, but next to, the thing it is to touch, and there must be no third thing between them. So, if there is to be contact, there must be at least two things. And if to the two terms a third be added next to them, the number of terms will be three, the number of contacts two. And so the addition of every fresh term will mean the addition of one fresh contact, with the result that the contacts are always fewer by one than the amount of the numbers. For every subsequent total of terms exceeds the total of contacts by the same amount as the original pair of terms exceeded the contacts, since at every step one term and one contact are added. Thus, however many things there are, their contacts are always fewer by one. And if there is only a one, not a pair of things, there will be no contact.

Now things that are other than one, we say, are not one and have not unity, since they are other. Consequently they do not possess number, because there is no one among them. Thus they are neither one nor two nor any other number you could name. The one, then, is the only thing that is one, and there will be no pair, and consequently no contact. Therefore, contact being nonexistent, the one does not touch the others, nor the others the one.

Thus the total result of these considerations is that the one both touches, and does not touch, both itself and the others.

We may next inquire whether the one is both equal and unequal, alike to itself and to the others.

If the one is to be greater or less than the others or they are to be greater or less than it, neither will be greater or less than the other merely in virtue of being what they are—the one being one, and the others being other than the one—but if, besides each being such as it is, they should each possess equality, then they would be equal to one another, or if the others possess greatness, the one smallness, or the one possesses greatness, the others smallness, then whichever possesses greatness will be greater, whichever possesses smallness, less.

This pair of characters, then, greatness and smallness, must exist, for surely, if they did not exist, they could not be contrary to one another and come to be in things.

If, then, smallness comes to be in the one, it must be either (*a*) in the one as a whole or (*b*) in a part of it.

(*a*) Suppose it comes to be in the one as a whole. Then it must either stretch throughout the whole extent of the one or contain the one. If it is coextensive with the one, the smallness will be equal to the one; if containing it, greater. But smallness cannot be equal to, or greater than, anything and so discharge, not its own function, but that of greatness or equality. Therefore, smallness cannot be in the one as a whole.

(*b*) Hence, if it is in the one at all, it must be in a part. But not in all that part; otherwise the effect would be the same as in the case of the whole. It would be either equal to, or larger than, any part in which it might be. Therefore smallness will never be in anything, if it cannot come to be in either a part or the whole, and there will be nothing small except smallness itself.

It follows that greatness will not be in the one either, for then there would be something else, besides greatness itself, that would be ‘greater,’ namely the thing in which greatness was—and that in spite of the thing’s having no smallness, which is required for greatness to surpass, if it is to be great. And there can be no such smallness, since smallness is not in anything anywhere.

Further, the only thing than which greatness itself is greater is smallness itself, and the only thing than which smallness is smaller is greatness itself. Hence, the others, not possessing greatness or smallness, are not greater or smaller than the one; also this pair themselves [greatness and smallness] possess their power of exceeding or being exceeded only with reference to each other, not with reference to the one, and the one in its turn, not possessing either greatness or smallness, cannot be greater or smaller than they or than the others.

It follows that the one, if it is neither greater nor smaller than the others, cannot either exceed them or be exceeded by them, and that which neither exceeds nor is exceeded must be of equal extent, and so equal.

Moreover, the one will also stand in this relation to itself. If it has in itself neither largeness nor smallness, it cannot either exceed or be exceeded by itself, but must be coextensive and so equal to itself.

Therefore the one will be equal both to itself and to the others.

(*c*) Further, if it is in itself, it must also encompass itself on the outside, and as container it will be greater than itself, and as contained, less. In this way the one will be greater and less than itself.

(*d*) Also, there can be nothing besides the one and the others. Further, anything that is must always be somewhere. And that which is in something will be in it as a less in a greater; only so can one thing be in another.

Now, since there is nothing else besides the others and the one, and they must be in something, it follows at once that they must be in each other—the others in the one and the one in the others—or be nowhere at all. Consequently, since the one is in the others, the others, as containing the one, must be greater than it, and the one, as contained by them, less than they. And since the others are in the one, by the same reasoning the one must be greater than the others, and they less than the one.

Therefore, the one is alike equal to, greater than, and less than, both itself and the others.

Further, the one, if greater, less, and equal, must be of equal measures with itself and with the others, and also of more and fewer, and if of measures, then of parts. And, being of equal, more, and fewer measures, it will also be correspondingly fewer than, more than, and equal to, both itself and the others in number. For if it is greater than anything, it will contain a greater number of measures and so of parts; if less, a smaller number; if equal, the same number.

Hence, the one, being greater and less than itself and also equal, will contain more and fewer and the same number of measures, and hence of parts. So, as having the same number of parts, it will be equal to itself in number, and as having more or fewer, more or less than itself in number.

The one will also stand in the same way to the others. Since it is seen to be greater and smaller and of the same magnitude as the others, it must also be more, fewer, and equal to them in number.

Thus, once more, it appears that the one will be alike, equal to, and more and fewer than both itself and the others in number.

Next is the question whether the one exists in time, and, as so existing, both is and becomes younger and older than itself and the others, and also neither is nor becomes younger or older than itself or the others.

Since the one *is* one, of course it has being, and to 'be' means precisely having existence in conjunction with time present, as 'was'

or 'will be' means having existence in conjunction with past or future time. So if the one is, it is in time.

(*a*) Time, moreover, is advancing. Hence since the one moves forward temporally, it is always becoming older than itself. And we remember that what is becoming older becomes older than something that is becoming younger. So, since the one is becoming older than itself, that self must be becoming younger.

Therefore, in this sense, it is becoming both younger and older than itself.

(*b*) Also it *is* older when, in this process of becoming, it is *at* the present time which lies between 'was' and 'will be,' for of course, as it travels from past to future, it will never overstep the present. So, when it coincides with the present, it stops becoming older; at that time it is not becoming, but already *is*, older. For if it were getting ahead, it could never be caught up by the present, since to get ahead would mean to be in touch with both the present and the future, leaving the present behind and reaching out to the future, and so passing between the two. Whereas, if it is true of anything which is becoming that it can never pass beyond the present, it constantly stops becoming when it is at the present, and it then *is* whatever it may be that it was becoming.

This applies to the one. When, in becoming older, it coincides with the present, it stops becoming and *is* then older. Moreover, it is older than the thing it was becoming older than, namely itself. And older means older than a younger. Hence the one is also younger than itself at the time when, in becoming older, it coincides with the present. But the present is with the one always throughout all its existence, for at whatever time it is existing, it is existing ‘now.’

Therefore, at all times the one both is and is becoming older and younger than itself.

(*c*) Also in thus being or becoming it cannot take a longer time than itself; it must take the same time. But if it is, or is becoming, for the same length of time, it is of the same age, and so neither older nor younger.

Therefore, the one, which is and is becoming for the same length of time as itself, neither is nor becomes older or younger than itself. Next, is the one similarly related to the others?

(*a*) Things other than the one, being different things and not *a* different thing, are more than one; *a* different thing would be one, but different things must be more than one and have plurality. Hence they have a number greater than that of the one. And of a number the lesser part comes, or has come, into being before the greater part, and first of all the least, namely the one. Thus in all things that have number the one comes first, and the others, being others and not an other, are always things that have number. And what comes first comes earlier, while the others, coming later, are younger.

In this way the others will he younger than the one, the one older than the others.

Again, the one can have come to be only in a way consistent with its own nature. Now we saw that the one has parts, and hence a beginning, an end, and a middle. And the beginning of anything, whether it be the one itself or any one of the others, always comes into being first, and after the beginning, all the rest up to the end. Moreover, by 'all the rest' we shall mean parts of the whole or one, and this itself comes to be, as a one or whole, at the same moment as the end. But the end is the last part to come into being, and it is the nature of the one to come into being simultaneously with the last. Hence, if the one a must come to be in a way consistent with its nature, we must say it is the nature of the one, as having come into being at the same time with the end, to come later than all the others.

Therefore, the one is younger than the others, the others older than the one.

(*b*) But again, a beginning or any part whatsoever of the one or of anything else, if it is *a* part and not parts, must be one. So 'one' must come to be along with the first part that comes to be, and again along with the second part, and cannot be lacking to every subsequent part that is added, until, on reaching the last part, a one whole is formed; it cannot be missing at the formation of any part, first, middle, or last. Therefore the one is of the same age as all the others, so that, if the one is not to contradict its own nature, it will have come to be neither before nor after the others, but at the same time.

Thus, according to this argument, the one will be neither older nor younger than the others, nor they than it, whereas by our former argument it was both older and younger, and so were the others.

So much for what it *is* and *has* become.

Next there is the question whether the one is becoming both older and younger than the others, and they than it, and also not becoming younger or older. Does the case stand with becoming as with being, or not?

(*c*) If one thing actually is older than another, it cannot be becoming older still, nor the younger younger still, by any more than their original difference in age, for if equals be added to unequals, the difference that results, in time or any other magnitude, will always be the same as the original difference. Consequently what is older or younger can never be becoming older or younger than what is younger or older, the difference in age being constant at all times. The one is or has become older, the other younger, but neither is becoming so.

Therefore, the one, if it is so, is not becoming, either older or younger than the others which *are* so.

(*d*) From another point of view, both are becoming older and younger. We have seen that (α) the one is older than the others, and (β) they are older than it. (α) When the one is older than the others, it has, of course, been in existence for a longer time than they. Now, if an equal time is added to a greater time and to a less, the greater will exceed the less by a smaller fraction. Hence, the difference in age between the one and the others will not remain into the future what it originally was; the addition of the same time to each will make the difference in age constantly less. And if a thing differs less in age from something than it formerly did, it must be becoming younger than it was relatively to those things in relation to which it was formerly older. And if it is becoming younger, those other things in their turn must be becoming older than they were in relation to it. Hence what has come to be [later and is] younger is becoming older in relation to what has come to be earlier and is older. It never is older than the other, but it is always becoming so, since that other is progressing toward being younger, while it is progressing toward being older. And the older thing, in its turn, is becoming younger than the younger in the same way. As the two move in contrary directions, they are becoming each other's contrary—the younger becoming older than the older, the older becoming younger than the younger—but they can never finally become so; if they did, they would no longer be becoming, but would be so. As it is, each is becoming older and younger than the other. The one is becoming younger than the others, because, as we saw, it is older and came into existence earlier; the others are becoming older than the one, because they came into existence later. By the same reasoning, (β) the others stand in the same way to the one, since, as we saw, they are older and came into existence earlier.

Thus, from the point of view (*c*) in which there is no question of one thing becoming either older or younger than another, since their distance in age remains always the same, the one will not be becoming older or younger than the others, nor they than it. But from another point of view (*d*) in which the difference between things which come into existence earlier and later must be a constantly diminishing fraction, the one and the others must be becoming both older and younger than each other.

So the conclusion of all these arguments is that the one both is, and is becoming, older and younger than itself and than the others, and also neither is, nor is becoming, either older or younger than itself or than the others.

Now, since the one is in time and has the property of becoming older and younger, it has a past, a future, and a present. Consequently the one was and is and will be, and it was becoming, is becoming, and will become.

Also, it can be said to *have* something, and there can be something *of* it, alike in past, present, and future. So there can be knowledge and opinion and perception of it; in fact we are now exercising all these activities with respect to it.

Further, it will have a name and can be spoken of; indeed it actually is being named and spoken of. And all the other characters which belong to any other things of which the above statements are true belong equally to the one.

To take up the argument yet a third time, if there is a one such as we have described—a one which is both one and many and neither one nor many and is in time—it follows that since it *is* one, it has existence at some time, and again since it *is not* one, at some time it has not existence. And since it cannot both have and not have existence at the same time, it can only have existence at one time and not have existence at another. And there must also be a time when it comes to possess existence and a time when it ceases to possess it; it can possess a thing at one time and not at another only if there are times when it acquires that thing and loses it. Now acquiring existence is called ‘coming into existence,’ and losing existence is called ‘ceasing to exist.’

It appears, then, that the one, when it acquires or loses existence, comes into existence and ceases to exist.

Also, since it is one and many and a thing that comes to be and ceases to be, when it comes to be one, its being many ceases to be, and when it comes to be many, its being one ceases to be. And as coming to be one it must be combined, as coming to be many, separated.

Further, when it becomes like or unlike, it is subject to assimilation or dissimilation.

Also, when it becomes greater or less or equal, it must be increased or diminished or equalized.

But when, being in motion, it comes to a stand, or, being at rest, it changes to being in motion, it cannot itself occupy any time at all for this reason. Suppose it is first at rest and later in motion, or first in motion and later at rest;

that cannot happen to it without its changing. But there is no time during which a thing can be at once neither in motion nor at rest. On the other hand it does not change without making a transition. When does it make the transition, then? Not while it is at rest or while it is in motion, or while it is occupying time. Consequently, the time at which it will be when it makes the transition must be that queer thing, the instant. The word ‘instant’ appears to mean something such that *from it* a thing passes to one or other of the two conditions. There is no transition *from* a state of rest so long as the thing is still at rest, nor *from* motion so long as it is still in motion, but this queer thing, the instant, is situated between the motion and the rest; it occupies no time at all, and the transition of the moving thing to the state of rest, or of the stationary thing to being in motion, takes place *to* and *from* the instant. Accordingly, the one, since it both is at rest and is in motion, must pass from the one condition to the other—only so can it do both things—and when it passes, it makes the transition instantaneously; it occupies no time in making it and at that moment it cannot be either in motion or at rest.

The same holds good of its other transitions. When it passes from being in existence to ceasing to exist or from being nonexistent to coming into existence, it is then between certain motions and states; it is then neither existent nor nonexistent, and it is neither coming into existence nor ceasing to exist. By the same reasoning when it passes from one to many or from many to one, it is not either one or many, and it is not being separated or being combined. Similarly when it passes from like to unlike or from unlike to like, it is neither like nor unlike, and it is neither becoming like nor becoming unlike. And when it passes from small to great or equal or in the opposite direction, it is not small or great or equal, nor is it being increased or being diminished or being equalized.

All these changes, then, may happen to the one, if it exists.

We have next to consider what will be true of the others, if there is a one. Supposing, then, that there is a one, what must be said of the things other than the one?

Since they are other than the one, they are not the one; if they were, they could not be other than it. Yet the others are not wholly destitute of the one [unity], but partake of it in a way. For things other than the one are others as having parts; if they had no parts they would be absolutely one. And parts, we say, are parts of a whole, while a whole must be a one consisting of many, and the parts will be parts of this one whole.

For each part must be part, not of a many, but of a whole, for this reason. If a thing were to be part of a many, among which itself were included, then it would be a part of itself—which is absurd—and also a part of every one of the rest, since it is supposed to be a part of them all. For if there is one of them of which it is not a part, it will be a part of the remainder exclusive of that one, and, if we proceed in that way, it will prove not to be a part of each successive one that we take, and so, not being a part of each one, it will not be a part of any one of the many. But if a thing is a part, or whatever else you please, of no one of a number of things, it cannot be a part of all those things, of no one of which it is a part. Therefore a part is part not of many or of all, but of a single entity or 'one' which we call a whole, a complete 'one' composed of all. Hence if the others have parts, they must also possess wholeness and unity.

Therefore, the things other than the one must be one complete whole having parts.

Further, the same reasoning holds of each part. It is also true of each part that it must have unity. For if each of them is a part, ‘each’ means that it is one thing, distinct from the rest and having its independent being, if we are to call it ‘each.’ As having unity, it will plainly be other than unity; otherwise it would not have unity, but simply be unity itself, whereas nothing but unity itself can be unity. But both the whole and the part must *have* unity, for the whole is *one* whole, of which the parts are parts, while every part that is part of a whole is *one* part of that whole.

Now things that have a share in the one [possess unity] will be different from the one that they share in [the unity they possess]. And things different from the one will naturally be many, for if the things other than the one were neither one nor more than one, they would be nothing.

Moreover, since both things that *have* the unity of a part and things that have the unity of a whole are more than one, it follows that those things which come to *acquire* unity, must, just in themselves, be without limit of multitude. We may see that in this way. Evidently, at the time when they come to acquire unity they are not one and do not possess unity. So they are multitudes which do not contain unity. Now if we choose to take in thought from such multitudes the least portion we can conceive, that portion also, if it does not possess unity, must be not one but a multitude. And if we go on in that way considering, just by itself, the nature other than the form, any portion of it that comes into view will he without limit of multitude.

Further, when each single part becomes a part, they now have a limit in relation both to one another and to the whole, and so has the whole in relation to the parts. Thus the consequence for the things other than the one appears to be that from the combination of unity and themselves there comes to be in them something fresh, which gives them a limit with reference to one another, whereas their own nature gives them, in themselves, unlimitedness.

Thus the things other than the one, both as wholes and part by part, are unlimited and also have limit.

Moreover they are also both like and unlike one another and themselves.

In so far as they are all unlimited in respect of their own nature, they have the same character, and also in so far as they all have limit. But in so far as they have both characters, limited and unlimited, they have characters which are contrary to one another, and contraries are as unlike as possible. Thus in respect of either character singly they are like themselves and one another, but in respect of both characters taken together they are quite contrary and unlike both themselves and one another.

Thus the others will be both like and unlike themselves and one another.

Also, since we have found this to be true of them, there will be no further difficulty in showing that the things other than the one are the same as, and different from, one another, and both in motion and at rest, and have all the contrary characters.

Suppose, then, we pass over those further consequences as obvious and consider once more whether, if there is a one, it will not also be true that things other than the one have none of these characters. Let us start again from the beginning and ask, If there is a one, what must be true of the things other than the one?

The one, then, must be separate from the others and they from it. For there is no further thing distinct from both the one and the others; when we have named the one and the others, we have named all things. So there is no further thing besides them, in which the one and the others alike might be. Hence they are never in the same thing, and therefore must be separate.

Also we cannot admit that what is really and truly one has parts. Therefore the one cannot be in the others as a whole, nor can parts of it be so, if it is separate from the others and also has no parts.

Consequently, the things other than the one, not possessing unity either in part or as a whole, can have no unity in any way. The others, then, are not one in any sense, and there is no 'one thing' to be found among them.

It follows that the others are not many either. For if they were many, each of them would be one part of the whole, whereas, in fact, not having unity in any sense, they are neither one nor many, neither a whole nor parts.

Nor yet, consequently, are the others two or three, and no two things or three things can be in them, since they are altogether destitute of unity.

It follows that the others are not like the one, nor yet unlike it; there is no likeness and unlikeness in them. If they were like and unlike or had likeness and unlikeness in them, they would then have in them two characters contrary to one another. But, as we saw, it is impossible for things which do not even possess unity to possess any *two* things. Therefore the others are neither like nor unlike nor both at once, for, if like or unlike, they would have one of two characters; if both, *two* contrary characters, and that we have seen to be impossible.

Nor yet, accordingly, are they the same, or different, or in motion, or at rest, or coming to be, or ceasing to be, or greater, or less, or equal, nor have they any other characters of that kind. If the others admit any such character, they will also admit of being one, two, three, odd and even, and we have seen that they cannot have those characters, being altogether destitute of unity.

Thus, if there is a one, the one is both all things and nothing whatsoever, alike with reference to itself and to the others.

We have next to consider what follows, if the one is not.

What, then, is the meaning of this supposition, ‘if a one [one thing] does not exist’? It differs from the supposition, ‘if a not-one [no-thing] does not exist,’ and not only differs from it, but is the direct contrary.

Now suppose one says, ‘if largeness does not exist,’ or ‘if smallness does not exist,’ or any other statement of that type. Obviously in each case it is a different thing that is spoken of as nonexistent. And so in the present case, if a man says ‘if a one [one thing] does not exist,’ it is plain that the thing he is saying does not exist is something different from other things, and we know what he is speaking of. So in speaking of a ‘one’ [one thing] he is speaking, in the first place, of something knowable, and in the second of something different from other things, no matter whether he attributes existence to it or nonexistence; even if he says it is nonexistent, we nevertheless know what is said not to exist, and that it is distinguishable from other things.

Starting afresh, then, from this supposition, ‘if a one [one thing] does not exist,’ we are to consider what consequences follow.

First, it seems, this must be true of it, that there is knowledge of it; otherwise the very meaning of the supposition that ‘a one does not exist’ would be unknown.

Also, it must be true that other things are different from it; otherwise it could not be spoken of as different from them. So, besides being knowable, it must have difference in character, for when you speak of the one as different from the others, you are speaking of its difference in character, not of theirs.

And further this nonexistent one has the characters of being 'that' and 'something,' and of being related '*to* this' or '*to* these,' and all other such characters. If it were not 'something' and had not all those other characters, we could not have spoken of '*the* one' or of things different from *the* one, or of anything as belonging *to* it or as being of it, nor could we have spoken of it as 'something.' Thus although the one cannot have existence, if it does not exist, there is nothing against its having many characters; indeed it must, if it is *this* one, and not another that does not exist. If what is not to exist is neither *the one* nor *this* and the statement is about something else, we ought not so much as to open our lips, but granted that we are supposing the nonexistence of *this one* and not of something else, it must have the character of being *this* and many other characters as well.

It follows that the one possesses unlikeness with respect to the others. For the others, being different, will actually be of different character—that is, of other character—that is, unlike. And if they are unlike the one, unlikes must be unlike an unlike. Therefore the one also will possess unlikeness, with respect to which the others are unlike it.

Moreover, if it has unlikeness to the others, it must have likeness to itself. For if the one has unlikeness to the one, what we are speaking of will not be such as the one in character, and our supposition will not be about a one, but about something other than a one. But that is inadmissible.

The one, therefore, must have likeness to itself.

Further, the one is not equal to the others. If it were equal. that would at once imply that it exists and also *is* like them in respect of this equality. But both implications are impossible, if a one does not exist. And since it is not equal to the others, the others must be not equal to it. And things that are not equal are unequal, and unequal things are unequal to an unequal. So the one has inequality, with reference to which the others are unequal to it.

On the other hand, inequality implies greatness and smallness, and accordingly these must belong to such a one as we are describing. Now greatness and smallness are always kept apart from one another. So there is always something between them, and this can only be equality. Accordingly, anything that has greatness and smallness has also equality between the two.

So a one which does not exist will, it appears, have equality, greatness, and smallness.

Further, it must in some sense even possess being. For it must be in the state we are ascribing to it; otherwise we should not be speaking the truth in saying that the one does not exist. If we are speaking the truth, evidently the things we are speaking of must *be*. So, since we do claim to be speaking the truth, we must also assert that we are speaking of things that are. So it appears that the one *is* nonexistent. If it *is not* nonexistent, if it somehow slips away from being so to not being so, it will at once follow that it *is* existent. Accordingly, if it is not to exist, it must have the fact of *being* nonexistent to secure its nonexistence, just as the existent must have the fact of *not being* nonexistent, in order that it may be possible for it completely to exist. The only way to secure that the existent shall exist, and that the nonexistent shall not exist, is this. The existent must have the 'being' implied in 'being existent' and the 'not-being' implied in 'not being nonexistent,' if it is to have complete existence, and the nonexistent, if it is to have complete nonexistence, must have the ‘not-being’ implied in ‘not being existent’ and the ‘being’ implied in ‘being nonexistent.’ Thus, since the existent has not-being and the nonexistent has being, the one also, since it does not exist, must have being in order to be nonexistent.

Thus it appears that the one has being, if it *is* nonexistent, and also, since it *is not* existent, has not-being.

Now a thing which is in a certain condition can not-be in that condition only by passing out of it. So anything that both is, and is not, in such and such a condition implies transition, and transition is motion. Now we have seen that the one is existent and also is nonexistent, and accordingly is, and is not, in a certain condition. Therefore the nonexistent one has been shown to be a thing that moves, since it admits transition from being to not-being.

On the other hand, if the one is not anywhere in the world of existence—and it is not, if it does not exist—it cannot shift from one place to another. Therefore it cannot move by shifting its position. Nor yet can it revolve in the same [place], since it has no point of contact with what is the same, for what is the same is existent, and the nonexistent cannot be in anything that exists. Therefore the one, if nonexistent, cannot revolve in that in which it is not.

Nor can the one, either when existent or when nonexistent, alter from itself in character; if it did, we should no longer be speaking of the one, but of something other than it.

If, then, it does not alter in character and neither revolves in the same place nor shifts from one place to another, there is no other motion it can have. And the motionless must be at rest, and, if at rest, stationary.

It appears, then, that the nonexistent one is both at rest and in motion.

Further, if it does move, it must become unlike, since in whatever respect a thing moves, to that extent it is no longer in the same condition as before, but in a different condition. So, as moving, the one does become unlike. Also in so far as it is not moving in any respect, it will not be becoming unlike in any way. Consequently, the nonexistent one, in so far as it moves, becomes unlike, and in those respects in which it has no motion, it does not become unlike.

Therefore, the nonexistent one both becomes, and does not become, unlike.

And a thing that becomes unlike must *come to be* different from what it was, and must *cease to be* in its former condition, while what does not become unlike does not come to be or cease to be. And so the nonexistent one, as becoming unlike, comes to be and ceases to be, and as not becoming unlike, it does neither.

Thus the nonexistent one both comes to be and ceases to be, and also does not come to be or cease to be.

Once more, then, let us go back to our starting point to see whether we shall reach results different from these. Our question is, If a one is not, what will follow concerning it?

The words ‘is not’ mean simply the absence of being from anything that we say is not. We do not mean that the thing in a sense is not, though in another sense it is. The words mean without any qualification that the thing which is not in no sense or manner is, and does not possess being in any way. So what is not cannot exist or have being in any sense or manner.

And ‘coming to be’ and ‘ceasing to be’ mean, as we said, nothing else than acquiring being and losing it. But a thing which has nothing at all to do with being cannot acquire or lose it. So the one, since it ‘is’ in no sense whatever, must not possess being or lose or acquire it in any way. Therefore the one which is not, not possessing being in any sense, neither ceases to be nor comes to be.

Consequently, neither does it change in character in any way, for if it suffered such change it would be coming to be or ceasing to be.

And if it does not change in character, it cannot be in motion. On the other hand, we cannot speak of what is nowhere at all as being at rest either, for what is at rest must always be in something [some place or condition] that is the same. Thus that which is not must not be said ever to be in motion or at rest.

Further, nothing that is can belong to it; to have a character that is would imply that it had being. Therefore it has not greatness or smallness or equality. Nor can it have likeness to, or difference of character from, either itself or the others.

And if nothing can stand in relation to it, the others cannot be anything to it. They cannot be either like it or unlike, the same or different.

Again, we cannot attribute to ‘what is not’ anything that is; we cannot say it is ‘something’ or ‘this thing,’ or that it is so-and-so ‘of this’ or ‘of another’ or ‘to another,’ or that it is at any time, past, present, or future, or that there is anything ‘*of* it’—any knowledge or opinion, or perception *of* it—or that it *has* anything, even a name, so as to be the subject of discourse.

Thus a one which is not cannot have any character whatsoever. Let us go on, then, to the question, If there is no one, what must be true of the others?

Obviously it must be true that they are others; if it were not, we could not be talking about ‘the others.’ And if we are talking about the others, things that are others must be different; ‘other’ and ‘different’ are two names for the same thing. Moreover, we speak of a thing as different from, or other than, something that is different from, or other than, it. So the others must have something to be ‘other than.’ What can this something be? Not the one, for there is no one. They must, then, be other than each other; that is the only possibility left, if they are not to be other than nothing.

Accordingly they must differ from each other as multitudes from multitudes; they cannot differ as one thing from another one, since there is no one [one thing]. Rather, it seems, each mass of them must be without limit of multitude; if you take what seems to be a minimum, suddenly, as might happen in a dream, what you took to be one appears many, and what had seemed to be least appears enormous in comparison with the small change for it. It is, then, as masses of this sort that the others are other than each other, if they are other without there being any one.

And there will be many such masses, each appearing to be one, but not really being so, if there is to be no one. So they will seem to have number, since each seems to be one, and they are many. And some among them will appear even, some odd, but falsely, if there is to be no one.

Further, they will seem, as we are saying, to have a smallest in them, but this smallest appears as a ‘many.’ which is great in comparison with the smallness of each of that many. Also each mass will be imagined equal to the many smalls, for it could not pass in appearance from larger to smaller without seeming to reach the intermediate stage, which will be a semblance of equality.

Also each mass will appear as having a limit in relation to another mass. With respect to itself, it has neither beginning nor end nor middle, since whenever you fix your thought on any part of them and take that as beginning or middle or end, another beginning always appears before the beginning, another end leftover after the end, and within the middle others that are more in the middle and smaller, because you cannot apprehend any of them as a 'one,' since there is no one. So anything there is, upon which you may fix your thought, must be frittered away in subdivision; anything we may take will always be a mass without a one. To a dim and distant view such a thing must appear one, but to closer and keener inspection each must appear without limit of multitude, being destitute of that one which does not exist.

Thus, if there is no one, but only things other than the one, each of these others must appear both unlimited in multitude and limited, both one and many.

Also, they will appear both like and unlike. As with scene paintings, to the distant spectator all will appear as one thing, and seem to have the same character and so to be alike, but if you approach nearer, they seem many and different and this semblance of difference will make them seem different in character and unlike one another. Thus these masses must appear both like and unlike themselves and each other.

Moreover, they must appear both the same and different from one another, both in contact and apart from one another, both in every sort of motion and at rest in every respect, both coming to be and ceasing to be and doing neither, and so on with all characters of that sort, which could easily be enumerated. All this follows, if there are many, but no one.

Now let us go back to the beginning for the last time and ask, If there is no one, but only things other than one, what must follow?

The others will not be one, but neither will they be many. For if they are to be many, there must be a one among them, since, if none of them is one thing (ἑν), they will all be no-thing ( (οὐδἑν), and so not many either. But there is no one among them; so the others are neither one nor many.

Nor do they appear one or many. For the others cannot in any sense or manner have any connection with a nonentity, nor can any element of a nonentity be present to any of them, since a nonentity has no elements. Consequently neither can any appearance or seeming (δόξα) of that which has no being be found in the others, nor can any notion whatsoever of what has no being be entertained as applied to the others. So if there is no one, none of the others can be so much as imagined to be one, nor yet to be many, for you cannot imagine many without a one.

Therefore, if there is no one, the others neither are, nor can be imagined to be, one or many.

Nor yet, if there is no one, can the others be or appear like or unlike, or the same or different, or in contact or apart, and so on with all the other characters which we have just been saying they appear to have.

Thus, in sum, we may conclude, If there is no one, there is nothing at all.

To this we may add the conclusion. It seems that, whether there is or is not a one, both that one and the others alike are and are not, and appear and do not appear to be, all manner of things in all manner of ways, with respect to themselves and to one another.

Aristoteles:: Most true.

# Parmenides

Translated by Mary Louise Gill and Paul Ryan.

Socrates, Cephalus, Adeimantus, Zeno, Glaucon,
Parmenides, Antiphon, Aristotle, Pythodorus

Cephalus:: When we arrived in Athens from home in Clazomenae, we ran into Adeimantus and Glaucon in the marketplace. Adeimantus took me by the hand and said;

Adeimantus:: “Welcome, Cephalus. If there is anything you want here that we can do for you, please tell us.”

Cephalus:: “In fact that’s the very reason I’m here to ask a favor of you.”

Adeimantus:: “Tell us what you want.”

Cephalus:: “Your half brother on your mother’s side—what was his name? I’ve forgotten. He would have been a child when I came here from Clazomenae to stay before—and that’s a long time ago now. I think his father’s name was Pyrilampes.”

Adeimantus:: “It was, indeed.”

Cephalus:: “And his?”

Adeimantus:: “Antiphon. But why do you ask?”

Cephalus:: “These men are fellow citizens of mine, keen philosophers, and they have heard that this Antiphon met many times with a friend of Zeno’s called Pythodorus and can recite from memory the discussion that Socrates and Zeno and Parmenides once had, since he heard it often from Pythodorus.”

Adeimantus:: ‘That’s true.”

Cephalus:: “Well, we want to hear that discussion.”

Adeimantus:: “Nothing hard about that. When Antiphon was a young man, he practiced it to perfection, although these days, just like the grandfather he's named for, he devotes most of his time to horses. But if that's what's called for, let's go to his house. He left here to go home just a short time ago, but he lives close by in Melite."

Cephalus:: After this exchange, we set off walking and found Antiphon at home engaging a smith to work on a bit of some kind. When he had finished with the smith, and his brothers told him why we were there, he recognized me from my earlier visit and greeted me. We asked him to go through the discussion, and he balked at first—it was, he said, a lot of work. But finally he narrated it in detail.

Cephalus:: Antiphon said that Pythodorus said that Zeno and Parmenides once came to the Great Panathenaea. Parmenides was already quite venerable, very gray but of distinguished appearance, about sixty-five years old. Zeno was at that time close to forty, a tall, handsome man who had been, as rumor had it, the object of Parmenides' affections when he was a boy. Antiphon said that the two of them were staying with Pythodorus, outside the city wall in the Potters' Quarter, and that Socrates had come there, along with a number of others, because they were eager to hear Zeno read his book, which he and Parmenides had just brought to Athens for the first time. Socrates was then quite young.

Zeno was reading to them in person; Parmenides happened to be out. Very little remained to be read when Pythodorus, as he related it, came in, and with him Parmenides and Aristotle—the man who later became one of the Thirty. They listened to a little of the book at the very end. But not Pythodorus himself; he had heard Zeno read it before.

Then Socrates, after he had heard it, asked Zeno to read the first hypothesis of the first argument again; and when he had read it, Socrates said;

Socrates:: “Zeno, what do you mean by this: if things are many, they must then be both like and unlike, but that is impossible, because unlike things can’t be like or like things unlike? That’s what you say, isn’t it?”

Zeno:: “It is.”

Socrates:: “If it’s impossible for unlike things to be like and like things unlike, isn’t it then also impossible for them to be many? Because, if they were many, they would have incompatible properties. Is this the point of your arguments—simply to maintain, in opposition to everything that is commonly said, that things are not many? And do you suppose that each of your arguments is proof for this position, so that you think you give as many proofs that things are not many as your book has arguments? Is that what you’re saying—or do I misunderstand?”

Zeno:: “No. On the contrary, you grasp the general point of the book splendidly.”

Socrates:: “Parmenides, I understand that Zeno wants to be on intimate terms with you not only in friendship but also in his book. He has, in a way, written the same thing as you, but by changing it round he tries to fool us into thinking he is saying something different. You say in your poem that the all is one, and you give splendid and excellent proofs for that; he, for his part, says that it is not many and gives a vast array of very grand proofs of his own. So, with one of you saying ‘one,’ and the other ‘not many,’ and with each of you speaking in a way that suggests that you’ve said nothing the same—although you mean practically the same thing—what you’ve said you appear to have said over the heads of the rest of us.”

Zeno:: “Yes, Socrates. Still, you haven’t completely discerned the truth about my book, even though you chase down its arguments and follow their spoor as keenly as a young Spartan hound. First of all, you have missed this point: the book doesn’t at all preen itself on having been written with the intent you described, while disguising it from people, as if that were some great accomplishment. You have mentioned something that happened accidentally. The truth is that the book comes to the defense of Parmenides’ argument against those who try to make fun of it by claiming that, if it is one, many absurdities and self-contradictions result from that argument. Accordingly, my book speaks against those who assert the many and pays them back in kind with something for good measure, since it aims to make clear that their hypothesis, if it is many, would, if someone examined the matter thoroughly, suffer consequences even more absurd than those suffered by the hypothesis of its being one. In that competitive spirit, then, I wrote the book when I was a young man. Someone made an unauthorized copy, so I didn’t even have a chance to decide for myself whether or not it should see the light. So in this respect you missed the point, Socrates: you think it was written not out of a young man’s competitiveness, but out of a mature man’s vainglory. Still, as I said, your portrayal was not bad.”

Socrates:: “I take your point, and I believe it was as you say. But tell me this: don’t you acknowledge that there is a form, itself by itself, of likeness, and another form, opposite to this, which is what unlike is? Don’t you and I and the other things we call ‘many’ get a share of those two entities? And don’t things that get a share of likeness come to be like in that way and to the extent that they get a share, whereas things that get a share of unlikeness come to be unlike, and things that get a share of both come to be both? And even if all things get a share of both, though they are opposites, and by partaking of them are both like and unlike themselves, what's astonishing about that?

"If someone showed that the likes themselves come to be unlike or the unlikes like—that, I think, would be a marvel; but if he shows that things that partake of both of these have both properties, there seems to me nothing strange about that, Zeno—not even if someone shows that all things are one by partaking of oneness, and that these same things are many by partaking also of multitude. But if he should demonstrate this thing itself, what one is, to be many, or, conversely, the many to be one—at this I'll be astonished.

"And it's the same with all the others: if he could show that the kinds and forms themselves have in themselves these opposite properties, that would call for astonishment. But if someone should demonstrate that I am one thing and many, what's astonishing about that? He will say, when he wants to show that I'm many, that my right side is different from my left, and my front from my back, and likewise with my upper and lower parts—since I take it I do partake of multitude. But when he wants to show that I'm one, he will say I'm one person among the seven of us, because I also partake of oneness. Thus he shows that both are true.

"So if—in the case of stones and sticks and such things—someone tries to show that the same thing is many and one, we'll say that he is demonstrating something to be many and one, not the one to be many or the many one—and we'll say that he is saying nothing astonishing, but just what all of us would agree to. But if someone first distinguishes as separate the forms, themselves by themselves, of the things I was talking about a moment ago—for example, likeness and unlikeness, multitude and oneness, rest and motion, and everything of that sort—and then shows that in themselves they can mix together and separate, I for my part, would be utterly amazed, Zeno. I think these issues have been handled with great vigor in your book; but I would, as I say, be much more impressed if someone were able to display this same difficulty, which you and Parmenides went through in the case of visible things, also similarly entwined in multifarious ways in the forms themselves—in things that are grasped by reasoning.”

Cephalus:: Pythodorus said that, while Socrates was saying all this, he himself kept from moment to moment expecting Parmenides and Zeno to get annoyed; but they both paid close attention to Socrates and often glanced at each other and smiled, as though they admired him. In fact, what Parmenides said when Socrates had finished confirmed this impression.

Parmenides:: “Socrates, you are much to be admired for your keenness for argument! Tell me. Have you yourself distinguished as separate, in the way you mention, certain forms themselves, and also as separate the things that partake of them? And do you think that likeness itself is something, separate from the likeness we have? And one and many and all the things you heard Zeno read about a while ago?”

Socrates:: “I do indeed.”

Parmenides:: “And what about these? Is there a form, itself by itself, of just, and beautiful, and good, and everything of that sort?”

Socrates:: “Yes.”

Parmenides:: “What about a form of human being, separate from us and all those like us? Is there a form itself of human being, or fire, or water?”

Socrates:: “Parmenides, I’ve often found myself in doubt whether I should talk about those in the same way as the others or differently.”

Parmenides:: “And what about these, Socrates? Things that might seem absurd, like hair and mud and dirt, or anything else totally undignified and worthless? Are you doubtful whether or not you should say that a form is separate for each of these, too, which in turn is other than anything we touch with our hands?”

Socrates:: “Not at all. On the contrary, these things are in fact just what we see. Surely it’s too outlandish to think there is a form for them. Not that the thought that the same thing might hold in all cases hasn’t troubled me from time to time. Then, when I get bogged down in that, I hurry away, afraid that I may fall into some pit of nonsense and come to harm; but when I arrive back in the vicinity of the things we agreed a moment ago have forms, I linger there and occupy myself with them.”

Parmenides:: “That’s because you are still young, Socrates, and philosophy has not yet gripped you as, in my opinion, it will in the future, once you begin to consider none of the cases beneath your notice. Now, though, you still care about what people think, because of your youth.

“But tell me this: is it your view that, as you say, there are certain forms from which these other things, by getting a share of them, derive their names—as, for instance, they come to be like by getting a share of likeness, large by getting a share of largeness, and just and beautiful by getting a share of justice and beauty?”

Socrates:: “It certainly is.”

Parmenides:: “So does each thing that gets a share get as its share the form as a whole or a part of it? Or could there be some other means of getting a share apart from these two?”

Socrates:: “How could there be?”

Parmenides:: “Do you think, then, that the form as a whole—one thing—is in each of the many? Or what do you think?”

Socrates:: “What’s to prevent its being one, Parmenides?”

Parmenides:: “So, being one and the same, it will be at the same time, as a whole, in things that are many and separate; and thus it would be separate from itself.”

Socrates:: “No it wouldn’t. Not if it’s like one and the same day. That is in many places at the same time and is none the less not separate from itself. If it’s like that, each of the forms might be, at the same time, one and the same in all.”

Parmenides:: “Socrates, how neatly you make one and the same thing be in many places at the same time! It’s as if you were to cover many people with a sail, and then say that one thing as a whole is over many. Or isn’t that the sort of thing you mean to say?”

Socrates:: “Perhaps.”

Parmenides:: “In that case would the sail be, as a whole, over each person, or would a part of it be over one person and another part over another?”

Socrates:: “A part.”

Parmenides:: “So the forms themselves are divisible, Socrates, and things that partake of them would partake of a part; no longer would a whole form, but only a part of it, be in each thing.”

Socrates:: “It does appear that way.”

Parmenides:: “Then are you willing to say, Socrates, that our one form is really divided? Will it still be one?”

Socrates:: “Not at all.”

Parmenides:: “No. For suppose you are going to divide largeness itself. If each of the many large things is to be large by a part of largeness smaller than largeness itself, won’t that appear unreasonable?”

Socrates:: “It certainly will.”

Parmenides:: “What about this? Will each thing that has received a small part of the equal have something by which to be equal to anything, when its portion is less than the equal itself?”

Socrates:: “That’s impossible.”

Parmenides:: “Well, suppose one of us is going to have a part of the small. The small will be larger than that part of it, since the part is a part of it: so the small itself will be larger! And that to which the part subtracted is added will be smaller, not larger, than it was before.”

Socrates:: “That surely couldn’t happen.”

Parmenides:: “Socrates, in what way, then, will the other things get a share of your forms, if they can do so neither by getting parts nor by getting wholes?”

Socrates:: “By Zeus! It strikes me that’s not at all easy to determine!”

Parmenides:: “And what do you think about the following?”

Socrates:: “What’s that?”

Parmenides:: “I suppose you think each form is one on the following ground: whenever some number of things seem to you to be large, perhaps there seems to be some one character, the same as you look at them all, and from that you conclude that the large is one.”

Socrates:: “That’s true.”

Parmenides:: “What about the large itself and the other large things? If you look at them all in the same way with the mind’s eye, again won’t some one thing appear large, by which all these appear large?”

Socrates:: “It seems so.”

Parmenides:: “So another form of largeness will make its appearance, which has emerged alongside largeness itself and the things that partake of it, and in turn another over all these, by which all of them will be large. Each of your forms will no longer be one, but unlimited in multitude.”

Socrates:: “But, Parmenides, maybe each of these forms is a thought, and properly occurs only in minds. In this way each of them might be one and no longer face the difficulties mentioned just now.”

Parmenides:: “What do you mean? Is each of the thoughts one, but a thought of nothing?”

Socrates:: “No, that’s impossible.”

Parmenides:: “Of something, rather?”

Socrates:: “Yes.”

Parmenides:: “Of something that is, or of something that is not?”

Socrates:: “Of something that is.”

Parmenides:: “Isn’t it of some one thing, which that thought thinks is over all the instances, being some one character?”

Socrates:: “Yes.”

Parmenides:: “Then won’t this thing that is thought to be one, being always the same over all the instances, be a form?”

Socrates:: “That, too, appears necessary.”

Parmenides:: “And what about this? Given your claim that other things partake of forms, won’t you necessarily think either that each thing is composed of thoughts and all things think, or that, although they are thoughts, they are unthinking?”

Socrates:: “That isn’t reasonable either, Parmenides. No, what appears most likely to me is this: these forms are like patterns set in nature, and other things resemble them and are likenesses; and this partaking of the forms is, for the other things, simply being modeled on them.”

Parmenides:: “If something resembles the form, can that form not be like what has been modeled on it, to the extent that the thing has been made like it? Or is there any way for something like to be like what is not like it?”

Socrates:: “There is not.”

Parmenides:: “And isn’t there a compelling necessity for that which is like to partake of the same one form as what is like it?”

Socrates:: “There is.”

Parmenides:: “But if like things are like by partaking of something, won’t that be the form itself?”

Socrates:: “Undoubtedly.”

Parmenides:: “Therefore nothing can be like the form, nor can the form be like anything else. Otherwise, alongside the form another form will always make its appearance, and if that form is like anything, yet another; and if the form proves to be like what partakes of it, a fresh form will never cease emerging.”

Socrates:: “That’s very true.”

Parmenides:: “So other things don’t get a share of the forms by likeness; we must seek some other means by which they get a share.”

Socrates:: “So it seems.”

Parmenides:: “Then do you see, Socrates, how great the difficulty is if one marks things off as forms, themselves by themselves?”

Socrates:: “Quite clearly.”

Parmenides:: “I assure you, that you do not yet, if I may put it so, have an inkling of how great the difficulty is if you are going to posit one form in each case every time you make a distinction among things.”

Socrates:: “How so?”

Parmenides:: “There are many other reasons, but the main one is this: suppose someone were to say that if the forms are such as we claim they must be, they cannot even be known. If anyone should raise that objection, you wouldn’t be able to show him that he is wrong, unless the objector happened to be widely experienced and not ungifted, and consented to pay attention while in your effort to show him you dealt with many distant considerations. Otherwise, the person who insists that they are necessarily unknowable would remain unconvinced.”

Socrates:: “Why is that, Parmenides?”

Parmenides:: “Because I think that you, Socrates, and anyone else who posits that there is for each thing some being, itself by itself, would agree, to begin with, that none of those beings is in us.”

Socrates:: “Yes—how could it still be itself by itself?”

Parmenides:: “Very good. And so all the characters that are what they are in relation to each other have their being in relation to themselves but not in relation to things that belong to us. And whether one posits the latter as likenesses or in some other way, it is by partaking of them that we come to be called by their various names. These things that belong to us, although they have the same names as the forms, are in their turn what they are in relation to themselves but not in relation to the forms; and all the things named in this way are of themselves but not of the forms.”

Socrates:: “What do you mean?”

Parmenides:: “Take an example. If one of us is somebody’s master or somebody’s slave, he is surely not a slave of master itself—of what a master is—nor is the master a master of slave itself—of what a slave is. On the contrary, being a human being, he is a master or slave of a human being. Mastery itself, on the other hand, is what it is of slavery itself; and, in the same way, slavery itself is slavery of mastery itself. Things in us do not have their power in relation to forms, nor do they have theirs in relation to us; but, I repeat, forms are what they are of themselves and in relation to themselves, and things that belong to us are, in the same way, what they are in relation to themselves. You do understand what I mean?”

Socrates:: “Certainly, I understand.”

Parmenides:: So too, knowledge itself, what knowledge is, would be knowledge of that truth itself, which is what truth is?”

Socrates:: “Certainly.”

Parmenides:: “Furthermore, each particular knowledge, what it is, would be knowledge of some particular thing, of what that thing is. Isn’t that so?”

Socrates:: “Yes.”

Parmenides:: “But wouldn’t knowledge that belongs to us be of the truth that belongs to our world? And wouldn’t it follow that each particular knowledge that belongs to us is in turn knowledge of some particular thing in our world?”

Socrates:: “Necessarily.”

Parmenides:: “But, as you agree, we neither have the forms themselves nor can they belong to us.”

Socrates:: “Yes, you’re quite right.”

Parmenides:: “And surely the kinds themselves, what each of them is, are known by the form of knowledge itself?”

Socrates:: “Yes.”

Parmenides:: “The very thing that we don’t have.”

Socrates:: “No, we don’t.”

Parmenides:: “So none of the forms is known by us, because we don’t partake of knowledge itself.”

Socrates:: “It seems not.”

Parmenides:: “Then the beautiful itself, what it is, cannot be known by us, nor can the good, nor, indeed, can any of the things we take to be characters themselves.”

Socrates:: “It looks that way.”

Parmenides:: Here’s something even more shocking than that.”

Socrates:: “What’s that?”

Parmenides:: Surely you would say that if in fact there is knowledge—a kind itself—it is much more precise than is knowledge that belongs to us. And the same goes for beauty and all the others.”

Socrates:: “Yes.”

Parmenides:: “Well, whatever else partakes of knowledge itself, wouldn’t you say that god more than anyone else has this most precise knowledge?”

Socrates:: “Necessarily.”

Parmenides:: “Tell me, will god, having knowledge itself, then be able to know things that belong to our world?”

Socrates:: “Yes, why not?”

Parmenides:: “Because we have agreed, Socrates, that those forms do not have their power in relation to things in our world, and things in our world do not have theirs in relation to forms, but that things in each group have their power in relation to themselves.”

Socrates:: “Yes, we did agree on that.”

Parmenides:: “Well then, if this most precise mastery and this most precise knowledge belong to the divine, the gods’ mastery could never master us, nor could their knowledge know us or anything that belongs to us. No, just as we do not govern them by our governance and know nothing of the divine by our knowledge, so they in their turn are, for the same reason, neither our masters nor, being gods, do they know human affairs.”

Socrates:: “If god is to be stripped of knowing, our argument may be getting too bizarre.”

Parmenides:: “And yet, Socrates, the forms inevitably involve these objections and a host of others besides—if there are those characters for things, and a person is to mark off each form as ‘something itself.’ As a result, whoever hears about them is doubtful and objects that they do not exist, and that, even if they do, they must by strict necessity be unknowable to human nature; and in saying this he seems to have a point; and, as we said, he is extraordinarily hard to win over. Only a very gifted man can come to know that for each thing there is some kind, a being itself by itself; but only a prodigy more remarkable still will discover that and be able to teach someone else who has sifted all these difficulties thoroughly and critically for himself.”

Socrates:: “I agree with you, Parmenides. That’s very much what I think too.”

Parmenides:: “Yet on the other hand, Socrates, if someone, having an eye on all the difficulties we have just brought up and others of the same sort, won’t allow that there are forms for things and won’t mark off a form for each one, he won’t have anywhere to turn his thought, since he doesn’t allow that for each thing there is a character that is always the same. In this way he will destroy the power of dialectic entirely. But I think you are only too well aware of that."

Socrates:: "What you say is true."

Parmenides:: "What then will you do about philosophy? Where will you turn, while these difficulties remain unresolved?"

Socrates:: "I don't think I have anything clearly in view, at least not at present."

Parmenides:: "Socrates, that's because you are trying to mark off something beautiful, and just, and good, and each one of the forms, too soon, before you have been properly trained. I noticed that the other day too, as I listened to you conversing with Aristotle here. The impulse you bring to argument is noble and divine, make no mistake about it. But while you are still young, put your back into it and get more training through something people think useless—what the crowd call idle talk. Otherwise, the truth will escape you."

Socrates:: "What manner of training is that, Parmenides?"

Parmenides:: "The manner is just what you heard from Zeno. Except I was also impressed by something you had to say to him: you didn't allow him to remain among visible things and observe their wandering between opposites. You asked him to observe it instead among those things that one might above all grasp by means of reason and might think to be forms."

Socrates:: "I did that, because I think that here, among visible things, it's not at all hard to show that things are both like and unlike and anything else you please."

Parmenides:: "And you are quite right. But you must do the following in addition to that: if you want to be trained more thoroughly, you must not only hypothesize, if each thing is, and examine the consequences of that hypothesis; you must also hypothesize, if that same thing is not."

Socrates:: “What do you mean?”

Parmenides:: “If you like, take as an example this hypothesis that Zeno entertained: if many are, what must the consequences be both for the many themselves in relation to themselves and in relation to the one, and for the one in relation to itself and in relation to the many? And, in turn, on the hypothesis, if many are not, you must again examine what the consequences will be both for the one and for the many in relation to themselves and in relation to each other. And again, in turn, if you hypothesize, if likeness is or if it is not, you must examine what the consequences will be on each hypothesis, both for the things hypothesized themselves and for the others, both in relation to themselves and in relation to each other. And the same method applies to unlike, to motion, to rest, to generation and destruction, and to being itself and not-being. And, in a word, concerning whatever you might ever hypothesize as being or as not being or as having any other property, you must examine the consequences for the thing you hypothesize in relation to itself and in relation to each one of the others, whichever you select, and in relation to several of them and to all of them in the same way; and, in turn, you must examine the others, both in relation to themselves and in relation to whatever other thing you select on each occasion, whether what you hypothesize you hypothesize as being or as not being. All this you must do if, after completing your training, you are to achieve a full view of the truth.”

Socrates:: “Scarcely manageable, Parmenides, this task you describe! And besides, I don’t quite understand. To help me understand more fully, why don’t you hypothesize something and go through the exercise for me yourself?”

Parmenides:: “For a man my age that’s a big assignment, Socrates.”

Socrates:: “Well then, you, Zeno—why don’t you go through it for us?”

Cephalus:: And Antiphon said that Zeno laughed and said;

Zeno:: “Let’s beg Parmenides to do it himself, Socrates. What he’s proposing won’t be easy, I’m afraid. Or don’t you recognize what a big assignment it is? Indeed, if there were more of us here, it wouldn’t be right to ask him—it’s not fitting, especially for a man his age, to engage in such a discussion in front of a crowd. Ordinary people don’t know that without this comprehensive and circuitous treatment we cannot hit upon the truth and gain insight. And so, Parmenides, I join with Socrates in begging you, so that I too may become your pupil again after all this time.”

Cephalus:: When Zeno had finished speaking, Antiphon said that Pythodorus said that he too, along with Aristotle and the others, begged Parmenides not to refuse, but to give a demonstration of what he was recommending. In the end Parmenides said:

Parmenides:: “I am obliged to go along with you. And yet I feel like the horse in the poem of Ibycus. Ibycus compares himself to a horse—a champion but no longer young, on the point of drawing a chariot in a race and trembling at what experience tells him is about to happen -and says that he himself, old man that he is, is being forced against his will to compete in Love’s game. I too, when I think back, feel a good deal of anxiety as to how at my age I am to make my way across such a vast and formidable sea of words. Even so, I’ll do it, since it is right for me to oblige you; and besides, we are, as Zeno says, by ourselves.

“Well then, at what point shall we start? What shall we hypothesize first? I know: since we have in fact decided to play this strenuous game, is it all right with you if I begin with myself and my own hypothesis? Shall I hypothesize about the one itself and consider what the consequences must be, if it is one or if it is not one?"

Zeno:: "By all means."

Parmenides:: "Then who will answer my questions? The youngest, surely? For he would give the least trouble and would be the most likely to say what he thinks. At the same time his answer would allow me a breathing space."

Aristoteles:: "I'm ready to play this role for you, Parmenides. Because you mean me when you say the youngest. Ask away—you can count on me to answer."

Parmenides:: "Very good. If it is one, the one would not be many, would it?"

Aristoteles:: "No, how could it?"

Parmenides:: "Then there cannot be a part of it nor can it be a whole."

Aristoteles:: "Why?"

Parmenides:: "A part is surely part of a whole."

Aristoteles:: "Yes."

Parmenides:: "But what is the whole? Wouldn't that from which no part is missing be a whole?"

Aristoteles:: "Certainly."

Parmenides:: "In both cases, then, the one would be composed of parts, both if it is a whole and if it has parts."

Aristoteles:: "Necessarily."

Parmenides:: "So in both cases the one would thus be many rather than one."

Aristoteles:: "True."

Parmenides:: "Yet it must be not many but one."

Aristoteles:: "It must."

Parmenides:: “Therefore, if the one is to be one, it will neither be a whole nor have parts.”

Aristoteles:: “No, it won’t.”

Parmenides:: “Well, then, if it doesn’t have a part, it could have neither a beginning nor an end nor a middle; for those would in fact be parts of it.”

Aristoteles:: “That’s right.”

Parmenides:: “Furthermore, end and beginning are limits of each thing.”

Aristoteles:: “Doubtless.”

Parmenides:: “So the one is unlimited if it has neither beginning nor end.”

Aristoteles:: “Unlimited.”

Parmenides:: “So it is also without shape; for it partakes of neither round nor straight.”

Aristoteles:: “How so?”

Parmenides:: “Round is surely that whose extremities are equidistant in every direction from the middle.”

Aristoteles:: “Yes.”

Parmenides:: “Furthermore, straight is that whose middle stands in the way of the two extremities.”

Aristoteles:: “Just so.”

Parmenides:: “So the one would have parts and be many if it partook of either a straight or a curved shape.”

Aristoteles:: “Of course.”

Parmenides:: “Therefore it is neither straight nor curved, since in fact it doesn’t have parts.”

Aristoteles:: “That’s right.”

Parmenides:: “Furthermore, being like that, it would be nowhere, because it could be neither in another nor in itself.”

Aristoteles:: “How is that?”

Parmenides:: “If it were in another, it would surely be contained all around by the thing it was in and would touch it in many places with many parts; but since it is one and without parts and does not partake of circularity, it cannot possibly touch in many places all around.”

Aristoteles:: “It can’t.”

Parmenides:: “Yet, on the other hand, if it were in itself, its container would be none other than itself, if in fact it were in itself; for a thing can’t be in something that doesn’t contain it.”

Aristoteles:: “No, it can’t.”

Parmenides:: “So the container itself would be one thing, and the thing contained something else, since the same thing will not, as a whole at any rate, undergo and do both at once. And in that case the one would be no longer one but two.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “Therefore, the one is not anywhere, if it is neither in itself nor in another.”

Aristoteles:: “It isn’t.”

Parmenides:: “Then consider whether, since it is as we have said, it can be at rest or in motion.”

Aristoteles:: “Yes, why not?”

Parmenides:: “Because if it moves, it would either move spatially or be altered, since these are the only motions.”

Aristoteles:: “Yes.”

Parmenides:: “But the one surely can’t be altered from itself and still be one.”

Aristoteles:: “It can’t.”

Parmenides:: “Then it doesn’t move by alteration at least.”

Aristoteles:: “Apparently not.”

Parmenides:: “But by moving spatially?”

Aristoteles:: “Perhaps.”

Parmenides:: “And if the one moved spatially, it surely would either spin in a circle in the same location or change from one place to another.”

Aristoteles:: “Necessarily.”

Parmenides:: “Well then, if it spins in a circle, it must be poised on its middle and have other parts of itself that move round the middle. But how will a thing that has nothing to do with middle or parts manage to be moved in a circle round its middle?”

Aristoteles:: “Not at all.”

Parmenides:: “But by changing places does it come to be here at one time, there at another, and move in this way?”

Aristoteles:: “If in fact it moves at all.”

Parmenides:: “Wasn’t it shown that it cannot be anywhere in anything?”

Aristoteles:: “Yes.”

Parmenides:: “Then is it not even more impossible for it to come to be?”

Aristoteles:: “I don’t see why.”

Parmenides:: “If something comes to be in something, isn’t it necessary that it not yet be in that thing—since it is still coming to be in it—and that it no longer be entirely outside it, if in fact it is already coming to be in it?”

Aristoteles:: “Necessarily.”

Parmenides:: “So if anything is to undergo this, only that which has parts could do so, because some of it would already be in that thing, while some, at the same time, would be outside. But a thing that doesn’t have parts will not by any means be able to be, at the same time, neither wholly inside nor wholly outside something.”

Aristoteles:: “True.”

Parmenides:: “But isn’t it much more impossible still for a thing that has no parts and is not a whole to come to be in something somewhere, if it does so neither part by part nor as a whole?”

Aristoteles:: “Apparently.”

Parmenides:: “Therefore it doesn’t change places by going somewhere and coming to be in something, nor does it move by spinning in the same location or by being altered.”

Aristoteles:: “It seems not.”

Parmenides:: “The one, therefore, is unmoved by every sort of motion.”

Aristoteles:: “Unmoved.”

Parmenides:: “Yet, on the other hand, we also say that it cannot be in anything.”

Aristoteles:: “Yes, we do.”

Parmenides:: “Then it is also never in the same thing.”

Aristoteles:: “Why?”

Parmenides:: “Because it would then be in that—in that same thing it is in.”

Aristoteles:: “Of course.”

Parmenides:: “But it was impossible for it to be either in itself or in another.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “So the one is never in the same thing.”

Aristoteles:: “It seems not.”

Parmenides:: “But what is never in the same thing neither enjoys repose nor is at rest.”

Aristoteles:: “No, it cannot.”

Parmenides:: “Therefore the one, as it seems, is neither at rest nor in motion.”

Aristoteles:: “It certainly does appear not.”

Parmenides:: “Furthermore, it won’t be the same as another thing or itself; nor, again, could it be different from itself or another thing.”

Aristoteles:: “Why is that?”

Parmenides:: “If it were different from itself, it would surely be different from one, and would not be one.”

Aristoteles:: “True.”

Parmenides:: “On the other hand, if it were the same as another, it would be that thing, and not itself. So in this way, too, it would not be just what it is—one—but would be different from one.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “Therefore, it won’t be the same as another or different from itself.”

Aristoteles:: “No, it won’t.”

Parmenides:: “And it won’t be different from another, as long as it is one; for it is not proper to one to be different from something, but proper to different-from-another alone, and to nothing else.”

Aristoteles:: “That’s right.”

Parmenides:: “Therefore it won’t be different by being one. Or do you think it will?”

Aristoteles:: “No indeed.”

Parmenides:: “Yet if it isn’t different by being one, it will not be so by itself; and if it isn’t so by itself, it will not itself be so. And if it is itself in no way different, it will be different from nothing.”

Aristoteles:: “That’s right.”

Parmenides:: “Nor will it be the same as itself.”

Aristoteles:: “Why not?”

Parmenides:: “The nature of the one is not, of course, also that of the same.”

Aristoteles:: “Why?”

Parmenides:: “Because it is not the case that, whenever a thing comes to be the same as something, it comes to be one.”

Aristoteles:: “But why?”

Parmenides:: “If it comes to be the same as the many, it must come to be many, not one.”

Aristoteles:: “True.”

Parmenides:: “But if the one and the same in no way differ, whenever something came to be the same, it would always come to be one; and whenever it came to be one, it would always come to be the same.”

Aristoteles:: “Certainly.”

Parmenides:: “Therefore, if the one is to be the same as itself, it won’t be one with itself; and thus it will be one and not one. But this surely is impossible. Therefore the one can’t be either different from another or the same as itself.”

Aristoteles:: “It can’t.”

Parmenides:: “Thus the one could neither be different from nor the same as itself or another.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “Furthermore, it will be neither like nor unlike anything, either itself or another.”

Aristoteles:: “Why?”

Parmenides:: “Because whatever has a property the same is surely like.”

Aristoteles:: “Yes.”

Parmenides:: “But it was shown that the same is separate in its nature from the one.”

Aristoteles:: “Yes, it was.”

Parmenides:: “But if the one has any property apart from being one, it would be more than one; and that is impossible.”

Aristoteles:: “Yes.”

Parmenides:: “Therefore, the one can in no way have a property the same as another or itself.”

Aristoteles:: “Apparently not.”

Parmenides:: “So it cannot be like another or itself either.”

Aristoteles:: “It seems not.”

Parmenides:: “Nor does the one have the property of being different; for in this way too it would be more than one.”

Aristoteles:: “Yes, it would be more.”

Parmenides:: “Surely that which has a property different from itself or another would be unlike itself or another, if in fact what has a property the same is like.”

Aristoteles:: “That’s right.”

Parmenides:: “But the one, as it seems, since it in no way has a property different, is in no way unlike itself or another thing.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “Therefore the one could be neither like nor unlike another or itself.”

Aristoteles:: “Apparently not.”

Parmenides:: “Furthermore, being like that, it will be neither equal nor unequal to itself or another.”

Aristoteles:: “How?”

Parmenides:: “If it is equal, it will be of the same measures as that to which it is equal.”

Aristoteles:: “Yes.”

Parmenides:: “But surely if it is greater or less, it will, in the case of things with which it is commensurate, have more measures than those that are less, and fewer than those that are greater.”

Aristoteles:: “Yes.”

Parmenides:: “And in the case of things with which it is not commensurate, it will be of smaller measures in the one case, and of larger measures in the other.”

Aristoteles:: “No doubt.”

Parmenides:: “Well, if a thing doesn’t partake of the same, it can’t be of the same measures or of the same anything else at all, can it?”

Aristoteles:: “It can’t.”

Parmenides:: “So it couldn’t be equal to itself or another, if it is not of the same measures.”

Aristoteles:: “It certainly appears not.”

Parmenides:: “Yet if it is, on the other hand, of more measures or fewer, it would have as many parts as measures; and thus, again, it will be no longer one, but just as many as are its measures.”

Aristoteles:: “That’s right.”

Parmenides:: “And if it were of one measure, it would prove to be equal to its measure; but it was shown that it couldn’t be equal to anything.”

Aristoteles:: “Yes, it was.”

Parmenides:: “Therefore, since it doesn’t partake of one measure or many or few, and since it doesn’t partake of the same at all, it will, as it seems, never be equal to itself or another; nor again will it be greater or less than itself or another.”

Aristoteles:: “That’s absolutely so.”

Parmenides:: “What about this? Do you think that the one can be older or younger than, or the same age as, anything?”

Aristoteles:: “Yes, why not?”

Parmenides:: “Because if it is the same age as itself or another, it will surely partake of likeness and of equality of time, of which—likeness and equality—we said the one has no share.”

Aristoteles:: “Yes, we did say that.”

Parmenides:: “And we also said that it does not partake of unlikeness and inequality.”

Aristoteles:: “Of course.”

Parmenides:: “Then, being like that, how will it be able to be older or younger than, or the same age as, anything?”

Aristoteles:: “In no way.”

Parmenides:: “Therefore, the one could not be younger or older than, or the same age as, itself or another.”

Aristoteles:: “Apparently not.”

Parmenides:: “So if it is like that, the one could not even be in time at all, could it? Or isn’t it necessary, if something is in time, that it always come to be older than itself?”

Aristoteles:: “Necessarily.”

Parmenides:: “Isn’t the older always older than a younger?”

Aristoteles:: “To be sure.”

Parmenides:: “Therefore, that which comes to be older than itself comes to be, at the same time, younger than itself, if in fact it is to have something it comes to be older than.”

Aristoteles:: “What do you mean?”

Parmenides:: “I mean this: there is no need for a thing to come to be different from a thing that is already different; it must, rather, already be different from what is already different, have come to be different from what has come to be different, and be going to be different from what is going to be different; but it must not have come to be, be going to be, or be different from what comes to be different: it must come to be different, and nothing else."

Aristoteles:: "Yes, that's necessary."

Parmenides:: "But surely older is a difference from younger and from nothing else."

Aristoteles:: "Yes, it is."

Parmenides:: "So that which comes to be older than itself must also, at the same time, come to be younger than itself."

Aristoteles:: "So it seems."

Parmenides:: "But it must also not come to be for more or less time than itself; it must come to be and be and have come to be and be going to be for a time equal to itself."

Aristoteles:: "Yes, that too is necessary."

Parmenides:: "Therefore it is necessary, as it seems, that each thing that is in time and partakes of time be the same age as itself and, at the same time, come to be both older and younger than itself."

Aristoteles:: "It looks that way."

Parmenides:: "But the one surely had no share of any of that."

Aristoteles:: "No, it didn't."

Parmenides:: "Therefore, it has no share of time, nor is it in any time."

Aristoteles:: "It certainly isn't, as the argument proves."

Parmenides:: "Now, don't you think that 'was' and 'has come to be' and 'was coming to be' signify partaking of time past?"

Aristoteles:: "By all means."

Parmenides:: “And again that ‘will be’ and ‘will come to be’ and ‘will be coming to be’ signify partaking of time hereafter?”

Aristoteles:: “Yes.”

Parmenides:: “And that ‘is’ and ‘comes to be’ signify partaking of time now present?”

Aristoteles:: “Of course.”

Parmenides:: “Therefore, if the one partakes of no time at all, it is not the case that it has at one time come to be, was coming to be, or was; or has now come to be, comes to be, or is; or will hereafter come to be, will be coming to be, or will be.”

Aristoteles:: “Very true.”

Parmenides:: “Could something partake of being except in one of those ways?”

Aristoteles:: “It couldn’t.”

Parmenides:: “Therefore the one in no way partakes of being.”

Aristoteles:: “It seems not.”

Parmenides:: “Therefore the one in no way is.”

Aristoteles:: “Apparently not.”

Parmenides:: “Therefore neither is it in such a way as to be one, because it would then, by being and partaking of being, be. But, as it seems, the one neither is one nor is, if we are obliged to trust this argument.”

Aristoteles:: “It looks that way.”

Parmenides:: “If something is not, could anything belong to this thing that is not, or be of it?”

Aristoteles:: “How could it?”

Parmenides:: “Therefore, no name belongs to it, nor is there an account or any knowledge or perception or opinion of it.”

Aristoteles:: “Apparently not.”

Parmenides:: “Therefore it is not named or spoken of, nor is it the object of opinion or knowledge, nor does anything that is perceive it.”

Aristoteles:: “It seems not.”

Parmenides:: “Is it possible that these things are so for the one?”

Aristoteles:: “I certainly don’t think so.”

Parmenides:: “Do you want to return to the hypothesis from the beginning, in the hope that another kind of result may come to light as we go back over it?”

Aristoteles:: “I do indeed.”

Parmenides:: “If one is, we are saying, aren’t we, that we must agree on the consequences for it, whatever they happen to be?”

Aristoteles:: “Yes.”

Parmenides:: “Consider from the beginning: if one is, can it be, but not partake of being?”

Aristoteles:: “It cannot.”

Parmenides:: “So there would also be the being of the one, and that is not the same as the one. For if it were, it couldn’t be the being of the one, nor could the one partake of it. On the contrary, saying that one is would be like saying that one is one. But this time that is not the hypothesis, namely, what the consequences must be, if one is one, but if one is. Isn’t that so?”

Aristoteles:: “Of course.”

Parmenides:: “Is that because ‘is’ signifies something other than ‘one’?”

Aristoteles:: “Necessarily.”

Parmenides:: “So whenever someone, being brief, says ‘one is,’ would this simply mean that the one partakes of being?”

Aristoteles:: “Certainly.”

Parmenides:: “Let’s again say what the consequences will be, if one is. Consider whether this hypothesis must not signify that the one is such as to have parts.”

Aristoteles:: “How so?”

Parmenides:: “In this way: if we state the ‘is’ of the one that is, and the ‘one’ of that which is one, and if being and oneness are not the same, but both belong to that same thing that we hypothesized, namely, the one that is, must it not itself, since it is one being, be a whole, and the parts of this whole be oneness and being?”

Aristoteles:: “Necessarily.”

Parmenides:: “Shall we call each of these two parts a part only, or must the part be called part of the whole?”

Aristoteles:: “Of the whole.”

Parmenides:: “Therefore whatever is one both is a whole and has a part.”

Aristoteles:: “Certainly.”

Parmenides:: “Now, what about each of these two parts of the one that is, oneness and being? Is oneness ever absent from the being part or being from the oneness part?”

Aristoteles:: “That couldn’t be.”

Parmenides:: “So again, each of the two parts possesses oneness and being; and the part, in its turn, is composed of at least two parts; and in this way always, for the same reason, whatever part turns up always possesses these two parts, since oneness always possesses being and being always possesses oneness. So, since it always proves to be two, it must never be one."

Aristoteles:: "Absolutely."

Parmenides:: "So, in this way, wouldn't the one that is be unlimited in multitude?"

Aristoteles:: "So it seems."

Parmenides:: "Come, let's proceed further in the following way."

Aristoteles:: "How?"

Parmenides:: "Do we say that the one partakes of being, and hence is?"

Aristoteles:: "Yes."

Parmenides:: "And for this reason the one that is was shown to be many."

Aristoteles:: "Just so."

Parmenides:: "And what about the one itself, which we say partakes of being? If we grasp it in thought alone by itself, without that of which we say it partakes, will it appear to be only one, or will this same thing also appear to be many?"

Aristoteles:: "One, I should think."

Parmenides:: "Let's see. Must not its being be something and it itself something different, if in fact the one is not being but, as one, partakes of being?"

Aristoteles:: "Necessarily."

Parmenides:: "So if being is something and the one is something different, it is not by its being one that the one is different from being, nor by its being being that being is other than the one. On the contrary, they are different from each other by difference and otherness."

Aristoteles:: "Of course."

Parmenides:: “And so difference is not the same as oneness or being.”

Aristoteles:: “Obviously not.”

Parmenides:: “Now, if we select from them, say, being and difference, or being and oneness, or oneness and difference, do we not in each selection choose a certain pair that is correctly called ‘both’?”

Aristoteles:: “How so?”

Parmenides:: “As follows: we can say ‘being’?”

Aristoteles:: “We can.”

Parmenides:: “And, again, we can say ‘one’?”

Aristoteles:: “That too.”

Parmenides:: “So hasn’t each of the pair been mentioned?”

Aristoteles:: “Yes.”

Parmenides:: “What about when I say ‘being and oneness’? Haven’t both been mentioned?”

Aristoteles:: “Certainly.”

Parmenides:: “And if I say ‘being and difference’ or ‘difference and oneness,’ and so on—in each case don’t I speak of both?”

Aristoteles:: “Yes.”

Parmenides:: “Can things that are correctly called ‘both’ be both, but not two?”

Aristoteles:: “They cannot.”

Parmenides:: “If there are two things, is there any way for each member of the pair not to be one?”

Aristoteles:: “Not at all.”

Parmenides:: “Therefore, since in fact each pair taken together turns out to be two, each member would be one.”

Aristoteles:: “Apparently.”

Parmenides:: “And if each of them is one, when any one is added to any couple, doesn’t the total prove to be three?”

Aristoteles:: “Yes.”

Parmenides:: “And isn’t three odd, and two even?”

Aristoteles:: “Doubtless.”

Parmenides:: “What about this? Since there are two, must there not also be twice, and since there are three, thrice, if in fact two is two times one and three is three times one?”

Aristoteles:: “Necessarily.”

Parmenides:: “Since there are two and twice, must there not be two times two? And since there are three and thrice, must there not be three times three?”

Aristoteles:: “Doubtless.”

Parmenides:: “And again: if there are three and they are two times, and if there are two and they are three times, must there not be two times three and three times two?”

Aristoteles:: “There certainly must.”

Parmenides:: “Therefore, there would be even times even, odd times odd, odd times even, and even times odd.”

Aristoteles:: “That’s so.”

Parmenides:: “Then if that is so, do you think there is any number that need not be?”

Aristoteles:: “In no way at all.”

Parmenides:: “Therefore, if one is, there must also be number.”

Aristoteles:: “Necessarily.”

Parmenides:: “But if there is number, there would be many, and an unlimited multitude of beings. Or doesn’t number, unlimited in multitude, also prove to partake of being?”

Aristoteles:: “It certainly does.”

Parmenides:: “So if all number partakes of being, each part of number would also partake of it?”

Aristoteles:: “Yes.”

Parmenides:: “So has being been distributed to all things, which are many, and is it missing from none of the beings, neither the smallest nor the largest? Or is it unreasonable even to ask that question? How could being be missing from any of the beings?”

Aristoteles:: “In no way.”

Parmenides:: “So being is chopped up into beings of all kinds, from the smallest to the largest possible, and is the most divided thing of all; and the parts of being are countless.”

Aristoteles:: “Quite so.”

Parmenides:: “Therefore its parts are the most numerous of things.”

Aristoteles:: “The most numerous indeed.”

Parmenides:: “Now, is there any of them that is part of being, yet not one part?”

Aristoteles:: “How could that happen?”

Parmenides:: “I take it, on the contrary, that if in fact it is, it must always, as long as it is, be some one thing; it cannot be nothing.”

Aristoteles:: “Necessarily.”

Parmenides:: “So oneness is attached to every part of being and is not absent from a smaller or a larger, or any other, part.”

Aristoteles:: “Just so.”

Parmenides:: “So, being one, is it, as a whole, in many places at the same time? Look at this carefully.”

Aristoteles:: “I am—and I see that it’s impossible.”

Parmenides:: “Therefore as divided, if in fact not as a whole; for surely it will be present to all the parts of being at the same time only as divided.”

Aristoteles:: “Yes.”

Parmenides:: “Furthermore, a divided thing certainly must be as numerous as its parts.”

Aristoteles:: “Necessarily.”

Parmenides:: “So we were not speaking truly just now, when we said that being had been distributed into the most numerous parts. It is not distributed into more parts than oneness, but, as it seems, into parts equal to oneness, since neither is being absent from oneness, nor is oneness absent from being. On the contrary, being two, they are always equal throughout all things.”

Aristoteles:: “It appears absolutely so.”

Parmenides:: “Therefore, the one itself, chopped up by being, is many and unlimited in multitude.”

Aristoteles:: “Apparently.”

Parmenides:: “So not only is it the case that the one being is many, but also the one itself, completely distributed by being, must be many.”

Aristoteles:: “Absolutely.”

Parmenides:: “Furthermore, because the parts are parts of a whole, the one, as the whole, would be limited. Or aren’t the parts contained by the whole?”

Aristoteles:: “Necessarily.”

Parmenides:: “But surely that which contains would be a limit.”

Aristoteles:: “Doubtless.”

Parmenides:: “So the one that is is surely both one and many, a whole and parts, and limited and unlimited in multitude.”

Aristoteles:: “Apparently.”

Parmenides:: “So, since in fact it is limited, does it not also have extremities?”

Aristoteles:: “Necessarily.”

Parmenides:: “And again: if it is a whole, would it not have a beginning, a middle, and an end? Or can anything be a whole without those three? And if any one of them is missing from something, will it still consent to be a whole?”

Aristoteles:: “It won’t.”

Parmenides:: “The one, as it seems, would indeed have a beginning, an end, and a middle.”

Aristoteles:: “It would.”

Parmenides:: “But the middle is equidistant from the extremities—otherwise, it wouldn’t be a middle.”

Aristoteles:: “No, it wouldn’t.”

Parmenides:: “Since the one is like that, it would partake of some shape, as it seems, either straight or round, or some shape mixed from both.”

Aristoteles:: “Yes, it would partake of a shape.”

Parmenides:: “Since it is so, won’t it be both in itself and in another?”

Aristoteles:: “How so?”

Parmenides:: “Each of the parts is surely in the whole, and none outside the whole.”

Aristoteles:: “Just so.”

Parmenides:: “And are all the parts contained by the whole?”

Aristoteles:: “Yes.”

Parmenides:: “Furthermore, the one is all the parts of itself, and not any more or less than all.”

Aristoteles:: “No, it isn’t.”

Parmenides:: “The one is also the whole, is it not?”

Aristoteles:: “Doubtless.”

Parmenides:: “So if all its parts are actually in a whole, and the one is both all the parts and the whole itself, and all the parts are contained by the whole, the one would be contained by the one; and thus the one itself would, then, be in itself.”

Aristoteles:: “Apparently.”

Parmenides:: “Yet, on the other hand, the whole is not in the parts, either in all or in some one. For if it were in all, it would also have to be in one, because if it were not in some one, it certainly could not be in all. And if this one is among them all, but the whole is not in it, how will the whole still be in all?”

Aristoteles:: “In no way.”

Parmenides:: “Nor is it in some of the parts: for if the whole were in some, the greater would be in the less, which is impossible.”

Aristoteles:: “Yes, impossible.”

Parmenides:: “But if the whole is not in some or one or all the parts, must it not be in something different or be nowhere at all?”

Aristoteles:: “Necessarily.”

Parmenides:: “If it were nowhere, it would be nothing; but since it is a whole, and is not in itself, it must be in another. Isn’t that so?”

Aristoteles:: “Certainly.”

Parmenides:: “So the one, insofar as it is a whole, is in another; but insofar as it is all the parts, it is in itself. And thus the one must be both in itself and in a different thing.”

Aristoteles:: “Necessarily.”

Parmenides:: “Since that is the one’s natural state, must it not be both in motion and at rest?”

Aristoteles:: “How?”

Parmenides:: “It is surely at rest, if in fact it is in itself. For being in one thing and not stirring from that, it would be in the same thing, namely, itself.”

Aristoteles:: “Yes, it is.”

Parmenides:: “And that which is always in the same thing must, of course, always be at rest.”

Aristoteles:: “Certainly.”

Parmenides:: “What about this? Must not that which is always in a different thing be, on the contrary, never in the same thing? And since it is never in the same thing, also not at rest? And since not at rest, in motion?”

Aristoteles:: “Just so.”

Parmenides:: “Therefore the one, since it is itself always both in itself and in a different thing, must always be both in motion and at rest.”

Aristoteles:: “Apparently.”

Parmenides:: “Furthermore, it must be the same as itself and different from itself, and, likewise, the same as and different from the others, if in fact it has the aforesaid properties.”

Aristoteles:: “How so?”

Parmenides:: “Everything is surely related to everything as follows: either it is the same or different; or, if it is not the same or different, it would be related as part to whole or as whole to part.”

Aristoteles:: “Apparently.”

Parmenides:: “Is the one itself part of itself?”

Aristoteles:: “In no way.”

Parmenides:: “So neither could it be a whole in relation to itself as part of itself, because then it would be a part in relation to itself.”

Aristoteles:: “No, it could not.”

Parmenides:: “But is the one different from one?”

Aristoteles:: “No indeed.”

Parmenides:: “So it couldn’t be different from itself.”

Aristoteles:: “Certainly not.”

Parmenides:: “So if it is neither different nor whole nor part in relation to itself, must it not then be the same as itself?”

Aristoteles:: “Necessarily.”

Parmenides:: “What about this? Must not that which is in something different from itself—the self that is in the same thing as itself—be different from itself, if in fact it is also to be in something different?”

Aristoteles:: “It seems so to me.”

Parmenides:: “In fact the one was shown to be so, since it is, at the same time, both in itself and in a different thing.”

Aristoteles:: “Yes, it was.”

Parmenides:: “So in this way the one, as it seems, would be different from itself.”

Aristoteles:: “So it seems.”

Parmenides:: “Now, if anything is different from something, won’t it be different from something that is different?”

Aristoteles:: “Necessarily.”

Parmenides:: “Aren’t all the things that are not-one different from the one, and the one from the things not-one?”

Aristoteles:: “Doubtless.”

Parmenides:: “Therefore the one would be different from the others.”

Aristoteles:: “Different.”

Parmenides:: “Consider this: aren’t the same itself and the different opposite to each other?”

Aristoteles:: “Doubtless.”

Parmenides:: “Then will the same ever consent to be in the different, or the different in the same?”

Aristoteles:: “It won’t.”

Parmenides:: “So if the different is never to be in the same, there is no being that the different is in for any time; for if it were in anything for any time whatsoever, for that time the different would be in the same. Isn’t that so?”

Aristoteles:: “Just so.”

Parmenides:: “But since it is never in the same, the different would never be in any being.”

Aristoteles:: “True.”

Parmenides:: “So the different wouldn’t be in the things not-one or in the one.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “So not by the different would the one be different from the things not-one or they different from it.”

Aristoteles:: “No, it wouldn’t.”

Parmenides:: “Nor by themselves would they be different from each other, if they don’t partake of the different.”

Aristoteles:: “Obviously not.”

Parmenides:: “But if they aren’t different by themselves or by the different, wouldn’t they in fact entirely avoid being different from each other?”

Aristoteles:: “They would.”

Parmenides:: “But neither do the things not-one partake of the one; otherwise they would not be not-one, but somehow one.”

Aristoteles:: “True.”

Parmenides:: “So the things not-one could not be a number either; for in that case, too, they would not be absolutely not-one, since they would at least have number.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “And again: are the things not-one parts of the one? Or would the things not-one in that case, too, partake of the one?”

Aristoteles:: “They would.”

Parmenides:: “So if it is in every way one, and they are in every way not-one, the one would be neither a part of the things not-one nor a whole with them as parts; and, in turn, the things not-one would be neither parts of the one nor wholes in relation to the one as part.”

Aristoteles:: “No, they wouldn’t.”

Parmenides:: “But in fact we said that things that are neither parts nor wholes nor different from each other will be the same as each other.”

Aristoteles:: “Yes, we did.”

Parmenides:: “So are we to say that the one, since it is so related to the things not-one, is the same as they are?”

Aristoteles:: “Let’s say so.”

Parmenides:: “Therefore the one, as it seems, is both different from the others and itself, and the same as the others and itself.”

Aristoteles:: “It certainly looks that way from our argument.”

Parmenides:: “Would the one then also be both like and unlike itself and the others?”

Aristoteles:: “Perhaps.”

Parmenides:: “At any rate, since it was shown to be different from the others, the others would surely also be different from it.”

Aristoteles:: “To be sure.”

Parmenides:: “Wouldn’t it be different from the others just as they are different from it, and neither more nor less?”

Aristoteles:: “Yes, why not?”

Parmenides:: “So if neither more nor less, in like degree.”

Aristoteles:: “Yes.”

Parmenides:: “Accordingly, insofar as it has the property of being different from the others and they, likewise, have the property of being different from it, in this way the one would have a property the same as the others, and they would have a property the same as it.”

Aristoteles:: “What do you mean?”

Parmenides:: “As follows: don’t you apply to something each name you use?”

Aristoteles:: “I do.”

Parmenides:: “Now, could you use the same name either more than once or once?”

Aristoteles:: “I could.”

Parmenides:: “So if you use it once, do you call by name that thing whose name it is, but not that thing, if you use it many times? Or whether you utter the same name once or many times, do you quite necessarily always also speak of the same thing?”

Aristoteles:: “To be sure.”

Parmenides:: “Now ‘different’ in particular is a name for something, isn’t it?”

Aristoteles:: “Certainly.”

Parmenides:: “So when you utter it, whether once or many times, you don’t apply it to another thing or name something other than that thing whose name it is.”

Aristoteles:: “Necessarily.”

Parmenides:: “Whenever we say ‘the others are different from the one’ and ‘the one is different from the others,’ although we use ‘different’ twice, we don’t apply it to another nature, but always to that nature whose name it is.”

Aristoteles:: “Of course.”

Parmenides:: “So insofar as the one is different from the others, and the others from the one, on the basis of having the property difference itself, the one would have a property not other, but the same as the others. And that which has a property the same is surely like, isn’t it?”

Aristoteles:: “Yes.”

Parmenides:: “Indeed, insofar as the one has the property of being different from the others, owing to that property itself it would be altogether like them all, because it is altogether different from them all.”

Aristoteles:: “So it seems.”

Parmenides:: “Yet, on the other hand, the like is opposite to the unlike.”

Aristoteles:: “Yes.”

Parmenides:: “Isn’t the different also opposite to the same?”

Aristoteles:: “That too.”

Parmenides:: “But this was shown as well: that the one is the same as the others.”

Aristoteles:: “Yes, it was.”

Parmenides:: “And being the same as the others is the property opposite to being different from the others.”

Aristoteles:: “Certainly.”

Parmenides:: “Insofar as the one is different, it was shown to be like.”

Aristoteles:: “Yes.”

Parmenides:: “So insofar as it is the same, it will be unlike, owing to the property opposite to that which makes it like. And surely the different made it like?”

Aristoteles:: “Yes.”

Parmenides:: “So the same will make it unlike; otherwise it won’t be opposite to the different.”

Aristoteles:: “So it seems.”

Parmenides:: “Therefore the one will be like and unlike the others—insofar as it is different, like, and insofar as it is the same, unlike.”

Aristoteles:: “Yes, it admits of this argument too, as it seems.”

Parmenides:: “It also admits of the following.”

Aristoteles:: “What is that?”

Parmenides:: “Insofar as it has a property the same, it has a property that is not of another kind; and if it has a property that is not of another kind, it is not unlike; and if not unlike, it is like. But insofar as it has a property other, it has a property that is of another kind; and if it has a property that is of another kind, it is unlike.”

Aristoteles:: “That’s true.”

Parmenides:: “So because the one is the same as the others and because it is different, on both grounds and either, it would be both like and unlike the others.”

Aristoteles:: “Certainly.”

Parmenides:: “So, in the same way, it will be like and unlike itself as well. Since in fact it was shown to be both different from itself and the same as itself, on both grounds and either, won’t it be shown to be both like and unlike itself?”

Aristoteles:: “Necessarily.”

Parmenides:: “And what about this? Consider the question whether the one touches or does not touch itself and the others.”

Aristoteles:: “Very well.”

Parmenides:: “Surely the one was shown to be in itself as a whole.”

Aristoteles:: “That’s right.”

Parmenides:: “Isn’t the one also in the others?”

Aristoteles:: “Yes.”

Parmenides:: “Then insofar as it is in the others, it would touch the others; but insofar as it is in itself, it would be kept from touching the others, and being in itself, would touch itself.”

Aristoteles:: “Apparently.”

Parmenides:: “Thus the one would touch itself and the others.”

Aristoteles:: “It would.”

Parmenides:: “And again, in this way: must not everything that is to touch something lie next to that which it is to touch, occupying the position adjacent to that occupied by what it touches?”

Aristoteles:: “Necessarily.”

Parmenides:: “So, too, the one, if it is to touch itself, must lie directly adjacent to itself, occupying a place next to that in which it itself is.”

Aristoteles:: “Yes, it must.”

Parmenides:: “Now if the one were two it could do that and turn out to be in two places at the same time; but won’t it refuse as long as it is one?”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “So the same necessity that keeps the one from being two keeps it from touching itself.”

Aristoteles:: “The same.”

Parmenides:: “But it won’t touch the others either.”

Aristoteles:: “Why?”

Parmenides:: “Because, we say, that which is to touch must, while being separate, be next to what it is to touch, and there must be no third thing between them.”

Aristoteles:: “True.”

Parmenides:: “So there must be at least two things if there is to be contact.”

Aristoteles:: “There must.”

Parmenides:: “But if to the two items a third is added in a row, they themselves will be three, their contacts two.”

Aristoteles:: “Yes.”

Parmenides:: “And thus whenever one item is added, one contact is also added, and it follows that the contacts are always fewer by one than the multitude of the numbers. For in regard to the number being greater than the contacts, every later number exceeds all the contacts by an amount equal to that by which the first two exceeded their contacts, since thereafter one is added to the number and, at the same time, one contact to the contacts.”

Aristoteles:: “That’s right.”

Parmenides:: “So however many the things are in number, the contacts are always fewer than they are by one.”

Aristoteles:: “True.”

Parmenides:: “But if there is only one, and not two, there could not be contact.”

Aristoteles:: “Obviously not.”

Parmenides:: “Certainly the things other than the one, we say, are not one and do not partake of it, if in fact they are other.”

Aristoteles:: “No, they don’t.”

Parmenides:: “So number is not in the others, if one is not in them.”

Aristoteles:: “Obviously not.”

Parmenides:: “So the others are neither one nor two, nor do they have a name of any other number.”

Aristoteles:: “No.”

Parmenides:: “So the one alone is one, and there could not be two.”

Aristoteles:: “Apparently not.”

Parmenides:: “So there is no contact, since there aren’t two items.”

Aristoteles:: “There isn’t.”

Parmenides:: “Therefore, the one doesn’t touch the others nor do the others touch the one, since in fact there is no contact.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “Thus, to sum up, the one both touches and does not touch the others and itself.”

Aristoteles:: “So it seems.”

Parmenides:: “Is it then both equal and unequal to itself and the others?”

Aristoteles:: “How so?”

Parmenides:: “If the one were greater or less than the others, or they in turn greater or less than it, they wouldn’t be in any way greater or less than each other by the one being one and the others being other than one -that is, by their own being—would they? But if they each had equality in addition to their own being, they would be equal to each other. And if the others had largeness and the one had smallness, or vice versa, whichever form had largeness attached would be greater, and whichever had smallness attached would be less?”

Aristoteles:: “Necessarily.”

Parmenides:: “Then aren’t there these two forms, largeness and smallness? For certainly, if there weren’t, they couldn’t be opposite to each other and couldn’t occur in things that are.”

Aristoteles:: “No. How could they?”

Parmenides:: “So if smallness occurs in the one, it would be either in the whole of it or in part of it.”

Aristoteles:: “Necessarily.”

Parmenides:: “What if it were to occur in the whole? Wouldn’t it be in the one either by being stretched equally throughout the whole of it, or by containing it?”

Aristoteles:: “Quite clearly.”

Parmenides:: “Wouldn’t smallness, then, if it were in the one equally throughout, be equal to it, but if it contained the one, be larger?”

Aristoteles:: “Doubtless.”

Parmenides:: “So can smallness be equal to or larger than something, and do the jobs of largeness and equality, but not its own?”

Aristoteles:: “It can’t.”

Parmenides:: “So smallness could not be in the one as a whole; but if in fact it is in the one, it would be in a part.”

Aristoteles:: “Yes.”

Parmenides:: “But, again, not in all the part. Otherwise, it will do exactly the same thing as it did in relation to the whole: it will be equal to or larger than whatever part it is in.”

Aristoteles:: “Necessarily.”

Parmenides:: “Therefore smallness will never be in any being, since it occurs neither in a part nor in a whole. Nor will anything be small except smallness itself.”

Aristoteles:: “It seems not.”

Parmenides:: “So largeness won’t be in the one either. For if it were, something else, apart from largeness itself, would be larger than something, namely, that which the largeness is in—and that too, although there is for it no small thing, which it must exceed, if in fact it is large. But this is impossible, since smallness is nowhere in anything.”

Aristoteles:: “True.”

Parmenides:: “But largeness itself is not greater than anything other than smallness itself, nor is smallness less than anything other than largeness itself.”

Aristoteles:: “No, they aren’t.”

Parmenides:: “So the others aren’t greater than the one, nor are they less, because they have neither largeness nor smallness. Nor do these two themselves—largeness and smallness—have, in relation to the one, their power of exceeding and being exceeded; they have it, rather, in relation to each other. Nor could the one, in its turn, be greater or less than these two or the others, since it has neither largeness nor smallness.”

Aristoteles:: “It certainly appears not.”

Parmenides:: “So if the one is neither greater nor less than the others, it must neither exceed them nor be exceeded by them?”

Aristoteles:: “Necessarily.”

Parmenides:: “Now, it is quite necessary that something that neither exceeds nor is exceeded be equally matched, and if equally matched, equal.”

Aristoteles:: “No doubt.”

Parmenides:: “Furthermore, the one would also itself be so in relation to itself: having neither largeness nor smallness in itself, it would neither be exceeded by nor exceed itself, but, being equally matched, would be equal to itself.”

Aristoteles:: “Of course.”

Parmenides:: “Therefore the one would be equal to itself and the others.”

Aristoteles:: “Apparently.”

Parmenides:: “And yet, since it is in itself, it would also be around itself on the outside, and as container it would be greater than itself, but as contained it would be less. And thus the one would be greater and less than itself.”

Aristoteles:: “Yes, it would be.”

Parmenides:: “Isn’t this necessary too, that there be nothing outside the one and the others?”

Aristoteles:: “No doubt.”

Parmenides:: “But surely what is must always be somewhere.”

Aristoteles:: “Yes.”

Parmenides:: “Then won’t that which is in something be in something greater as something less? For there is no other way that something could be in something else.”

Aristoteles:: “No, there isn’t.”

Parmenides:: “Since there is nothing else apart from the others and the one, and since they must be in something, must they not in fact be in each other—the others in the one and the one in the others—or else be nowhere?”

Aristoteles:: “Apparently.”

Parmenides:: “So, on the one hand, because the one is in the others, the others would be greater than the one, since they contain it, and the one would be less than the others, since it is contained. On the other hand, because the others are in the one, by the same argument the one would be greater than the others and they less than it.”

Aristoteles:: “So it seems.”

Parmenides:: “Therefore the one is both equal to, and greater and less than, itself and the others.”

Aristoteles:: “Apparently.”

Parmenides:: “And if in fact it is greater and less and equal, it would be of measures equal to, and more and fewer than, itself and the others; and since of measures, also of parts.”

Aristoteles:: “Doubtless.”

Parmenides:: “So, since it is of equal and more and fewer measures, it would also be fewer and more than itself and the others in number, and, correspondingly, equal to itself and the others.”

Aristoteles:: “How so?”

Parmenides:: “It would surely be of more measures than those things it is greater than, and of as many parts as measures; and likewise it would be of fewer measures and parts than those things it is less than; and correspondingly for the things it is equal to.”

Aristoteles:: “Just so.”

Parmenides:: “Since it is, then, greater and less than, and equal to, itself, would it not be of measures more and fewer than, and equal to, itself? And since of measures, also of parts?”

Aristoteles:: “Doubtless.”

Parmenides:: “So, since it is of parts equal to itself, it would be equal to itself in multitude, but since it is of more and fewer parts, it would be more and fewer than itself in number.”

Aristoteles:: “Apparently.”

Parmenides:: “Now won’t the one be related in the same way also to the others? Because it appears larger than they, it must also be more than they are in number; and because it appears smaller, fewer; and because it appears equal in largeness, it must also be equal to the others in multitude.”

Aristoteles:: “Necessarily.”

Parmenides:: “Thus, in turn, as it seems, the one will be equal to, and more and fewer than, itself and the others in number.”

Aristoteles:: “It will.”

Parmenides:: “Does the one also partake of time? And, in partaking of time, is it and does it come to be both younger and older than, and neither younger nor older than, itself and the others?”

Aristoteles:: “How so?”

Parmenides:: “If in fact one is, being surely belongs to it.”

Aristoteles:: “Yes.”

Parmenides:: “But is to be simply partaking of being with time present, just as was is communion with being together with time past, and, in turn, will be is communion with being together with time future?”

Aristoteles:: “Yes, it is.”

Parmenides:: “So the one partakes of time, if in fact it partakes of being.”

Aristoteles:: “Certainly.”

Parmenides:: “Of time advancing?”

Aristoteles:: “Yes.”

Parmenides:: "So the one always comes to be older than itself, if in fact it goes forward in step with time."

Aristoteles:: "Necessarily."

Parmenides:: "Do we recall that the older comes to be older than something that comes to be younger?"

Aristoteles:: "We do."

Parmenides:: "So, since the one comes to be older than itself, wouldn't it come to be older than a self that comes to be younger?"

Aristoteles:: "Necessarily."

Parmenides:: "Thus it indeed comes to be both younger and older than itself."

Aristoteles:: "Yes."

Parmenides:: "But it is older, isn't it, whenever, in coming to be, it is at the now time, between was and will be? For as it proceeds from the past to the future, it certainly won't jump over the now."

Aristoteles:: "No, it won't."

Parmenides:: "Doesn't it stop coming to be older when it encounters the now? It doesn't come to be, but is then already older, isn't it? For if it were going forward, it could never be grasped by the now. A thing going forward is able to lay hold of both the now and the later—releasing the now and reaching for the later, while coming to be between the two, the later and the now."

Aristoteles:: "True."

Parmenides:: "But if nothing that comes to be can sidestep the now, whenever a thing is at this point, it always stops its coming-to-be and then is whatever it may have come to be."

Aristoteles:: "Apparently."

Parmenides:: “So, too, the one: whenever, in coming to be older, it encounters the now, it stops its coming-to-be and is then older.”

Aristoteles:: “Of course.”

Parmenides:: “So it also is older than that very thing it was coming to be older than—and wasn’t it coming to be older than itself?”

Aristoteles:: “Yes.”

Parmenides:: “And the older is older than a younger?”

Aristoteles:: “It is.”

Parmenides:: “So the one is then also younger than itself, whenever, in its coming-to-be older, it encounters the now.”

Aristoteles:: “Necessarily.”

Parmenides:: “Yet the now is always present to the one throughout its being; for the one always is now, whenever it is.”

Aristoteles:: “No doubt.”

Parmenides:: “Therefore the one always both is and comes to be older and younger than itself.”

Aristoteles:: “So it seems.”

Parmenides:: “Is it or does it come to be for more time than itself or an equal time?”

Aristoteles:: “An equal.”

Parmenides:: “But if it comes to be or is for an equal time, it is the same age.”

Aristoteles:: “Doubtless.”

Parmenides:: “And that which is the same age is neither older nor younger.”

Aristoteles:: “No, it isn’t.”

Parmenides:: “So the one, since it comes to be and is for a time equal to itself, neither is nor comes to be younger or older than itself.”

Aristoteles:: “I think not.”

Parmenides:: “And again: what of the others?”

Aristoteles:: “I can’t say.”

Parmenides:: “This much, surely, you can say: things other than the one, if in fact they are different things and not a different thing, are more than one. A different thing would be one, but different things are more than one and would have multitude.”

Aristoteles:: “Yes, they would.”

Parmenides:: “And, being a multitude, they would partake of a greater number than the one.”

Aristoteles:: “Doubtless.”

Parmenides:: “Now, shall we say in connection with number that things that are more or things that are less come to be and have come to be earlier?”

Aristoteles:: “Things that are less.”

Parmenides:: “So, the least thing first; and this is the one. Isn’t that so?”

Aristoteles:: “Yes.”

Parmenides:: “So of all the things that have number the one has come to be first. And the others, too, all have number, if in fact they are others and not an other.”

Aristoteles:: “Yes, they do.”

Parmenides:: “But that which has come to be first, I take it, has come to be earlier, and the others later; and things that have come to be later are younger than what has come to be earlier. Thus the others would be younger than the one, and the one older than they.”

Aristoteles:: “Yes, it would.”

Parmenides:: “What about the following? Could the one have come to be in a way contrary to its own nature, or is that impossible?”

Aristoteles:: “Impossible.”

Parmenides:: “Yet the one was shown to have parts, and if parts, a beginning, an end, and a middle.”

Aristoteles:: “Yes.”

Parmenides:: “Well, in the case of all things—the one itself and each of the others—doesn’t a beginning come to be first, and after the beginning all the others up to the end?”

Aristoteles:: “To be sure.”

Parmenides:: “Furthermore, we shall say that all these others are parts of some one whole, but that it itself has come to be one and whole at the same time as the end.”

Aristoteles:: “Yes, we shall.”

Parmenides:: “An end, I take it, comes to be last, and the one naturally comes to be at the same time as it. And so if in fact the one itself must not come to be contrary to nature, it would naturally come to be later than the others, since it has come to be at the same time as the end.”

Aristoteles:: “Apparently.”

Parmenides:: “Therefore the one is younger than the others, and the others are older than it.”

Aristoteles:: “That, in turn, appears to me to be so.”

Parmenides:: “But again: must not a beginning or any other part of the one or of anything else, if in fact it is a part and not parts, be one, since it is a part?”

Aristoteles:: “Necessarily.”

Parmenides:: “Accordingly, the one would come to be at the same time as the first part that comes to be, and at the same time as the second; and it is absent from none of the others that come to be—no matter what is added to what—

until, upon arriving at the last part, it comes to be one whole, having been absent at the coming-to-be of neither the middle nor the first nor the last nor any other part.”

Aristoteles:: “True.”

Parmenides:: “Therefore the one is the same age as all the others. And so, unless the one itself is naturally contrary to nature, it would have come to be neither earlier nor later than the others, but at the same time. And according to this argument the one would be neither older nor younger than the others, nor the others older or younger than it. But according to our previous argument, it was both older and younger than they, and likewise they were both older and younger than it.”

Aristoteles:: “Of course.”

Parmenides:: “That’s how it is and has come to be. But what about its coming-to-be both older and younger, and neither older nor younger, than the others and they than it? Is the case with coming-to-be just as it is with being, or is it different?”

Aristoteles:: “I can’t say.”

Parmenides:: “But I can say this much, at least: if something is indeed older than another thing, it could not come to be still older by an amount greater than the original difference in age. Nor, in turn, could the younger come to be still younger. For equals added to unequals, in time or anything else at all, always make them differ by an amount equal to that by which they differed at first.”

Aristoteles:: “No doubt.”

Parmenides:: “So what is older or younger could never come to be older or younger than what is older or younger, if in fact they always differ in age by an equal amount. On the contrary, something is and has come to be older, and something younger, but they do not come to be so.”

Aristoteles:: “True.”

Parmenides:: “So also the one, since it is older or younger, never comes to be older or younger than the others that are older or younger than it.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “But consider whether it comes to be older and younger in this way.”

Aristoteles:: “In what way?”

Parmenides:: “In the way that the one was shown to be older than the others and they older than it.”

Aristoteles:: “What of that?”

Parmenides:: “When the one is older than the others, it has surely come to be for more time than they.”

Aristoteles:: “Yes.”

Parmenides:: “Go back and consider: if we add an equal time to more and less time, will the more differ from the less by an equal or a smaller fraction?”

Aristoteles:: “A smaller.”

Parmenides:: “So the one’s difference in age in relation to the others will not be in the future just what it was at first. On the contrary, by getting an increment of time equal to the others, it will differ from them in age always less than it did before. Isn’t that so?”

Aristoteles:: “Yes.”

Parmenides:: “Wouldn’t that which differs from anything in age less than before come to be younger than before in relation to those things it was previously older than?”

Aristoteles:: “Younger.”

Parmenides:: “And if the one comes to be younger, don’t those others, in turn, come to be older than before in relation to it?”

Aristoteles:: “Certainly.”

Parmenides:: “So what is younger comes to be older in relation to what has come to be earlier and is older, but it never is older. On the contrary, it always comes to be older than that thing. For the older advances toward the younger, while the younger advances toward the older. And, in the same way, the older, in its turn, comes to be younger than the younger. For both, by going toward their opposites, come to be each other’s opposite, the younger coming to be older than the older, and the older younger than the younger. But they could not come to be so. For if they came to be, they would no longer come to be, but would be so. But as it is they come to be older and younger than each other. The one comes to be younger than the others, because it was shown to be older and to have come to be earlier, whereas the others come to be older than the one, because they have come to be later.

“And by the same argument the others, too, come to be younger in relation to the one, since in fact they were shown to be older than it and to have come to be earlier.”

Aristoteles:: “Yes, it does appear so.”

Parmenides:: “Well then, insofar as nothing comes to be older or younger than a different thing, owing to their always differing from each other by an equal number, the one would not come to be older or younger than the others, and they would not come to be older or younger than it. But insofar as things that came to be earlier must differ from things that come to be later by a fraction that is always different, and vice versa, in this way they must come to be older and younger than each other—both the others than the one and the one than the others.”

Aristoteles:: “Of course.”

Parmenides:: “To sum up all this, the one itself both is and comes to be older and younger than itself and the others, and it neither is nor comes to be older or younger than itself or the others.”

Aristoteles:: “Exactly.”

Parmenides:: “And since the one partakes of time and of coming to be older and younger, must it not also partake of time past, future, and present—if in fact it partakes of time?”

Aristoteles:: “Necessarily.”

Parmenides:: “Therefore, the one was and is and will be, and was coming to be and comes to be and will come to be.”

Aristoteles:: “To be sure.”

Parmenides:: “And something could belong to it and be of it, in the past, present, and future.”

Aristoteles:: “Certainly.”

Parmenides:: “And indeed there would be knowledge and opinion and perception of it, if in fact even now we are engaging in all those activities concerning it.”

Aristoteles:: “You’re right.”

Parmenides:: “And a name and an account belong to it, and it is named and spoken of. And all such things as pertain to the others also pertain to the one.”

Aristoteles:: “That’s exactly so.”

Parmenides:: “Let’s speak of it yet a third time. If the one is as we have described it—being both one and many and neither one nor many, and partaking of time—must it not, because it is one, sometimes partake of being, and in turn because it is not, sometimes not partake of being?”

Aristoteles:: “Necessarily.”

Parmenides:: “When it partakes, can it at that time not partake, or partake when it doesn’t?”

Aristoteles:: “It cannot.”

Parmenides:: “So it partakes at one time, and doesn’t partake at another; for only in this way could it both partake and not partake of the same thing.”

Aristoteles:: “That’s right.”

Parmenides:: “Isn’t there, then, a definite time when it gets a share of being and when it parts from it? Or how can it at one time have and at another time not have the same thing, if it never gets and releases it?”

Aristoteles:: “In no way.”

Parmenides:: “Don’t you in fact call getting a share of being ‘coming-to-be’?”

Aristoteles:: “I do.”

Parmenides:: “And parting from being ‘ceasing-to-be’?”

Aristoteles:: “Most certainly.”

Parmenides:: “Indeed the one, as it seems, when it gets and releases being, comes to be and ceases to be.”

Aristoteles:: “Necessarily.”

Parmenides:: “And since it is one and many and comes to be and ceases to be, doesn’t its being many cease to be whenever it comes to be one, and doesn’t its being one cease to be whenever it comes to be many?”

Aristoteles:: “Certainly.”

Parmenides:: “Whenever it comes to be one and many, must it not separate and combine?”

Aristoteles:: “It certainly must.”

Parmenides:: “Furthermore, whenever it comes to be like and unlike, must it not be made like and unlike?”

Aristoteles:: “Yes.”

Parmenides:: “And whenever it comes to be greater and less and equal, must it not increase and decrease and be made equal?”

Aristoteles:: “Just so.”

Parmenides:: “And whenever, being in motion, it comes to a rest, and whenever, being at rest, it changes to moving, it must itself, presumably, be in no time at all.”

Aristoteles:: “How is that?”

Parmenides:: “It won’t be able to undergo being previously at rest and later in motion or being previously in motion and later at rest without changing.”

Aristoteles:: “Obviously not.”

Parmenides:: “Yet there is no time in which something can, simultaneously, be neither in motion nor at rest.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “Yet surely it also doesn’t change without changing.”

Aristoteles:: “Hardly.”

Parmenides:: “So when does it change? For it does not change while it is at rest or in motion, or while it is in time.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “Is there, then, this queer thing in which it might be, just when it changes?”

Aristoteles:: “What queer thing?”

Parmenides:: “The instant. The instant seems to signify something such that changing occurs from it to each of two states. For a thing doesn’t change from rest while rest continues, or from motion while motion continues. Rather, this queer creature, the instant, lurks between motion and rest—being in no time at all—and to it and from it the moving thing changes to resting and the resting thing changes to moving.”

Aristoteles:: “It looks that way.”

Parmenides:: “And the one, if in fact it both rests and moves, could change to each state—for only in this way could it do both. But in changing, it changes at an instant, and when it changes, it would be in no time at all, and just then it would be neither in motion nor at rest.”

Aristoteles:: “No, it wouldn’t.”

Parmenides:: “Is it so with the other changes too? Whenever the one changes from being to ceasing-to-be, or from not-being to coming-to-be, isn’t it then between certain states of motion and rest? And then it neither is nor is not, and neither comes to be nor ceases to be?”

Aristoteles:: “It seems so, at any rate.”

Parmenides:: “Indeed, according to the same argument, when it goes from one to many and from many to one, it is neither one nor many, and neither separates nor combines. And when it goes from like to unlike and from unlike to like, it is neither like nor unlike, nor is it being made like or unlike. And when it goes from small to large and to equal and vice versa, it is neither small nor large nor equal; nor would it be increasing or decreasing or being made equal.”

Aristoteles:: “It seems not.”

Parmenides:: “The one, if it is, could undergo all that.”

Aristoteles:: “Doubtless.”

Parmenides:: “Must we not examine what would be proper for the others to undergo, if one is?”

Aristoteles:: “We must.”

Parmenides:: “Are we to say, then, what properties things other than the one must have, if one is?”

Aristoteles:: “Let’s do.”

Parmenides:: “Well then, since in fact they are other than the one, the others are not the one. For if they were, they would not be other than the one.”

Aristoteles:: “That’s right.”

Parmenides:: “And yet the others are not absolutely deprived of the one, but somehow partake of it.”

Aristoteles:: “In what way?”

Parmenides:: “In that things other than the one are surely other because they have parts; for if they didn’t have parts, they would be altogether one.”

Aristoteles:: “That’s right.”

Parmenides:: “And parts, we say, are parts of that which is a whole.”

Aristoteles:: “Yes, we do.”

Parmenides:: “Yet the whole of which the parts are to be parts must be one thing composed of many, because each of the parts must be part, not of many, but of a whole.”

Aristoteles:: “Why is that?”

Parmenides:: “If something were to be part of many, in which it itself is, it will, of course, be both part of itself, which is impossible, and of each one of the others, if in fact it is part of all of them. For if it is not part of one, it will be part of the others, that one excepted, and thus it will not be part of each one. And if it is not part of each, it will be part of none of the many. But if something is part of none, it cannot be a part, or anything else at all, of all those things of which it is no part of any.”

Aristoteles:: “It certainly appears so.”

Parmenides:: “So the part would not be part of many things or all, but of some one character and of some one thing, which we call a ‘whole,’ since it has come to be one complete thing composed of all. This is what the part would be part of.”

Aristoteles:: “Absolutely.”

Parmenides:: “So if the others have parts, they would also partake of some one whole.”

Aristoteles:: “Certainly.”

Parmenides:: “So things other than the one must be one complete whole with parts.”

Aristoteles:: “Necessarily.”

Parmenides:: “Furthermore, the same account applies also to each part, since it too must partake of the one. For if each of them is a part, ‘each,’ of course, signifies that it is one thing, detached from the others and being by itself, if in fact it is to be each.”

Aristoteles:: “That’s right.”

Parmenides:: “But clearly it would partake of the one, while being something other than one. Otherwise, it wouldn’t partake, but would itself be one. But as it is, it is surely impossible for anything except the one itself to be one.”

Aristoteles:: “Impossible.”

Parmenides:: “But both the whole and the part must partake of the one; for the whole will be one thing of which the parts are parts, and in turn each thing that is part of a whole will be one part of the whole.”

Aristoteles:: “Just so.”

Parmenides:: “Well, then, won’t things that partake of the one partake of it, while being different from it?”

Aristoteles:: “Doubtless.”

Parmenides:: “And things different from the one would surely be many; for if things other than the one were neither one nor more than one, they would be nothing.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “Since both things that partake of the oneness of a part and things that partake of the oneness of a whole are more than one, must not those things themselves that get a share of the one in fact be unlimited in multitude?”

Aristoteles:: “How so?”

Parmenides:: “Let’s observe the following: isn’t it the case that, at the time when they get a share of the one, they get a share, while not being one and not partaking of the one?”

Aristoteles:: “Quite clearly.”

Parmenides:: “While being multitudes, then, in which oneness is not present?”

Aristoteles:: “Certainly, multitudes.”

Parmenides:: “Now, if we should be willing to subtract, in thought, the very least we can from these multitudes, must not that which is subtracted, too, be a multitude and not one, if in fact it doesn’t partake of the one?”

Aristoteles:: “Necessarily.”

Parmenides:: “So always, as we examine in this way its nature, itself by itself, different from the form, won’t as much of it as we ever see be unlimited in multitude?”

Aristoteles:: “Absolutely.”

Parmenides:: “Furthermore, whenever each part comes to be one part, the parts then have a limit in relation to each other and in relation to the whole, and the whole has a limit in relation to the parts.”

Aristoteles:: “Quite so.”

Parmenides:: “Accordingly, it follows for things other than the one that from the one and themselves gaining communion with each other, as it seems, something different comes to be in them, which affords a limit for them in relation to each other; but their own nature, by themselves, affords unlimitedness.”

Aristoteles:: “Apparently.”

Parmenides:: “In this way, indeed, things other than the one, taken both as wholes and part by part, both are unlimited and partake of a limit.”

Aristoteles:: “Certainly.”

Parmenides:: “Well, aren’t they both like and unlike each other and themselves?”

Aristoteles:: “In what way?”

Parmenides:: “On the one hand, insofar as they are all unlimited by their own nature, they would in this way have a property the same.”

Aristoteles:: “Certainly.”

Parmenides:: “Furthermore, insofar as they all partake of a limit, in this way, too, they would all have a property the same.”

Aristoteles:: “Doubtless.”

Parmenides:: “On the other hand, insofar as they are both limited and unlimited, they have these properties, which are opposite to each other.”

Aristoteles:: “Yes.”

Parmenides:: “And opposite properties are as unlike as possible.”

Aristoteles:: “To be sure.”

Parmenides:: “So in respect of either property they would be like themselves and each other, but in respect of both properties they would be utterly opposite and unlike both themselves and each other.”

Aristoteles:: “It looks that way.”

Parmenides:: “Thus the others would be both like and unlike themselves and each other.”

Aristoteles:: “Just so.”

Parmenides:: “And indeed we will have no further trouble in finding that things other than the one are both the same as and different from each other, both in motion and at rest, and have all the opposite properties, since in fact they were shown to have those we mentioned.”

Aristoteles:: “You’re right.”

Parmenides:: “Well, then, suppose we now concede those results as evident and examine again, if one is: Are things other than the one also not so, or only so?”

Aristoteles:: “Of course.”

Parmenides:: “Let’s say from the beginning, what properties things other than the one must have, if one is.”

Aristoteles:: “Yes, let’s do.”

Parmenides:: “Must not the one be separate from the others, and the others separate from the one?”

Aristoteles:: “Why?”

Parmenides:: “Because surely there is not something else in addition to them that is both other than the one and other than the others; for all things have been mentioned, once the one and the others are mentioned.”

Aristoteles:: “Yes, all things.”

Parmenides:: “So there is no further thing, different from them, in which same thing the one and the others could be.”

Aristoteles:: “No, there isn’t.”

Parmenides:: “So the one and the others are never in the same thing.”

Aristoteles:: “It seems not.”

Parmenides:: “So they are separate?”

Aristoteles:: “Yes.”

Parmenides:: “Furthermore, we say that what is really one doesn’t have parts.”

Aristoteles:: “Obviously not.”

Parmenides:: “So the one could not be in the others as a whole, nor could parts of it be in them, if it is separate from the others and doesn’t have parts.”

Aristoteles:: “Obviously not.”

Parmenides:: “So the others could in no way partake of the one, if they partake neither by getting some part of it nor by getting it as a whole.”

Aristoteles:: “It seems not.”

Parmenides:: “In no way, then, are the others one, nor do they have any oneness in them.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “So the others aren’t many either; for each of them would be one part of a whole, if they were many. But as it is, things other than the one are neither one nor many nor a whole nor parts, since they in no way partake of the one.”

Aristoteles:: “That’s right.”

Parmenides:: “Therefore, the others are not themselves two or three, nor are two or three in them, if in fact they are entirely deprived of the one.”

Aristoteles:: “Just so.”

Parmenides:: “So the others aren’t themselves like and unlike the one, and likeness and unlikeness aren’t in them. For if they were themselves like and unlike, or had likeness and unlikeness in them, things other than the one would surely have in themselves two forms opposite to each other.”

Aristoteles:: “Apparently.”

Parmenides:: “But it was impossible for things that couldn’t partake even of one to partake of any two.”

Aristoteles:: “Impossible.”

Parmenides:: “So the others are neither like nor unlike nor both. If they were like or unlike, they would partake of one of the two forms, and if they were both, they would partake of two opposite forms. But these alternatives were shown to be impossible.”

Aristoteles:: “True.”

Parmenides:: “So they are neither the same nor different, neither in motion nor at rest, neither coming to be nor ceasing to be, neither greater nor less nor equal. Nor do they have any other such properties. For if the others submit to having any such property, they will partake of one and two and three and odd and even, of which it was shown they could not partake, since they are in every way entirely deprived of the one.”

Aristoteles:: “Very true.”

Parmenides:: “Thus if one is, the one is all things and is not even one, both in relation to itself and, likewise, in relation to the others.

Aristoteles:: “Exactly.”

Parmenides:: “So far so good. But must we not next examine what the consequences must be, if the one is not?”

Aristoteles:: “Yes, we must.”

Parmenides:: “What, then, would this hypothesis be: ‘if one is not’? Does it differ at all from this hypothesis: ‘if not-one is not’?”

Aristoteles:: “Of course it differs.”

Parmenides:: “Does it merely differ, or is saying ‘if not-one is not’ the complete opposite of saying, ‘if one is not’?”

Aristoteles:: “The complete opposite.”

Parmenides:: “What if someone were to say, ‘if largeness is not’ or ‘if smallness is not’ or anything else like that, would it be clear in each case that what he is saying is not is something different?”

Aristoteles:: “Certainly.”

Parmenides:: “So now, too, whenever he says, ‘if one is not,’ isn’t it clear that what he says is not is different from the others, and don’t we recognize what he means?”

Aristoteles:: “We do.”

Parmenides:: “So he speaks of something, in the first place, knowable, and in the second, different from the others, whenever he says ‘one,’ whether he attaches being or not-being to it; for we still know what thing is said not to be, and that it is different from the others. Isn’t that so?”

Aristoteles:: “Necessarily.”

Parmenides:: “Then we must state from the beginning as follows what must be the case, if one is not. First, as it seems, this must be so for it, that there is knowledge of it; otherwise we don’t even know what is meant when someone says, ‘if one is not’.”

Aristoteles:: “True.”

Parmenides:: “And it must be the case that the others are different from it—or else it isn’t said to be different from them?”

Aristoteles:: “Certainly.”

Parmenides:: “Therefore difference in kind pertains to it in addition to knowledge. For someone doesn’t speak of the difference in kind of the others when he says that the one is different from the others, but of that thing’s difference in kind.”

Aristoteles:: “Apparently.”

Parmenides:: “Furthermore, the one that is not partakes of that and of something, this, to this, these, and so on; for the one could not be mentioned, nor could things be different from the one, nor could anything belong to it or be of it, nor could it be said to be anything, unless it had a share of something and the rest.”

Aristoteles:: “That’s right.”

Parmenides:: “The one can’t be, if in fact it is not, but nothing prevents it from partaking of many things. Indeed, it’s even necessary, if in fact it’s that one and not another that is not. If, however, neither the one nor that is not to be, but the account is about something else, we shouldn't even utter a sound. But if that one and not another is posited not to be, it must have a share of that and of many other things."

Aristoteles:: "Quite certainly."

Parmenides:: "So it has unlikeness, too, in relation to the others. For things other than the one, since they are different, would also be different in kind."

Aristoteles:: "Yes."

Parmenides:: "And aren't things different in kind other in kind?"

Aristoteles:: "Doubtless."

Parmenides:: "Aren't things other in kind unlike?"

Aristoteles:: "Unlike, certainly."

Parmenides:: "Well, then, if in fact they are unlike the one, clearly things unlike would be unlike an unlike."

Aristoteles:: "Clearly."

Parmenides:: "So the one would also have unlikeness, in relation to which the others are unlike it."

Aristoteles:: "So it seems."

Parmenides:: "But, then, if it has unlikeness to the others, must it not have likeness to itself?"

Aristoteles:: "How so?"

Parmenides:: "If the one has unlikeness to one, the argument would surely not be about something of the same kind as the one, nor would the hypothesis be about one, but about something other than one."

Aristoteles:: "Certainly."

Parmenides:: "But it must not be."

Aristoteles:: "No indeed."

Parmenides:: “Therefore the one must have likeness of itself to itself.”

Aristoteles:: “It must.”

Parmenides:: “Furthermore, it is not equal to the others either; for if it were equal, it would then both be, and be like them in respect of equality. But those are both impossible, if in fact one is not.”

Aristoteles:: “Impossible.”

Parmenides:: “Since it is not equal to the others, must not the others, too, be not equal to it?”

Aristoteles:: “Necessarily.”

Parmenides:: “Aren’t things that are not equal unequal?”

Aristoteles:: “Yes.”

Parmenides:: “And aren’t things unequal unequal to something unequal?”

Aristoteles:: “Doubtless.”

Parmenides:: “So the one partakes also of inequality, in relation to which the others are unequal to it.”

Aristoteles:: “It does.”

Parmenides:: “But largeness and smallness are constitutive of inequality.”

Aristoteles:: “Yes, they are.”

Parmenides:: “So do largeness and smallness, too, belong to this one?”

Aristoteles:: “It looks that way.”

Parmenides:: “Yet largeness and smallness always stand apart from each other.”

Aristoteles:: “Certainly.”

Parmenides:: “So there is always something between them.”

Aristoteles:: “There is.”

Parmenides:: “Then can you mention anything between them other than equality?”

Aristoteles:: “No, just that.”

Parmenides:: “Therefore whatever has largeness and smallness also has equality, since it is between them.”

Aristoteles:: “Apparently.”

Parmenides:: “The one, if it is not, would have, as it seems, a share of equality, largeness, and smallness.”

Aristoteles:: “So it seems.”

Parmenides:: “Furthermore, it must also somehow partake of being.”

Aristoteles:: “How is that?”

Parmenides:: “It must be in the state we describe; for if it is not so, we wouldn’t speak truly when we say that the one is not. But if we do speak truly, it is clear that we say things that are. Isn’t that so?”

Aristoteles:: “It is indeed so.”

Parmenides:: “And since we claim to speak truly, we must claim also to speak of things that are.”

Aristoteles:: “Necessarily.”

Parmenides:: “Therefore, as it seems, the one is a not-being; for if it is not to be a not-being, but is somehow to give up its being in relation to not-being, it will straightway be a being.”

Aristoteles:: “Absolutely.”

Parmenides:: “So if it is not to be, it must have being a not-being as a bond in regard to its not-being, just as, in like manner, what is must have not-being what is not, in order that it, in its turn, may completely be. This is how what is would most of all be and what is not would not be: on the one hand, by what is, if it is completely to be, partaking of being in regard to being a being and of not-being in regard to being a not-being; and, on the other hand, by what is not, if in its turn what is not is completely not to be, partaking of not-being in regard to not-being a not-being and of being in regard to being a not-being."

Aristoteles:: "Very true."

Parmenides:: "Accordingly, since in fact what is has a share of not-being and what is not has a share of being, so, too, the one, since it is not, must have a share of being in regard to its not-being."

Aristoteles:: "Necessarily."

Parmenides:: "Then the one, if it is not, appears also to have being."

Aristoteles:: "Apparently."

Parmenides:: "And of course not-being, if in fact it is not."

Aristoteles:: "Doubtless."

Parmenides:: "Can something that is in some state not be so, without changing from that state?"

Aristoteles:: "It cannot."

Parmenides:: "So everything of the sort we've described, which is both so and not so, signifies a change."

Aristoteles:: "Doubtless."

Parmenides:: "And a change is a motion—or what shall we call it?"

Aristoteles:: "A motion."

Parmenides:: "Now wasn't the one shown both to be and not to be?"

Aristoteles:: "Yes."

Parmenides:: "Therefore, it appears both to be so and not so."

Aristoteles:: "So it seems."

Parmenides:: “Therefore the one that is not has been shown also to move, since in fact it has been shown to change from being to not-being.”

Aristoteles:: “It looks that way.”

Parmenides:: “Yet, on the other hand, if it is nowhere among the things that are—as it isn’t, if in fact it is not—it couldn’t travel from one place to another.”

Aristoteles:: “Obviously not.”

Parmenides:: “So it couldn’t move by switching place.”

Aristoteles:: “No, it couldn’t.”

Parmenides:: “Nor could it rotate in the same thing, because it nowhere touches the same thing. For that which is the same is a being, and what is not cannot be in anything that is.”

Aristoteles:: “No, it can’t.”

Parmenides:: “Therefore the one, if it is not, would be unable to rotate in that in which it is not.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “And, surely, the one isn’t altered from itself either, whether as something that is or as something that is not. For the argument would no longer be about the one, but about something else, if in fact the one were altered from itself.”

Aristoteles:: “That’s right.”

Parmenides:: “But if it isn’t altered and doesn’t rotate in the same thing or switch place, could it still move somehow?”

Aristoteles:: “Obviously not.”

Parmenides:: “Yet what is unmoved must enjoy repose, and what reposes must be at rest.”

Aristoteles:: “Necessarily.”

Parmenides:: “Therefore the one, as it seems, since it is not, is both at rest and in motion.”

Aristoteles:: “So it seems.”

Parmenides:: “Furthermore, if in fact it moves, it certainly must be altered; for however something is moved, by just so much it is no longer in the same state as it was, but in a different state.”

Aristoteles:: “Just so.”

Parmenides:: “Then because it moves, the one is also altered.”

Aristoteles:: “Yes.”

Parmenides:: “And yet, because it in no way moves, it could in no way be altered.”

Aristoteles:: “No, it couldn’t.”

Parmenides:: “So insofar as the one that is not moves, it is altered, but insofar as it doesn’t move, it is not altered.”

Aristoteles:: “No, it isn’t.

Parmenides:: “Therefore the one, if it is not, is both altered and not altered.”

Aristoteles:: “Apparently.”

Parmenides:: “Must not that which is altered come to be different from what it was before, and cease to be in its previous state; and must not that which is not altered neither come to be nor cease to be?”

Aristoteles:: “Necessarily.”

Parmenides:: “Therefore also the one, if it is not, comes to be and ceases to be, if it is altered, and does not come to be or cease to be, if it is not altered. And thus the one, if it is not, both comes to be and ceases to be, and does not come to be or cease to be.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “Let’s go back again to the beginning to see whether things will appear the same to us as they do now, or different.”

Aristoteles:: “Indeed, we must.”

Parmenides:: “Aren’t we saying, if one is not, what the consequences must be for it?”

Aristoteles:: “Yes.”

Parmenides:: “When we say ‘is not,’ the words don’t signify anything other than absence of being for whatever we say is not, do they?”

Aristoteles:: “Nothing other.”

Parmenides:: “When we say that something is not, are we saying that in a way it is not, but in a way it is? Or does this ‘is not’ signify without qualification that what is not is in no way at all and does not in any way partake of being?”

Aristoteles:: “Absolutely without qualification.”

Parmenides:: “Therefore what is not could neither be nor partake of being in any other way at all.”

Aristoteles:: “No, it couldn’t.”

Parmenides:: “Can coming-to-be and ceasing-to-be possibly be anything other than getting a share of being and losing it?”

Aristoteles:: “Nothing other.”

Parmenides:: “But what has no share of being could neither get nor lose it.”

Aristoteles:: “Obviously not.”

Parmenides:: “So the one, since it in no way is, must in no way have, release, or get a share of, being.”

Aristoteles:: “That’s reasonable.”

Parmenides:: “So the one that is not neither ceases to be nor comes to be, since in fact it in no way partakes of being.”

Aristoteles:: “Apparently not.”

Parmenides:: “So it also isn’t altered in any way. For if it were to undergo this, it would then come to be and cease to be.”

Aristoteles:: “True.”

Parmenides:: “And if it isn’t altered, it must not move either?”

Aristoteles:: “Necessarily.”

Parmenides:: “And surely we won’t say that what in no way is is at rest, since what is at rest must always be in some same thing.”

Aristoteles:: “In the same thing, no doubt.”

Parmenides:: “Thus, let’s say that what is not is, in turn, never at rest or in motion.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “But in fact nothing that is belongs to it; for then, by partaking of that, it would partake of being.”

Aristoteles:: “Clearly.”

Parmenides:: “So neither largeness nor smallness nor equality belongs to it.”

Aristoteles:: “No, they don’t.”

Parmenides:: “Furthermore, it would have neither likeness nor difference in kind in relation to itself or in relation to the others.”

Aristoteles:: “Apparently not.”

Parmenides:: “What about this? Can the others be related to it, if, necessarily, nothing belongs to it?”

Aristoteles:: “They can’t.”

Parmenides:: “So the others are neither like nor unlike it, and they are neither the same as nor different from it.”

Aristoteles:: “No, they aren’t.”

Parmenides:: “And again: will of that, to that, something, this, of this, of another, to another, or time past, hereafter, or now, or knowledge, opinion, perception, an account, a name, or anything else that is be applicable to what is not?”

Aristoteles:: “It will not.”

Parmenides:: “Thus one, since it is not, is not in any state at all.”

Aristoteles:: “At any rate, it certainly seems to be in no state at all.”

Parmenides:: “Let’s go on and say what properties the others must have, if one is not.”

Aristoteles:: “Yes, let’s do.”

Parmenides:: “They must surely be other; for if they weren’t even other, we wouldn’t be talking about the others.”

Aristoteles:: “Just so.”

Parmenides:: “But if the argument is about the others, the others are different. Or don’t you apply the names ‘other’ and ‘different’ to the same thing?”

Aristoteles:: “I do.”

Parmenides:: “And surely we say that the different is different from a different thing, and the other is other than another thing?”

Aristoteles:: “Yes.”

Parmenides:: “So the others, too, if they are to be other, have something they will be other than.”

Aristoteles:: “Necessarily.”

Parmenides:: “What would it be then? For they won’t be other than the one, if it is indeed not.”

Aristoteles:: “No, they won’t.”

Parmenides:: “So they are other than each other, since that alternative remains for them, or else to be other than nothing.”

Aristoteles:: “That’s right.”

Parmenides:: “So they each are other than each other as multitudes; for they couldn’t be so as ones, if one is not. But each mass of them, as it seems, is unlimited in multitude, and if you take what seems to be smallest, in an instant, just as in a dream, instead of seeming to be one, it appears many, and instead of very small, immense in relation to the bits chopped from it.”

Aristoteles:: “That’s quite right.”

Parmenides:: “The others would be other than each other as masses of this sort, if they are other, and if one is not.”

Aristoteles:: “Quite so.”

Parmenides:: “Well then, won’t there be many masses, each appearing, but not being, one, if in fact one is not to be?”

Aristoteles:: “Just so.”

Parmenides:: “And there will seem to be a number of them, if in fact each seems to be one, although being many.”

Aristoteles:: “Certainly.”

Parmenides:: “And among them some appear even and some odd, although not really being so, if in fact one is not to be.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “Furthermore, a smallest too, we say, will seem to be among them; but this appears many and large in relation to each of its many, because they are small.”

Aristoteles:: “Doubtless.”

Parmenides:: “And each mass will be conceived to be equal to its many small bits. For it could not, in appearance, shift from greater to less, until it seems to come to the state in between, and this would be an appearance of equality.”

Aristoteles:: “That’s reasonable.”

Parmenides:: “Now won’t it appear to have a limit in relation to another mass, but itself to have no beginning, limit, or middle in relation to itself?”

Aristoteles:: “Why is that?”

Parmenides:: “Because whenever you grasp any bit of them in thought as being a beginning, middle, or end, before the beginning another beginning always appears, and after the end a different end is left behind, and in the middle others more in the middle than the middle but smaller, because you can’t grasp each of them as one, since the one is not.”

Aristoteles:: “Very true.”

Parmenides:: “So every being that you grasp in thought must, I take it, be chopped up and dispersed, because surely, without oneness, it would always be grasped as a mass.”

Aristoteles:: “Of course.”

Parmenides:: “So must not such a thing appear one to a person dimly observing from far off; but to a person considering it keenly from up close, must not each one appear unlimited in multitude, if in fact it is deprived of the one, if it is not?”

Aristoteles:: “Indeed, most necessarily.”

Parmenides:: “Thus the others must each appear unlimited and as having a limit, and one and many, if one is not, but things other than the one are.”

Aristoteles:: “Yes, they must.”

Parmenides:: “Won’t they also seem to be both like and unlike?”

Aristoteles:: “Why is that?”

Parmenides:: “Just as, to someone standing at a distance, all things in a painting, appearing one, appear to have a property the same and to be like.”

Aristoteles:: “Certainly.”

Parmenides:: “But when the person comes closer, they appear many and different and, by the appearance of the different, different in kind and unlike themselves.”

Aristoteles:: “Just so.”

Parmenides:: “So the masses must also appear both like and unlike themselves and each other.”

Aristoteles:: “Of course.”

Parmenides:: “Accordingly, if one is not and many are, the many must appear both the same as and different from each other, both in contact and separate from themselves, both moving with every motion and in every way at rest, both coming to be and ceasing to be and neither, and surely everything of that sort, which it would now be easy enough for us to go through.”

Aristoteles:: “Very true indeed.”

Parmenides:: “Let’s go back to the beginning once more and say what must be the case, if one is not, but things other than the one are.”

Aristoteles:: “Yes, let’s do.”

Parmenides:: “Well, the others won’t be one.”

Aristoteles:: “Obviously not.”

Parmenides:: “And surely they won’t be many either, since oneness would also be present in things that are many. For if none of them is one, they are all nothing—so they also couldn’t be many.”

Aristoteles:: “True.”

Parmenides:: “If oneness isn’t present in the others, the others are neither many nor one.”

Aristoteles:: “No, they aren’t.”

Parmenides:: “Nor even do they appear one or many.”

Aristoteles:: “Why?”

Parmenides:: “Because the others have no communion in any way at all with any of the things that are not, and none of the things that are not belongs to any of the others, since things that are not have no part.”

Aristoteles:: “True.”

Parmenides:: “So no opinion or any appearance of what is not belongs to the others, nor is not-being conceived in any way at all in the case of the others.”

Aristoteles:: “Yes, you’re quite right.”

Parmenides:: “So if one is not, none of the others is conceived to be one or many, since, without oneness, it is impossible to conceive of many.”

Aristoteles:: “Yes, impossible.”

Parmenides:: “Therefore, if one is not, the others neither are nor are conceived to be one or many.”

Aristoteles:: “It seems not.”

Parmenides:: “So they aren’t like or unlike either.”

Aristoteles:: “No, they aren’t.”

Parmenides:: “And indeed, they are neither the same nor different, neither in contact nor separate, nor anything else that they appeared to be in the argument we went through before. The others neither are nor appear to be any of those things, if one is not.”

Aristoteles:: “True.”

Parmenides:: “Then if we were to say, to sum up, ‘if one is not, nothing is,’ wouldn’t we speak correctly?”

Aristoteles:: “Absolutely.”

Parmenides:: “Let us then say this—and also that, as it seems, whether one is or is not, it and the others both are and are not, and both appear and do not appear all things in all ways, both in relation to themselves and in relation to each other.”

Aristoteles:: “Very true.”

Translated by Jowett 3rd ed.

PERSONS OF THE DIALOGUE.

CEPHALUS.
ADEIMANTUS.
GLAUCON.
ANTIPHON.
PYTHODORUS.
SOCRATES.
ZENO.
PARMENIDES.
ARISTOTELES.

Cephalus rehearses a dialogue which is supposed to have been narrated in his presence by Antiphon, the half-brother of Adeimantus and Glaucon, to certain Clazomenians.

Cephalus:: We had come from our home at Clazomenae to Athens, and met Adeimantus, who took me by the hand and Glaucon in the Agora.

Adeimantus:: Welcome, Cephalus, is there anything which we can do for you in Athens?

Cephalus:: Yes; that is why I am here; I wish to ask a favor of you.

Adeimantus:: What may that be?

Cephalus:: I want you to tell me the name of your half-brother, which I have forgotten; he was a mere child when I last came hither from Clazomenae, but that was a long time ago; his father's name, if I remember rightly, was Pyrilampes?

Adeimantus:: Yes, and the name of our brother, Antiphon; but why do you ask?

Cephalus:: Let me introduce some countrymen of mine; they are lovers of philosophy, and have heard that Antiphon was intimate with a certain Pythodorus, a friend of Zeno, and remembers a conversation which took place between Socrates, Zeno, and Parmenides many years ago, Pythodorus having often recited it to him.

Adeimantus:: Quite true.

Cephalus:: And could we hear it?

Adeimantus:: Nothing easier; when he was a youth he made a careful study of the piece; at present his thoughts run in another direction; like his grandfather Antiphon he is devoted to horses. But, if that is what you want, let us go and look for him; he dwells at Melita, which is quite near, and he has only just left us to go home.

Cephalus:: Accordingly we went to look for him; he was at home, and in the act of giving a bridle to a smith to be fitted. When he had done with the smith, his brothers told him the purpose of our visit; and he saluted me as an acquaintance whom he remembered from my former visit, and we asked him to repeat the dialogue. At first he was not very willing, and complained of the trouble, but at length he consented. He told us that Pythodorus had described to him the appearance of Parmenides and Zeno; they came to Athens, as he said, at the great Panathenaea; the former was, at the time of his visit, about 65 years old, very white with age, but well favored. Zeno was nearly 40 years of age, tall and fair to look upon; in the days of his youth he was reported to have been beloved by Parmenides. He said that they lodged with Pythodorus in the Ceramicus, outside the wall, whither Socrates, then a very young man, came to see them, and many others with him; they wanted to hear the writings of Zeno, which had been brought to Athens for the first time on the occasion of their visit. These Zeno himself read to them in the absence of Parmenides, and had very nearly finished when Pythodorus entered, and with him Parmenides and Aristoteles who was afterwards one of the Thirty, and heard the little that remained of the dialogue. Pythodorus had heard Zeno repeat them before.

When the recitation was completed, Socrates requested that the first thesis of the first argument might be read over again, and this having been done, he said:

Socrates:: What is your meaning, Zeno? Do you maintain that if being is many, it must be both like and unlike, and that this is impossible, for neither can the like be unlike, nor the unlike like—is that your position?

Zeno:: Just so.

Socrates:: And if the unlike cannot be like, or the like unlike, then according to you, being could not be many; for this would involve an impossibility. In all that you say have you any other purpose except to disprove the being of the many? and is not each division of your treatise intended to furnish a separate proof of this, there being in all as many proofs of the not-being of the many as you have composed arguments? Is that your meaning, or have I misunderstood you?

Zeno:: No; you have correctly understood my general purpose.

Socrates:: I see, Parmenides, that Zeno would like to be not only one with you in friendship but your second self in his writings too; he puts what you say in another way, and would fain make believe that he is telling us something which is new. For you, in your poems, say The All is one, and of this you adduce excellent proofs; and he on the other hand says There is no many; and on behalf of this he offers overwhelming evidence. You affirm unity, he denies plurality. And so you deceive the world into believing that you are saying different things when really you are saying much the same. This is a strain of art beyond the reach of most of us.

Zeno:: Yes, Socrates. But although you are as keen as a Spartan hound in pursuing the track, you do not fully apprehend the true motive of the composition, which is not really such an artificial work as you imagine; for what you speak of was an accident; there was no pretence of a great purpose; nor any serious intention of deceiving the world. The truth is, that these writings of mine were meant to protect the arguments of Parmenides against those who make fun of him and seek to show the many ridiculous and contradictory results which they suppose to follow from the affirmation of the one. My answer is addressed to the partisans of the many, whose attack I return with interest by retorting upon them that their hypothesis of the being of many, if carried out, appears to be still more ridiculous than the hypothesis of the being of one. Zeal for my master led me to write the book in the days of my youth, but some one stole the copy; and therefore I had no choice whether it should be published or not; the motive, however, of writing, was not the ambition of an elder man, but the pugnacity of a young one. This you do not seem to see, Socrates; though in other respects, as I was saying, your notion is a very just one.

Socrates:: I understand and quite accept your account. But tell me, Zeno, do you not further think that there is an idea of likeness in itself, and another idea of unlikeness, which is the opposite of likeness, and that in these two, you and I and all other things to which we apply the term many, participate—things which participate in likeness become in that degree and manner like; and so far as they participate in unlikeness become in that degree unlike, or both like and unlike in the degree in which they participate in both? And may not all things partake of both opposites, and be both like and unlike, by reason of this participation?—Where is the wonder? Now if a person could prove the absolute like to become unlike, or the absolute unlike to become like, that, in my opinion, would indeed be a wonder; but there is nothing extraordinary, Zeno, in showing that the things which only partake of likeness and unlikeness experience both. Nor, again, if a person were to show that all is one by partaking of one, and at the same time many by partaking of many, would that be very astonishing. But if he were to show me that the absolute one was many, or the absolute many one, I should be truly amazed. And so of all the rest: I should be surprised to hear that the natures or ideas themselves had these opposite qualities; but not if a person wanted to prove of me that I was many and also one. When he wanted to show that I was many he would say that I have a right and a left side, and a front and a back, and an upper and a lower half, for I cannot deny that I partake of multitude; when, on the other hand, he wants to prove that I am one, he will say, that we who are here assembled are seven, and that I am one and partake of the one. In both instances he proves his case. So again, if a person shows that such things as wood, stones, and the like, being many are also one, we admit that he shows the coexistence of the one and many, but he does not show that the many are one or the one many; he is uttering not a paradox but a truism. If however, as I just now suggested, some one were to abstract simple notions of like, unlike, one, many, rest, motion, and similar ideas, and then to show that these admit of admixture and separation in themselves, I should be very much astonished. This part of the argument appears to be treated by you, Zeno, in a very spirited manner; but, as I was saying, I should be far more amazed if any one found in the ideas themselves which are apprehended by reason, the same puzzle and entanglement which you have shown to exist in visible objects.

Cephalus:: While Socrates was speaking, Pythodorus thought that Parmenides and Zeno were not altogether pleased at the successive steps of the argument; but still they gave the closest attention, and often looked at one another, and smiled as if in admiration of him. When he had finished, Parmenides expressed their feelings in the following words:—

Parmenides:: Socrates, I admire the bent of your mind towards philosophy; tell me now, was this your own distinction between ideas in themselves and the things which partake of them? and do you think that there is an idea of likeness apart from the likeness which we possess, and of the one and many, and of the other things which Zeno mentioned?

Socrates:: I think that there are such ideas.

Parmenides:: And would you also make absolute ideas of the just and the beautiful and the good, and of all that class?

Socrates:: Yes, I should.

Parmenides:: And would you make an idea of man apart from us and from all other human creatures, or of fire and water?

Socrates:: I am often undecided, Parmenides, as to whether I ought to include them or not.

Parmenides:: And would you feel equally undecided, Socrates, about things of which the mention may provoke a smile?—I mean such things as hair, mud, dirt, or anything else which is vile and paltry; would you suppose that each of these has an idea distinct from the actual objects with which we come into contact, or not?

Socrates:: Certainly not; visible things like these are such as they appear to us, and I am afraid that there would be an absurdity in assuming any idea of them, although I sometimes get disturbed, and begin to think that there is nothing without an idea; but then again, when I have taken up this position, I run away, because I am afraid that I may fall into a bottomless pit of nonsense, and perish; and so I return to the ideas of which I was just now speaking, and occupy myself with them.

Parmenides:: Yes, Socrates; that is because you are still young; the time will come, if I am not mistaken, when philosophy will have a firmer grasp of you, and then you will not despise even the meanest things; at your age, you are too much disposed to regard the opinions of men. But I should like to know whether you mean that there are certain ideas of which all other things partake, and from which they derive their names; that similars, for example, become similar, because they partake of similarity; and great things become great, because they partake of greatness; and that just and beautiful things become just and beautiful, because they partake of justice and beauty?

Socrates:: Yes, certainly, that is my meaning.

Parmenides:: Then each individual partakes either of the whole of the idea or else of a part of the idea? Can there be any other mode of participation?

Socrates:: There cannot be.

Parmenides:: Then do you think that the whole idea is one, and yet, being one, is in each one of the many?

Socrates:: Why not, Parmenides?

Parmenides:: Because one and the same thing will exist as a whole at the same time in many separate individuals, and will therefore be in a state of separation from itself.

Socrates:: Nay, but the idea may be like the day which is one and the same in many places at once, and yet continuous with itself; in this way each idea may be one and the same in all at the same time.

Parmenides:: I like your way, Socrates, of making one in many places at once. You mean to say, that if I were to spread out a sail and cover a number of men, these would be one whole including many—is not that your meaning?

Socrates:: I think so;

Parmenides:: And would you say that the whole sail includes each man, or a part of it only, and different parts different men?

Socrates:: The latter.

Parmenides:: Then, Socrates, the ideas themselves will be divisible, and things which participate in them will have a part of them only and not the whole idea existing in each of them?

Socrates:: That seems to follow.

Parmenides:: Then would you like to say, Socrates, that the one idea is really divisible and yet remains one?

Socrates:: Certainly not.

Parmenides:: Suppose that you divide absolute greatness, and that of the many great things, each one is great in virtue of a portion of greatness less than absolute greatness—is that conceivable?

Socrates:: No.

Parmenides:: Or will each equal thing, if possessing some small portion of equality less than absolute equality, be equal to some other thing by virtue of that portion only?

Socrates:: Impossible.

Parmenides:: Or suppose one of us to have a portion of smallness; this is but a part of the small, and therefore the absolutely small is greater; if the absolutely small be greater, that to which the part of the small is added will be smaller and not greater than before.

Socrates:: How absurd!

Parmenides:: Then in what way, Socrates, will all things participate in the ideas, if they are unable to participate in them either as parts or wholes?

Socrates:: Indeed, you have asked a question which is not easily answered.

Parmenides:: Well, and what do you say of another question?

Socrates:: What question?

Parmenides:: I imagine that the way in which you are led to assume one idea of each kind is as follows:—You see a number of great objects, and when you look at them there seems to you to be one and the same idea (or nature) in them all; hence you conceive of greatness as one.

Socrates:: Very true.

Parmenides:: And if you go on and allow your mind in like manner to embrace in one view the idea of greatness and of great things which are not the idea, and to compare them, will not another greatness arise, which will appear to be the source of all these?

Socrates:: It would seem so.

Parmenides:: Then another idea of greatness now comes into view over and above absolute greatness, and the individuals which partake of it; and then another, over and above all these, by virtue of which they will all be great, and so each idea instead of being one will be infinitely multiplied.

Socrates:: But may not the ideas, be thoughts only, and have no proper existence except in our minds, Parmenides? For in that case each idea may still be one, and not experience this infinite multiplication.

Parmenides:: And can there be individual thoughts which are thoughts of nothing?

Socrates:: Impossible.

Parmenides:: The thought must be of something?

Socrates:: Yes.

Parmenides:: Of something which is or which is not?

Socrates:: Of something which is.

Parmenides:: Must it not be of a single something, which the thought recognizes as attaching to all, being a single form or nature?

Socrates:: Yes.

Parmenides:: And will not the something which is apprehended as one and the same in all, be an idea?

Socrates:: From that, again, there is no escape.

Parmenides:: Then, if you say that everything else participates in the ideas, must you not say either that everything is made up of thoughts, and that all things think; or that they are thoughts but have no thought?

Socrates:: The latter view is no more rational than the previous one. In my opinion, the ideas are, as it were, patterns fixed in nature, and other things are like them, and resemblances of them—what is meant by the participation of other things in the ideas, is really assimilation to them.

Parmenides:: But if the individual is like the idea, must not the idea also be like the individual, in so far as the individual is a resemblance of the idea? That which is like, cannot be conceived of as other than the like of like.

Socrates:: Impossible.

Parmenides:: And when two things are alike, must they not partake of the same idea?

Socrates:: They must.

Parmenides:: And will not that of which the two partake, and which makes them alike, be the idea itself?

Socrates:: Certainly.

Parmenides:: Then the idea cannot be like the individual, or the individual like the idea; for if they are alike, some further idea of likeness will always be coming to light, and if that be like anything else, another; and new ideas will be always arising, if the idea resembles that which partakes of it?

Socrates:: Quite true.

Parmenides:: The theory, then, that other things participate in the ideas by resemblance, has to be given up, and some other mode of participation devised?

Socrates:: It would seem so.

Parmenides:: Do you see then, Socrates, how great is the difficulty of affirming the ideas to be absolute?

Socrates:: Yes, indeed.

Parmenides:: And, further, let me say that as yet you only understand a small part of the difficulty which is involved if you make of each thing a single idea, parting it off from other things.

Socrates:: What difficulty?

Parmenides:: There are many, but the greatest of all is this:—If an opponent argues that these ideas, being such as we say they ought to be, must remain unknown, no one can prove to him that he is wrong, unless he who denies their existence be a man of great ability and knowledge, and is willing to follow a long and laborious demonstration; he will remain unconvinced, and still insist that they cannot be known.

Socrates:: What do you mean, Parmenides?

Parmenides:: In the first place, I think, Socrates, that you, or any one who maintains the existence of absolute essences, will admit that they cannot exist in us.

Socrates:: No; for then they would be no longer absolute.

Parmenides:: True; and therefore when ideas are what they are in relation to one another, their essence is determined by a relation among themselves, and has nothing to do with the resemblances, or whatever they are to be termed, which are in our sphere, and from which we receive this or that name when we partake of them. And the things which are within our sphere and have the same names with them, are likewise only relative to one another, and not to the ideas which have the same names with them, but belong to themselves and not to them.

Socrates:: What do you mean?

Parmenides:: I may illustrate my meaning in this way:—A master has a slave; now there is nothing absolute in the relation between them, which is simply a relation of one man to another, But there is also an idea of mastership in the abstract, which is relative to the idea of slavery in the abstract. These natures have nothing to do with us, nor we with them; they are concerned with themselves only, and we with ourselves. Do you see my meaning?

Socrates:: Yes, I quite see your meaning.

Parmenides:: And will not knowledge—I mean absolute knowledge—answer to absolute truth?

Socrates:: Certainly.

Parmenides:: And each kind of absolute knowledge will answer to each kind of absolute being?

Socrates:: Yes.

Parmenides:: But the knowledge which we have, will answer to the truth which we have; and again, each kind of knowledge which we have, will be a knowledge of each kind of being which we have?

Socrates:: Certainly.

Parmenides:: But the ideas themselves, as you admit, we have not, and cannot have?

Socrates:: No, we cannot.

Parmenides:: And the absolute natures or kinds are known severally by the absolute idea of knowledge?

Socrates:: Yes.

Parmenides:: And we have not got the idea of knowledge?

Socrates:: No.

Parmenides:: Then none of the ideas are known to us, because we have no share in absolute knowledge?

Socrates:: I suppose not.

Parmenides:: Then the nature of the beautiful in itself, and of the good in itself, and all other ideas which we suppose to exist absolutely, are unknown to us?

Socrates:: It would seem so.

Parmenides:: I think that there is a stranger consequence still.

Socrates:: What is it?

Parmenides:: Would you, or would you not say, that absolute knowledge, if there is such a thing, must be a far more exact knowledge than our knowledge; and the same of beauty and of the rest?

Socrates:: Yes.

Parmenides:: And if there be such a thing as participation in absolute knowledge, no one is more likely than God to have this most exact knowledge?

Socrates:: Certainly.

Parmenides:: But then, will God, having absolute knowledge, have a knowledge of human things?

Socrates:: Why not?

Parmenides:: Because, Socrates, we have admitted that the ideas are not valid in relation to human things; nor human things in relation to them; the relations of either are limited to their respective spheres.

Socrates:: Yes, that has been admitted.

Parmenides:: And if God has this perfect authority, and perfect knowledge, his authority cannot rule us, nor his knowledge know us, or any human thing; just as our authority does not extend to the gods, nor our knowledge know anything which is divine, so by parity of reason they, being gods, are not our masters, neither do they know the things of men.

Socrates:: Yet, surely, to deprive God of knowledge is monstrous.

Parmenides:: These, are a few, and only a few of the difficulties in which we are involved if ideas really are and we determine each one of them to be an absolute unity. He who hears what may be said against them will deny the very existence of them—and even if they do exist, he will say that they must of necessity be unknown to man; and he will seem to have reason on his side, and as we were remarking just now, will be very difficult to convince; a man must be gifted with very considerable ability before he can learn that everything has a class and an absolute essence; and still more remarkable will he be who discovers all these things for himself, and having thoroughly investigated them is able to teach them to others.

Socrates:: I agree with you, Parmenides; and what you say is very much to my mind.

Parmenides:: And yet, Socrates, if a man, fixing his attention on these and the like difficulties, does away with ideas of things and will not admit that every individual thing has its own determinate idea which is always one and the same, he will have nothing on which his mind can rest; and so he will utterly destroy the power of reasoning, as you seem to me to have particularly noted.

Socrates:: Very true.

Parmenides:: But, then, what is to become of philosophy? Whither shall we turn, if the ideas are unknown?

Socrates:: I certainly do not see my way at present.

Parmenides:: Yes; and I think that this arises, Socrates, out of your attempting to define the beautiful, the just, the good, and the ideas generally, without sufficient previous training. I noticed your deficiency, when I heard you talking here with your friend Aristoteles, the day before yesterday. The impulse that carries you towards philosophy is assuredly noble and divine; but there is an art which is called by the vulgar idle talking, and which is often imagined to be useless; in that you must train and exercise yourself, now that you are young, or truth will elude your grasp.

Socrates:: And what is the nature of this exercise, Parmenides, which you would recommend?

Parmenides:: That which you heard Zeno practicing; at the same time, I give you credit for saying to him that you did not care to examine the perplexity in reference to visible things, or to consider the question in that way; but only in reference to objects of thought, and to what may be called ideas.

Socrates:: Why, yes, there appears to me to be no difficulty in showing by this method that visible things are like and unlike and may experience anything.

Parmenides:: Quite true; but I think that you should go a step further, and consider not only the consequences which flow from a given hypothesis, but also the consequences which flow from denying the hypothesis; and that will be still better training for you.

Socrates:: What do you mean?

Parmenides:: I mean, for example, that in the case of this very hypothesis of Zeno's about the many, you should inquire not only what will be the consequences to the many in relation to themselves and to the one, and to the one in relation to itself and the many, on the hypothesis of the being of the many, but also what will be the consequences to the one and the many in their relation to themselves and to each other, on the opposite hypothesis. Or, again, if likeness is or is not, what will be the consequences in either of these cases to the subjects of the hypothesis, and to other things, in relation both to themselves and to one another, and so of unlikeness; and the same holds good of motion and rest, of generation and destruction, and even of being and not-being. In a word, when you suppose anything to be or not to be, or to be in any way affected, you must look at the consequences in relation to the thing itself, and to any other things which you choose,—to each of them singly, to more than one, and to all; and so of other things, you must look at them in relation to themselves and to anything else which you suppose either to be or not to be, if you would train yourself perfectly and see the real truth.

Socrates:: That, Parmenides, is a tremendous business of which you speak, and I do not quite understand you; will you take some hypothesis and go through the steps?—then I shall apprehend you better.

Parmenides:: That, Socrates, is a serious task to impose on a man of my years.

Socrates:: Then will you, Zeno?

Cephalus:: Zeno answered with a smile:—

Zeno:: Let us make our petition to Parmenides himself, who is quite right in saying that you are hardly aware of the extent of the task which you are imposing on him; and if there were more of us I should not ask him, for these are not subjects which any one, especially at his age, can well speak of before a large audience; most people are not aware that this roundabout progress through all things is the only way in which the mind can attain truth and wisdom. And therefore, Parmenides, I join in the request of Socrates, that I may hear the process again which I have not heard for a long time.

Cephalus:: When Zeno had thus spoken, Pythodorus, according to Antiphon's report of him, said, that he himself and Aristoteles and the whole company entreated Parmenides to give an example of the process.

Parmenides:: I cannot refuse; and yet I feel rather like Ibycus, who, when in his old age, against his will, he fell in love, compared himself to an old racehorse, who was about to run in a chariot race, shaking with fear at the course he knew so well—this was his simile of himself. And I also experience a trembling when I remember through what an ocean of words I have to wade at my time of life. But I must indulge you, as Zeno says that I ought, and we are alone, Where shall I begin? And what shall be our first hypothesis, if I am to attempt this laborious pastime? Shall I begin with myself, and take my own hypothesis of the one? and consider the consequences which follow on the supposition either of the being or of the not-being of one?

Zeno:: By all means.

Parmenides:: And who will answer me? Shall I propose the youngest? He will not make difficulties and will be the most likely to say what he thinks; and his answers will give me time to breathe.

Aristoteles:: I am the one whom you mean, Parmenides; for I am the youngest and at your service. Ask, and I will answer.

Cephalus:: Parmenides proceeded:

Parmenides:: If one is, the one cannot be many?

Aristoteles:: Impossible.

Parmenides:: Then the one cannot have parts, and cannot be a whole?

Aristoteles:: Why not?

Parmenides:: Because every part is part of a whole; is it not?

Aristoteles:: Yes.

Parmenides:: And what is a whole? would not that of which no part is wanting be a whole?

Aristoteles:: Certainly.

Parmenides:: Then, in either case, the one would be made up of parts; both as being a whole, and also as having parts?

Aristoteles:: To be sure.

Parmenides:: And in either case, the one would be many, and not one?

Aristoteles:: True.

Parmenides:: But, surely, it ought to be one and not many?

Aristoteles:: It ought.

Parmenides:: Then, if the one is to remain one, it will not be a whole, and will not have parts?

Aristoteles:: No.

Parmenides:: But if it has no parts, it will have neither beginning, middle, nor end; for these would of course be parts of it.

Aristoteles:: Right.

Parmenides:: But then, again, a beginning and an end are the limits of everything?

Aristoteles:: Certainly.

Parmenides:: Then the one, having neither beginning nor end, is unlimited?

Aristoteles:: Yes, unlimited.

Parmenides:: And therefore formless; for it cannot partake either of round or straight.

Aristoteles:: But why?

Parmenides:: Why, because the round is that of which all the extreme points are equidistant from the centre?

Aristoteles:: Yes.

Parmenides:: And the straight is that of which the centre intercepts the view of the extremes?

Aristoteles:: True.

Parmenides:: Then the one would have parts and would be many, if it partook either of a straight or of a circular form?

Aristoteles:: Assuredly.

Parmenides:: But having no parts, it will be neither straight nor round?

Aristoteles:: Right.

Parmenides:: And, being of such a nature, it cannot be in any place, for it cannot be either in another or in itself.

Aristoteles:: How so?

Parmenides:: Because if it were in another, it would be encircled by that in which it was, and would touch it at many places and with many parts; but that which is one and indivisible, and does not partake of a circular nature, cannot be touched all round in many places.

Aristoteles:: Certainly not.

Parmenides:: But if, on the other hand, one were in itself, it would also be contained by nothing else but itself; that is to say, if it were really in itself; for nothing can be in anything which does not contain it.

Aristoteles:: Impossible.

Parmenides:: But then, that which contains must be other than that which is contained? for the same whole cannot do and suffer both at once; and if so, one will be no longer one, but two?

Aristoteles:: True.

Parmenides:: Then one cannot be anywhere, either in itself or in another?

Aristoteles:: No.

Parmenides:: Further consider, whether that which is of such a nature can have either rest or motion.

Aristoteles:: Why not?

Parmenides:: Why, because the one, if it were moved, would be either moved in place or changed in nature; for these are the only kinds of motion.

Aristoteles:: Yes.

Parmenides:: And the one, when it changes and ceases to be itself, cannot be any longer one.

Aristoteles:: It cannot.

Parmenides:: It cannot therefore experience the sort of motion which is change of nature?

Aristoteles:: Clearly not.

Parmenides:: Then can the motion of the one be in place?

Aristoteles:: Perhaps.

Parmenides:: But if the one moved in place, must it not either move round and round in the same place, or from one place to another?

Aristoteles:: It must.

Parmenides:: And that which moves in a circle must rest upon a centre; and that which goes round upon a centre must have parts which are different from the centre; but that which has no centre and no parts cannot possibly be carried round upon a centre?

Aristoteles:: Impossible.

Parmenides:: But perhaps the motion of the one consists in change of place?

Aristoteles:: Perhaps so, if it moves at all.

Parmenides:: And have we not already shown that it cannot be in anything?

Aristoteles:: Yes.

Parmenides:: Then its coming into being in anything is still more impossible; is it not?

Aristoteles:: I do not see why.

Parmenides:: Why, because anything which comes into being in anything, can neither as yet be in that other thing while still coming into being, nor be altogether out of it, if already coming into being in it.

Aristoteles:: Certainly not.

Parmenides:: And therefore whatever comes into being in another must have parts, and then one part may be in, and another part out of that other; but that which has no parts can never be at one and the same time neither wholly within nor wholly without anything.

Aristoteles:: True.

Parmenides:: And is there not a still greater impossibility in that which has no parts, and is not a whole, coming into being anywhere, since it cannot come into being either as a part or as a whole?

Aristoteles:: Clearly.

Parmenides:: Then it does not change place by revolving in the same spot, nor by going somewhere and coming into being in something; nor again, by change in itself?

Aristoteles:: Very true.

Parmenides:: Then in respect of any kind of motion the one is immoveable?

Aristoteles:: Immoveable.

Parmenides:: But neither can the one be in anything, as we affirm?

Aristoteles:: Yes, we said so.

Parmenides:: Then it is never in the same?

Aristoteles:: Why not?

Parmenides:: Because if it were in the same it would be in something.

Aristoteles:: Certainly.

Parmenides:: And we said that it could not be in itself, and could not be in other?

Aristoteles:: True.

Parmenides:: Then one is never in the same place?

Aristoteles:: It would seem not.

Parmenides:: But that which is never in the same place is never quiet or at rest?

Aristoteles:: Never.

Parmenides:: One then, as would seem, is neither at rest nor in motion?

Aristoteles:: It certainly appears so.

Parmenides:: Neither will it be the same with itself or other; nor again, other than itself or other.

Aristoteles:: How is that?

Parmenides:: If other than itself it would be other than one, and would not be one.

Aristoteles:: True.

Parmenides:: And if the same with other, it would be that other, and not itself; so that upon this supposition too, it would not have the nature of one, but would be other than one?

Aristoteles:: It would.

Parmenides:: Then it will not be the same with other, or other than itself?

Aristoteles:: It will not.

Parmenides:: Neither will it be other than other, while it remains one; for not one, but only other, can be other than other, and nothing else.

Aristoteles:: True.

Parmenides:: Then not by virtue of being one will it be other?

Aristoteles:: Certainly not.

Parmenides:: But if not by virtue of being one, not by virtue of itself; and if not by virtue of itself, not itself, and itself not being other at all, will not be other than anything?

Aristoteles:: Right.

Parmenides:: Neither will one be the same with itself.

Aristoteles:: How not?

Parmenides:: Surely the nature of the one is not the nature of the same.

Aristoteles:: Why not?

Parmenides:: It is not when anything becomes the same with anything that it becomes one.

Aristoteles:: What of that?

Parmenides:: Anything which becomes the same with the many, necessarily becomes many and not one.

Aristoteles:: True.

Parmenides:: But, if there were no difference between the one and the same, when a thing became the same, it would always become one; and when it became one, the same?

Aristoteles:: Certainly.

Parmenides:: And, therefore, if one be the same with itself, it is not one with itself, and will therefore be one and also not one.

Aristoteles:: Surely that is impossible.

Parmenides:: And therefore the one can neither be other than other, nor the same with itself.

Aristoteles:: Impossible.

Parmenides:: And thus the one can neither be the same, nor other, either in relation to itself or other?

Aristoteles:: No.

Parmenides:: Neither will the one be like anything or unlike itself or other.

Aristoteles:: Why not?

Parmenides:: Because likeness is sameness of affections.

Aristoteles:: Yes.

Parmenides:: And sameness has been shown to be of a nature distinct from oneness?

Aristoteles:: That has been shown.

Parmenides:: But if the one had any other affection than that of being one, it would be affected in such a way as to be more than one; which is impossible.

Aristoteles:: True.

Parmenides:: Then the one can never be so affected as to be the same either with another or with itself?

Aristoteles:: Clearly not.

Parmenides:: Then it cannot be like another, or like itself?

Aristoteles:: No.

Parmenides:: Nor can it be affected so as to be other, for then it would be affected in such a way as to be more than one.

Aristoteles:: It would.

Parmenides:: That which is affected otherwise than itself or another, will be unlike itself or another, for sameness of affections is likeness.

Aristoteles:: True.

Parmenides:: But the one, as appears, never being affected otherwise, is never unlike itself or other?

Aristoteles:: Never.

Parmenides:: Then the one will never be either like or unlike itself or other?

Aristoteles:: Plainly not.

Parmenides:: Again, being of this nature, it can neither be equal nor unequal either to itself or to other.

Aristoteles:: How is that?

Parmenides:: Why, because the one if equal must be of the same measures as that to which it is equal.

Aristoteles:: True.

Parmenides:: And if greater or less than things which are commensurable with it, the one will have more measures than that which is less, and fewer than that which is greater?

Aristoteles:: Yes.

Parmenides:: And so of things which are not commensurate with it, the one will have greater measures than that which is less and smaller than that which is greater.

Aristoteles:: Certainly.

Parmenides:: But how can that which does not partake of sameness, have either the same measures or have anything else the same?

Aristoteles:: Impossible.

Parmenides:: And not having the same measures, the one cannot be equal either with itself or with another?

Aristoteles:: It appears so.

Parmenides:: But again, whether it have fewer or more measures, it will have as many parts as it has measures; and thus again the one will be no longer one but will have as many parts as measures.

Aristoteles:: Right.

Parmenides:: And if it were of one measure, it would be equal to that measure; yet it has been shown to be incapable of equality.

Aristoteles:: It has.

Parmenides:: Then it will neither partake of one measure, nor of many, nor of few, nor of the same at all, nor be equal to itself or another; nor be greater or less than itself, or other?

Aristoteles:: Certainly.

Parmenides:: Well, and do we suppose that one can be older, or younger than anything, or of the same age with it?

Aristoteles:: Why not?

Parmenides:: Why, because that which is of the same age with itself or other, must partake of equality or likeness of time; and we said that the one did not partake either of equality or of likeness?

Aristoteles:: We did say so.

Parmenides:: And we also said, that it did not partake of inequality or unlikeness.

Aristoteles:: Very true.

Parmenides:: How then can one, being of this nature, be either older or younger than anything, or have the same age with it?

Aristoteles:: In no way.

Parmenides:: Then one cannot be older or younger, or of the same age, either with itself or with another?

Aristoteles:: Clearly not.

Parmenides:: Then the one, being of this nature, cannot be in time at all; for must not that which is in time, be always growing older than itself?

Aristoteles:: Certainly.

Parmenides:: And that which is older, must always be older than something which is younger?

Aristoteles:: True.

Parmenides:: Then, that which becomes older than itself, also becomes at the same time younger than itself, if it is to have something to become older than.

Aristoteles:: What do you mean?

Parmenides:: I mean this:—A thing does not need to become different from another thing which is already different; it is different, and if its different has become, it has become different; if its different will be, it will be different; but of that which is becoming different, there cannot have been, or be about to be, or yet be, a different—the only different possible is one which is becoming.

Aristoteles:: That is inevitable.

Parmenides:: But, surely, the elder is a difference relative to the younger, and to nothing else.

Aristoteles:: True.

Parmenides:: Then that which becomes older than itself must also, at the same time, become younger than itself?

Aristoteles:: Yes.

Parmenides:: But again, it is true that it cannot become for a longer or for a shorter time than itself, but it must become, and be, and have become, and be about to be, for the same time with itself?

Aristoteles:: That again is inevitable.

Parmenides:: Then things which are in time, and partake of time, must in every case, I suppose, be of the same age with themselves; and must also become at once older and younger than themselves?

Aristoteles:: Yes.

Parmenides:: But the one did not partake of those affections?

Aristoteles:: Not at all.

Parmenides:: Then it does not partake of time, and is not in any time?

Aristoteles:: So the argument shows.

Parmenides:: Well, but do not the expressions 'was,' and 'has become,' and 'was becoming,' signify a participation of past time?

Aristoteles:: Certainly.

Parmenides:: And do not 'will be,' 'will become,' 'will have become,' signify a participation of future time?

Aristoteles:: Yes.

Parmenides:: And 'is,' or 'becomes,' signifies a participation of present time?

Aristoteles:: Certainly.

Parmenides:: And if the one is absolutely without participation in time, it never had become, or was becoming, or was at any time, or is now become or is becoming, or is, or will become, or will have become, or will be, hereafter.

Aristoteles:: Most true.

Parmenides:: But are there any modes of partaking of being other than these?

Aristoteles:: There are none.

Parmenides:: Then the one cannot possibly partake of being?

Aristoteles:: That is the inference.

Parmenides:: Then the one is not at all?

Aristoteles:: Clearly not.

Parmenides:: Then the one does not exist in such way as to be one; for if it were and partook of being, it would already be; but if the argument is to be trusted, the one neither is nor is one?

Aristoteles:: True.

Parmenides:: But that which is not admits of no attribute or relation?

Aristoteles:: Of course not.

Parmenides:: Then there is no name, nor expression, nor perception, nor opinion, nor knowledge of it?

Aristoteles:: Clearly not.

Parmenides:: Then it is neither named, nor expressed, nor opined, nor known, nor does anything that is perceive it.

Aristoteles:: So we must infer.

Parmenides:: But can all this be true about the one?

Aristoteles:: I think not.

Parmenides:: Suppose, now, that we return once more to the original hypothesis; let us see whether, on a further review, any new aspect of the question appears.

Aristoteles:: I shall be very happy to do so.

Parmenides:: We say that we have to work out together all the consequences, whatever they may be, which follow, if the one is?

Aristoteles:: Yes.

Parmenides:: Then we will begin at the beginning:—If one is, can one be, and not partake of being?

Aristoteles:: Impossible.

Parmenides:: Then the one will have being, but its being will not be the same with the one; for if the same, it would not be the being of the one; nor would the one have participated in being, for the proposition that one is would have been identical with the proposition that one is one; but our hypothesis is not if one is one, what will follow, but if one is:—am I not right?

Aristoteles:: Quite right.

Parmenides:: We mean to say, that being has not the same significance as one?

Aristoteles:: Of course.

Parmenides:: And when we put them together shortly, and say 'One is,' that is equivalent to saying, 'partakes of being'?

Aristoteles:: Quite true.

Parmenides:: Once more then let us ask, if one is what will follow. Does not this hypothesis necessarily imply that one is of such a nature as to have parts?

Aristoteles:: How so?

Parmenides:: In this way:—If being is predicated of the one, if the one is, and one of being, if being is one; and if being and one are not the same; and since the one, which we have assumed, is, must not the whole, if it is one, itself be, and have for its parts, one and being?

Aristoteles:: Certainly.

Parmenides:: And is each of these parts—one and being—to be simply called a part, or must the word 'part' be relative to the word 'whole'?

Aristoteles:: The latter.

Parmenides:: Then that which is one is both a whole and has a part?

Aristoteles:: Certainly.

Parmenides:: Again, of the parts of the one, if it is—I mean being and one—does either fail to imply the other? is the one wanting to being, or being to the one?

Aristoteles:: Impossible.

Parmenides:: Thus, each of the parts also has in turn both one and being, and is at the least made up of two parts; and the same principle goes on for ever, and every part whatever has always these two parts; for being always involves one, and one being; so that one is always disappearing, and becoming two.

Aristoteles:: Certainly.

Parmenides:: And so the one, if it is, must be infinite in multiplicity?

Aristoteles:: Clearly.

Parmenides:: Let us take another direction.

Aristoteles:: What direction?

Parmenides:: We say that the one partakes of being and therefore it is?

Aristoteles:: Yes.

Parmenides:: And in this way, the one, if it has being, has turned out to be many?

Aristoteles:: True.

Parmenides:: But now, let us abstract the one which, as we say, partakes of being, and try to imagine it apart from that of which, as we say, it partakes—will this abstract one be one only or many?

Aristoteles:: One, I think.

Parmenides:: Let us see:—Must not the being of one be other than one? for the one is not being, but, considered as one, only partook of being?

Aristoteles:: Certainly.

Parmenides:: If being and the one be two different things, it is not because the one is one that it is other than being; nor because being is being that it is other than the one; but they differ from one another in virtue of otherness and difference.

Aristoteles:: Certainly.

Parmenides:: So that the other is not the same—either with the one or with being?

Aristoteles:: Certainly not.

Parmenides:: And therefore whether we take being and the other, or being and the one, or the one and the other, in every such case we take two things, which may be rightly called both.

Aristoteles:: How so.

Parmenides:: In this way—you may speak of being?

Aristoteles:: Yes.

Parmenides:: And also of one?

Aristoteles:: Yes.

Parmenides:: Then now we have spoken of either of them?

Aristoteles:: Yes.

Parmenides:: Well, and when I speak of being and one, I speak of them both?

Aristoteles:: Certainly.

Parmenides:: And if I speak of being and the other, or of the one and the other,—in any such case do I not speak of both?

Aristoteles:: Yes.

Parmenides:: And must not that which is correctly called both, be also two?

Aristoteles:: Undoubtedly.

Parmenides:: And of two things how can either by any possibility not be one?

Aristoteles:: It cannot.

Parmenides:: Then, if the individuals of the pair are together two, they must be severally one?

Aristoteles:: Clearly.

Parmenides:: And if each of them is one, then by the addition of any one to any pair, the whole becomes three?

Aristoteles:: Yes.

Parmenides:: And three are odd, and two are even?

Aristoteles:: Of course.

Parmenides:: And if there are two there must also be twice, and if there are three there must be thrice; that is, if twice one makes two, and thrice one three?

Aristoteles:: Certainly.

Parmenides:: There are two, and twice, and therefore there must be twice two; and there are three, and there is thrice, and therefore there must be thrice three?

Aristoteles:: Of course.

Parmenides:: If there are three and twice, there is twice three; and if there are two and thrice, there is thrice two?

Aristoteles:: Undoubtedly.

Parmenides:: Here, then, we have even taken even times, and odd taken odd times, and even taken odd times, and odd taken even times.

Aristoteles:: True.

Parmenides:: And if this is so, does any number remain which has no necessity to be?

Aristoteles:: None whatever.

Parmenides:: Then if one is, number must also be?

Aristoteles:: It must.

Parmenides:: But if there is number, there must also be many, and infinite multiplicity of being; for number is infinite in multiplicity, and partakes also of being: am I not right?

Aristoteles:: Certainly.

Parmenides:: And if all number participates in being, every part of number will also participate?

Aristoteles:: Yes.

Parmenides:: Then being is distributed over the whole multitude of things, and nothing that is, however small or however great, is devoid of it? And, indeed, the very supposition of this is absurd, for how can that which is, be devoid of being?

Aristoteles:: In no way.

Parmenides:: And it is divided into the greatest and into the smallest, and into being of all sizes, and is broken up more than all things; the divisions of it have no limit.

Aristoteles:: True.

Parmenides:: Then it has the greatest number of parts?

Aristoteles:: Yes, the greatest number.

Parmenides:: Is there any of these which is a part of being, and yet no part?

Aristoteles:: Impossible.

Parmenides:: But if it is at all and so long as it is, it must be one, and cannot be none?

Aristoteles:: Certainly.

Parmenides:: Then the one attaches to every single part of being, and does not fail in any part, whether great or small, or whatever may be the size of it?

Aristoteles:: True.

Parmenides:: But reflect:—Can one, in its entirety, be in many places at the same time?

Aristoteles:: No; I see the impossibility of that.

Parmenides:: And if not in its entirety, then it is divided; for it cannot be present with all the parts of being, unless divided.

Aristoteles:: True.

Parmenides:: And that which has parts will be as many as the parts are?

Aristoteles:: Certainly.

Parmenides:: Then we were wrong in saying just now, that being was distributed into the greatest number of parts. For it is not distributed into parts more than the one, but into parts equal to the one; the one is never wanting to being, or being to the one, but being two they are co-equal and co-extensive.

Aristoteles:: Certainly that is true.

Parmenides:: The one itself, then, having been broken up into parts by being, is many and infinite?

Aristoteles:: True.

Parmenides:: Then not only the one which has being is many, but the one itself distributed by being, must also be many?

Aristoteles:: Certainly.

Parmenides:: Further, inasmuch as the parts are parts of a whole, the one, as a whole, will be limited; for are not the parts contained by the whole?

Aristoteles:: Certainly.

Parmenides:: And that which contains, is a limit?

Aristoteles:: Of course.

Parmenides:: Then the one if it has being is one and many, whole and parts, having limits and yet unlimited in number?

Aristoteles:: Clearly.

Parmenides:: And because having limits, also having extremes?

Aristoteles:: Certainly.

Parmenides:: And if a whole, having beginning and middle and end. For can anything be a whole without these three? And if any one of them is wanting to anything, will that any longer be a whole?

Aristoteles:: No.

Parmenides:: Then the one, as appears, will have beginning, middle, and end.

Aristoteles:: It will.

Parmenides:: But, again, the middle will be equidistant from the extremes; or it would not be in the middle?

Aristoteles:: Yes.

Parmenides:: Then the one will partake of figure, either rectilinear or round, or a union of the two?

Aristoteles:: True.

Parmenides:: And if this is the case, it will be both in itself and in another too.

Aristoteles:: How?

Parmenides:: Every part is in the whole, and none is outside the whole.

Aristoteles:: True.

Parmenides:: And all the parts are contained by the whole?

Aristoteles:: Yes.

Parmenides:: And the one is all its parts, and neither more nor less than all?

Aristoteles:: No.

Parmenides:: And the one is the whole?

Aristoteles:: Of course.

Parmenides:: But if all the parts are in the whole, and the one is all of them and the whole, and they are all contained by the whole, the one will be contained by the one; and thus the one will be in itself.

Aristoteles:: That is true.

Parmenides:: But then, again, the whole is not in the parts—neither in all the parts, nor in some one of them. For if it is in all, it must be in one; for if there were any one in which it was not, it could not be in all the parts; for the part in which it is wanting is one of all, and if the whole is not in this, how can it be in them all?

Aristoteles:: It cannot.

Parmenides:: Nor can the whole be in some of the parts; for if the whole were in some of the parts, the greater would be in the less, which is impossible.

Aristoteles:: Yes, impossible.

Parmenides:: But if the whole is neither in one, nor in more than one, nor in all of the parts, it must be in something else, or cease to be anywhere at all?

Aristoteles:: Certainly.

Parmenides:: If it were nowhere, it would be nothing; but being a whole, and not being in itself, it must be in another.

Aristoteles:: Very true.

Parmenides:: The one then, regarded as a whole, is in another, but regarded as being all its parts, is in itself; and therefore the one must be itself in itself and also in another.

Aristoteles:: Certainly.

Parmenides:: The one then, being of this nature, is of necessity both at rest and in motion?

Aristoteles:: How?

Parmenides:: The one is at rest since it is in itself, for being in one, and not passing out of this, it is in the same, which is itself.

Aristoteles:: True.

Parmenides:: And that which is ever in the same, must be ever at rest?

Aristoteles:: Certainly.

Parmenides:: Well, and must not that, on the contrary, which is ever in other, never be in the same; and if never in the same, never at rest, and if not at rest, in motion?

Aristoteles:: True.

Parmenides:: Then the one being always itself in itself and other, must always be both at rest and in motion?

Aristoteles:: Clearly.

Parmenides:: And must be the same with itself, and other than itself; and also the same with the others, and other than the others; this follows from its previous affections.

Aristoteles:: How so?

Parmenides:: Everything in relation to every other thing, is either the same or other; or if neither the same nor other, then in the relation of a part to a whole, or of a whole to a part.

Aristoteles:: Clearly.

Parmenides:: And is the one a part of itself?

Aristoteles:: Certainly not.

Parmenides:: Since it is not a part in relation to itself it cannot be related to itself as whole to part?

Aristoteles:: It cannot.

Parmenides:: But is the one other than one?

Aristoteles:: No.

Parmenides:: And therefore not other than itself?

Aristoteles:: Certainly not.

Parmenides:: If then it be neither other, nor a whole, nor a part in relation to itself, must it not be the same with itself?

Aristoteles:: Certainly.

Parmenides:: But then, again, a thing which is in another place from 'itself,' if this 'itself' remains in the same place with itself, must be other than 'itself,' for it will be in another place?

Aristoteles:: True.

Parmenides:: Then the one has been shown to be at once in itself and in another?

Aristoteles:: Yes.

Parmenides:: Thus, then, as appears, the one will be other than itself?

Aristoteles:: True.

Parmenides:: Well, then, if anything be other than anything, will it not be other than that which is other?

Aristoteles:: Certainly.

Parmenides:: And will not all things that are not one, be other than the one, and the one other than the not-one?

Aristoteles:: Of course.

Parmenides:: Then the one will be other than the others?

Aristoteles:: True.

Parmenides:: But, consider:—Are not the absolute same, and the absolute other, opposites to one another?

Aristoteles:: Of course.

Parmenides:: Then will the same ever be in the other, or the other in the same?

Aristoteles:: They will not.

Parmenides:: If then the other is never in the same, there is nothing in which the other is during any space of time; for during that space of time, however small, the other would be in the same. Is not that true?

Aristoteles:: Yes.

Parmenides:: And since the other is never in the same, it can never be in anything that is.

Aristoteles:: True.

Parmenides:: Then the other will never be either in the not-one, or in the one?

Aristoteles:: Certainly not.

Parmenides:: Then not by reason of otherness is the one other than the not-one, or the not-one other than the one.

Aristoteles:: No.

Parmenides:: Nor by reason of themselves will they be other than one another, if not partaking of the other.

Aristoteles:: How can they be?

Parmenides:: But if they are not other, either by reason of themselves or of the other, will they not altogether escape being other than one another?

Aristoteles:: They will.

Parmenides:: Again, the not-one cannot partake of the one; otherwise it would not have been not-one, but would have been in some way one.

Aristoteles:: True.

Parmenides:: Nor can the not-one be number; for having number, it would not have been not-one at all.

Aristoteles:: It would not.

Parmenides:: Again, is the not-one part of the one; or rather, would it not in that case partake of the one?

Aristoteles:: It would.

Parmenides:: If then, in every point of view, the one and the not-one are distinct, then neither is the one part or whole of the not-one, nor is the not-one part or whole of the one?

Aristoteles:: No.

Parmenides:: But we said that things which are neither parts nor wholes of one another, nor other than one another, will be the same with one another:—so we said?

Aristoteles:: Yes.

Parmenides:: Then shall we say that the one, being in this relation to the not-one, is the same with it?

Aristoteles:: Let us say so.

Parmenides:: Then it is the same with itself and the others, and also other than itself and the others.

Aristoteles:: That appears to be the inference.

Parmenides:: And it will also be like and unlike itself and the others?

Aristoteles:: Perhaps.

Parmenides:: Since the one was shown to be other than the others, the others will also be other than the one.

Aristoteles:: Yes.

Parmenides:: And the one is other than the others in the same degree that the others are other than it, and neither more nor less?

Aristoteles:: True.

Parmenides:: And if neither more nor less, then in a like degree?

Aristoteles:: Yes.

Parmenides:: In virtue of the affection by which the one is other than others and others in like manner other than it, the one will be affected like the others and the others like the one.

Aristoteles:: How do you mean?

Parmenides:: I may take as an illustration the case of names: You give a name to a thing?

Aristoteles:: Yes.

Parmenides:: And you may say the name once or oftener?

Aristoteles:: Yes.

Parmenides:: And when you say it once, you mention that of which it is the name? and when more than once, is it something else which you mention? or must it always be the same thing of which you speak, whether you utter the name once or more than once?

Aristoteles:: Of course it is the same.

Parmenides:: And is not ‘other’ a name given to a thing?

Aristoteles:: Certainly.

Parmenides:: Whenever, then, you use the word ‘other’ whether once or oftener, you name that of which it is the name, and to no other do you give the name?

Aristoteles:: True.

Parmenides:: Then when we say that the others are other than the one, and the one other than the others, in repeating the word ‘other’ we speak of that nature to which the name is applied, and of no other?

Aristoteles:: Quite true.

Parmenides:: Then the one which is other than others, and the other which is other than the one, in that the word ‘other’ is applied to both, will be in the same condition; and that which is in the same condition is like?

Aristoteles:: Yes.

Parmenides:: Then in virtue of the affection by which the one is other than the others, every thing will be like every thing, for every thing is other than every thing.

Aristoteles:: True.

Parmenides:: Again, the like is opposed to the unlike?

Aristoteles:: Yes.

Parmenides:: And the other to the same?

Aristoteles:: True again.

Parmenides:: And the one was also shown to be the same with the others?

Aristoteles:: Yes.

Parmenides:: And to be the same with the others is the opposite of being other than the others?

Aristoteles:: Certainly.

Parmenides:: And in that it was other it was shown to be like?

Aristoteles:: Yes.

Parmenides:: But in that it was the same it will be unlike by virtue of the opposite affection to that which made it like; and this was the affection of otherness.

Aristoteles:: Yes.

Parmenides:: The same then will make it unlike; otherwise it will not be the opposite of the other.

Aristoteles:: True.

Parmenides:: Then the one will be both like and unlike the others; like in so far as it is other, and unlike in so far as it is the same.

Aristoteles:: Yes, that argument may be used.

Parmenides:: And there is another argument.

Aristoteles:: What?

Parmenides:: In so far as it is affected in the same way it is not affected otherwise, and not being affected otherwise is not unlike, and not being unlike, is like; but in so far as it is affected by other it is otherwise, and being otherwise affected is unlike.

Aristoteles:: True.

Parmenides:: Then because the one is the same with the others and other than the others, on either of these two grounds, or on both of them, it will be both like and unlike the others?

Aristoteles:: Certainly.

Parmenides:: And in the same way as being other than itself and the same with itself, on either of these two grounds and on both of them, it will be like and unlike itself?

Aristoteles:: Of course.

Parmenides:: Again, how far can the one touch or not touch itself and others?—consider.

Aristoteles:: I am considering.

Parmenides:: The one was shown to be in itself which was a whole?

Aristoteles:: True.

Parmenides:: And also in other things?

Aristoteles:: Yes.

Parmenides:: In so far as it is in other things it would touch other things, but in so far as it is in itself it would be debarred from touching them, and would touch itself only.

Aristoteles:: Clearly.

Parmenides:: Then the inference is that it would touch both?

Aristoteles:: It would.

Parmenides:: But what do you say to a new point of view? Must not that which is to touch another be next to that which it is to touch, and occupy the place nearest to that in which what it touches is situated?

Aristoteles:: True.

Parmenides:: Then the one, if it is to touch itself, ought to be situated next to itself, and occupy the place next to that in which itself is?

Aristoteles:: It ought.

Parmenides:: And that would require that the one should be two, and be in two places at once, and this, while it is one, will never happen.

Aristoteles:: No.

Parmenides:: Then the one cannot touch itself any more than it can be two?

Aristoteles:: It cannot.

Parmenides:: Neither can it touch others.

Aristoteles:: Why not?

Parmenides:: The reason is, that whatever is to touch another must be in separation from, and next to, that which it is to touch, and no third thing can be between them.

Aristoteles:: True.

Parmenides:: Two things, then, at the least are necessary to make contact possible?

Aristoteles:: They are.

Parmenides:: And if to the two a third be added in due order, the number of terms will be three, and the contacts two?

Aristoteles:: Yes.

Parmenides:: And every additional term makes one additional contact, whence it follows that the contacts are one less in number than the terms; the first two terms exceeded the number of contacts by one, and the whole number of terms exceeds the whole number of contacts by one in like manner; and for every one which is afterwards added to the number of terms, one contact is added to the contacts.

Aristoteles:: True.

Parmenides:: Whatever is the whole number of things, the contacts will be always one less.

Aristoteles:: True.

Parmenides:: But if there be only one, and not two, there will be no contact?

Aristoteles:: How can there be?

Parmenides:: And do we not say that the others being other than the one are not one and have no part in the one?

Aristoteles:: True.

Parmenides:: Then they have no number, if they have no one in them?

Aristoteles:: Of course not.

Parmenides:: Then the others are neither one nor two, nor are they called by the name of any number?

Aristoteles:: No.

Parmenides:: One, then, alone is one, and two do not exist?

Aristoteles:: Clearly not.

Parmenides:: And if there are not two, there is no contact?

Aristoteles:: There is not.

Parmenides:: Then neither does the one touch the others, nor the others the one, if there is no contact?

Aristoteles:: Certainly not.

Parmenides:: For all which reasons the one touches and does not touch itself and the others?

Aristoteles:: True.

Parmenides:: Further—is the one equal and unequal to itself and others?

Aristoteles:: How do you mean?

Parmenides:: It the one were greater or less than the others, or the others greater or less than the one, they would not be greater or less than each other in virtue of their being the one and the others; but, if in addition to their being what they are they had equality, they would be equal to one another, or if the one had smallness and the others greatness, or the one had greatness and the others smallness—whichever kind had greatness would be greater, and whichever had smallness would be smaller?

Aristoteles:: Certainly.

Parmenides:: Then there are two such ideas as greatness and smallness; for if they were not they could not be opposed to each other and be present in that which is.

Aristoteles:: How could they?

Parmenides:: If, then, smallness is present in the one it will be present either in the whole or in a part of the whole?

Aristoteles:: Certainly.

Parmenides:: Suppose the first; it will be either co-equal and co-extensive with the whole one, or will contain the one?

Aristoteles:: Clearly.

Parmenides:: If it be co-extensive with the one it will be co-equal with the one, or if containing the one it will be greater than the one?

Aristoteles:: Of course.

Parmenides:: But can smallness be equal to anything or greater than anything, and have the functions of greatness and equality and not its own functions?

Aristoteles:: Impossible.

Parmenides:: Then smallness cannot be in the whole of one, but, if at all, in a part only?

Aristoteles:: Yes.

Parmenides:: And surely not in all of a part, for then the difficulty of the whole will recur; it will be equal to or greater than any part in which it is.

Aristoteles:: Certainly.

Parmenides:: Then smallness will not be in anything, whether in a whole or in a part; nor will there be anything small but actual smallness.

Aristoteles:: True.

Parmenides:: Neither will greatness be in the one, for if greatness be in anything there will be something greater other and besides greatness itself, namely, that in which greatness is; and this too when the small itself is not there, which the one, if it is great, must exceed; this, however, is impossible, seeing that smallness is wholly absent.

Aristoteles:: True.

Parmenides:: But absolute greatness is only greater than absolute smallness, and smallness is only smaller than absolute greatness.

Aristoteles:: Very true.

Parmenides:: Then other things are not greater or less than the one, if they have neither greatness nor smallness; nor have greatness or smallness any power of exceeding or being exceeded in relation to the one, but only in relation to one another; nor will the one be greater or less than them or others, if it has neither greatness nor smallness.

Aristoteles:: Clearly not.

Parmenides:: Then if the one is neither greater nor less than the others, it cannot either exceed or be exceeded by them?

Aristoteles:: Certainly not.

Parmenides:: And that which neither exceeds nor is exceeded, must be on an equality; and being on an equality, must be equal.

Aristoteles:: Of course.

Parmenides:: And this will be true also of the relation of the one to itself; having neither greatness nor smallness in itself, it will neither exceed nor be exceeded by itself, but will be on an equality with and equal to itself.

Aristoteles:: Certainly.

Parmenides:: Then the one will be equal both to itself and the others?

Aristoteles:: Clearly so.

Parmenides:: And yet the one, being itself in itself, will also surround and be without itself; and, as containing itself, will be greater than itself; and, as contained in itself, will be less; and will thus be greater and less than itself.

Aristoteles:: It will.

Parmenides:: Now there cannot possibly be anything which is not included in the one and the others?

Aristoteles:: Of course not.

Parmenides:: But, surely, that which is must always be somewhere?

Aristoteles:: Yes.

Parmenides:: But that which is in anything will be less, and that in which it is will be greater; in no other way can one thing be in another.

Aristoteles:: True.

Parmenides:: And since there is nothing other or besides the one and the others, and they must be in something, must they not be in one another, the one in the others and the others in the one, if they are to be anywhere?

Aristoteles:: That is clear.

Parmenides:: But inasmuch as the one is in the others, the others will be greater than the one, because they contain the one, which will be less than the others, because it is contained in them; and inasmuch as the others are in the one, the one on the same principle will be greater than the others, and the others less than the one.

Aristoteles:: True.

Parmenides:: The one, then, will be equal to and greater and less than itself and the others?

Aristoteles:: Clearly.

Parmenides:: And if it be greater and less and equal, it will be of equal and more and less measures or divisions than itself and the others, and if of measures, also of parts?

Aristoteles:: Of course.

Parmenides:: And if of equal and more and less measures or divisions, it will be in number more or less than itself and the others, and likewise equal in number to itself and to the others?

Aristoteles:: How is that?

Parmenides:: It will be of more measures than those things which it exceeds, and of as many parts as measures; and so with that to which it is equal, and that than which it is less.

Aristoteles:: True.

Parmenides:: And being greater and less than itself, and equal to itself, it will be of equal measures with itself and of more and fewer measures than itself; and if of measures then also of parts?

Aristoteles:: It will.

Parmenides:: And being of equal parts with itself, it will be numerically equal to itself; and being of more parts, more, and being of less, less than itself?

Aristoteles:: Certainly.

Parmenides:: And the same will hold of its relation to other things; inasmuch as it is greater than them, it will be more in number than them; and inasmuch as it is smaller, it will be less in number; and inasmuch as it is equal in size to other things, it will be equal to them in number.

Aristoteles:: Certainly.

Parmenides:: Once more, then, as would appear, the one will be in number both equal to and more and less than both itself and all other things.

Aristoteles:: It will.

Parmenides:: Does the one also partake of time? And is it and does it become older and younger than itself and others, and again, neither younger nor older than itself and others, by virtue of participation in time?

Aristoteles:: How do you mean?

Parmenides:: If one is, being must be predicated of it?

Aristoteles:: Yes.

Parmenides:: But to be (εἶναι) is only participation of being in present time, and to have been is the participation of being at a past time, and to be about to be is the participation of being at a future time?

Aristoteles:: Very true.

Parmenides:: Then the one, since it partakes of being, partakes of time?

Aristoteles:: Certainly.

Parmenides:: And is not time always moving forward?

Aristoteles:: Yes.

Parmenides:: Then the one is always becoming older than itself, since it moves forward in time?

Aristoteles:: Certainly.

Parmenides:: And do you remember that the older becomes older than that which becomes younger?

Aristoteles:: I remember.

Parmenides:: Then since the one becomes older than itself, it becomes younger at the same time?

Aristoteles:: Certainly.

Parmenides:: Thus, then, the one becomes older as well as younger than itself?

Aristoteles:: Yes.

Parmenides:: And it is older (is it not?) when in becoming, it gets to the point of time between 'was' and 'will be,' which is 'now': for surely in going from the past to the future, it cannot skip the present?

Aristoteles:: No.

Parmenides:: And when it arrives at the present it stops from becoming older, and no longer becomes, but is older, for if it went on it would never be reached by the present, for it is the nature of that which goes on, to touch both the present and the future, letting go the present and seizing the future, while in process of becoming between them.

Aristoteles:: True.

Parmenides:: But that which is becoming cannot skip the present; when it reaches the present it ceases to become, and is then whatever it may happen to be becoming.

Aristoteles:: Clearly.

Parmenides:: And so the one, when in becoming older it reaches the present, ceases to become, and is then older.

Aristoteles:: Certainly.

Parmenides:: And it is older than that than which it was becoming older, and it was becoming older than itself.

Aristoteles:: Yes.

Parmenides:: And that which is older is older than that which is younger?

Aristoteles:: True.

Parmenides:: Then the one is younger than itself, when in becoming older it reaches the present?

Aristoteles:: Certainly.

Parmenides:: But the present is always present with the one during all its being; for whenever it is it is always now.

Aristoteles:: Certainly.

Parmenides:: Then the one always both is and becomes older and younger than itself?

Aristoteles:: Truly.

Parmenides:: And is it or does it become a longer time than itself or an equal time with itself?

Aristoteles:: An equal time.

Parmenides:: But if it becomes or is for an equal time with itself, it is of the same age with itself?

Aristoteles:: Of course.

Parmenides:: And that which is of the same age, is neither older nor younger?

Aristoteles:: No.

Parmenides:: The one, then, becoming and being the same time with itself, neither is nor becomes older or younger than itself?

Aristoteles:: I should say not.

Parmenides:: And what are its relations to other things? Is it or does it become older or younger than they?

Aristoteles:: I cannot tell you.

Parmenides:: You can at least tell me that others than the one are more than the one—other would have been one, but the others have multitude, and are more than one?

Aristoteles:: They will have multitude.

Parmenides:: And a multitude implies a number larger than one?

Aristoteles:: Of course.

Parmenides:: And shall we say that the lesser or the greater is the first to come or to have come into existence?

Aristoteles:: The lesser.

Parmenides:: Then the least is the first? And that is the one?

Aristoteles:: Yes.

Parmenides:: Then the one of all things that have number is the first to come into being; but all other things have also number, being plural and not singular.

Aristoteles:: They have.

Parmenides:: And since it came into being first it must be supposed to have come into being prior to the others, and the others later; and the things which came into being later, are younger than that which preceded them? And so the other things will be younger than the one, and the one older than other things?

Aristoteles:: True.

Parmenides:: What would you say of another question? Can the one have come into being contrary to its own nature, or is that impossible?

Aristoteles:: Impossible.

Parmenides:: And yet, surely, the one was shown to have parts; and if parts, then a beginning, middle and end?

Aristoteles:: Yes.

Parmenides:: And a beginning, both of the one itself and of all other things, comes into being first of all; and after the beginning, the others follow, until you reach the end?

Aristoteles:: Certainly.

Parmenides:: And all these others we shall affirm to be parts of the whole and of the one, which, as soon as the end is reached, has become whole and one?

Aristoteles:: Yes; that is what we shall say.

Parmenides:: But the end comes last, and the one is of such a nature as to come into being with the last; and, since the one cannot come into being except in accordance with its own nature, its nature will require that it should come into being after the others, simultaneously with the end.

Aristoteles:: Clearly.

Parmenides:: Then the one is younger than the others and the others older than the one.

Aristoteles:: That also is clear in my judgment.

Parmenides:: Well, and must not a beginning or any other part of the one or of anything, if it be a part and not parts, being a part, be also of necessity one?

Aristoteles:: Certainly.

Parmenides:: And will not the one come into being together with each part—together with the first part when that comes into being, and together with the second part and with all the rest, and will not be wanting to any part, which is added to any other part until it has reached the last and become one whole; it will be wanting neither to the middle, nor to the first, nor to the last, nor to any of them, while the process of becoming is going on?

Aristoteles:: True.

Parmenides:: Then the one is of the same age with all the others, so that if the one itself does not contradict its own nature, it will be neither prior nor posterior to the others, but simultaneous; and according to this argument the one will be neither older nor younger than the others, nor the others than the one, but according to the previous argument the one will be older and younger than the others and the others than the one.

Aristoteles:: Certainly.

Parmenides:: After this manner then the one is and has become. But as to its becoming older and younger than the others, and the others than the one, and neither older nor younger, what shall we say? Shall we say as of being so also of becoming, or otherwise?

Aristoteles:: I cannot answer.

Parmenides:: But I can venture to say, that even if one thing were older or younger than another, it could not become older or younger in a greater degree than it was at first; for equals added to unequals, whether to periods of time or to anything else, leave the difference between them the same as at first.

Aristoteles:: Of course.

Parmenides:: Then that which is, cannot become older or younger than that which is, since the difference of age is always the same; the one is and has become older and the other younger; but they are no longer becoming so.

Aristoteles:: True.

Parmenides:: And the one which is does not therefore become either older or younger than the others which are.

Aristoteles:: No.

Parmenides:: But consider whether they may not become older and younger in another way.

Aristoteles:: In what way?

Parmenides:: Just as the one was proven to be older than the others and the others than the one.

Aristoteles:: And what of that?

Parmenides:: If the one is older than the others, it has come into being a longer time than the others.

Aristoteles:: Yes.

Parmenides:: But consider again; if we add equal time to a greater and a less time, will the greater differ from the less time by an equal or by a smaller portion than before?

Aristoteles:: By a smaller portion.

Parmenides:: Then the difference between the age of the one and the age of the others will not be afterwards so great as at first, but if an equal time be added to both of them they will differ less and less in age?

Aristoteles:: Yes.

Parmenides:: And that which differs in age from some other less than formerly, from being older will become younger in relation to that other than which it was older?

Aristoteles:: Yes, younger.

Parmenides:: And if the one becomes younger the others aforesaid will become older than they were before, in relation to the one.

Aristoteles:: Certainly.

Parmenides:: Then that which had become younger becomes older relatively to that which previously had become and was older; it never really is older, but is always becoming, for the one is always growing on the side of youth and the other on the side of age. And in like manner the older is always in process of becoming younger than the younger; for as they are always going in opposite directions they become in ways the opposite to one another, the younger older than the older, and the older younger than the younger. They cannot, however, have become; for if they had already become they would be and not merely become. But that is impossible; for they are always becoming both older and younger than one another: the one becomes younger than the others because it was seen to be older and prior, and the others become older than the one because they came into being later; and in the same way the others are in the same relation to the one, because they were seen to be older and prior to the one.

Aristoteles:: That is clear.

Parmenides:: Inasmuch then, as one thing does not become older or younger than another, in that they always differ from each other by an equal number, the one cannot become older or younger than the others, nor the others than the one; but inasmuch as that which came into being earlier and that which came into being later must continually differ from each other by a different portion—in this point of view the others must become older and younger than the one, and the one than the others.

Aristoteles:: Certainly.

Parmenides:: For all these reasons, then, the one is and becomes older and younger than itself and the others, and neither is nor becomes older or younger than itself or the others.

Aristoteles:: Certainly.

Parmenides:: But since the one partakes of time, and partakes of becoming older and younger, must it not also partake of the past, the present, and the future?

Aristoteles:: Of course it must.

Parmenides:: Then the one was and is and will be, and was becoming and is becoming and will become?

Aristoteles:: Certainly.

Parmenides:: And there is and was and will be something which is in relation to it and belongs to it?

Aristoteles:: True.

Parmenides:: And since we have at this moment opinion and knowledge and perception of the one, there is opinion and knowledge and perception of it?

Aristoteles:: Quite right.

Parmenides:: Then there is name and expression for it, and it is named and expressed, and everything of this kind which appertains to other things appertains to the one.

Aristoteles:: Certainly, that is true.

Parmenides:: Yet once more and for the third time, let us consider: If the one is both one and many, as we have described, and is neither one nor many, and participates in time, must it not, in as far as it is one, at times partake of being, and in as far as it is not one, at times not partake of being?

Aristoteles:: Certainly.

Parmenides:: But can it partake of being when not partaking of being, or not partake of being when partaking of being?

Aristoteles:: Impossible.

Parmenides:: Then the one partakes and does not partake of being at different times, for that is the only way in which it can partake and not partake of the same.

Aristoteles:: True.

Parmenides:: And is there not also a time at which it assumes being and relinquishes being—for how can it have and not have the same thing unless it receives and also gives it up at some time?

Aristoteles:: Impossible.

Parmenides:: And the assuming of being is what you would call becoming?

Aristoteles:: I should.

Parmenides:: And the relinquishing of being you would call destruction?

Aristoteles:: I should.

Parmenides:: The one then, as would appear, becomes and is destroyed by taking and giving up being.

Aristoteles:: Certainly.

Parmenides:: And being one and many and in process of becoming and being destroyed, when it becomes one it ceases to be many, and when many, it ceases to be one?

Aristoteles:: Certainly.

Parmenides:: And as it becomes one and many, must it not inevitably experience separation and aggregation?

Aristoteles:: Inevitably.

Parmenides:: And whenever it becomes like and unlike it must be assimilated and dissimilated?

Aristoteles:: Yes.

Parmenides:: And when it becomes greater or less or equal it must grow or diminish or be equalized?

Aristoteles:: True.

Parmenides:: And when being in motion it rests, and when being at rest it changes to motion, it can surely be in no time at all?

Aristoteles:: How can it?

Parmenides:: But that a thing which is previously at rest should be afterwards in motion, or previously in motion and afterwards at rest, without experiencing change, is impossible.

Aristoteles:: Impossible.

Parmenides:: And surely there cannot be a time in which a thing can be at once neither in motion nor at rest?

Aristoteles:: There cannot.

Parmenides:: But neither can it change without changing.

Aristoteles:: True.

Parmenides:: When then does it change; for it cannot change either when at rest, or when in motion, or when in time?

Aristoteles:: It cannot.

Parmenides:: And does this strange thing in which it is at the time of changing really exist?

Aristoteles:: What thing?

Parmenides:: The moment. For the moment seems to imply a something out of which change takes place into either of two states; for the change is not from the state of rest as such, nor from the state of motion as such; but there is this curious nature which we call the moment lying between rest and motion, not being in any time; and into this and out of this what is in motion changes into rest, and what is at rest into motion.

Aristoteles:: So it appears.

Parmenides:: And the one then, since it is at rest and also in motion, will change to either, for only in this way can it be in both. And in changing it changes in a moment, and when it is changing it will be in no time, and will not then be either in motion or at rest.

Aristoteles:: It will not.

Parmenides:: And it will be in the same case in relation to the other changes, when it passes from being into cessation of being, or from not-being into becoming—then it passes between certain states of motion and rest, and neither is nor is not, nor becomes nor is destroyed.

Aristoteles:: Very true.

Parmenides:: And on the same principle, in the passage from one to many and from many to one, the one is neither one nor many, neither separated nor aggregated; and in the passage from like to unlike, and from unlike to like, it is neither like nor unlike, neither in a state of assimilation nor of dissimilation; and in the passage from small to great and equal and back again, it will be neither small nor great, nor equal, nor in a state of increase, or diminution, or equalization.

Aristoteles:: True.

Parmenides:: All these, then, are the affections of the one, if the one has being.

Aristoteles:: Of course.

Parmenides:: But if one is, what will happen to the others—is not that also to be considered?

Aristoteles:: Yes.

Parmenides:: Let us show then, if one is, what will be the affections of the others than the one.

Aristoteles:: Let us do so.

Parmenides:: Inasmuch as there are things other than the one, the others are not the one; for if they were they could not be other than the one.

Aristoteles:: Very true.

Parmenides:: Nor are the others altogether without the one, but in a certain way they participate in the one.

Aristoteles:: In what way?

Parmenides:: Because the others are other than the one inasmuch as they have parts; for if they had no parts they would be simply one.

Aristoteles:: Right.

Parmenides:: And parts, as we affirm, have relation to a whole?

Aristoteles:: So we say.

Parmenides:: And a whole must necessarily be one made up of many; and the parts will be parts of the one, for each of the parts is not a part of many, but of a whole.

Aristoteles:: How do you mean?

Parmenides:: If anything were a part of many, being itself one of them, it will surely be a part of itself, which is impossible, and it will be a part of each one of the other parts, if of all; for if not a part of some one, it will be a part of all the others but this one, and thus will not be a part of each one; and if not a part of each one, it will not be a part of any one of the many; and not being a part of any one, it cannot be a part or anything else of all those things of none of which it is anything.

Aristoteles:: Clearly not.

Parmenides:: Then the part is not a part of the many, nor of all, but is of a certain single form, which we call a whole, being one perfect unity framed out of all—of this the part will be a part.

Aristoteles:: Certainly.

Parmenides:: If, then, the others have parts, they will participate in the whole and in the one.

Aristoteles:: True.

Parmenides:: Then the others than the one must be one perfect whole, having parts.

Aristoteles:: Certainly.

Parmenides:: And the same argument holds of each part, for the part must participate in the one; for if each of the parts is a part, this means, I suppose, that it is one separate from the rest and self-related; otherwise it is not each.

Aristoteles:: True.

Parmenides:: But when we speak of the part participating in the one, it must clearly be other than one; for if not, it would not merely have participated, but would have been one; whereas only the one itself can be one.

Aristoteles:: Very true.

Parmenides:: Both the whole and the part must participate in the one; for the whole will be one whole, of which the parts will be parts; and each part will be one part of the whole which is the whole of the part.

Aristoteles:: True.

Parmenides:: And will not the things which participate in the one, be other than it?

Aristoteles:: Of course.

Parmenides:: And the things which are other than the one will be many; for if the things which are other than the one were neither one nor more than one, they would be nothing.

Aristoteles:: True.

Parmenides:: But, seeing that the things which participate in the one as a part, and in the one as a whole, are more than one, must not those very things which participate in the one be infinite in number?

Aristoteles:: How so?

Parmenides:: Let us look at the matter thus:—Is it not a fact that in partaking of the one they are not one, and do not partake of the one at the very time when they are partaking of it?

Aristoteles:: Clearly.

Parmenides:: They do so then as multitudes in which the one is not present?

Aristoteles:: Very true.

Parmenides:: And if we were to abstract from them in idea the very smallest fraction, must not that least fraction, if it does not partake of the one, be a multitude and not one?

Aristoteles:: It must.

Parmenides:: And if we continue to look at the other side of their nature, regarded simply, and in itself, will not they, as far as we see them, be unlimited in number?

Aristoteles:: Certainly.

Parmenides:: And yet, when each several part becomes a part, then the parts have a limit in relation to the whole and to each other, and the whole in relation to the parts.

Aristoteles:: Just so.

Parmenides:: The result to the others than the one is that the union of themselves and the one appears to create a new element in them which gives to them limitation in relation to one another; whereas in their own nature they have no limit.

Aristoteles:: That is clear.

Parmenides:: Then the others than the one, both as whole and parts, are infinite, and also partake of limit.

Aristoteles:: Certainly.

Parmenides:: Then they are both like and unlike one another and themselves.

Aristoteles:: How is that?

Parmenides:: Inasmuch as they are unlimited in their own nature, they are all affected in the same way.

Aristoteles:: True.

Parmenides:: And inasmuch as they all partake of limit, they are all affected in the same way.

Aristoteles:: Of course.

Parmenides:: But inasmuch as their state is both limited and unlimited, they are affected in opposite ways.

Aristoteles:: Yes.

Parmenides:: And opposites are the most unlike of things.

Aristoteles:: Certainly.

Parmenides:: Considered, then, in regard to either one of their affections, they will be like themselves and one another; considered in reference to both of them together, most opposed and most unlike.

Aristoteles:: That appears to be true.

Parmenides:: Then the others are both like and unlike themselves and one another?

Aristoteles:: True.

Parmenides:: And they are the same and also different from one another, and in motion and at rest, and experience every sort of opposite affection, as may be proved without difficulty of them, since they have been shown to have experienced the affections aforesaid?

Aristoteles:: True.

Parmenides:: Suppose, now, that we leave the further discussion of these matters as evident, and consider again upon the hypothesis that the one is, whether the opposite of all this is or is not equally true of the others.

Aristoteles:: By all means.

Parmenides:: Then let us begin again, and ask, If one is, what must be the affections of the others?

Aristoteles:: Let us ask that question.

Parmenides:: Must not the one be distinct from the others, and the others from the one?

Aristoteles:: Why so?

Parmenides:: Why, because there is nothing else beside them which is distinct from both of them; for the expression 'one and the others' includes all things.

Aristoteles:: Yes, all things.

Parmenides:: Then we cannot suppose that there is anything different from them in which both the one and the others might exist?

Aristoteles:: There is nothing.

Parmenides:: Then the one and the others are never in the same?

Aristoteles:: True.

Parmenides:: Then they are separated from each other?

Aristoteles:: Yes.

Parmenides:: And we surely cannot say that what is truly one has parts?

Aristoteles:: Impossible.

Parmenides:: Then the one will not be in the others as a whole, nor as part, if it be separated from the others, and has no parts?

Aristoteles:: Impossible.

Parmenides:: Then there is no way in which the others can partake of the one, if they do not partake either in whole or in part?

Aristoteles:: It would seem not.

Parmenides:: Then there is no way in which the others are one, or have in themselves any unity?

Aristoteles:: There is not.

Parmenides:: Nor are the others many; for if they were many, each part of them would be a part of the whole; but now the others, not partaking in any way of the one, are neither one nor many, nor whole, nor part.

Aristoteles:: True.

Parmenides:: Then the others neither are nor contain two or three, if entirely deprived of the one?

Aristoteles:: True.

Parmenides:: Then the others are neither like nor unlike the one, nor is likeness and unlikeness in them; for if they were like and unlike, or had in them likeness and unlikeness, they would have, two natures in them opposite to one another.

Aristoteles:: That is clear.

Parmenides:: But for that which partakes of nothing to partake of two things was held by us to be impossible?

Aristoteles:: Impossible.

Parmenides:: Then the others are neither like nor unlike nor both, for if they were like or unlike they would partake of one of those two natures, which would be one thing, and if they were both they would partake of opposites which would be two things, and this has been shown to be impossible.

Aristoteles:: True.

Parmenides:: Therefore they are neither the same, nor other, nor in motion, nor at rest, nor in a state of becoming, nor of being destroyed, nor greater, nor less, nor equal, nor have they experienced anything else of the sort; for, if they are capable of experiencing any such affection, they will participate in one and two and three, and odd and even, and in these, as has been proved, they do not participate, seeing that they are altogether and in every way devoid of the one.

Aristoteles:: Very true.

Parmenides:: Therefore if one is, the one is all things, and also nothing, both in relation to itself and to other things.

Aristoteles:: Certainly.

Parmenides::. Well, and ought we not to consider next what will be the consequence if the one is not?

Aristoteles:: Yes; we ought.

Parmenides:: What is the meaning of the hypothesis—If the one is not; is there any difference between this and the hypothesis—If the not one is not?

Aristoteles:: There is a difference, certainly.

Parmenides:: Is there a difference only, or rather are not the two expressions—if the one is not, and if the not one is not, entirely opposed?

Aristoteles:: They are entirely opposed.

Parmenides:: And suppose a person to say:—If greatness is not, if smallness is not, or anything of that sort, does he not mean, whenever he uses such an expression, that 'what is not' is other than other things?

Aristoteles:: To be sure.

Parmenides:: And so when he says 'If one is not' he clearly means, that what 'is not' is other than all others; we know what he means—do we not?

Aristoteles:: Yes, we do.

Parmenides:: When he says 'one,' he says something which is known; and secondly something which is other than all other things; it makes no difference whether he predicate of one being or not-being, for that which is said 'not to be' is known to be something all the same, and is distinguished from other things.

Aristoteles:: Certainly.

Parmenides:: Then I will begin again, and ask: If one is not, what are the consequences? In the first place, as would appear, there is a knowledge of it, or the very meaning of the words, 'if one is not,' would not be known.

Aristoteles:: True.

Parmenides:: Secondly, the others differ from it, or it could not be described as different from the others?

Aristoteles:: Certainly.

Parmenides:: Difference, then, belongs to it as well as knowledge; for in speaking of the one as different from the others, we do not speak of a difference in the others, but in the one.

Aristoteles:: Clearly so.

Parmenides:: Moreover, the one that is not is something and partakes of relation to 'that,' and 'this,' and 'these,' and the like, and is an attribute of 'this'; for the one, or the others than the one, could not have been spoken of, nor could any attribute or relative of the one that is not have been or been spoken of, nor could it have been said to be anything, if it did not partake of 'some,' or of the other relations just now mentioned.

Aristoteles:: True.

Parmenides:: Being, then, cannot be ascribed to the one, since it is not; but the one that is not may or rather must participate in many things, if it and nothing else is not; if, however, neither the one nor the one that is not is supposed not to be, and we are speaking of something of a different nature, we can predicate nothing of it. But supposing that the one that is not and nothing else is not, then it must participate in the predicate 'that,' and in many others.

Aristoteles:: Certainly.

Parmenides:: And it will have unlikeness in relation to the others, for the others being different from the one will be of a different kind.

Aristoteles:: Certainly.

Parmenides:: And are not things of a different kind also other in kind?

Aristoteles:: Of course.

Parmenides:: And are not things other in kind unlike?

Aristoteles:: They are unlike.

Parmenides:: And if they are unlike the one, that which they are unlike will clearly be unlike them?

Aristoteles:: Clearly so.

Parmenides:: Then the one will have unlikeness in respect of which the others are unlike it?

Aristoteles:: That would seem to be true.

Parmenides:: And if unlikeness to other things is attributed to it, it must have likeness to itself.

Aristoteles:: How so?

Parmenides:: If the one have unlikeness to one, something else must be meant; nor will the hypothesis relate to one; but it will relate to something other than one?

Aristoteles:: Quite so.

Parmenides:: But that cannot be.

Aristoteles:: No.

Parmenides:: Then the one must have likeness to itself?

Aristoteles:: It must.

Parmenides:: Again, it is not equal to the others; for if it were equal, then it would at once be and be like them in virtue of the equality; but if one has no being, then it can neither be nor be like?

Aristoteles:: It cannot.

Parmenides:: But since it is not equal to the others, neither can the others be equal to it?

Aristoteles:: Certainly not.

Parmenides:: And things that are not equal are unequal?

Aristoteles:: True.

Parmenides:: And they are unequal to an unequal?

Aristoteles:: Of course.

Parmenides:: Then the one partakes of inequality, and in respect of this the others are unequal to it?

Aristoteles:: Very true.

Parmenides:: And inequality implies greatness and smallness?

Aristoteles:: Yes.

Parmenides:: Then the one, if of such a nature, has greatness and smallness?

Aristoteles:: That appears to be true.

Parmenides:: And greatness and smallness always stand apart?

Aristoteles:: True.

Parmenides:: Then there is always something between them?

Aristoteles:: There is.

Parmenides:: And can you think of anything else which is between them other than equality?

Aristoteles:: No, it is equality which lies between them.

Parmenides:: Then that which has greatness and smallness also has equality, which lies between them?

Aristoteles:: That is clear.

Parmenides:: Then the one, which is not, partakes, as would appear, of greatness and smallness and equality?

Aristoteles:: Clearly.

Parmenides:: Further, it must surely in a sort partake of being?

Aristoteles:: How so?

Parmenides:: It must be so, for if not, then we should not speak the truth in saying that the one is not. But if we speak the truth, clearly we must say what is. Am I not right?

Aristoteles:: Yes.

Parmenides:: And since we affirm that we speak truly, we must also affirm that we say what is?

Aristoteles:: Certainly.

Parmenides:: Then, as would appear, the one, when it is not, is; for if it were not to be when it is not, but were to relinquish something of being, so as to become not-being, it would at once be.

Aristoteles:: Quite true.

Parmenides:: Then the one which is not, if it is to maintain itself, must have the being of not-being as the bond of not-being, just as being must have as a bond the not-being of not-being in order to perfect its own being; for the truest assertion of the being of being and of the not-being of not-being is when being partakes of the being of being, and not of the being of not-being—that is, the perfection of being; and when not-being does not partake of the not-being of not-being but of the being of not-being—that is the perfection of not-being.

Aristoteles:: Most true.

Parmenides:: Since then what is partakes of not-being, and what is not of being, must not the one also partake of being in order not to be?

Aristoteles:: Certainly.

Parmenides:: Then the one, if it is not, clearly has being?

Aristoteles:: Clearly.

Parmenides:: And has not-being also, if it is not?

Aristoteles:: Of course.

Parmenides:: But can anything which is in a certain state not be in that state without changing?

Aristoteles:: Impossible.

Parmenides:: Then everything which is and is not in a certain state, implies change?

Aristoteles:: Certainly.

Parmenides:: And change is motion—we may say that?

Aristoteles:: Yes, motion.

Parmenides:: And the one has been proved both to be and not to be?

Aristoteles:: Yes.

Parmenides:: And therefore is and is not in the same state?

Aristoteles:: Yes.

Parmenides:: Thus the one that is not has been shown to have motion also, because it changes from being to not-being?

Aristoteles:: That appears to be true.

Parmenides:: But surely if it is nowhere among what is, as is the fact, since it is not, it cannot change from one place to another?

Aristoteles:: Impossible.

Parmenides:: Then it cannot move by changing place?

Aristoteles:: No.

Parmenides:: Nor can it turn on the same spot, for it nowhere touches the same, for the same is, and that which is not cannot be reckoned among things that are?

Aristoteles:: It cannot.

Parmenides:: Then the one, if it is not, cannot turn in that in which it is not?

Aristoteles:: No.

Parmenides:: Neither can the one, whether it is or is not, be altered into other than itself, for if it altered and became different from itself, then we could not be still speaking of the one, but of something else?

Aristoteles:: True.

Parmenides:: But if the one neither suffers alteration, nor turns round in the same place, nor changes place, can it still be capable of motion?

Aristoteles:: Impossible.

Parmenides:: Now that which is unmoved must surely be at rest, and that which is at rest must stand still?

Aristoteles:: Certainly.

Parmenides:: Then the one that is not, stands still, and is also in motion?

Aristoteles:: That seems to be true.

Parmenides:: But if it be in motion it must necessarily undergo alteration, for anything which is moved, in so far as it is moved, is no longer in the same state, but in another?

Aristoteles:: Yes.

Parmenides:: Then the one, being moved, is altered?

Aristoteles:: Yes.

Parmenides:: And, further, if not moved in any way, it will not be altered in any way?

Aristoteles:: No.

Parmenides:: Then, in so far as the one that is not is moved, it is altered, but in so far as it is not moved, it is not altered?

Aristoteles:: Right.

Parmenides:: Then the one that is not is altered and is not altered?

Aristoteles:: That is clear.

Parmenides:: And must not that which is altered become other than it previously was, and lose its former state and be destroyed; but that which is not altered can neither come into being nor be destroyed?

Aristoteles:: Very true.

Parmenides:: And the one that is not, being altered, becomes and is destroyed; and not being altered, neither becomes nor is destroyed; and so the one that is not becomes and is destroyed, and neither becomes nor is destroyed?

Aristoteles:: True.

Parmenides:: And now, let us go back once more to the beginning, and see whether these or some other consequences will follow.

Aristoteles:: Let us do as you say.

Parmenides:: If one is not, we ask what will happen in respect of one? That is the question.

Aristoteles:: Yes.

Parmenides:: Do not the words 'is not' signify absence of being in that to which we apply them?

Aristoteles:: Just so.

Parmenides:: And when we say that a thing is not, do we mean that it is not in one way but is in another? or do we mean, absolutely, that what is not has in no sort or way or kind participation of being?

Aristoteles:: Quite absolutely.

Parmenides:: Then, that which is not cannot be, or in any way participate in being?

Aristoteles:: It cannot.

Parmenides:: And did we not mean by becoming, and being destroyed, the assumption of being and the loss of being?

Aristoteles:: Nothing else.

Parmenides:: And can that which has no participation in being, either assume or lose being?

Aristoteles:: Impossible.

Parmenides:: The one then, since it in no way is, cannot have or lose or assume being in any way?

Aristoteles:: True.

Parmenides:: Then the one that is not, since it in no way partakes of being, neither perishes nor becomes?

Aristoteles:: No.

Parmenides:: Then it is not altered at all; for if it were it would become and be destroyed?

Aristoteles:: True.

Parmenides:: But if it be not altered it cannot be moved?

Aristoteles:: Certainly not.

Parmenides:: Nor can we say that it stands, if it is nowhere; for that which stands must always be in one and the same spot?

Aristoteles:: Of course.

Parmenides:: Then we must say that the one which is not never stands still and never moves?

Aristoteles:: Neither.

Parmenides:: Nor is there any existing thing which can be attributed to it; for if there had been, it would partake of being?

Aristoteles:: That is clear.

Parmenides:: And therefore neither smallness, nor greatness, nor equality, can be attributed to it?

Aristoteles:: No.

Parmenides:: Nor yet likeness nor difference, either in relation to itself or to others?

Aristoteles:: Clearly not.

Parmenides:: Well, and if nothing should be attributed to it, can other things be attributed to it?

Aristoteles:: Certainly not.

Parmenides:: And therefore other things can neither be like or unlike, the same, or different in relation to it?

Aristoteles:: They cannot.

Parmenides:: Nor can what is not, be anything, or be this thing, or be related to or the attribute of this or that or other, or be past, present, or future. Nor can knowledge, or opinion, or perception, or expression, or name, or any other thing that is, have any concern with it?

Aristoteles:: No.

Parmenides:: Then the one that is not has no condition of any kind?

Aristoteles:: Such appears to be the conclusion.

Parmenides:: Yet once more; if one is not, what becomes of the others? Let us determine that.

Aristoteles:: Yes; let us determine that.

Parmenides:: The others must surely be; for if they, like the one, were not, we could not be now speaking of them.

Aristoteles:: True.

Parmenides:: But to speak of the others implies difference—the terms ‘other’ and ‘different’ are synonymous?

Aristoteles:: True.

Parmenides:: Other means other than other, and different, different from the different?

Aristoteles:: Yes.

Parmenides:: Then, if there are to be others, there is something than which they will be other?

Aristoteles:: Certainly.

Parmenides:: And what can that be?—for if the one is not, they will not be other than the one.

Aristoteles:: They will not.

Parmenides:: Then they will be other than each other; for the only remaining alternative is that they are other than nothing.

Aristoteles:: True.

Parmenides:: And they are each other than one another, as being plural and not singular; for if one is not, they cannot be singular, but every particle of them is infinite in number; and even if a person takes that which appears to be the smallest fraction, this, which seemed one, in a moment evanesces into many, as in a dream, and from being the smallest becomes very great, in comparison with the fractions into which it is split up?

Aristoteles:: Very true.

Parmenides:: And in such particles the others will be other than one another, if others are, and the one is not?

Aristoteles:: Exactly.

Parmenides:: And will there not be many particles, each appearing to be one, but not being one, if one is not?

Aristoteles:: True.

Parmenides:: And it would seem that number can be predicated of them if each of them appears to be one, though it is really many?

Aristoteles:: It can.

Parmenides:: And there will seem to be odd and even among them, which will also have no reality, if one is not?

Aristoteles:: Yes.

Parmenides:: And there will appear to be a least among them; and even this will seem large and manifold in comparison with the many small fractions which are contained in it?

Aristoteles:: Certainly.

Parmenides:: And each particle will be imagined to be equal to the many and little; for it could not have appeared to pass from the greater to the less without having appeared to arrive at the middle; and thus would arise the appearance of equality.

Aristoteles:: Yes.

Parmenides:: And having neither beginning, middle, nor end, each separate particle yet appears to have a limit in relation to itself and other.

Aristoteles:: How so?

Parmenides:: Because, when a person conceives of any one of these as such, prior to the beginning another beginning appears, and there is another end, remaining after the end, and in the middle truer middles within but smaller, because no unity can be conceived of any of them, since the one is not.

Aristoteles:: Very true.

Parmenides:: And so all being, whatever we think of, must be broken up into fractions, for a particle will have to be conceived of without unity?

Aristoteles:: Certainly.

Parmenides:: And such being when seen indistinctly and at a distance, appears to be one; but when seen near and with keen intellect, every single thing appears to be infinite, since it is deprived of the one, which is not?

Aristoteles:: Nothing more certain.

Parmenides:: Then each of the others must appear to be infinite and finite, and one and many, if others than the one exist and not the one.

Aristoteles:: They must.

Parmenides:: Then will they not appear to be like and unlike?

Aristoteles:: In what way?

Parmenides:: Just as in a picture things appear to be all one to a person standing at a distance, and to be in the same state and alike?

Aristoteles:: True.

Parmenides:: But when you approach them, they appear to be many and different; and because of the appearance of the difference, different in kind from, and unlike, themselves?

Aristoteles:: True.

Parmenides:: And so must the particles appear to be like and unlike themselves and each other.

Aristoteles:: Certainly.

Parmenides:: And must they not be the same and yet different from one another, and in contact with themselves, although they are separated, and having every sort of motion, and every sort of rest, and becoming and being destroyed, and in neither state, and the like, all which things may be easily enumerated, if the one is not and the many are?

Aristoteles:: Most true.

Parmenides:: Once more, let us go back to the beginning, and ask if the one is not, and the others of the one are, what will follow.

Aristoteles:: Let us ask that question.

Parmenides:: In the first place, the others will not be one?

Aristoteles:: Impossible.

Parmenides:: Nor will they be many; for if they were many one would be contained in them. But if no one of them is one, all of them are naught, and therefore they will not be many.

Aristoteles:: True.

Parmenides:: If there be no one in the others, the others are neither many nor one.

Aristoteles:: They are not.

Parmenides:: Nor do they appear either as one or many.

Aristoteles:: Why not?

Parmenides:: Because the others have no sort or manner or way of communion with any sort of not-being, nor can anything which is not, be connected with any of the others; for that which is not has no parts.

Aristoteles:: True.

Parmenides:: Nor is there an opinion or any appearance of not-being in connection with the others, nor is not-being ever in any way attributed to the others.

Aristoteles:: No.

Parmenides:: Then if one is not, there is no conception of any of the others either as one or many; for you cannot conceive the many without the one.

Aristoteles:: You cannot.

Parmenides:: Then if one is not, the others neither are, nor can be conceived to be either one or many?

Aristoteles:: It would seem not.

Parmenides:: Nor as like or unlike?

Aristoteles:: No.

Parmenides:: Nor as the same or different, nor in contact or separation, nor in any of those states which we enumerated as appearing to be the others neither are nor appear to be any of these, if one is not?

Aristoteles:: True.

Parmenides:: Then may we not sum up the argument in a word and say truly: If one is not, then nothing is?

Aristoteles:: Certainly.

Parmenides:: Let thus much be said; and further let us affirm what seems to be the truth, that, whether one is or is not, one and the others in relation to themselves and one another, all of them, in every way, are and are not, and appear to be and appear not to be.

Aristoteles:: Most true.

# The Parmenides.

Translated by Thomas Taylor.

*PERSONS OF THE DIALOGUE.*

CEPHALUS, PYTHODORUS.
ADIMANTUS, SOCRATES.
ANTIPHON, ZENO.
GLAUCO, PARMENIDES.

SCENE, THE CERAMICUS.

Cephalus:: When we arrived at Athens from Clazomenia, the place of our abode, we fortunately met with Adimantus and Glaucus in the forum: and Adimantus, taking me by the hand;

Adeimantus:: I am glad to see you, Cephalus; and if you are in want of any thing here, in which we are able to assist you, I beg you would inform me.

Cephalus:: I came for this very purpose, as being indigent of your assistance.

Adeimantus:: Tell me, then, what you are in want of.

Cephalus:: What was your brother's name? for I do not remember: as he was almost a child when I first came here from Clazomenia; and, since that circumstance took place, a great length of time has intervened. But his father's name was, I think, Pyrilampes.

Adeimantus:: Entirely so, and my brother's name was Antiphon. But what is it you principally inquire after?

Cephalus:: These my Fellow-citizens are very philosophic, and have heard that this Antiphon was frequently present with one Pythodorus, the familiar of Zeno, and that he treasured in his memory the discourses which Socrates, Zeno, and Parmenides had with each other, and which had frequently been heard by Pythodorus.

Adeimantus:: You speak the truth.

Cephalus:: These discourses, therefore, we are desirous to hear.

Adeimantus:: But this is no difficult matter to accomplish: for the young man has made them the subject of vehement meditation; and now with his grandfather, who bears the same name as himself, very much applies himself to equestrian affairs. But if it is necessary, we will go to him: for he just now went from hence home; and dwells very near, in Melita.

Cephalus:: After we had thus spoke, we proceeded to the house of Antiphon; and found him at home, giving a certain bridle to a coppersmith, to be furnished in a proper manner. But as soon as the smith was gone, and the brothers had told him the cause of our arrival, Antiphon knew me, in consequence of my former journey to this place, and very kindly saluted me: and upon our begging him to relate the discourses, at first he seemed unwilling to comply (for he said it was a very operose undertaking); but afterwards, however, he gratified our request. Antiphon, therefore, said that Pythodorus related that Zeno and Parmenides once came to celebrate the great Panathenæa: that Parmenides was very much advanced in years, extremely hoary, but of a beautiful and venerable aspect, and about sixty-five years of age; but that Zeno was nearly forty years old, was very tall and graceful to the view, and was reported to be the bosom friend of Parmenides.

He likewise said that he met with them, together with Pythodorus, in the Ceramicus, beyond the walls; where also Socrates came, and many others with him, desiring to hear the writings of Zeno, for then for the first time they became acquainted with his writings: but that Socrates at that time was very young. That, in consequence of this, Zeno himself read to them. And Pythodorus further related that it happened Parmenides was gone out; and that but a small part of the discourse remained unfinished, when he himself entered, together with Parmenides and Aristotle, who was one of the thirty Athenians. That, in consequence of this, he heard but a little at that time; but that he had often before heard the whole discourse from Zeno.

He further added, that Socrates, upon hearing the latter part of Zeno's discourse, entreated him to repeat the first hypothesis of his first discourse; and that, when he had repeated it, Socrates said—

Socrates:: How is it you assert, O Zeno, that if beings are many, it is requisite that the same things should be both similar and dissimilar? But that this is impossible. For neither can things dissimilar be similar, nor things similar be dissimilar. Is not this what you assert?

Zeno:: It is.

Socrates:: If, therefore, it is impossible that dissimilars should be similar, and similars dissimilar, is it not impossible that many things should have a subsistence? For, if there were many, they would suffer impossibilities. Is it not then the sole intention of your discourses to evince, by contesting through all things, that the many has no subsistence? And do you not consider each of your discourses as an argument in support of this opinion; and so think that you have produced as many arguments as you have composed discourses, to show that the many is not? Is not this what you say, or do I not rightly understand you?

Zeno:: You perceive excellently well the meaning of the whole book.

Socrates:: I perceive, O Parmenides, that this Zeno does not only wish to connect himself in the bands of friendship with you, but to agree with you likewise in sentiments concerning the doctrines of the present discourse. For Zeno, in a certain respect, has written the same as yourself; though, by changing certain particulars, he endeavors to deceive us into an opinion that his assertions are different from yours. For you in your poems assert that the universe is one; and you produce beautiful and excellent arguments in support of this opinion: but Zeno says that the many is not, and delivers many and mighty arguments in defense, of this assertion. As, therefore, you assert that the one is, and he, that the many has no subsistence; and each speaks in such a manner as to disagree totally according to appearance from one another, though you both nearly assert the same; on this account it is that your discourses seem to be above our comprehension.

Zeno::—Indeed, Socrates, so it is: but you do not perfectly apprehend the truth of my writings; though, like Laconic dogs, you excellently pursue and trace the meaning of the assertions. But this in the first place is concealed from you, that this discourse is not in every respect so venerable, that it was composed, as you say, for the purpose of concealing its real doctrines from men, as if effecting a thing of great importance: yet you have spoken something of that which happens to be the case. But indeed the truth of the matter is this: These writings were composed for the purpose of affording a certain assistance to the doctrine of Parmenides, against those who endeavor to defame it by attempting to show that if the one is many, ridiculous consequences must attend such an opinion; and that things contrary to the assertion must ensue. This writing, therefore, contradicts those who say that the many is, and opposes this and many other opinions; as it is desirous to evince that the hypothesis which defends the subsistence of the many is attended with more ridiculous consequences than that which vindicates the subsistence of the one, if both are sufficiently examined. You are ignorant, therefore, Socrates, that this discourse, which was composed by me when a youth, through the love of contention, and which was privately taken from me, so that I was not able to consult whether or not it should be issued into the light—you are ignorant, I say, that it was not written through that desire of renown which belongs to a more advanced period of life, but through a juvenile desire of contention: though, as I have said, you do not conjecture amiss.

Socrates:: I admit it; and I think the case is just as you have stated it. But satisfy me in the following particulars. Do you think that there is a certain form of similitude, itself subsisting from itself? And another which is contrary to this, and is that which is dissimilar? But that you and me, and other things which we call many, participate of these two? And that such things as participate of similitude become similar, so far as they participate? But those which participate of dissimilitude become dissimilar? And that those which participate of both become both? But if all things participate of both, which are contrary to each other, and become similar and dissimilar to each other through participating of both, is there any thing wonderful in the case? For, if any one should show that similars themselves become dissimilar, or dissimilars similar, I should think it would be a prodigy: but if he evinces that such things as participate both these suffer likewise both these, it does not appear to me, O Zeno, that there would be any thing absurd in the case; nor again, if any one should evince that all things are one, through their participating of the one, and at the same time many, through their participating multitude. But I should very much wonder if any one should show that that which is one is many, and that the many is one; and in a similar manner concerning all the rest: for, doubtless, he would produce a proper subject of admiration, who should evince that both genera and species suffer these contrary affections. But what occasion of wonder would there be, should any one show that I myself am both one and many? and should prove his assertion by saying, when he wishes to assert that I am many, that the parts on the right hand of me are different from those on the left, the anterior from the posterior, and in like manner the upward from the downward parts (for I think that I participate of multitude): but when he desires to show that I am one, should say, that as we are seven in number, I am one man, and participate of the one? so that he would by this means evince the truth of both these assertions. If any one, therefore, should endeavor to show that stones, wood, and all such particulars, are both many and one, we should say that he exhibits to our view such things as are many and one, but that he does not assert that the one is many, nor the many one; nor speak of any thing wonderful, but asserts that which is confessed by all men. But if any one should, in the first place, distribute the forms of things, concerning which I have just been speaking, separating them essentially apart from each other, such as similitude and dissimilitude, multitude and the one, and the rest of this kind, and should afterwards show himself able to mingle and separate them in themselves, I should be astonished, O Zeno, in a wonderful manner. But it appears to me that we should strenuously labor in the investigation of these particulars: yet I should be much astonished if any one could solve this doubt, which is so profoundly involved in species; so as to be able no less clearly to explain this affair in the forms which are apprehended by the reasoning power, than in those belonging to visible objects, and which you have already discussed.

Cephalus:: Pythodorus said, that when Socrates had thus spoken, he thought that Parmenides and Zeno seemed to be indignant at the several particulars of Socrates’s discourse; but that they bestowed the greatest attention on what he said, and frequently looking at each other smiled, as wondering at Socrates: and that, in consequence of his ceasing to speak, Parmenides said—

Parmenides:: How worthy, O Socrates, of admiration is your ardor in the pursuit of liberal disciplines! Tell me, therefore, have you separated, as you say, certain species apart by themselves, and likewise the participants of these species apart? And does there appear to you to be a certain similitude separate from that similitude which we possess, and a certain one and many, and all such other particulars, which you have just now heard mentioned by Zeno?

Socrates:: So it appears to me.

Parmenides:: And does it also appear to you, that there is a certain species or form of *justice*, itself subsisting by itself; likewise of *beauty* and *the good*, and every thing of this kind?

Socrates:: It does.

Parmenides:: And likewise of all such things as we are composed from: so that there is a certain form of *man*, or of *fire*, or *water*?

Socrates:: —I have often been in doubt, O Parmenides, concerning these; whether it is necessary to speak of them in the same manner as of the former particulars, or in a different manner.

Parmenides:: And do you doubt, O Socrates, whether it is necessary to say that there is a certain form of every such particular as may appear to be ridiculous, I mean hair, clay, and mud, or any thing else which is vile and abject; and that these forms are different from the particulars with which we are conversant?

Socrates:: I do not by any means think that the forms of these can be different from those which are the objects of our inspection: but is it not vehemently absurd to think that there is a certain form of these? For this has formerly disturbed me, whether or not something of this kind does not take place about every thing: but, after having been fixed for some time in this opinion, I have hastily withdrawn myself and fled away; fearing lest, falling into a certain abyss of trifles, I should utterly perish and be lost; but, returning from thence, I have seriously applied myself to consider those particulars, to which, as we have just now asserted, forms belong.

Parmenides:: You are as yet but a young man, O Socrates, and Philosophy has not yet received you into her embraces: for, in my opinion, when you are received by her, you will not despise any of these particulars: but now, on account of your juvenile age, you regard the opinions of men.

Tell me, then, does it appear to you, as you say, that there are certain forms, of which other things participating retain the appellations; as, for instance, that such things as participate of *similitude* are *similars*; of magnitude, great; and that the participants of and justice are beautiful and just?

Socrates:: Entirely so.

Parmenides:: Does not every thing which participates either participate the whole form, or only a part of it? Or can there be any other mode of participation besides these?

Socrates:: How can there be?

Parmenides:: Does it then appear to you that the whole form is one in each individual of many things? Or what other opinion have you on this subject?

Socrates:: What hinders, O Parmenides, but that it should be one?

Parmenides:: As it is, therefore, one and the same in things many and separate from each other, the whole will be at the same time one, and so itself will be separate from itself.

Socrates:: It would not be so: but just as if this form was day, this being one and the same, is collectively present in many places, and yet is not any thing the more separate from itself; in the same manner, every form may be at once one and the same in all.

Parmenides:: You have made, O Socrates, one and the same thing to be collectively present in many places, in a very pleasant manner; just as if, covering many men with a veil, you should say that there is one whole, together with the many. Do you not think that you would make an assertion of this kind?

Socrates:: Perhaps so.

Parmenides:: Will, therefore, the whole veil subsist together with each man, or a different part of it with each individual?

Socrates:: A different part only.

Parmenides:: These forms then, O Socrates, are divisible, and their participants participate only parts of them: and hence there will no longer be one whole form in each individual, but only one part of each form.

Socrates:: So indeed it seems.

Parmenides:: Are you then willing to assert that one form is in reality divided, and that nevertheless it is still one?

Socrates:: By no means.

Parmenides:: For see, whether upon dividing magnitude itself, it would not be absurd that each of the many things which are great, should be great by a part of magnitude less than magnitude itself?

Socrates:: Entirely so.

Parmenides:: But what then? Can that which participates a part of equal itself, be equal to any thing by this its part of equality, which is less than equal itself?

Socrates:: It is impossible.

Parmenides:: But some one of us must possess a part of this small quantity; and that which is small itself will be greater than this, this small quantity being a part of *small itself*; and thus *small itself* will be that which is greater: but that to which this part which was taken away is added, will become smaller, and not greater than it was before.

Socrates:: —This cannot take place.

Parmenides:: But after what manner then, O Socrates, can individuals participate of forms, if they are neither able to participate according to parts, nor according to wholes?

Socrates:: It does not appear to me, by Jupiter, to be in any respect an easy matter to define a circumstance of this kind.

Parmenides:: But what will you say to this?

Socrates:: To what?

Parmenides:: I think that you consider every form as one, on this account; because, since a certain multitude of particulars seems to you to be great, there may perhaps appear to him who surveys them all to be one idea, from whence you think them to be one great thing.

Socrates:: You speak the truth.

Parmenides:: But what if you consider the *great itself*, and other things which are *great*, in the same manner, with the eye of the soul, will not again a certain something which is *great* appear to you, through which all these necessarily seem to be great?

Socrates:: It seems so.

Parmenides:: Hence, another form of *magnitude* will become apparent, besides *magnitude itself* and its participants: and besides all these another *magnitude*, through which all these become great; so that each of your forms will no longer be one thing, but an infinite multitude.

Socrates:: perhaps, O Parmenides, each of these forms is nothing more than an intellectual *conception*, which ought not to subsist any where but in the soul; and if this be the case, each will be one: and the consequences just now mentioned will not ensue.

Parmenides:: What then? is each of these conceptions one, but at the same time a *conception* of nothing?

Socrates:: This is impossible.

Parmenides:: It is a *conception*, therefore, of something?

Socrates:: Certainly.

Parmenides:: Of *being* or of *non-being*?

Socrates:: Of *being*.

Parmenides:: Will it not be of one particular thing, which that conception understands as one certain idea in all things?

Socrates:: Undoubtedly.

Parmenides:: But now will not that which is understood to be one, be a form always the same in all things?

Socrates:: This seems to be necessary.

Parmenides:: But what, is it not necessary, since other things participate of forms, that each should be composed from intellectual conceptions; and thus all of them be endued with intellection? Or will you assert that though they are intellectual conceptions, yet they understand nothing?

Socrates:: This is by no means rational. But, O Parmenides, the affair appears to me to take place, in the most eminent degree, as follows: that these forms are established paradigms, as it were, in nature; but that other things are assimilated to these, and are their resemblances: and that the participation of forms by other things, is nothing more than an assimilation to these forms.

Parmenides:: If any thing, therefore, becomes similar to a form, can it be possible that the form should not be similar to the assimilated, so far as the assimilated nature is rendered similar to the form? Or can any reason be assigned why similar should not be similar to similar?

Socrates:: There cannot.

Parmenides:: Is there not, therefore, a mighty necessity that the similar to similar should participate of one and the same form?

Socrates:: It is necessary.

Parmenides:: But will not that through the participation of which similars become similars be form itself?

Socrates:: Entirely so.

Parmenides:: Nothing, therefore, can be similar to a form, nor a form to any other. For in this case another form will always appear besides some particular form: and if this again should become similar to another, another would be required; and a new form would never cease to take place, as long as any form becomes similar to its participant.

Socrates:: You speak most truly.

Parmenides:: Hence, then, other things do not participate of forms through similitude; but it is necessary to seek after something else through which they participate.

Socrates:: So it seems.

Parmenides:: Do you see, O Socrates, how great a doubt arises, if any one defines forms as having an essential subsistence by themselves?

Socrates:: I do very much so.

Parmenides:: Know, then, that you do not apprehend what dubious consequences are produced, by placing every individual form of beings separate from its participants.

Socrates:: How do you mean?

Parmenides:: There are many other doubts, indeed, but this is the greatest: if any one should assert that it is not proper *forms* should be known, if they are such as we have said they ought to be, it is impossible to demonstrate that he who asserts this is deceived, unless he who doubts is skilled in a multitude of particulars, and is naturally of a good disposition. But he should be willing to pursue *him* closely who endeavors to support his opinion by a multitude of farfetched arguments: though, after all, he who contends that forms cannot be known will remain unpersuaded.

Socrates:: In what respect, O Parmenides?

Parmenides:: Because, O Socrates. I think that both you and any other, who establishes the essence of each form as subsisting by itself, must allow, in the first place, that no one of these subsists in us.

Socrates:: How if it did, could it any longer subsist itself by itself?

Parmenides:: You speak well. But will you not admit that such ideas as are, with relation to each other, such as they are, possess also their essence with respect to themselves, and not with reference to things subsisting among us, whether they are resemblances, or in whatever manner you may establish such things; each of which, while we participate, we distinguish by some peculiar appellation? But that the things subsisting among us, and which are synonymous to these, subsist also with reference to each other, and not with relation to forms; and belong to themselves, but not to those which receive with them a common appellation.

Socrates:: How do you mean?

Parmenides:: As if some one of us should be the master or servant of any one; he who is master is not the *master* of servant, nor is he who is servant, *servant* of master; but he sustains both these relations, as being a man; while, in the mean time, *dominion itself* is that which it is from its relation to *servitude*; and *servitude*, in a similar manner, is servitude with reference to *dominion*. But the ideas with which we are conversant possess no power over the ideas which subsist by themselves, nor have they any authority over us: but I assert that they subsist from themselves, and with relation to themselves; and ours, in a similar manner, with relation to themselves. Do you understand what I say?

Socrates:: Entirely so.

Parmenides:: Is not science itself, so far as it is such, the science of truth itself?

Socrates:: Perfectly so.

Parmenides:: But will each of the sciences which is, be the science of each of the things which are?

Socrates:: Certainly it will.

Parmenides:: But will not our science be conversant with the truth which subsists among us? And will not each of our sciences be the science of that being which happens to reside with us?

Socrates:: It is necessary that it should be so.

Parmenides:: But you have granted that we do not possess forms, and that they are not things with which we are conversant?

Socrates:: Certainly not.

Parmenides:: Is each genus of beings known to be what it is through the *form itself* of science?

Socrates:: Undoubtedly.

Parmenides:: But this *form* we do not possess?

Socrates:: By no means.

Parmenides:: No form, therefore, is known by us, as we do not participate of science itself?

Socrates:: It does not appear it can.

Parmenides:: The *beautiful itself* therefore, and the *good itself* and all such things which we have considered as being ideas, are unknown to us?

Socrates:: So it seems.

Parmenides:: But survey this, which is yet still more dire.

Socrates:: What?

Parmenides:: You will say, perhaps, that if there is any certain *genus of science*, it is much more accurate than the science which resides with us; and that this is likewise true of beauty, and every thing else?

Socrates:: Certainly.

Parmenides:: If, therefore, any one possesses *science itself* will you not assert that no one possesses the most accurate science more than a God?

Socrates:: It is necessary so to assert.

Parmenides:: But can a God, being such as he is, know our affairs through possessing science itself?

Socrates:: Why should he not?

Parmenides:: Because it has been confessed by us, O Socrates, that neither do those forms possess the power which is peculiar to them, through relation to our concerns, nor ours from relation to theirs; but that the forms in each division are referred to themselves.

Socrates:: It was admitted by us.

Parmenides:: If, therefore, there is the most accurate dominion with Divinity, and the most accurate science, the dominion of the Gods will not rule over us, nor will their science take cognizance of us, or of any of our concerns; and in a similar manner, we shall not rule over them by our dominion, nor know any thing divine through the assistance of our science. And again, in consequence of the same reasoning, they will neither, though Gods, be our governors, nor have any knowledge of human concerns.

Socrates:: But would not the discourse be wonderful in the extreme, which should deprive Divinity of knowledge?

Parmenides:: These, O Socrates, and many other consequences besides these, must necessarily happen to forms, if they are the ideas of things, and if any one separates each form apart from other things; so that any one who hears these assertions, may doubt and hesitate whether such forms have any subsistence; or if they do subsist in a most eminent degree, whether it is not abundantly necessary that they should be unknown by the human nature. Hence he who thus speaks may seem to say something to the purpose; and as we just now said, it may be considered as a wonderful thing, on account of the difficulty of being persuaded, and as the province of a man of a very naturally good disposition, to be able to perceive *that there is a certain genus of every thing, and an essence itself subsisting by itself*: but he will deserve still greater admiration, who, after having made this discovery, shall be able to teach another how to discern and distinguish all these in a becoming manner.

Socrates:: I assent to you, O Parmenides, for you entirely speak agreeably to my opinion.

Parmenides:: But indeed, O Socrates, if any one on the contrary takes away the forms of things, regarding all that has now been said, and other things of the same kind, he will not find where to turn his dianoëtic part, while he does not permit the idea of every thing which exists to be always the same, and by this means entirely destroys the dialectic power of the soul: but you also seem in this respect to perceive perfectly the same with myself.

Socrates:: You speak the truth.

Parmenides:: What then will you do with respect to philosophy? Where will you turn yourself, being ignorant of these?

Socrates:: Indeed I do not seem to myself to know at present.

Parmenides:: Before you exercise yourself in this affair, O Socrates, you should endeavor to define what the beautiful, the just, and the good are, and each of the other forms: for I before perceived the necessity of your accomplishing this, when I heard you discoursing with Aristotle. Indeed that ardor of yours, by which you are impelled to disputation, is both beautiful and divine; but collect yourself together, and while you are young more and more exercise yourself in that science, which appears useless to the many, and is called by them empty loquacity; for if you do not, the truth will elude your pursuit.

Socrates:: What method of exercise is this, O Parmenides?

Parmenides:: It is that which you have heard Zeno employing: but besides this, while you was speaking with Zeno, I admired your asserting that you not only suffered yourself to contemplate the wandering which subsists about the objects of sight, but likewise that which takes place in such things as are especially apprehended by reason, and which some one may consider as having a real subsistence.

Socrates:: For it appears to me, that after this manner it may without difficulty be proved, that there are both similars and dissimilars, or any thing else which it is the province of beings to suffer.

Parmenides:: You speak well: but it is necessary that, besides this, you should not only consider if each of the things supposed is, what will be the consequences from the hypothesis, but likewise what will result from supposing that it is not, if you wish to be more exercised in this affair.

Socrates:: How do you mean?

Parmenides:: As if you should wish to exercise yourself in this hypothesis of Zeno, if there are many things, what ought to happen both to the many with reference to themselves, and to the one; and to the one with respect to itself, and to the many: and again, if many are not, to consider what will happen both to the one and to the many, as well to themselves as to each other. And, again, if he should suppose if similitude is, or if it is not, what will happen from each hypothesis, both to the things supposed and to others, and to themselves and to each other; and the same method of proceeding must take place concerning the dissimilar, motion and permanency, generation and corruption, being and non-being: and, in one word, concerning every thing which is supposed either to be or nor to be, or influenced in any manner by any other passion, it is necessary to consider the consequences both to itself and to each individual of other things, which you may select for this purpose, and towards many, and towards all things in a similar manner; and again, how other things are related to themselves, and to another which you establish, whether you consider that which is the subject of your hypothesis as having a subsistence or as not subsisting; if, being perfectly exercised, you design through proper media to perceive the truth.

Socrates:: You speak, O Parmenides, of an employment which it is impossible to accomplish, nor do I very much understand what you mean; but why do you not establish a certain hypothesis yourself, and enter on its discussion, that I may be the better instructed in this affair?

Parmenides:: You assign, O Socrates, a mighty labor to a man so old as myself!

Socrates:: Will you, then, O Zeno, discuss something for us?

Cephalus:: And then Pythodorus related that Zeno, laughing, said—

Zeno:: We must request: Parmenides, O Socrates, to engage in this undertaking; for, as he says, it is no trifling matter; or do you not see the prodigious labor of such a discussion? If, therefore, many were present, it would not be proper to make such a request; for it is unbecoming, especially for an old man, to discourse about things of this kind before many witnesses. For the many are ignorant that, without this discursive progression and wandering through all things, it is impossible, by acquiring the truth, to obtain the possession of intellect. I, therefore, O Parmenides, in conjunction with Socrates, beg that you would undertake a discussion, which I have not heard for a long time.

Cephalus:: But Zeno having made this request, Antiphon said that Pythodorus related that he also, and Aristotle, and the rest who were present, entreated Parmenides to exhibit that which he spoke of, and not to deny their request.

Parmenides:: It is necessary to comply with your entreaties, though I should seem to myself to meet with the fate of the Ibycean horse, to whom as a courser, and advanced in years, when about to contend in the chariot races, and fearing through experience for the event, Ibycus comparing himself, said—*Thus also I that am so old, am compelled to return to the subjects of my love*; in like manner, I appear to myself to dread vehemently the present undertaking, when I call to mind the manner in which it is requisite to swim over such, and so great a sea of discourse: but yet it is necessary to comply, especially as it is the request of Zeno, for we are one and the same. Whence then shall we begin; and what shall we first of all suppose? Are you willing, since it seems we must play a very serious game, that I should begin from myself, and my own hypothesis, supposing concerning the one itself whether the one is, or whether it is not, what ought to be the consequence?

Zeno:: By all means.

Parmenides:: Who then will answer to me? Will the youngest among you do this? For the labor will be very little for him to answer what he thinks; and his answer will at the same time afford me a time for breathing in this arduous investigation.

Aristoteles:: I am prepared to attend you, O Parmenides; for you may call upon me as being the youngest. Ask me, therefore, as one who will answer you.

Parmenides:: Let us then begin. If one is, is it not true that the one will not be many?

Aristoteles:: For how can it be?

Parmenides:: It is necessary, therefore, that there should neither be any part belonging to it, nor that it should be a whole.

Aristoteles:: Why?

Parmenides:: Is not a part a part of a whole?

Aristoteles:: Certainly.

Parmenides:: But what is a whole? Is not that to which no part is wanting a whole?

Aristoteles:: Entirely so.

Parmenides:: From both these consequences, therefore, the one would be composed of parts, being a whole and possessing parts?

Aristoteles:: It is necessary it should be so.

Parmenides:: And so both ways the one will be many, and not one.

Aristoteles:: True.

Parmenides:: But it is necessary that it should not be many, but one.

Aristoteles:: It is necessary.

Parmenides:: Hence, it will neither be a whole, nor possess parts, if the one is one.

Aristoteles:: It will not.

Parmenides:: If, therefore, it has no part, it neither possesses beginning, middle, nor end; for such as these would be its parts?

Aristoteles:: Right.

Parmenides:: But end and beginning are the bounds of every thing?

Aristoteles:: How should they not?

Parmenides:: The one, therefore, is infinite, if it has neither beginning nor end?

Aristoteles:: Infinite.

Parmenides:: And without figure, therefore, for it neither participates of the round figure nor the straight.

Aristoteles:: Why not?

Parmenides:: For the round figure is that, the extremities of which are equally distant from the middle.

Aristoteles:: Certainly.

Parmenides:: And the straight figure is that, the middle part of which is situated before, or in the view of both the extremes?

Aristoteles:: It is so.

Parmenides:: Will not, therefore, the one consist of parts, and be many, whether it participates of a straight or round figure?

Aristoteles:: Entirely so.

Parmenides:: It is, therefore, neither straight nor circular, since it is without parts.

Aristoteles:: Right.

Parmenides:: And indeed, being such, it will be no where; for it will neither be in another, nor in itself.

Aristoteles:: How so?

Parmenides:: For, being in another, it would after a manner be circularly comprehended by that in which it is, and would be touched by it in many places: but it is impossible that the one which is without parts, and which does not participate of a circle, should be touched by a circle in many places.

Aristoteles:: Impossible.

Parmenides:: But if it were in itself it would also contain itself, since it is no other than itself which subsists in itself: For it is impossible that any thing should not be comprehended by that in which it is.

Aristoteles:: It is impossible.

Parmenides:: Would not, therefore, that which contains be one thing, and that which is contained another? For the same whole cannot at the same time suffer and do both these: and thus the one would no longer be one, but two.

Aristoteles:: It certainly would not.

Parmenides:: The one, therefore, is not any where, since it is neither in itself nor in another.

Aristoteles:: It is not.

Parmenides:: But consider whether thus circumstanced it can either stand or be moved.

Aristoteles:: Why can it not?

Parmenides:: Because whatever is moved is either locally moved, or suffers alteration; for these alone are the genera of motion.

Aristoteles:: Certainly.

Parmenides:: But if the one should be altered from itself, it is impossible that it should remain in any respect the one.

Aristoteles:: Impossible.

Parmenides:: It will not therefore be moved according to alteration?

Aristoteles:: It appears that it will not.

Parmenides:: But will it be moved locally?

Aristoteles:: Perhaps so.

Parmenides:: But indeed if the one is moved locally, it will either be carried round in the same circle, or it will change one place for another.

Aristoteles:: Necessarily so.

Parmenides:: But ought not that which is carried round in a circle to stand firm in the middle, and to have the other parts of itself rolled about the middle? And can any method be devised by which it is possible that a nature which has neither middle nor parts can be circularly carried about the middle?

Aristoteles:: There cannot be any.

Parmenides:: But if it changes its place, would it not become situated elsewhere, and thus be moved?

Aristoteles:: In this case it would.

Parmenides:: Has it not appeared to be impossible that the one should be in any thing?

Aristoteles:: It has.

Parmenides:: Is it not much more impossible that it should *become situated* in any thing?

Aristoteles:: I do not understand how you mean.

Parmenides:: If any thing is becoming to be in any thing, is it not necessary that it should not yet be in it, since it is becoming to be; nor yet entirely out of it, since it has already become?

Aristoteles:: It is necessary.

Parmenides:: If therefore this can take place in any other thing, it must certainly happen to that which possesses parts; for one part of it will be in this thing, but another out of it: but that which has no parts cannot by any means be wholly within or without any thing.

Aristoteles:: It is true.

Parmenides:: But is it not much more impossible that that which neither has parts nor is a whole can be becoming to be in any thing; since it can neither subsist in becoming to be according to parts, nor according to a whole?

Aristoteles:: So it appears.

Parmenides:: Hence it will neither change its place by going any where, nor that it may become situated in any thing; nor, through being carried round in that which is the same, will it suffer any alteration.

Aristoteles:: It does not appear that it can.

Parmenides:: The one therefore is immovable, according to every kind of motion.

Aristoteles:: Immovable.

Parmenides:: But we have likewise asserted that it is impossible for the one to be in any thing.

Aristoteles:: We have said so.

Parmenides:: It can never therefore be in same.

Aristoteles:: Why?

Parmenides:: Because it would now be in that in which same is.

Aristoteles:: Entirely so.

Parmenides:: But the one can neither be in itself nor in another.

Aristoteles:: It cannot.

Parmenides:: The one therefore is never in same.

Aristoteles:: It does not appear that it is.

Parmenides:: But as it is never in same, it can neither be at rest nor stand still.

Aristoteles:: In this case it cannot.

Parmenides:: The one, therefore, as it appears, neither stands still nor is moved.

Aristoteles:: It does not appear that it can.

Parmenides:: Nor will it be the same either with another, or with itself; nor again different either from itself or from another.

Aristoteles:: How so?

Parmenides:: For, if different from itself, it would be different from the one, and so would not be the one.

Aristoteles:: True.

Parmenides:: And if it should be the same with another, it would be that thing and would not be itself; so that neither could it thus be the one, but it would be something different from the one.

Aristoteles:: It could not indeed.

Parmenides:: But, if it is the same with another, must it not be different from itself?

Aristoteles:: It must.

Parmenides:: But it will not be different from another while it is *the one*. For it does not belong to *the one* to be different from another, but to that alone which is different from another, and; to no other.

Aristoteles:: Right.

Parmenides:: In consequence, therefore, of its being the one, it will not be another; or do you think that it can?

Aristoteles:: Certainly not.

Parmenides:: But if it is not different from another, neither will it be different from itself. But if not different from itself, it will not be that which is different; and being in no respect that which is different, it will be different from nothing.

Aristoteles:: Right.

Parmenides:: Nor yet will it be the same with itself.

Aristoteles:: Why not?

Parmenides:: Is the nature of the one the same with that of same?

Aristoteles:: Why?

Parmenides:: Because, when any thing becomes the same with any thing, it does not on this account become one.

Aristoteles:: But what then?

Parmenides:: That which becomes the same with many things must, necessarily become many, and not one.

Aristoteles:: True.

Parmenides:: But if the one and same differ in no respect, whenever any thing becomes same it will always become the one, and whenever it becomes “the one it will be same.

Aristoteles:: Entirely so.

Parmenides:: If, therefore, the one should be the same with itself, it would be to itself that which is not one; and so that which is one will not be one.

Aristoteles:: But this indeed is impossible.

Parmenides:: It is impossible, therefore, for the one to be either different from another, or the same with itself.

Aristoteles:: Impossible.

Parmenides:: And thus the one will neither be different nor the same, either with respect to itself or another.

Aristoteles:: It will not.

Parmenides:: But neither will it be similar to any thing, or dissimilar either to itself or to another.

Aristoteles:: Why not?

Parmenides:: Because the similar is that which in a certain respect suffers *same*.

Aristoteles:: Certainly.

Parmenides:: But it has appeared that same is naturally separate from the one.

Aristoteles:: It has appeared so.

Parmenides:: But if the one should suffer any thing except being the one which *is*, it would become more than the one: but this is impossible.

Aristoteles:: Certainly.

Parmenides:: In no respect, therefore, can *the one* suffer to be the same, either with another or with itself.

Aristoteles:: It does not appear that it can.

Parmenides:: It cannot, therefore, be similar either to another or to itself.

Aristoteles:: So it seems.

Parmenides:: Nor yet can the one suffer to be another; for thus it would suffer to be more than the one.

Aristoteles:: More, indeed.

Parmenides:: But that which suffers to be different, either from itself or from another, will be dissimilar either to itself or to another, if that which suffers same is similar.

Aristoteles:: Right.

Parmenides:: But *The One*, as it appears, since it in no respect suffers *different*, can in no respect be dissimilar either to itself or to another.

Aristoteles:: It certainly cannot.

Parmenides:: The one, therefore, will neither be similar nor dissimilar, either to another or to itself.

Aristoteles:: It does not appear that it can.

Parmenides:: But since it is such, it will neither be equal nor unequal, either to itself or to another.

Aristoteles:: How so?

Parmenides:: If it were equal, indeed, it would be of the same measures with that to which it is equal.

Aristoteles:: Certainly.

Parmenides:: But that which is greater or lesser than the things with which it is commensurate, will possess more measures than the lesser quantities, but fewer than the greater.

Aristoteles:: Certainly.

Parmenides:: But to those to which it is incommensurable, with respect to the one part, it will consist of lesser; and with respect to the other, of greater measures.

Aristoteles:: How should it not?

Parmenides:: Is it not, therefore, impossible that that which does not participate of same should either be of the same measures, or admit any thing in any respect the same?

Aristoteles:: It is impossible.

Parmenides:: It will, therefore, neither be equal to itself nor to another, if it does not consist of the same measures.

Aristoteles:: It does not appear that it will.

Parmenides:: But if it consists of more or fewer measures, it will be of as many parts as there are measures; and so again it will no longer be the one, but as many as there are measures.

Aristoteles:: Right.

Parmenides:: But if it should be of one measure, it would become equal to that measure: but it has appeared that the one cannot be equal to any thing.

Aristoteles:: It has appeared so.

Parmenides:: The one, therefore, neither participates of one measure, nor of many, nor of a few; nor (since it in no respect participates of same) can it ever, as it appears, be equal to itself or to another, nor again greater or lesser either than itself or another.

Aristoteles:: It is in every respect so.

Parmenides:: But what? Does it appear that the one can be either older or younger, or be of the same age?

Aristoteles:: What should hinder?

Parmenides:: If it had in any respect the same age, either with itself or with another, it would participate equally of time and similitude, which we have nevertheless asserted the one does not participate.

Aristoteles:: We have asserted so.

Parmenides:: And this also we have said, that it neither participates of dissimilitude nor inequality.

Aristoteles:: Entirely so.

Parmenides:: How, therefore, being such, can it either be older or younger than any thing, or possess the same age with any thing?

Aristoteles:: It can in no respect.

Parmenides:: The one, therefore, will neither be younger nor older, nor will it be of the same age, either with itself or with another.

Aristoteles:: It does not appear that it will.

Parmenides:: Will it not, therefore, be impossible that the one should be at all in time, if it be such? Or, is it not necessary that, if any thing is in time, it should always become older than itself?

Aristoteles:: It is necessary.

Parmenides:: But is not that which is older, always older than the younger?

Aristoteles:: What then?

Parmenides:: That, therefore, which is becoming to be older than itself, is at the same time becoming to be younger than itself, if it is about to have that through which it may become older.

Aristoteles:: How; do you say?

Parmenides:: Thus: It is requisite that nothing should subsist in becoming to be different from another, when it is already different, but that it should *be* now different from that which *is* different, *have been* from that which *was*, and *will be* from that which is *to be hereafter*: but from that which is *becoming to be* different, it ought neither to have been, nor to be here after, nor to be, but to subsist in becoming to be different, and no otherwise.

Aristoteles:: It is necessary.

Parmenides:: But the older differs from the younger, and no other.

Aristoteles:: Certainly.

Parmenides:: Hence, that which is becoming to be older than itself, must necessarily at the same time subsist in becoming to be younger than itself.

Aristoteles:: It seems so.

Parmenides:: But likewise it ought not to subsist in becoming to be in a longer time than itself, nor yet in a shorter; but in a time equal to itself it should subsist in becoming to be, should be, have been, and be hereafter.

Aristoteles:: For these are necessary.

Parmenides:: It is necessary, therefore, as it appears, that such things as are in time, and participate an affection of this kind, should each one possess the same age with itself, and should subsist in becoming to be both older and younger than itself.

Aristoteles:: It seems so.

Parmenides:: But no one of these passions belongs to the one. None. Neither, therefore, is time present with it, nor does it subsist in any time.

Aristoteles:: It does not, indeed, according to the decisions of reason.

Parmenides:: What then? Do not the terms it was, *it has been*, *it did become*, seem to signify the participation of the time past?

Aristoteles:: Certainly.

Parmenides:: And do not the terms it will be, it may become, and it will be generated, signify that which is about to be hereafter?

Aristoteles:: Certainly.

Parmenides:: But are not the terms *it is*, and *it is becoming to be*, marks of the present time?

Aristoteles:: Entirely so.

Parmenides:: If then the one participates in no respect of any time, it neither ever was, nor has been, nor did become: nor is it now generated, nor is becoming to be, nor is, nor may become hereafter, nor will be generated, nor will be.

Aristoteles:: It is most true.

Parmenides:: Is it possible, therefore, that any thing can participate of essence, except according to some one of these?

Aristoteles:: It is not.

Parmenides:: In no respect, therefore, does *the one* participate of essence.

Aristoteles:: It does not appear that it can.

Parmenides:: *The one*, therefore, is in no respect.

Aristoteles:: So it seems.

Parmenides:: Hence, it is not in such a manner as to be one, for thus it would be being, and participate of essence: but, as it appears, the one neither is one nor is, if it be proper to believe in reasoning of this kind.

Aristoteles:: It appears so.

Parmenides:: But can any thing either belong to, or be affirmed of, that which is not?

Aristoteles:: How can it?

Parmenides:: Neither, therefore, does any name belong to it, nor discourse, nor any science, nor sense, nor opinion.

Aristoteles:: It does not appear that there can.

Parmenides:: Hence, it can neither be named, nor spoken of, nor conceived by opinion, nor be known, nor perceived by any being.

Aristoteles:: So it seems.

Parmenides:: Is it possible, therefore, that these things can thus take place about the one?

Aristoteles:: It does not appear to me that they can.

Parmenides:: Are you therefore willing that we should return again to the hypothesis from the beginning, and see whether or not by this means any thing shall appear to us different from what it did before?

Aristoteles:: I am entirely willing.

Parmenides:: Have we not therefore declared if the one is, what circumstances ought to happen to it? Is it not so?

Aristoteles:: Certainly.

Parmenides:: But consider from the beginning, if the one is, can it be possible that it should be, and yet not participate of *essence*?

Aristoteles:: It cannot.

Parmenides:: Will not essence therefore be the essence of the one, but not the same with the one? for, if it were the same, it would not be the essence of *the one*, nor would *the one* participate of essence; but it would be all one to say *the one is*, and *one one*. But now our hypothesis is not *if one*, what ought to happen, but *if the one is*—Is it not so?

Aristoteles:: Entirely so.

Parmenides:: Does it not signify that the term *is* is something different from *the one*?

Aristoteles:: Necessarily.

Parmenides:: If, therefore, any one should summarily assert that *the one is*, this would be no other one than that which participates of essence.

Aristoteles:: Certainly.

Parmenides:: Again, therefore, let us say, if *the one is*, what will happen. Consider then whether it is not necessary that this hypothesis should signify such a *one* as possesses parts?

Aristoteles:: How?

Parmenides:: Thus. If the term *it is* is spoken of one being, and the one, of being which is one, and essence is not the same with the one, but each belongs to that same one being which we have supposed, is it not necessary that the whole of it should be *one being*, but that its parts should be the one and to be?

Aristoteles:: It is necessary.

Parmenides:: Whether, therefore, should we call each of these parts a part alone, or a part of the whole?

Aristoteles:: Each should be called a part of the whole.

Parmenides:: That which *is one*, therefore, is a whole, and possesses a part.

Aristoteles:: Entirely so.

Parmenides:: What then? Can each of these parts of one being, viz. the one and being, desert each other, so that the one shall not be a part of being, or being shall not be a part of the one?

Aristoteles:: It cannot be.

Parmenides:: Again, therefore, each of the parts will contain both *one* and being, and each part will at least be composed from two parts; and, on the same account, whatever part takes place will always possess these two parts: for the one will always contain being, and being the one; so that two things will always be produced, and no part will ever be one.

Aristoteles:: Entirely so.

Parmenides:: Will not, therefore, one being thus become an infinite multitude?

Aristoteles:: So it seems.

Parmenides:: But proceed, and still further consider this.

Aristoteles:: What?

Parmenides:: We have said that the one participates of essence, so far as it is being.

Aristoteles:: We have said so.

Parmenides:: And on this account one being appears to be many.

Aristoteles:: It does so.

Parmenides:: But what then? If we receive dianoëtically that one which we said participates of essence, and apprehend it alone by itself without that which we have said it participates, will it appear to be one alone? Or will this also be many?

Aristoteles:: I think it will be one.

Parmenides:: But let us consider another certain circumstance. It is necessary that its essence should be one thing, and itself another thing, if the one does not participate of essence; but as essence it participates of the one.

Aristoteles:: It is necessary.

Parmenides:: If, therefore, essence is one thing, and the one another thing, neither is the one, so far as the one, different from essence, nor essence, so far as essence, different from the one; but they are different from each other through that which is different and another.

Aristoteles:: Entirely so.

Parmenides:: So that different is neither the same with the one nor with essence.

Aristoteles:: How can it?

Parmenides:: What, then, if we should select from them, whether if you will essence and different, or essence and the one, or the one and different, should we not, in each assumption, select certain things which might very properly be denominated both these?

Aristoteles:: How do you mean?

Parmenides:: After this manner is there not that which we call *essence*?

Aristoteles:: There is.

Parmenides:: And again, that which we denominate the one?

Aristoteles:: And this also.

Parmenides:: Is not, therefore, each of them denominated?

Aristoteles:: Each.

Parmenides:: But what, when I say essence and the one, do I not pronounce both these?

Aristoteles:: Entirely so.

Parmenides:: And if I should say *essence* and *different*, or *different* and *The One*, should I not perfectly, in each of these, pronounce both?

Aristoteles:: Certainly.

Parmenides:: But can those things which are properly denominated both, be both, and yet not two?

Aristoteles:: They cannot.

Parmenides:: And can any reason be assigned, why of two things each of them should not be one?

Aristoteles:: There cannot.

Parmenides:: As, therefore, these two subsist together, each of them will be one.

Aristoteles:: It appears so.

Parmenides:: But if each of them is one, and the one is placed together with them, by any kind of conjunction, will not all of them become three?

Aristoteles:: Certainly.

Parmenides:: But are not three odd, and two even?

Aristoteles:: How should they not? But what then?

Parmenides:: Being two, is it not necessary that twice should be present? And being three, thrice; since twice one subsists in two, and thrice one in three?

Aristoteles:: It is necessary.

Parmenides:: But if there are two and twice, is it not necessary that there should be twice two? And if there are three and thrice, that there should be thrice three?

Aristoteles:: How should it not?

Parmenides:: But what, if there are three and twice, and two and thrice, is it not necessary that there should be thrice two and twice three?

Aristoteles:: Entirely so.

Parmenides:: Hence, there will be the evenly even, and the oddly odd; and the oddly even, and the evenly odd.

Aristoteles:: It will be so.

Parmenides:: If, therefore, this be the case, do you think that any number will be left which is not necessarily there?

Aristoteles:: By no means.

Parmenides:: If, therefore, the one is, it is also necessary that there should be number.

Aristoteles:: It is necessary.

Parmenides:: But if number is, it is necessary that the many should subsist, and an infinite multitude of beings: or do you think that number, infinite in multitude, will also participate of essence?

Aristoteles:: By all means I think so.

Parmenides:: If, therefore, every number participates of essence, will not each part also of number participate of essence?

Aristoteles:: Certainly.

Parmenides:: Essence, therefore, will be distributed through all things which are many, and will not desert any being, whether the least or the greatest: for how can essence be absent from any being?

Aristoteles:: In no respect.

Parmenides:: Essence, therefore, is distributed as much as possible into the least and the greatest, and into all things every way, and is divided the most of all things, and possesses infinite parts.

Aristoteles:: It is so.

Parmenides:: Very many, therefore, are its parts.

Aristoteles:: Very many, indeed.

Parmenides:: But what, is there any one of these which is a part of essence, and yet is not one part?

Aristoteles:: But how can this be?

Parmenides:: But if it is, I think it must always be necessary, as long as it is, that it should be a certain one; but that it cannot possibly be nothing.

Aristoteles:: It is necessary.

Parmenides:: The one, therefore, is present with every part of essence, deserting no part, whether small or great, or in whatever manner it may be affected.

Aristoteles:: It is so.

Parmenides:: Can one being, therefore, be a whole, subsisting in many places at once? Consider this diligently.

Aristoteles:: I do consider it, and I see that it is impossible.

Parmenides:: It is divided, therefore, since it is not a whole; for it can no otherwise be present with all the parts of essence, than in a divided state.

Aristoteles:: Certainly.

Parmenides:: But that which is divisible ought necessarily to be so many as its parts.

Aristoteles:: It ought.

Parmenides:: We did not, therefore, just now speak truly, when we said that essence was distributed into very many parts; since it is not divided into more parts than the one, but into parts equal to those of the one: for neither does being desert the one, nor the one, being: but these two always subsist, equalized through all things.

Aristoteles:: It appears to be entirely so.

Parmenides:: The one, therefore, which is distributed by essence, is many and an infinite multitude.

Aristoteles:: So it appears.

Parmenides:: One being, therefore, is not only many, but it is like wise necessary that the one which is distributed by essence should be many.

Aristoteles:: Entirely so.

Parmenides:: And, indeed, in consequence of the parts being parts of a whole, the one will be defined according to a whole: or are not the parts comprehended by the whole?

Aristoteles:: Necessarily so.

Parmenides:: But that which contains will be a bound.

Aristoteles:: How should it not?

Parmenides:: One being, therefore, is in a certain respect both one and many, whole and parts, finite and infinite in multitude.

Aristoteles:: It appears so.

Parmenides:: As it is bounded, therefore, must it not also have extremes?

Aristoteles:: It is necessary.

Parmenides:: But what, if it be a whole, must it not also have a beginning, middle, and end? Or can there be any whole without these three? And if any one of these be wanting, can it be willing to be any longer a whole?

Aristoteles:: It cannot.

Parmenides:: The one, therefore, as it appears, will possess a beginning, end, and middle.

Aristoteles:: It will.

Parmenides:: But the middle is equally distant from the extremes; for it could not otherwise be the middle.

Aristoteles:: It could not.

Parmenides:: And, as it appears, the one being such, will participate of a certain figure, whether straight or round, or a certain mixture from both.

Aristoteles:: It will so.

Parmenides:: Will it, therefore, being such, subsist in itself and in another?

Aristoteles:: How?

Parmenides:: For each of the parts is in the whole, nor is any one external to the whole.

Aristoteles:: It is so.

Parmenides:: But all the parts are comprehended by the whole.

Aristoteles:: Certainly.

Parmenides:: But the one is all the parts of itself; and is neither more nor less than all.

Aristoteles:: Certainly.

Parmenides:: Is not the one, therefore, a whole?

Aristoteles:: How should it not?

Parmenides:: If, therefore, all the parts are in the whole, and all the parts are one, and the one is a whole, but all the parts are comprehended by the whole; hence, the one will be comprehended by the one, and so the one will be in itself.

Aristoteles:: It appears so.

Parmenides:: But again, the whole is not in the parts, neither in all, nor in a certain one. For, if it were in all, it would necessarily be in one: for, if it were not in some one, it would not be able to be in all. But if this one is a one belonging to all the parts, and the whole is not in this one, how can it any longer be a whole in all the parts?

Aristoteles:: In no respect.

Parmenides:: Nor yet in any of the parts. For if the whole should be in some of the parts, the greater would be in the lesser; which is impossible.

Aristoteles:: Impossible.

Parmenides:: But since the whole is neither in many, nor in one, nor in all the parts, is it not necessary that it should either be in some other, or that it should be nowhere?

Aristoteles:: It is necessary.

Parmenides:: But if it is nowhere, will it not be nothing? And if it is a whole, since it is not in itself, is it not necessary that it should be in another?

Aristoteles:: Entirely so.

Parmenides:: So far, therefore, as the one is a whole, it is in another: but so far as all things are its parts, and itself all the parts, it is in itself: and so the one will necessarily be in itself and in another.

Aristoteles:: Necessarily.

Parmenides:: But as the one is naturally such, is it not necessary that it should both be moved and stand still?

Aristoteles:: How?

Parmenides:: It must stand still, indeed, if it be in itself. For, being in one, and not departing from this, it will be in same, through being in itself.

Aristoteles:: It will.

Parmenides:: But that which is always in the same must necessarily without doubt always stand still.

Aristoteles:: Entirely so.

Parmenides:: But what, must not that, on the contrary, which is always in another, necessarily never be in same? But if it be never in same, can it stand still? And if it does not stand still, must it not be moved?

Aristoteles:: Certainly.

Parmenides:: It is necessary, therefore, that the one, since it is always in itself and in another, must always be moved and stand still.

Aristoteles:: It appears so.

Parmenides:: But, likewise, it ought to be the same with itself, and different from itself; and, in like manner, the same with, and different from, others, if it suffers what we have related above.

Aristoteles:: How?

Parmenides:: Every thing, in a certain respect, thus takes place with relation to every thing: For it is either the same with it or different: or if it is neither same nor different, it will be a part of this to which it is so related, or with respect to a part it will be a whole.

Aristoteles:: It appears so.

Parmenides:: Is therefore the one a part of itself?

Aristoteles:: By no means.

Parmenides:: It will not therefore be a whole, with respect to itself, as if itself were a part.

Aristoteles:: For it cannot.

Parmenides:: But is the one, therefore, different from the one?

Aristoteles:: By no means.

Parmenides:: It will not therefore be different from itself.

Aristoteles:: Certainly not.

Parmenides:: If, therefore, it is neither different nor a whole, nor yet a part with respect to itself, is it not necessary that it should be the same with itself?

Aristoteles:: It is necessary.

Parmenides:: But what, that which is elsewhere than itself, subsisting in same in itself, must it not necessarily be different from itself, since it has a subsistence elsewhere?

Aristoteles:: It appears so to me.

Parmenides:: And in this manner the one appears to subsist being at the same time both in itself and in another.

Aristoteles:: So it seems.

Parmenides:: Through this, therefore, it appears that the one is different from itself.

Aristoteles:: It does so.

Parmenides:: But what if any thing is different from any thing, is it not different from that which is different?

Aristoteles:: Necessarily so.

Parmenides:: But are not all such things as are not one different from the one? And is not the one different from such things as are not one?

Aristoteles:: How should it not?

Parmenides:: The one therefore will be different from other things.

Aristoteles:: Different.

Parmenides:: But see whether different and same are not contrary to each other.

Aristoteles:: How should they not?

Parmenides:: Do you think, therefore, that same can ever be in different, or different in same?

Aristoteles:: I do not.

Parmenides:: If therefore *different* is never in *same*, there is no being in which for any time different subsists; for, if it subsisted in it during any time whatever, in that time different would be in same. Would it not be so?

Aristoteles:: It would.

Parmenides:: But since it is never in same, different will never subsist in any being.

Aristoteles:: True.

Parmenides:: Neither therefore will different be in things which are not one, nor in the one.

Aristoteles:: It will not.

Parmenides:: The one, therefore, will not through different be different from things which are not one, nor things which are not one from the one.

Aristoteles:: Not, indeed.

Parmenides:: Nor likewise will they be different from each other, since they do not participate of different.

Aristoteles:: For how can they?

Parmenides:: But if they are neither different from themselves, nor from different, must they not entirely escape from being different from each other?

Aristoteles:: They must escape.

Parmenides:: But neither will things which are not one participate of the one: for if they did they would no longer be not one, but in a certain respect one.

Aristoteles:: True.

Parmenides:: Hence things which are not one will not be number; for they would not be entirely not one in consequence of possessing number.

Aristoteles:: Certainly not.

Parmenides:: But what, can things which are not one be parts of one? Or would not things which are not one by this means participate of the one?

Aristoteles:: They would participate.

Parmenides:: If, therefore, this is entirely the one, but those not one, neither will the one be a part of things which are not one, nor a whole with respect to them, as if they were parts; nor, on the contrary, will things which are not one be parts of the one, nor yet wholes, as if the one were a part.

Aristoteles:: They will not.

Parmenides:: But we have said that things which are neither parts nor wholes, nor different from each other, must be the same with each other.

Aristoteles:: We have said so.

Parmenides:: Must we not therefore assert that the one, since it subsists in this manner with respect to things which are not one, is the same with them?

Aristoteles:: We must.

Parmenides:: The one, therefore, as it appears, is both different from others and itself, and the same with them and with itself.

Aristoteles:: It appears from this reasoning to be so.

Parmenides:: But is it also similar and dissimilar to itself and others?

Aristoteles:: Perhaps so.

Parmenides:: Since, therefore, it appears to be different from others, others also will be different from it.

Aristoteles:: But what then?

Parmenides:: Will it not be different from others, in the same manner as others from it? And this neither more nor less?

Aristoteles:: How should it not?

Parmenides:: If, therefore, neither more nor less, it must be different in a similar manner.

Aristoteles:: Certainly.

Parmenides:: Will not that through which the one becomes different from others, and others in a similar manner from it, be also that through which both the one becomes the same with others, and others with the one?

Aristoteles:: How do you say?

Parmenides:: Thus: Do not you call every name the name of something?

Aristoteles:: I do: but what then?

Parmenides:: Do you pronounce the same name often or once?

Aristoteles:: I pronounce it once.

Parmenides:: When, therefore, you enunciate that name once, do you denominate that thing to which the name belongs: but if often, not the same? Or, whether you pronounce the same name once or often, do you not necessarily always signify the same thing?

Aristoteles:: But what then?

Parmenides:: Does not a different name belong to some certain thing?

Aristoteles:: Entirely so.

Parmenides:: When, therefore, you pronounce this, whether once or often, you do not assign this name to any other, nor do you denominate any other thing than that to which this name belongs.

Aristoteles:: It is necessary it should be so.

Parmenides:: But when we say that other things are different from the one, and that the one is different from others, twice pronouncing the name different, we yet signify nothing more than the nature of that thing of which this is the name.

Aristoteles:: Entirely so.

Parmenides:: If therefore the one be different from others, and others from the one, in consequence of suffering the same different, the one will not suffer that which is different from others, but the same with others: but is not that which in a certain respect suffers the same similar?

Aristoteles:: Certainly.

Parmenides:: But, in the same manner, as the one becomes different from others, every thing becomes similar to every thing: for every thing is different from all things.

Aristoteles:: It appears so.

Parmenides:: But is the similar contrary to the dissimilar?

Aristoteles:: It is.

Parmenides:: And is not different contrary to *same*?

Aristoteles:: And this also.

Parmenides:: But this likewise is apparent, that the one is both the same with and different from others.

Aristoteles:: It is apparent.

Parmenides:: But to be the same with others is a contrary passion to the being different from others.

Aristoteles:: Entirely so.

Parmenides:: But the one appears to be similar, so far as different.

Aristoteles:: Certainly.

Parmenides:: So far therefore as it is same, it will be dissimilar on account of its suffering a passion contrary to that which produces the similar: or was it not the similar which produced the different?

Aristoteles:: Certainly.

Parmenides:: It will therefore render that which is dissimilar the same; or it would not be contrary to different.

Aristoteles:: So it appears.

Parmenides:: The one therefore will be both similar and dissimilar to others: and so far as different it will be similar; but so far as the same dissimilar.

Aristoteles:: The case appears to be so.

Parmenides:: And it is likewise thus affected.

Aristoteles:: How?

Parmenides:: So far as it suffers same it does not suffer that which is various; but not suffering that which is various, it cannot be dissimilar; and not being dissimilar, it will be similar: but so far as it suffers different it will be various; and being various it will be dissimilar.

Aristoteles:: You speak the truth.

Parmenides:: Since, therefore, the one is both the same with and different from others, according to both and according to each of these, it will be similar and dissimilar to others.

Aristoteles:: Entirely so.

Parmenides:: And will not this in a similar manner be the case with relation to itself, since it has appeared to be both different from and the same with itself; so that, according to both these, and according to each, it will appear to be similar and dissimilar?

Aristoteles:: Necessarily so.

Parmenides:: But consider now how the one subsists with respect to touching itself and others, and not touching.

Aristoteles:: I consider.

Parmenides:: For the one appears in a certain respect to be in the whole of itself.

Aristoteles:: Right.

Parmenides:: But is the one also in others?

Aristoteles:: Certainly.

Parmenides:: So far therefore as the one is in others it will touch others; but so far as it is in itself it will be hindered from touching others, but it will touch itself because it subsists in itself.

Aristoteles:: So it appears.

Parmenides:: And thus, indeed, the one will both touch itself and others.

Aristoteles:: It will so.

Parmenides:: But what will you say to this? Must not every thing which is about to touch any thing be situated in a place proximate to and after that which it is about to touch, and in which when situated it touches?

Aristoteles:: It is necessary.

Parmenides:: The one, therefore, if it is about to touch itself, ought to be situated immediately after itself, occupying the place proximate to that in which it is.

Aristoteles:: It ought so.

Parmenides:: Would not this be the case with the one if it was two; and would it not be in two places at once? But can this be the case while it is the one?

Aristoteles:: It cannot.

Parmenides:: The same necessity therefore belongs to the one, neither to be two nor to touch itself.

Aristoteles:: The same.

Parmenides:: But neither will it touch others.

Aristoteles:: Why?

Parmenides:: Because we have said, that when any thing is about to touch any thing which is separate from it, it ought to be placed proximate to that which it is about to touch; but that there must be no third in the middle of them.

Aristoteles:: True.

Parmenides:: Two things, therefore, at the least are requisite, if contact is about to take place.

Aristoteles:: Certainly.

Parmenides:: But if a third thing succeeds to the two terms, these will now be three, but the contacts two.

Aristoteles:: Certainly.

Parmenides:: And thus one always being added, one contact will be added, and it will come to pass that the contacts will be less by one than the multitude of the numbers: for by how much the two first numbers surpassed the contacts, so as to be more in number than the contacts, by so much will all the following number surpass the multitude of the contacts. For in that which remains one will be added to the number, and one contact to the contacts.

Aristoteles:: Right.

Parmenides:: The contacts, therefore, less by one will always be as many in number as the things themselves.

Aristoteles:: True.

Parmenides:: If therefore it is one alone, and not two, there can be no contact.

Aristoteles:: How can there?

Parmenides:: Have we not said that such things as are different from the one are neither one nor participate of it, since they are different?

Aristoteles:: We have.

Parmenides:: The one therefore is not number in others, as the one is not contained in them.

Aristoteles:: How can it?

Parmenides:: The one, therefore, is neither others, nor two, nor any thing possessing the name of another number.

Aristoteles:: It is not.

Parmenides:: The one, therefore, is one alone, and will not be two.

Aristoteles:: It will not, as it appears.

Parmenides:: There is no contact, therefore, two not subsisting.

Aristoteles:: There is not.

Parmenides:: The one therefore will neither touch other things, nor will other things touch the one, as there is no contact.

Aristoteles:: Certainly not.

Parmenides:: On all these accounts, therefore, the one will both touch and not touch others and itself.

Aristoteles:: So it appears.

Parmenides:: Is it therefore equal and unequal to itself and others?

Aristoteles:: How?

Parmenides:: If the one were greater or lesser than others, or others greater or lesser than the one, would it not follow that neither the one, because one, nor others, because different from the one, would be greater or lesser than each other from their own essences? But if each, besides being such as they are, should possess equality, would they not be equal to each other? But if the one should possess magnitude, and the other parvitude, or the one magnitude but others parvitude, would it not follow, that, with whatever species magnitude was present, that species would be greater; but that the species would be lesser with which parvitude was present?

Aristoteles:: Necessarily so.

Parmenides:: Are there not, therefore, two certain species of this kind, magnitude and parvitude? For if they had no subsistence they could never be contrary to each other, and be present with beings.

Aristoteles:: How should they?

Parmenides:: If therefore parvitude becomes inherent in *the one*, it will either be inherent in the whole or in a part of it.

Aristoteles:: It is necessary.

Parmenides:: But if it should be inherent in the whole, will it not either be extended equally through the whole of the one or comprehend the one?

Aristoteles:: Plainly so.

Parmenides:: If parvitude, therefore, is equally inherent in the one, will it not be equal to the one; but if it comprehends the one will it not be greater?

Aristoteles:: How should it not?

Parmenides:: Can therefore parvitude be equal to or greater than any thing, and exhibit the properties of magnitude and equality, and not its own?

Aristoteles:: It is impossible.

Parmenides:: Parvitude, therefore, will not be inherent in the whole of the one, but if at all, in a part.

Aristoteles:: Certainly.

Parmenides:: Nor yet again in the whole part; as the same consequences would ensue in the whole part of the one, as in the whole of the one: for it would either be equal to or greater than the part in which it is inherent.

Aristoteles:: It is necessary.

Parmenides:: Parvitude, therefore, will not be inherent in any being, since it can neither be in a part nor in a whole; nor will there be any thing small, except smallness itself.

Aristoteles:: It does not appear that there will.

Parmenides:: Neither will magnitude therefore be in the one: for there will be some other thing great besides magnitude itself. I mean that in which magnitude is inherent; and this, though parvitude is not, which ought to be surpassed by that which is great; but which in this case is impossible, since parvitude is not inherent in any being.

Aristoteles:: True.

Parmenides:: But, indeed, magnitude itself will not surpass any thing else but parvitude itself, nor will parvitude be less than any other than magnitude itself.

Aristoteles:: It will not.

Parmenides:: Neither therefore will other things be greater than the one; nor lesser, since they neither possess magnitude nor parvitude: nor will these two possess any power with respect to the one, either of surpassing or of being surpassed, but this will be the case only with respect to each other: nor, on the contrary, will the one be either greater or lesser than these two, or others, as it neither possesses magnitude nor parvitude.

Aristoteles:: So indeed it appears.

Parmenides:: If the one therefore is neither greater nor lesser than others, is it not necessary that it should neither surpass nor be surpassed by them?

Aristoteles:: It is necessary.

Parmenides:: Is it not also abundantly necessary, that that which neither surpasses nor is surpassed should be equally affected? And must it not, if equally affected, be equal?

Aristoteles:: How should it not?

Parmenides:: The one therefore will be thus circumstanced with respect to itself: viz. from neither possessing magnitude nor parvitude in itself, it will neither surpass nor be surpassed by itself; but being equally affected it will be equal to itself.

Aristoteles:: Entirely so.

Parmenides:: The one therefore will be equal both to itself and others.

Aristoteles:: So it appears.

Parmenides:: But if the one should be in itself, it would also be externally about itself; and so, through comprehending itself, it would be greater than itself; but from being comprehended less than itself: and thus the one would be both greater and lesser than itself.

Aristoteles:: It would so.

Parmenides:: Is not this also necessary, that nothing has any subsistence besides the one and others?

Aristoteles:: How should it be otherwise?

Parmenides:: But ought not whatever has a being to be always somewhere?

Aristoteles:: Certainly.

Parmenides:: And does not that which subsists in another, subsist as the lesser in the greater? For one thing cannot in any other way subsist in another.

Aristoteles:: It cannot.

Parmenides:: But since there is nothing else except the one and others, and it is necessary that these should be in something, is it not necessary that they should be in one another, viz. others in the one, and the one in others; or that they should be no where?

Aristoteles:: It appears so.

Parmenides:: Because, therefore, the one is in others, others will be greater than the one, through comprehending it; but the one will be less than others, because comprehended: but if others are inherent in the one, the one on the same account will be greater than others; but others will be less than the one.

Aristoteles:: It appears so.

Parmenides:: The one, therefore, is equal to, greater and lesser, both than itself and others.

Aristoteles:: It seems so.

Parmenides:: But if it is greater, equal, and lesser, it will be of equal, more, and fewer measures, both than itself and others; and if of measures, also of parts.

Aristoteles:: How should it not?

Parmenides:: Being, therefore, of equal, more, and fewer measures, it will also be more and less in number, both with respect to itself and others; and also, for the same reason, equal to itself and others.

Aristoteles:: How?

Parmenides:: That which is greater possesses more measures than that which is smaller, and contains as many parts as measures; and that which is lesser in the same manner, as also that which is equal.

Aristoteles:: It is so.

Parmenides:: Since the one, therefore, is both greater, lesser, and equal to itself, will it not also contain measures equal to, more and fewer than itself? And if of measures, will not this also be true of parts?

Aristoteles:: How should it not?

Parmenides:: If, therefore, it contains equal parts with itself, it will be equal in multitude to itself: but if more, more in multitude, and if fewer, less in multitude, than itself.

Aristoteles:: It appears so.

Parmenides:: But will the one be similarly affected towards others? For, since it appears to be greater than others, is it not necessary that it should be more in number than others? but, because it is lesser, must it not also be fewer in number? and because equal in magnitude, must it not also be equal in multitude to others?

Aristoteles:: It is necessary.

Parmenides:: And thus again, as it appears, *the one* will be equal, more, and less in number, both than itself and others.

Aristoteles:: It will so.

Parmenides:: Will the one, therefore, participate of time? And is it, and does it subsist in becoming to be younger and older, both than itself and others? And again, neither younger nor older than itself and others, though participating of time?

Aristoteles:: How?

Parmenides:: To be in a certain respect is present with it, since it is the one.

Aristoteles:: Certainly.

Parmenides:: But what else is to be than a participation of essence with the present time? In the same manner as it was is a communication of essence with the past, and it will be with the future?

Aristoteles:: It is no other.

Parmenides:: It must participate, therefore, of time, if it participates of being.

Aristoteles:: Entirely so.

Parmenides:: Must it not, therefore, participate of time in progression?

Aristoteles:: Certainly.

Parmenides:: It will always, therefore, subsist in becoming to be older than itself, if it proceeds according to time.

Aristoteles:: It is necessary.

Parmenides:: Do we, therefore, call to mind that the older is always becoming older, because it is always becoming younger?

Aristoteles:: We do call it to mind.

Parmenides:: Does not the one, therefore, while it is becoming older than itself, subsist in becoming older than itself, while it is becoming younger than itself?

Aristoteles:: Necessarily so.

Parmenides:: It will, therefore, become both younger and older than itself.

Aristoteles:: Certainly.

Parmenides:: But is it not then older when it subsists in becoming to be according to the present time, which is between *it was* and *it will be*: for, through proceeding from the past to the future, it will not pass beyond the present now?

Aristoteles:: It will not.

Parmenides:: Will it not, therefore, cease becoming to be older, when it arrives at the now, and is no longer becoming to be, but is now older? For while it proceeds it will never be comprehended by the now. For that which proceeds subsists in such a manner as to touch upon both the now and the future time; departing, indeed, from the now, but apprehending the future, because it subsists in the middle of the future and the now.

Aristoteles:: True.

Parmenides:: But if it be necessary that whatever is becoming to be should not pass by the now or the present time, hence, as soon as it arrives at the now, it will always cease becoming to be, and is then that which it was in pursuit of becoming.

Aristoteles:: It appears so.

Parmenides:: The one, therefore, when in becoming older it arrives at the now, will cease becoming *to be,* and then *is* older.

Aristoteles:: Entirely so.

Parmenides:: Is it not, therefore, older than that in respect of which it becomes older? And does it not become older than itself?

Aristoteles:: Certainly.

Parmenides:: And is not the older older than the younger?

Aristoteles:: It is.

Parmenides:: The one, therefore, is younger than itself, when in becoming older it arrives at the now.

Aristoteles:: It is necessary.

Parmenides:: But the now is always present with the one, through the whole of its being: For it is always now as long as it is.

Aristoteles:: How should it not?

Parmenides:: The one, therefore, always is, and is becoming to be younger and older than itself.

Aristoteles:: So it appears.

Parmenides:: But is the one, or does it subsist in becoming to be, in a time more extended than or equal to itself?

Aristoteles:: In an equal time.

Parmenides:: But that which either is, or subsists in becoming to be, in an equal time possesses the same age.

Aristoteles:: How should it not?

Parmenides:: But that which has the same age is neither older nor younger.

Aristoteles:: By no means.

Parmenides:: The one, therefore, since it both subsists in becoming to be and is, in a time equal to itself, neither is nor is becoming to be younger nor older than itself.

Aristoteles:: It does not appear to me that it can.

Parmenides:: But how is it affected with respect to others?

Aristoteles:: I know not what to say.

Parmenides:: But this you may say, that things different from the one because they are others, and not another, are more than the one. For that which is another is one; but being others they are more than one, and possess multitude.

Aristoteles:: They do.

Parmenides:: But multitude participates of a greater number than the one? How should it not?

Aristoteles:: What then?

Parmenides:: Do we say that things more in number are generated, or have been generated, before the few?

Aristoteles:: We assert this of the few before the many.

Parmenides:: That which is the fewest, therefore, is first: but is not this the one?

Aristoteles:: Certainly.

Parmenides:: The one, therefore, becomes the first of all things possessing number: but all other things have number, if they are others and not another.

Aristoteles:: They have indeed.

Parmenides:: But that which is first generated has I think a priority of subsistence: but others are posterior to this. But such as have an after generation are younger than that which had a prior generation; and thus others will be younger than the one, but the one will be older than others.

Aristoteles:: It will indeed.

Parmenides:: But what shall we say to this? Can the one be generated contrary to its nature, or is this impossible?

Aristoteles:: Impossible.

Parmenides:: But the one appears to consist of parts; and if of parts, it possesses a beginning, end, and middle.

Aristoteles:: Certainly.

Parmenides:: Is not, therefore, the beginning generated first of all, both of the one and of every other thing; and after the beginning all the other parts, as far as to the end?

Aristoteles:: What then?

Parmenides:: And, indeed, we should say that all these are parts of a whole and of one; but that the one, together with the end, is generated one and a whole.

Aristoteles:: We should say so.

Parmenides:: But the end I think must be generated last of all, and the one must be naturally generated together with this; so that the one, since it is necessary that it should not be generated contrary to nature, being produced together with the end, will be naturally generated the last of others. The one, therefore, is younger than others, but others are older than the one.

Aristoteles:: So again it appears to me.

Parmenides:: But what, must not the beginning, or any other part whatever, of the one, or of any thing else, if it is a part, and not parts—must it not necessarily be one, since it is a part?

Aristoteles:: Necessarily.

Parmenides:: The one, therefore, while becoming to be, together with the first part, will be generated, and together with the second; and it will never desert any one of the other generated parts, till arriving at the extremity it becomes one whole; neither excluded from the middle, nor from the last, nor the first, nor from any other whatever in its generation.

Aristoteles:: True.

Parmenides:: The one, therefore, will possess the same age with others, as (if it be not the one contrary to its own nature) it will be generated neither prior nor posterior to others, but together with them; and on this account the one will neither be older nor younger than others, nor others than the one: but, according to the former reasoning, the one was both older and younger than others, and others in a similar manner than it.

Aristoteles:: Entirely so.

Parmenides:: After this manner, therefore, the one subsists and is generated. But what shall we say respecting its becoming older and younger than others, and others than the one; and again, that it neither becomes older nor younger? Shall we say that it subsists in the same manner with respect to the term becoming to be as with respect to the term to bet or otherwise?

Aristoteles:: I am not able to say.

Parmenides:: But I am able to affirm this, that however one thing may be older than another, yet it cannot otherwise subsist in becoming to be older, than by that difference of age which it possessed as soon as it was born: nor, on the contrary, can that which is younger subsist in becoming to be younger, otherwise than by the same difference. For, equal things being added to unequals, whether they are times or any thing else, always cause them to differ by the same interval by which they were distant at first.

Aristoteles:: How should it be otherwise?

Parmenides:: That which is, therefore, cannot subsist in becoming to be older or younger than one being, since it is always equally different from it in age: but this is and was older, but that younger; but by no means subsists in becoming so.

Aristoteles:: True.

Parmenides:: That which is one, therefore, will never subsist in becoming to be either older or younger than other beings.

Aristoteles:: Never.

Parmenides:: But see whether by this means other things will become younger and older.

Aristoteles:: After what manner?

Parmenides:: The same as that through which the one appeared to be older than others, and others than the one.

Aristoteles:: What then?

Parmenides:: Since the one is older than others, it was for a longer period of time than others.

Aristoteles:: Certainly.

Parmenides:: But again consider, if we add an equal time to a longer and shorter time, does the longer differ from the shorter by an equal or by a smaller part?

Aristoteles:: By a smaller.

Parmenides:: The one, therefore, will not differ from others by so great an age afterwards as before; but, receiving an equal time with others, it will always differ by a less age than before. Will it not be so?

Aristoteles:: Certainly.

Parmenides:: But does not that which differs less in age, with respect to any thing, than it did before, become younger than before, with respect to those than which it was before older?

Aristoteles:: Younger.

Parmenides:: But if it is younger, will not, on the contrary, others with respect to the one be older than before?

Aristoteles:: Entirely so.

Parmenides:: That, therefore, which was generated younger, will subsist in becoming to be older, with respect to that which was before generated and is older; but it never is older, but always is becoming older than it; the one indeed advancing to a more juvenile state, but the other to one more aged: but that which is older is becoming to be younger than the younger, after the same manner. For both tending to that which is contrary they subsist in becoming contrary to each other; the younger becoming older than the older, and the older younger than the younger: but they are not able to become so. For if they should become they would no longer subsist in becoming, but would now be. But now they are becoming younger and older than each other; and the one indeed becomes younger than others, because it appears to be older, and to have a prior generation: but others are older than the one, because they have a posterior generation; and, from the same reason, other things will be similarly related with respect to the one, since they appear to be more ancient and to have a prior generation.

Aristoteles:: So indeed it appears.

Parmenides:: Does it not follow, that so far as the one does not become younger or older than the other, because they differ by an equal number from each other, that, so far as this, the one will not become older or younger than others, nor others than the one? But that, so far as it is necessary that the prior should always differ from such as are becoming to be posterior, and the posterior from the prior; so far it is necessary that they should become older and younger than each other, both others than the one and the one than others?

Aristoteles:: Entirely so.

Parmenides:: On all these accounts, therefore, the one is, and is becoming to be, older and younger both than itself and others; and again, neither is nor is becoming to be older nor younger than itself and others.

Aristoteles:: It is perfectly so.

Parmenides:: But since the one participates of time, and of becoming to be older and younger, is it not necessary that it should participate of the past, present, and future, since it participates of time?

Aristoteles:: It is necessary.

Parmenides:: The one, therefore, was, and is, and will be; and was generated, and is generated, and will be generated.

Aristoteles:: What then?

Parmenides:: And there will also be something belonging to it, and which may be asserted of it, and which was, and is, and will be.

Aristoteles:: Entirely so.

Parmenides:: There will, therefore, be science, opinion, and sense of the one, since we have now treated of all these things about it.

Aristoteles:: You speak rightly.

Parmenides:: A name, therefore, and discourse may subsist about the one, and it may be denominated and spoken of: and whatever particulars of the same kind take place in other things, will also take place about the one.

Aristoteles:: The case is perfectly so.

Parmenides:: In the third place, let us consider, if the one subsists in the manner we have already asserted, is it not necessary, since it is both one and many, and again neither one nor many, and participating of time, that because it is one it should participate of essence; but that because it is not, it should not at any time participate of essence?

Aristoteles:: It is necessary.

Parmenides:: Is it, therefore, possible, that when it participates and becomes such as it is, that then it should not participate; or that it should participate when it does not participate?

Aristoteles:: It cannot be possible.

Parmenides:: It participates, therefore, at one time, and does not participate at another: for thus alone can it participate and not participate of the same.

Aristoteles:: Right.

Parmenides:: Is not that also time, when it receives being and again loses it? Or how can it be possible that, being such as it is, it should at one time possess the same thing, and at another time not, unless it both receives and loses it?

Aristoteles:: No otherwise.

Parmenides:: Do you not denominate the receiving of essence to become?

Aristoteles:: I do.

Parmenides:: And is not to lose essence the same as to perish?

Aristoteles:: Entirely so.

Parmenides:: The one, therefore, as it seems, by receiving and losing essence, is generated and perishes.

Aristoteles:: Necessarily so.

Parmenides:: But since it is both one and many, and subsists in becoming to be and perishing, when it becomes one does it cease to be many, and when it becomes many does it cease to be one?

Aristoteles:: Entirely so.

Parmenides:: But, in consequence of becoming one and many, must it not be separated and collected?

Aristoteles:: It must.

Parmenides:: And when it becomes dissimilar and similar, must it not be assimilated and dissimilated?

Aristoteles:: Certainly.

Parmenides:: And when it becomes greater, lesser, and equal, must it not be increased, corrupted, and equalized?

Aristoteles:: It must so.

Parmenides:: But when from being moved it stands still, and when from standing still it is changed into being moved, it is requisite that it should not subsist in one time.

Aristoteles:: How should it?

Parmenides:: But that which before stood still and is afterwards moved, and was before moved and afterwards stands still, cannot suffer these affections without mutation.

Aristoteles:: For how can it?

Parmenides:: But there is no time in which any thing can neither be moved nor stand still.

Aristoteles:: There is not.

Parmenides:: But it cannot be changed without mutation.

Aristoteles:: It is not probable that it can.

Parmenides:: When, therefore, will it be changed? For neither while it stands still, nor while it is moved, will it be changed: nor while it is in time.

Aristoteles:: It will not.

Parmenides:: Is that any wonderful thing in which it will be when it changes?

Aristoteles:: What thing?

Parmenides:: The sudden, or that which unapparent starts forth to the view. For the sudden seems to signify some such thing, as that from which it passes into each of these conditions. For while it stands still it will not be changed from standing, nor while in motion will it be changed from motion: but that wonderful nature the sudden is situated between motion and abiding, is in no time, and into this and from this that which is moved passes into standing still, and that which stands still into motion.

Aristoteles:: It appears so.

Parmenides:: The one, therefore, if it stands still and is moved, must be changed into each: for thus alone will it produce both these affections. But, becoming changed, it will be changed suddenly; and when it changes will be in no time: For it will then neither stand still nor be moved.

Aristoteles:: It will not.

Parmenides:: Will the one also be thus affected with respect to other mutations? And when it is changed from being into the loss of being, or from non-being into becoming to be, does it not then become a medium between certain motions and abidings? and then neither is nor is not, nor becomes nor perishes?

Aristoteles:: It appears so.

Parmenides:: And in the same manner, when it passes from one into many and from many into one, it is neither one nor many, nor is it separated nor collected. And in passing from similar to dissimilar, and from dissimilar to similar, it is neither similar nor dissimilar, nor is assimilated nor dissimilated. And while it passes from small into great, and into equal or its contrary, it will neither be small nor great, nor unequal, nor increasing, nor perishing, nor equalized.

Aristoteles:: It does not appear that it can.

Parmenides:: But all these passions the one will suffer, if it is.

Aristoteles:: How should it not?

Parmenides:: But should we not consider what other things ought to suffer if the one is?

Aristoteles:: We should.

Parmenides:: Let us relate, therefore, if the one is, what other things ought to suffer from the one.

Aristoteles:: By all means.

Parmenides:: Does it not follow that because other things are different from the one they are not the one: for otherwise they would not be different from the one?

Aristoteles:: Right.

Parmenides:: Nor yet are others entirely deprived of the one, but participate it in a certain respect.

Aristoteles:: In what respect?

Parmenides:: Because things different from the one are different, from their having parts: for if they had not parts they would be entirely one.

Aristoteles:: Right.

Parmenides:: But parts we have asserted belong to that which is a whole.

Aristoteles:: We have so.

Parmenides:: But it is necessary that a whole should be one composed from many, of which one the many are parts: for each of the parts ought not to be a part of many, but of a whole.

Aristoteles:: How so?

Parmenides:: If any thing should be a part of many, among which it subsists itself, it would doubtless be a part of itself (which is impossible), and of each one of the others; since it is a part of all. For if it is not a part of one of these it will be a part of the others, this being excepted; and so it will not be a part of each one: and not being a part of each, it will be a part of no one of the many: and being a part of no one of the many, it is impossible that it should be any thing belonging to all those, of no one of which it is either a part or any thing else.

Aristoteles:: So it appears.

Parmenides:: A part, therefore, is neither a part of many nor of all; but of one certain idea and of one certain thing which we call a whole, and which becomes one perfect thing from all: for a part indeed is a part of this.

Aristoteles:: Entirely so.

Parmenides:: If, therefore, other things have parts, they will also participate of a whole and one.

Aristoteles:: Certainly.

Parmenides:: One perfect whole, therefore, possessing parts, must necessarily be different from *the one*.

Aristoteles:: It is necessary.

Parmenides:: But the same reasoning is true concerning each of the parts: For it is necessary that each of these should participate of the one. For, if each of these is a part, the very being each, in a certain respect, signifies one; since it is distinguished from others, and has a subsistence by itself, if it is that which is called each.

Aristoteles:: Right.

Parmenides:: But it participates of the one as it is evidently something different from the one; for otherwise it would not participate, but would be the one itself. But now it is impossible that any thing can be the one except the one itself.

Aristoteles:: Impossible.

Parmenides:: But it is necessary both to a whole and to a part to participate of the one: for a whole is one certain thing and has parts. But each part whatever, which is a part of the whole, is one part.

Aristoteles:: It is so.

Parmenides:: Must not, therefore, those which participate of the one participate it, as being different from the one?

Aristoteles:: How should they not?

Parmenides:: But things different from the one will in a certain respect be many; for if things different from the one were neither one nor more than one, they would be nothing.

Aristoteles:: They would.

Parmenides:: But since the things which participate of one part and one whole are more than one, is it not necessary that these very things which participate of the one should be infinite in multitude?

Aristoteles:: How?

Parmenides:: Thus: they are different from the one, nor are they participants of the one, then when they have already participated of it.

Aristoteles:: Certainly.

Parmenides:: Are not those multitudes in which the one is not?

Aristoteles:: Multitudes, certainly.

Parmenides:: What then? If we should be willing by cogitation to take away the least quantity from these, would it not he necessary that this quantity which is taken away should be multitude, and not one, since it does not participate of the one?

Aristoteles:: It is necessary.

Parmenides:: By always surveying, therefore, another nature of form, itself subsisting by itself, will not any quantity of it which we may behold be infinite in multitude?

Aristoteles:: Entirely so.

Parmenides:: And since every part becomes one, the parts will have bounds with respect to each other, and to the whole; and the whole with respect to the parts.

Aristoteles:: Perfectly so.

Parmenides:: It will happen, therefore, to things different from the one, as it appears both from the one and from their communicating with each other, that a certain something different will take place in them; which indeed affords to them a bound towards each other, while in the mean time the nature of these causes them to become essentially connected with infinity.

Aristoteles:: It appears so.

Parmenides:: And thus things different from the one, both as wholes and according to parts, are infinite and participate of bound.

Aristoteles:: Entirely so.

Parmenides:: Are they not, therefore, similar and dissimilar, both to each other and to themselves?

Aristoteles:: Why?

Parmenides:: Because, so far as all of them are in a certain respect infinite, according to their own nature, they all of them, in consequence of this, suffer that which is the same.

Aristoteles:: How should they not?

Parmenides:: But so far as they suffer to be bounded and infinite, which are passions contrary to each other, they suffer these passions.

Aristoteles:: Certainly.

Parmenides:: But things contrary, as such, are most dissimilar.

Aristoteles:: What then?

Parmenides:: According to each of these passions, therefore, they are similar to themselves and to each other; but, according to both, they are on both sides most contrary and dissimilar.

Aristoteles:: It appears so.

Parmenides:: And thus others will be the same with themselves and with each other, and similar and dissimilar.

Aristoteles:: They will so.

Parmenides:: And again, they will be the same and different from each other, will both be moved and stand still; and it will not be difficult to find all kinds of contrary passions suffered by things different from the one, while they appear to be passive, in the manner we have related.

Aristoteles:: You speak rightly.

Parmenides:: Shall we not, therefore, pass by these things as evident, and again consider if the one is, whether things different from the one will subsist not in this manner, or whether in this manner alone?

Aristoteles:: Entirely so.

Parmenides:: Let us, therefore, assert again from the beginning, if the one is, what things different from the one ought to suffer.

Aristoteles:: Let us.

Parmenides:: Is, therefore, the one separate from others, and are others separate from the one?

Aristoteles:: Why?

Parmenides:: Because there is no other different besides these, viz. that which is different from the one, and that which is different from others; for all that can be spoken is asserted, when we say the one and others.

Aristoteles:: All, indeed.

Parmenides:: There is nothing else, therefore, besides these in which the one and others can subsist after the same manner.

Aristoteles:: Nothing.

Parmenides:: The one and others, therefore, are never in the same.

Aristoteles:: It does not appear that they are.

Parmenides:: Are they separate, therefore?

Aristoteles:: They are.

Parmenides:: We have likewise asserted that the truly one has not any parts.

Aristoteles:: For how can it?

Parmenides:: Neither, therefore, will the whole of the one be in others, nor the parts of if it is separate from others, and has no parts.

Aristoteles:: How should it not be so?

Parmenides:: In no way, therefore, will others participate of the one, since they neither participate according to a certain part of it, nor according to the whole.

Aristoteles:: It does not appear that they can.

Parmenides:: By no means, therefore, are others the one, nor have they any one in themselves.

Aristoteles:: They have not.

Parmenides:: Neither, then, are other things many; for, if they were many, each of them, as being a part of a whole, would be one: but now things different from the one are neither one nor many, nor a whole, nor parts, since they in no respect participate of the one.

Aristoteles:: Right.

Parmenides:: Others, therefore, are neither two nor three, nor is one contained in them, because they are entirely deprived of the one.

Aristoteles:: So it is.

Parmenides:: Others, therefore, are neither similars nor dissimilars, nor the same with the one, nor are similitude and dissimilitude inherent in them. For, if they were similar and dissimilar, so far as they contained in themselves similitude and dissimilitude, so far things different from the one would comprehend in themselves two contrary species.

Aristoteles:: So it appears.

Parmenides:: But it is impossible for those to participate of two certain things which do not participate of one.

Aristoteles:: Impossible.

Parmenides:: Others, therefore, are neither similars nor dissimilars, nor both. For, if they were things similar or dissimilar, they would participate of one other form; and if they were both, they would participate of two contrary forms: but these things appear to be impossible.

Aristoteles:: True.

Parmenides:: Others, therefore, are neither same nor different, nor are moved nor stand still, nor are generated nor destroyed, nor are greater, or lesser, or equal, nor do they suffer any thing else of this kind. For, if others could sustain to suffer any such affection, they would participate of one and two, and of even and odd; all which it appears impossible for them to participate, since they are entirely deprived of the one.

Aristoteles:: All this is most true.

Parmenides:: Hence, then, if the one is, the one is all things and nothing; and is similarly affected towards itself and towards others.

Aristoteles:: Entirely so.

Parmenides:: Let this then be admitted. But should we not after this consider what ought to happen if the one is not?

Aristoteles:: We should.

Parmenides:: What then will be the hypothesis if the one is not? Will it differ from the hypothesis if that which is not one is not?

Aristoteles:: It will indeed differ.

Parmenides:: Will it only differ, or is the hypothesis if that which is not one is not, entirely contrary to the hypothesis if the one is not?

Aristoteles:: Entirely contrary.

Parmenides:: But what, if any one should say, if magnitude is not, or parvitude is not, or any thing else of this kind, would he not evince in each of these that he speaks of that which is not as something, different?

Aristoteles:: Entirely so.

Parmenides:: Would he not, therefore, now evince that he calls that which is not different from others, when he says if the one is not; and should we understand that which he says?

Aristoteles:: We should understand.

Parmenides:: In the first place, therefore, he speaks of something which may be known; and afterwards of something different from others when he says the one, whether he adds to it *to be* or *not to be*: for that which is said not to be will be not the less known, nor that it is something different from others: is it not so?

Aristoteles:: It is necessary it should.

Parmenides:: Let us, therefore, relate from the beginning, if the one is not, what ought to be the consequence. In the first place, therefore, this as it appears ought to happen it, that either there should be a science of it, or that nothing of what is pronounced can be known, when any one says if the one is not.

Aristoteles:: True.

Parmenides:: Must not this also happen, that either other things must be different from it, or that it must be said to be different from others?

Aristoteles:: Entirely so.

Parmenides:: Diversity, therefore, besides science, is present with it; for, when any one says that the one is different from others, he will not speak of the diversity of others, but of the diversity of the one.

Aristoteles:: It appears so.

Parmenides:: And besides, that which is not, or non-being, will participate of that, and of some certain thing, and of this, and of these, and every thing of this kind. For neither could the one be spoken of, nor things different from the one, nor would any thing be present with it, nor could it be denominated any thing, if it neither participated of some certain thing or things of this kind.

Aristoteles:: Right.

Parmenides:: But to be cannot be present with the one if it is not; though nothing hinders but it may participate of the many; but, indeed, it is necessary that it should, if the one is that, and is not something different from that. If, therefore, it is neither the one nor that, neither will it be; but discourse must take place about something else, and it will be necessary to pronounce nothing concerning it. But if the one is established as that and not as another, it is necessary that it should participate of that and of many other things.

Aristoteles:: Entirely so.

Parmenides:: Dissimilitude, therefore, is present with it as to other things: for other things being different from the one will also be foreign from it.

Aristoteles:: Certainly.

Parmenides:: But are not things foreign various?

Aristoteles:: How should they not?

Parmenides:: And are not things various dissimilars?

Aristoteles:: Dissimilars.

Parmenides:: If, therefore, they are dissimilars to the one, it is evident they will be dissimilars to that which is dissimilar.

Aristoteles:: It is evident.

Parmenides:: Dissimilitude, therefore, will be present with the one, according to which others will be dissimilars to it.

Aristoteles:: It appears so.

Parmenides:: But if a dissimilitude with respect to other things belongs to it, must not similitude to itself be present with it?

Aristoteles:: How?

Parmenides:: If there be a dissimilitude of the one with respect to the one, discourse would not take place about a thing of this kind as of the one; nor would the hypothesis be about the one, but about something different from the one.

Aristoteles:: Entirely so.

Parmenides:: But it ought not.

Aristoteles:: Certainly not.

Parmenides:: There ought, therefore, to be a similitude of the one with respect to itself.

Aristoteles:: There ought.

Parmenides:: But neither is the one equal to others. For, if it were equal, it would according to equality be similar to them; but both these are impossible, since the one is not.

Aristoteles:: Impossible.

Parmenides:: But since it is not equal to others, is it not necessary that others also should not be equal to it?

Aristoteles:: It is necessary.

Parmenides:: But are not things which are not equal unequal?

Aristoteles:: Certainly.

Parmenides:: And are not unequals unequal to that which is unequal?

Aristoteles:: How should they not?

Parmenides:: The one, therefore, will participate of inequality, according to which others will be unequal to it.

Aristoteles:: It will participate.

Parmenides:: But magnitude and parvitude belong to inequality.

Aristoteles:: They do.

Parmenides:: Do magnitude and parvitude, therefore, belong to a one of this kind?

Aristoteles:: It appears they do.

Parmenides:: But magnitude and parvitude are always separated from each other.

Aristoteles:: Entirely so.

Parmenides:: Something, therefore, always subsists between them.

Aristoteles:: Certainly.

Parmenides:: Can you assign any thing else between these, except equality?

Aristoteles:: Nothing else.

Parmenides:: With whatever, therefore, there is magnitude and parvitude, with this equality also is present, subsisting as a medium between these.

Aristoteles:: It appears so.

Parmenides:: But to the one which is not, equality, magnitude, and parvitude, as it appears, belong.

Aristoteles:: So it seems.

Parmenides:: But it ought likewise, in a certain respect, to participate of essence.

Aristoteles:: How so?

Parmenides:: Ought it to possess the properties which we have already described? for, unless this is the case, we shall not speak the truth when we say the one is not; but if this is true, it is evident that we have asserted things which have a subsistence: is it not so?

Aristoteles:: It is.

Parmenides:: But since we assert that we speak truly, it is likewise necessary to assert that we speak of things which exist.

Aristoteles:: It is necessary.

Parmenides:: The one, therefore, which is not, as it appears, is; for if it is not, while not being, but remits something of being in order to not being, it will immediately become being.

Aristoteles:: Entirely so.

Parmenides:: It ought, therefore, to have, as the bond of not to be, to be that which is not, if it is about not to be: just as being ought to have as a bond not to be that which is not, that it may be perfectly *that which is*. For thus, in a most eminent degree, being will be and non-being will not be: being participating of essence, in order that it may be being; but of non-essence in order that it may obtain to be non-being, if it is about perfectly to be: but non-being participating of non-essence, in order that it may not be that which is not being; but participating of essence, in order that it may obtain to be non-being, if it is to be perfectly that which is not.

Aristoteles:: Most truly so.

Parmenides:: Since, therefore, non-being is present with being, and being with non-being, is it not necessary that the one also, since it is not, should participate of being, in order that it may *not be*?

Aristoteles:: It is necessary.

Parmenides:: Essence, therefore, will appear with *The One*, if it is not.

Aristoteles:: So it seems.

Parmenides:: And *non-essence*, since it is not.

Aristoteles:: How should it not?

Parmenides:: Can any thing, therefore, which is affected in a certain manner, be not so affected when not changed from this habit?

Aristoteles:: It cannot.

Parmenides:: Every thing, therefore, signifies a certain mutation, which is affected and again not affected in some particular manner.

Aristoteles:: How should it not?

Parmenides:: Is mutation a motion, or what else do we call it?

Aristoteles:: It is a motion.

Parmenides:: But has not the one appeared to be both *being* and *non-being*?

Aristoteles:: Certainly.

Parmenides:: It has appeared, therefore, to be thus and not thus affected.

Aristoteles:: It has.

Parmenides:: The one, therefore, which is non-being appears to be moved, since it possesses a mutation from being into non-being.

Aristoteles:: It appears so.

Parmenides:: But if it be no where among beings, as it is not in consequence of not being, it cannot pass elsewhere.

Aristoteles:: For how can it?

Parmenides:: It will not, therefore, be moved by transition.

Aristoteles:: It will not.

Parmenides:: Neither will it revolve in same: For it will never touch *same*, since *same* is *being*. But it is impossible that *non-being* can reside in *any being*.

Aristoteles:: Impossible.

Parmenides:: The one, therefore, which is not, cannot revolve in that in which it is not.

Aristoteles:: It cannot.

Parmenides:: Neither will the one be altered from itself, either into being or non-being: for our discourse would no longer be concerning the one, if it was altered from itself, but concerning something different from this one.

Aristoteles:: Right.

Parmenides:: But if it is neither altered, nor revolves in same, nor suffers transition, is there any way in which it can be moved?

Aristoteles:: How should there?

Parmenides:: But that which is immovable must necessarily be at rest; and that which is at rest must abide or stand still.

Aristoteles:: It is necessary.

Parmenides:: The one which is not, therefore, as it appears, both abides and is moved.

Aristoteles:: It appears so.

Parmenides:: But if it be moved, there is a great necessity that it should be altered; for, so far as any thing is moved, it is no longer affected in the same manner as before, but differently.

Aristoteles:: There is so.

Parmenides:: The one, therefore, since it is moved, is also altered.

Aristoteles:: Certainly.

Parmenides:: But as again it is in no respect moved, it will be in no respect altered.

Aristoteles:: It will not.

Parmenides:: So far, therefore, as the one which is not is moved, it is altered; but so far as it is not moved it is not altered.

Aristoteles:: Certainly not.

Parmenides:: The one, therefore, which is not, is both altered and not altered.

Aristoteles:: It appears so.

Parmenides:: But is it not necessary that when any thing is altered it should become different from what it was before, and should suffer a dissolution of its former habit; but that a nature which is not altered should neither be generated nor dissolved?

Aristoteles:: It is necessary.

Parmenides:: The one, therefore, which is not, through being altered, will be generated and dissolved; but at the same time, from its not suffering alteration, will not be subject to either generation or corruption. And thus the one which is not will be generated and dissolved, and will neither be generated nor dissolved.

Aristoteles:: It will not.

Parmenides:: But let us again return to the beginning, and see whether these things will appear to us in our subsequent discussion as they do now, or otherwise.

Aristoteles:: It is necessary, indeed, so to do.

Parmenides:: Have we not already related, if the one is not, what ought to happen concerning it?

Aristoteles:: Certainly.

Parmenides:: But when we say it is not, do we signify any thing else than the absence of essence from that which we say is not?

Aristoteles:: Nothing else.

Parmenides:: Whether, therefore, when we say that any thing is not, do we say that in a certain respect it is not, and, that in a certain respect it is? Or does the term is not simply signify that it is in no respect any where, and that it does not any how participate of essence, since it is not?

Aristoteles:: It signifies, indeed, most simply.

Parmenides:: Neither therefore can that which is not be, nor in any other respect participate of essence.

Aristoteles:: It cannot.

Parmenides:: But is to be generated and corrupted any thing else than for this to receive essence and for that to lose essence?

Aristoteles:: It is nothing else.

Parmenides:: That therefore with which nothing of essence is present, can neither receive nor lose it.

Aristoteles:: How can it?

Parmenides:: The one, therefore, since it in no respect is, can neither possess, nor lose, nor receive essence, in any manner whatever.

Aristoteles:: It is proper it should be so.

Parmenides:: The one which is not, will neither therefore be corrupted nor generated, since it in no respect participates of essence.

Aristoteles:: It does not appear that it will.

Parmenides:: Neither, therefore, will it be in any respect altered; for if it suffered this passion it would be generated and corrupted.

Aristoteles:: True.

Parmenides:: But if it is not altered, is it not also necessary that it should not be moved?

Aristoteles:: It is necessary.

Parmenides:: But that which in no respect is, we have likewise asserted, cannot stand still; for that which stands ought always to be in a certain same?

Aristoteles:: How should it not?

Parmenides:: And thus we must assert that non-being neither at any time stands nor is moved.

Aristoteles:: For indeed it does not.

Parmenides:: But likewise nothing of beings is present with it; for this, through participating of being, would participate of essence.

Aristoteles:: It is evident.

Parmenides:: Neither magnitude, therefore, nor parvitude, nor equality, belongs to it.

Aristoteles:: Certainly not.

Parmenides:: Neither will similitude or diversity, either with respect to itself or others, be present with it.

Aristoteles:: It does not appear that they will.

Parmenides:: But what, can other things be in any respect present with it, if nothing ought to be present with it?

Aristoteles:: They cannot.

Parmenides:: Neither, therefore, are similars nor dissimilars, nor same nor different, different from it.

Aristoteles:: They are not.

Parmenides:: But what, can any thing be asserted of it, or be with it, or can it be any certain thing, or this, or belong to this, or that, or be with some other thing, or be formerly, or hereafter, or now—or can science, or opinion, or sense, or discourse, or a name, or any thing else belonging to beings, subsist about that which is not?

Aristoteles:: There cannot.

Parmenides:: The one therefore which is not, will not in any respect subsist any where.

Aristoteles:: So indeed it appears.

Parmenides:: But let us again declare if the one is not, what other things ought to suffer.

Aristoteles:: Let us.

Parmenides:: But in a certain respect others ought to subsist; for, unless others have a being, we cannot discourse concerning them.

Aristoteles:: True.

Parmenides:: But if discourse is about others, others will be different: or do you not call others and different the same?

Aristoteles:: I do.

Parmenides:: But do we not say that different is different from different, and other is other than another?

Aristoteles:: Certainly.

Parmenides:: With respect to others, therefore, if they are about to be others, there is something than which they will be others.

Aristoteles:: It is necessary.

Parmenides:: But what will this be? For they will not be different from the one, since it is not.

Aristoteles:: They will not.

Parmenides:: They are different therefore from each other; for this alone remains to them, or to be different from nothing.

Aristoteles:: Right.

Parmenides:: According to multitudes, therefore, each is different from each; for they cannot be different according to the one, since the one is not. But each mass of these, as it appears, is infinite in multitude. And though any one should assume that which appears to be the least, like a dream in sleep, on a sudden, instead of that which seemed to be one, many would rise to the view; and instead of that which is smallest, a quantity perfectly great with respect to the multitude distributed from it.

Aristoteles:: Most right.

Parmenides:: But among these masses or heaps, others will be mutually different from one another, if they are others and the one is not.

Aristoteles:: Eminently so.

Parmenides:: Will there not then be many heaps, each of which will appear to be one, but is not so since the one is not?

Aristoteles:: There will so.

Parmenides:: There will likewise appear to be a number of these, if each of these which are many is one.

Aristoteles:: Entirely so.

Parmenides:: But the even and odd which are among them will not have a true appearance, since the one will not have a being.

Aristoteles:: They will not.

Parmenides:: But likewise that which is smallest, as we have said, will appear to be with them; but this minimum will seem to be many things and great, with respect to each of the things which are many and small.

Aristoteles:: How should it not?

Parmenides:: And every small heap will seem in the eye of opinion to be equal to many small heaps: For it will not appear to pass from a greater into a lesser quantity, before it seems to arrive at something between; and this will be a phantasm of equality.

Aristoteles:: It is likely to be so.

Parmenides:: Will it not also appear to be bounded with respect to another heap, itself with respect to itself, at the same time neither having a beginning, nor middle, nor end?

Aristoteles:: How so?

Parmenides:: Because, when any one apprehends by the dianoëtic power some one of these prior to the beginning, another beginning will always appear, and after the end another end will always be left behind: but in the middle there will always be other things more inward than the middle; and smaller, because each of them cannot receive *one one*, since the one is not.

Aristoteles:: This is most true.

Parmenides:: But every thing which any one may apprehend by the dianoëtic power, must I think be broken to pieces and distributed; for the bulk will in a certain respect be apprehended without the one.

Aristoteles:: Entirely so.

Parmenides:: But will not such a heap, to him who beholds it afar off and with a dull eye, necessarily appear to be one: but to him who with an intellectual eye surveys it near and acutely, will not each appear to be infinite in multitude, since it is deprived of the one, because it has no subsistence?

Aristoteles:: It is necessary it should be so in the highest, degree.

Parmenides:: Each, therefore, of other things ought to appear infinite and bounded, and one and many, if the one is not, and other things besides the one have a subsistence.

Aristoteles:: It ought to be so.

Parmenides:: Will they, therefore, appear to be similars and dissimilars?

Aristoteles:: But how?

Parmenides:: Since to him who beholds others at a distance, involved as it were in shadow, they all appear to be one, they will seem to suffer same and to be similar.

Aristoteles:: Entirely so.

Parmenides:: But to him who approaches nearer they will appear to be many and different, and different from and dissimilar to themselves, through the phantasm of *diversity*.

Aristoteles:: It is so.

Parmenides:: The heaps, therefore, will necessarily appear to be similar and dissimilar to themselves, and to each other.

Aristoteles:: Entirely so.

Parmenides:: Will they not also be the same and different from each other, and in contact with, and separate from, themselves, and moved with all possible motions, and every way abiding: likewise generated and corrupted, and neither of these, and all of this kind, which may be easily enumerated, if, though the one is not, the many have a subsistence?

Aristoteles:: All this is most true.

Parmenides:: Once more, therefore, returning again to the beginning, let us relate what ought to happen to things different from the one, if the one is not.

Aristoteles:: Let us relate.

Parmenides:: Does it not, therefore, follow that others are not the one?

Aristoteles:: How should it not be so?

Parmenides:: Nor yet are they many; for, in the many, the one also would be inherent. For, if none of these is one, all are nothing; so that neither can there be many.

Aristoteles:: True.

Parmenides:: The one, therefore, not being inherent in others, others are neither many nor one.

Aristoteles:: They are not.

Parmenides:: Nor will they appear either to be one or many.

Aristoteles:: Why not?

Parmenides:: Because others cannot in any respect have any communication with things which are not, nor can any thing of non-beings be present with others; for no part subsists with non-beings.

Aristoteles:: True.

Parmenides:: Neither, therefore, is there any opinion of that which is not, inherent in others, nor any phantasm; nor can that which is not become in any respect the subject of opinion to others.

Aristoteles:: It cannot.

Parmenides:: The one, therefore, if it is not, cannot by opinion be conceived to be any certain one of others, nor yet many; for it is impossible to form an opinion of many without the one.

Aristoteles:: It is impossible.

Parmenides:: If the one, therefore, is not, neither have others any subsistence; nor can the one or the many be conceived by opinion.

Aristoteles:: It does not appear that they can.

Parmenides:: Neither, therefore, do similars nor dissimilars subsist.

Aristoteles:: They do not.

Parmenides:: Nor same nor different, nor things in contact, nor such as are separate from each other, nor other things, such as we have already discussed, as appearing to subsist; for no particular of these will have any existence, nor will others appear to be, if the one is not.

Aristoteles:: True.

Parmenides:: If we should, therefore, summarily say, that if the one is not, nothing is, will not our assertion be right?

Aristoteles:: Entirely so.

Parmenides:: Let this then be asserted by us, and this also: that whether the one is or is not, both itself, as it appears, and others, both with respect to themselves and to each other, are entirely all things, and at the same time are not all, and appear to be, and at the same time do not appear.

Aristoteles:: It is most true.

THE END OF THE PARMENIDES.

Wednesday, April 1, 2020

**Recursion and Names.**

What is knowledge? As a thing is comprised of two elements, how do we state them as just one thing?

Plato starts with the recursion of appearance, the looks of Socrates and Theaetetus. What are names and how are they recursively applied? We can only name the parts of a thing, its two elements which you will find in the quote, a dream for a dream. So, if we name a thing, we must use recursion in order to do it. Do we understand recursion?

Is then definition, the measure, or standard by which we name a thing, a relative or an absolute? Is it perceptible or the intelligible?

If one is not able to comprehend recursion, then they get into the circular arguments over the question is a thing a relative or an absolute. What this is about is that one is not able to discern the difference between a thing named and the method of naming things. The name of a thing is not the thing named. Names are simply addresses, not having any meaning in of themselves; one can just as well as say counting, indexing, naming, etc. Thus, we have to learn not only to distinguish between the elements of a thing, but how we name those elements and how we recursively apply names, while keeping in mind that the name is not the abstraction named.

A noun, which is an absolute, or container, becomes a way of place value notation, but it is not place value, but group value, or group address, or group name. between each name of a group is one or more relative differences, or again, dimensions. Dimension simply means that we mention every thing by 2's or binary. It is not the brain dead mystical means of hallucination that one can travel between mysterious places.

Every possible grammar system uses a method of recursion to produce specific names. How do we do it in Common Grammar, Arithmetic, Algebra and Geometry?

We have standards of behavior to construct symbol sets, and standards of behavior to recursively use those symbols; both of these universal systems of producing names whose products are specific, particular names; this is how we make a neurolandscape. Thus, two squared, a single recursion of our binary, produces our four grammar systems for our grammar Matrix. In *Theaetetus*, one should come away asking how do we actually recursively construct these two parts of grammar and apply them?

If one refers to the *dream for a dream* quote, Plato tells you how recursion is effected in Common Grammar, for definition is a combination of names, or again, the combiner, container, noun. The noun, being an absolute, is not a relative.

A thing is a combination of names, a thing is a relative constrained by correlatives. If we have to produce names which are relatively different one from another, then we have to use the absolute to accomplish it. What we have to do in defining any thing is given any noun which names a thing, understand the relatives within that group. Each relative will be of some one thing which is actually different from the name of the group name.

We can enumerate the relative differences, in a group in two ways; by equating a noun to its two predicates, or a noun to a noun. Tom is a cat, an Tom is furry. One must know that predicates come in pairs, the name of a relative and the name of an absolute. Thus, in Tom is furry, furry is not a predicate anymore than is Tom.

# **Theaetetus.**

or

On Science.

Translated by Henry Cary.

FIRST EUCLIDES, AND TERPSION,
THEN SOCRATES, THEODORUS, AND THEÆTETUS.

Euclid:: Are you just now, Terpsion, or long since come from the country?

Terpsion:: A considerable time since, and I have been seeking for you in the forum, and wondered that I could not find you.

Euclid:: I was not in the city.

Terpsion:: Where then?

Euclid:: As I was going down to the port, I met with Theætetus, who was being carried from the camp at Corinth to Athens.

Terpsion:: Alive or dead?

Euclid:: Alive, though scarcely so; for he is in a bad state from several wounds, though he suffers more from the disease that is prevalent in the army.

Terpsion:: Is it dysentery?

Euclid:: Yes.

Terpsion:: What a man you speak of as being in danger!

Euclid:: An honorable and good man, Terpsion, and I just now heard some persons highly extolling his conduct in the battle.

Terpsion:: Nor is that surprising, but it would be much more wonderful if he had not behaved so. But why did he not stop here at Megara?

Euclid:: He was hastening home; although I begged and advised him, yet he would not. And after I had attended him on his journey, on my return hither I recollected, and was filled with admiration of Socrates, who often spoke prophetically about other things, and especially about him. For if I remember rightly, a little before his death, he met with Theætetus who was then a youth, and being in company and discoursing with him, he very much admired his natural disposition. And when I went to Athens, he related to me the conversation he had had with him, which was very well worth hearing, and he said that he must necessarily distinguish himself, if he lived to a mature age.

Terpsion:: And he spoke truly as it seems. But what was the conversation? are you able to relate it?

Euclid:: No, by Jupiter, not by heart; but as soon as I returned home, I made notes of it, and afterwards at my leisure calling it to mind I wrote it down, and as often as I came to Athens, I asked Socrates to repeat what I did not remember, and, on my return hither, corrected it; so that I have nearly the whole conversation written out.

Terpsion:: True: I have heard you say so before, and though I always meant to beg you to show it me, I have hitherto delayed doing so. But what should hinder us from now going through it? For I am in great need of rest, having just come from the country.

Euclid:: I too accompanied Theætetus as far as Erinion, so that I should not be at all sorry to rest myself. Let us go, then, and while we rest the boy shall read to us.

Terpsion:: You say well.

Euclid:: This then is the book, Terpsion. But I wrote the conversation thus, not as if Socrates related it to me, as he did, but as if he was conversing with the persons with whom he said he did converse. But these, he said, were

Theodorus the geometrician, and Theætetus. In order, then, that phrases interposed in the discourse might not give us trouble in the writing, when Socrates spoke of himself, as "I said," or "Thereupon I replied," and again when he spoke of the person who gave the answer, "He assented," or "He denied," for this reason I have introduced Socrates himself as conversing with them, and have done away with all such expressions.

Terpsion:: And that is not at all improper, Euclides.

Euclid:: Here then, boy, take the book and read.

---

*Socrates::* If I took more interest in the people at Cyrene, Theodorus, I should enquire of you what is going on there, and of the people, whether there are any young men there who devote their attention to geometry, or any other liberal study. But now, for I love them less than these, I am more anxious to know who of our young men promise to become eminent. For I myself examine into this as far as I am able, and enquire of others, with whom I see the young men willingly associating. But no small number attach themselves to you, and justly; for you deserve it, both in other respects, and on account of your geometry. If, therefore, you have met with any one worth mentioning, I should be glad to be informed of it.

Theodorus:: And indeed, Socrates, it is very well worth while both for me to tell and you to hear, what a youth I have met with among your fellow-citizens. And if he were beautiful, I should be very much afraid to mention him, lest I should appear to any one to be enamored with him; but now, and don't be angry with me, he is not handsome, for he resembles you in the flatness of his nose and the prominence of his eyes: but he has these in a less degree than you. You see I speak without reserve. Be assured then, that of all I ever met with, and I have been in company with very many, I never yet knew one of such an admirable disposition. For a man to be apt to learn, as it is at all times difficult, and at the same time remarkably mild, and added to this brave beyond compare, I, for my part, thought could never happen, nor do I see any who are so. But those who are acute, as this one, sagacious, and of a good memory, are for the most part easily roused to anger, and are hurried violently along like ships without ballast, and are naturally rather furious than brave; on the other hand those who are more sedate commonly set about their studies more sluggishly and are forgetful. But he so calmly, steadily, and effectually applies himself to his studies and investigations, with so much gentleness, like oil flowing noiselessly, that one wonders how one at his age can manage to do this.

Socrates:: You bring good news. But whose son is he of our citizens?

Theodorus:: I have heard the name, but do not remember it. However he is the middle one of those who are now approaching. For both he and these who are some of his companions were just now anointing themselves in the outer course; and new they appear to me to be coming here after having anointed themselves. Observe, however, if you know him.

Socrates:: I do know him. He is the son of Euphronius of Sunium, who, my friend, was just such a man as you describe the son to be, and who was otherwise a person of consideration, and besides left behind him a very large fortune.

Theodorus:: Theætetus is his name, Socrates. But I think his guardians have squandered his fortune. However notwithstanding this, he is wonderfully liberal with his money, Socrates.

Socrates:: You describe a noble man. Bid him come here, and sit down by us.

Theodorus:: I will. Theætetus, come hither to Socrates.

Socrates:: By all means come, Theætetus, that I may look at myself, and see what sort of a face I have. For Theodorus says I am like you. But if we had each of us a lyre, and he should say that they were modulated alike, should we believe him at once, or consider first whether he speaks as a musician?

Theaetetus:: We should consider that first.

Socrates:: Should we not, then, on finding that he was so, believe him, but, if he was ignorant of music, disbelieve him?

Theaetetus:: True.

Socrates:: Now, then, I think, if we care at all about the resemblance of our faces, we should consider whether he speaks as a painter, or not.

Theaetetus:: It appears so to me.

Socrates:: Is Theodorus a painter then?

Theaetetus:: Not that I know of.

Socrates:: And is he not a geometrician either?

Theaetetus:: Most assuredly he is, Socrates.

Socrates:: Is he also an astronomer, a reasoner, and a musician, and acquainted with all such things as are requisite for a good education?

Theaetetus:: He appears so to me.

Socrates:: If, then, he says that we resemble each other in some part of our body, praising or blaming it, it is not very well worth while to pay any attention to him.

Theaetetus:: Perhaps not.

Socrates:: But what if he should praise the soul of either of us for virtue or wisdom? would it not be worth while for the one who heard him to take pains to examine him that was praised, and for the latter to discover himself willingly?

Theaetetus:: Certainly, Socrates.

Socrates:: It is time then, my dear Theætetus, for you to discover yourself, and for me to examine you; for be assured that Theodorus, though he has ere now praised many both strangers and citizens to me, has never praised any one so much as he praised you just now.

Theaetetus:: May it be well, Socrates; but beware that he did not speak in jest.

Socrates:: That is not Theodorus's habit. But do not retract what you have granted, under the pretence that he spoke in jest, lest he should be compelled to bear witness. For no one assuredly will accuse him of giving false evidence. Therefore adhere firmly to your agreement.

Theaetetus:: It is proper to do so, if you think fit.

Socrates:: Tell me, then; Do you learn geometry from Theodorus?

Theaetetus:: I do.

Socrates:: And, likewise, astronomy, and harmony, and reasoning.

Theaetetus:: I endeavor to do so.

Socrates:: I too, my boy, endeavor to learn both from him and from others who I think understand any thing of these matters. However, though I am tolerably well informed in other subjects, yet I am in doubt about a trifle which I wish to consider with you, and these here present. Tell me, then, is not to learn to become wiser in that which one learns?

Theaetetus:: How otherwise?

Socrates:: And by wisdom, I think, the wise are wise.

Theaetetus:: Yes.

Socrates:: But does this differ at all from science?

Theaetetus:: What?

Socrates:: Wisdom. Are not men wise in things of which they have a scientific knowledge?

Theaetetus:: How not?

Socrates:: Then are wisdom and science the same?

Theaetetus:: Yes.

Socrates:: This, then, is the thing that I doubt about, and I am not able to determine satisfactorily by myself what science is. Can we then explain it? What do you say? Which of us shall speak first? But he that mistakes, and as often as any one mistakes, shall sit as an ass, as the boys say when they play at ball; but whoever shall get the better without making a mistake shall be our king, and shall order any question he pleases to be answered. Why are you silent? Am I rude at all, Theodorus, from my love of talking, and in my anxiety to bring about a conversation amongst us, and of making us all friends, and sociable with one another?

Theodorus:: Such a thing, Socrates, cannot by any means be rude, but bid one of these young men answer you. For I am unaccustomed to this kind of conversation, and am not of an age to accustom myself to it; whereas it is suitable to them, and they will benefit by it much more; for, in truth, youth can derive benefit from every thing. As you begun, therefore, do not let Theætetus off, but question him.

Socrates:: You hear, Theætetus, what Theodorus says, whom, I think, you will neither be willing to disobey, nor is it right for a young man not to submit to a wise man, when he commands him in matters of this kind. Tell me, therefore, frankly and ingenuously, what does science appear to you to be?

Theaetetus:: I must then, Socrates, since you bid me. And if I make any mistake you will assuredly correct me.

Socrates:: Certainly, if we are able.

Theaetetus:: It appears to me, then, that sciences are such things as one may learn from Theodorus, geometry, and the others which you just now enumerated; and again, the shoemaker's art, and those of other artisans, all and each of these are nothing else but science.

Socrates:: Nobly and munificently, my friend, when asked for one thing you give many, and various things instead of the single one.

Theaetetus:: What mean you by this, Socrates?

Socrates:: Perhaps nothing: but I will tell you what I think. When you speak of the shoemaker's art, do you mean any thing else than the science of making shoes?

Theaetetus:: Nothing.

Socrates:: But what of the carpenter's art? Do you mean any thing else than the science of making implements in wood?

Theaetetus:: Still nothing else.

Socrates:: In both, then, do you not define that of which each is the science?

Theaetetus:: Yes.

Socrates:: But the question asked, Theætetus, was not this, of what things there is science, nor how many sciences there are; for we did not enquire, with a view to enumerate them, but to know what science itself is. Do I say nothing to the purpose?

Theaetetus:: You speak very correctly.

Socrates:: Consider this too. If any one should ask us about any mean and obvious thing, as, for instance, clay, what it is, if we were to answer him, there is the potters' clay, the oven-builders' clay, and the brick-makers' clay, should we not be ridiculous?

Theaetetus:: Probably.

Socrates:: In the first place, we should be ridiculous for thinking that he who asks the question can understand from our answer, when we say Clay, adding, image-makers, or any other artisans whatever. Do you think that any one can understand the name of a thing when he does not know what that thing is?

Theaetetus:: By no means.

Socrates:: Neither does he understand the science of shoes who does not know what science is?

Theaetetus:: He does not.

Socrates:: He then does not understand what is the art of shoemaking, or any other art, who is ignorant of what science is?

Theaetetus:: It is so.

Socrates:: It is, therefore, a ridiculous answer for one to give who is asked what science is, when he answers the name of some art. For he answers, of what there is a science, though this is not what he was asked.

Theaetetus:: It seems so.

Socrates:: In the next place, when he might have answered plainly and briefly he goes round an endless way. As for instance to the question about clay, it is a plain and simple answer to give, that clay is earth mixed with moisture, without mentioning what use is made of it.

Theaetetus:: It appears easy now, in this way, Socrates; for you appear to ask just such a question as lately occurred to me when we were conversing together, I and your namesake here, Socrates.

Socrates:: What was that, Theætetus?

Theaetetus:: Theodorus here was describing to us something about powers, with respect to magnitudes of three and five feet, showing that they are not commensurate in length to a magnitude of one foot, and thus proceeding through every number as far as to a magnitude of seventeen feet; at this he stopped. Since then powers appeared to be infinite in multitude, something of the following kind occurred to us, to endeavor to comprehend them in one name, by which we might denominate all these powers.

Socrates:: And did you discover any thing of the kind?

Theaetetus:: I think we did. But do you also consider.

Socrates:: Say on.

Theaetetus:: We divided all number into two classes; then comparing that in which the factors are the same to a square figure, we called it square and equilateral.

Socrates:: Very well.

Theaetetus:: But the intermediate numbers, such as three and five, and every one in which the factors are not the same, but a greater number is multiplied by a less, or a less by a greater, so that a greater and a lesser side always enclose them, we compared to an oblong figure, and called them oblong numbers.

Socrates:: Admirable. But what next?

Theaetetus:: Such lines as square an equilateral and plane number, we defined to be length, and such as square an oblong number, powers, as not being commensurate with them in length, but with the planes which they produce. And the case is the same with solids.

Socrates:: Excellently done, my boys; so that Theodorus appears to me not liable to the charge of having given false testimony.

Theaetetus:: However, Socrates, I shall not be able to answer your question about science, as I did that about length and power; though you appear to me to seek something of the same kind. So that Theodorus again appears to be a false witness.

Socrates:: How so? If, praising you for running, he should say that he never met with any youth who ran so swift, and afterwards you should be defeated in running by a man who is full grown and very swift, do you think he would have praised you with less truth?

Theaetetus:: I do not.

Socrates:: But with respect to science, as I just now spoke of it. do you think it is a trifling matter to find out what it is, and not in every way difficult?

Theaetetus:: By Jupiter, I think it difficult in the extreme.

Socrates:: Have confidence, then, in yourself, and think that Theodorus spoke to the purpose, and endeavor by all possible means to comprehend the notion both of other things, and also of science, what it is.

Theaetetus:: As far as endeavor goes, Socrates, it shall be found out.

Socrates:: Come then: for you began very well just now; endeavor, in imitation of your answer about powers, as you comprised those, which are many, under one general idea, so likewise to designate many sciences by one notion.

Theaetetus:: Be assured, Socrates, I have often attempted to examine this, on hearing the questions that are propounded by you; but I can neither persuade myself that I can say any thing satisfactory, nor can I hear any one else answering in the manner you require, though still I do not desist from the attempt.

Socrates:: You are in labor, my dear Theætetus, not because you are empty, but pregnant.

Theaetetus:: I know not, Socrates; however I tell you how the case stands with me.

Socrates:: What, absurd youth, have you not heard that I am son of the very noble and awful midwife Phænarete?

Theaetetus:: I have heard so.

Socrates:: And have you also heard that I study the same art?

Theaetetus:: By no means.

Socrates:: Be assured, however, that it is so: but do not betray me to others. For they are not aware, my friend, that I possess this art? but they, since they are ignorant of it, do not say this of me, but that I am a most absurd man, and make men doubt. Have you not heard this?

Theaetetus:: I have.

Socrates:: Shall I tell you the reason of it?

Theaetetus:: By all means.

Socrates:: Consider, then, every thing that relates to midwives, and you will more easily understand what I mean. For you doubtless know, that not one of them delivers others, while she herself can conceive and bring forth, but those who can no longer bring forth.

Theaetetus:: Certainly.

Socrates:: But they say that Diana is the cause of this, because being herself a virgin she has the charge of childbirths. Now to barren women she has not given the power of becoming midwives, because human nature is too weak to undertake an art in things of which it has had no experience, but she has imposed that office on those who from their age are incapable of bearing children, doing honor to the resemblance of herself.

Theaetetus:: That is reasonable.

Socrates:: And is not this also reasonable and necessary, that who are pregnant and who are not should be better known by midwives than by others?

Theaetetus:: Certainly.

Socrates:: Moreover, midwives by applying drugs and using enchantments, are able both to excite and, if they please, to alleviate the pangs, and to deliver those that bring forth with difficulty, and if the child appears to be abortive, they produce a miscarriage.

Theaetetus:: It is so.

Socrates:: Have you not also heard this of them, that they are most skilful match-makers, as being perfectly competent to distinguish what kind of woman ought to be united to what kind of man, in order to produce the finest children?

Theaetetus:: I did not altogether know that.

Socrates:: Be assured, then, that they pride themselves more in this than in cutting the navel-string. For consider; do you think it belongs to the same or a different art to cultivate and gather in the fruits of the earth, and again to know in what soil what plant or seed ought to be sown?

Theaetetus:: No, but to the same art.

Socrates:: But with respect to women, my friend, do you think that there is one art of that kind, and another of gathering in the fruit?

Theaetetus:: It is not reasonable to suppose so.

Socrates:: It is not. But by reason of the illegitimate and ill-assorted unions of men and women, to which the name of pandering has been given, midwives out of regard to their own dignity avoid match-making also, fearing lest by this they should incur the other imputation, since it doubtless belongs to real midwives only to make marriages properly.

Theaetetus:: It appears so.

Socrates:: Such then is the office of midwives, but less important than my task. For it does not happen to women, sometimes to bring forth images, and sometimes realities, which cannot be easily discriminated; for, if it did happen, it would be the greatest and noblest work for midwives to distinguish that which is true and that which is not; do you not think so?

Theaetetus:: I do.

Socrates:: But in my art of midwifery all other things are the same as in theirs; but it differs in this, that it delivers men and not women, and that it attends to their souls bringing forth and not their bodies. But the most important thing in my art is, that it is able to test in every possible way whether the mind of a young man is bringing forth an image and a cheat, or what is genuine and true: for the case is the same with me as with midwives; I am barren of wisdom, and as to what many have reproached me with, that I question others, but give no answer myself on any subject, because I have no wisdom, they reproach me truly. But the cause of this is as follows: the deity compels me to act the part of a midwife, but forbids me to bring forth myself. I am not, therefore, myself at all wise, and I have no such discovery as is the offspring of my own mind; but those who associate with me at first appear, some of them, exceedingly ignorant, but all, as our intimacy continues, to whom the deity grants that privilege, make a wonderful proficiency, as is evident both to themselves and others; and this is clear, that they make this proficiency without ever learning any thing from me, but from their own resources finding and becoming possessed of many beautiful things; of the midwife's office, however, the deity and I are the cause. But it is evident from this: many, from not knowing this, and deeming themselves to be the cause, but despising me, either of themselves or through the persuasion of others, have left me sooner than was proper, and after they have left me have miscarried for the future, in consequence of their depraved associations, and badly nurturing what they have been delivered of through me, they have destroyed it, setting a higher value on cheats and images than on that which is true, they have at last appeared to be ignorant both to themselves and others. One of these was Aristides son of Lysimachus, and many others, with some of whom, when they again come to me, begging to renew their intercourse with me, and doing every thing in their power to obtain it, the demon that attends me prevents me from associating, but with others it allows me, and these again make considerable proficiency. And they that associate with me are in this respect affected in the same way as women who bring forth; they suffer pangs, and are filled with anxieties, to a far greater degree than the women are. But their pangs my art is able both to excite and appease. And these are affected in this way. But sometimes, Theætetus, there are some who do not appear to me to be at all pregnant, and I, knowing that they do not need my assistance, very kindly sue others for them, and with the aid of the deity, conjecture well enough, from associating with whom they will derive benefit. Of these I have handed many over to Prodicus, and many to other wise and divine men. I have dwelt long on this, my excellent friend, for this reason, because I suspect, as you also think yourself, that you are in pain from being pregnant with something inwardly. Deal with me, then, as son of a midwife, and as myself skilled in midwifery, and endeavor to answer the questions I put to you to the best of your ability. And if, on examining any thing that you say, I shall consider it to be an image and not true, and should thereupon remove it and throw it away, do not be angry with me, like women who are delivered for the first time are for their children: for many, my admirable friend, have ere this been so affected towards me as to be actually ready to bite me, when I take away any trifle from them, and they do not think that I do this with a good design, in that they are very far from knowing that no deity designs ill to men, and that neither do I do any thing of this kind through ill-will, but because it is by no means allowable for me to give way to falsehood and conceal the truth. Again, therefore, from the beginning, Theætetus, endeavor to tell me what science is; but never say that you are unable to do so; for if God wills and you strive manfully you will be able.

Theaetetus:: Indeed, Socrates, when you are thus urgent, it would be disgraceful for one not to endeavor to the utmost of one's power to say what one is able. He, then, that knows any thing appears to me to perceive what he knows, and, as it now seems, science is nothing else than perception.

Socrates:: Well and nobly said, my boy; for it is right thus to declare one's opinion. But come, let us consider this together, whether it is solid or empty. Science, you say, is perception?

Theaetetus:: Yes.

Socrates:: You appear, indeed, to have given no mean definition of science, but that which Protagoras has given; but he said the same thing in a different manner. For he says that man is the measure of all things, of the existence of those that exist, and of the non-existence of those that do not exist. You have doubtless read this?

Theaetetus:: I have read it, and that often.

Socrates:: Does he not say pretty much, that such as every thing appears to me, such it is to me, and as it appears to you, such it is to you, but you and I are men?

Theaetetus:: He does indeed say so.

Socrates:: It is probable however that a wise man does not trifle; let us, therefore, follow him. Does it not sometimes happen that when the same wind blows, one of us is cold, and another not, and one slightly, but another exceedingly?

Theaetetus:: Assuredly.

Socrates:: Whether, then, shall we say, that the wind at that time is in itself cold or not cold? or shall we believe Protagoras, that it is cold to him that is cold, but not to him that is not?

Theaetetus:: It seems so.

Socrates:: Does it not, then, appear so to both of them?

Theaetetus:: Yes.

Socrates:: But to appear is the same as to be perceived?

Theaetetus:: It is.

Socrates:: Appearance then and perception are the same in things hot, and every thing of that kind; for such as every one perceives things to be, such also they seem to be to every one.

Theaetetus:: It seems so.

Socrates:: Perception, therefore, has always reference to that which really is, and is free from falsehood, as being science.

Theaetetus:: It appears so.

Socrates:: By the graces, then, was not Protagoras a very wise man, and did he express himself thus enigmatically to us, the general rabble, but speak the truth to his disciples in secret?

Theaetetus:: What mean you by this, Socrates?

Socrates:: I will tell you, and that no mean account; he asserts, that no one thing exists of itself, nor can you correctly designate any thing by any quality, but if you call it great, it will appear small, and if heavy, light, and so with every thing else; as if nothing was one thing, or any thing, or possessed of any quality: but as if all things which we say exist, become so from impulse, motion, and admixture with each other, thereby designating them incorrectly; for nothing ever is, but is always becoming. And in this all the wise men in succession, except Parmenides, agreed, namely, Protagoras, Heraclitus, and Empedocles, and of the poets, those who rank highest in each kind of poetry, in comedy Epicharmus, and in tragedy Homer; for in saying that “Oceanus is father of the gods, and Tethys mother,” he asserts that all things are produced by flux and motion. Does he not seem to say so?

Theaetetus:: To me he does.

Socrates:: Who then can contend with such an army, with Homer for its leader, and not be ridiculous?

Theaetetus:: It is not easy, Socrates.

Socrates:: It is not, indeed, Theætetus. For this is a strong proof in favor of their argument, that motion gives the appearance of existence and of generation, but repose of non-existence and decay; for heat and fire, which engenders and supports other things, is itself engendered by impulse and friction, but this is motion. Are not these the origin of fire?

Theaetetus:: Surely they are.

Socrates:: And moreover the race of animals springs from the same causes.

Theaetetus:: How not?

Socrates:: But what? Does not the habit of the body perish by rest and inaction, but is it not for the most part preserved by exercise and motion?

Theaetetus:: Yes.

Socrates:: But does not the habit of the soul acquire and retain learning and become better by study and practice, which are motions, but by rest, which is want of practice and ignorance, it neither learns any thing, and forgets what it has learnt?

Theaetetus:: Assuredly.

Socrates:: Motion, therefore, is good both for the soul and the body; but rest, the contrary.

Theaetetus:: It seems so.

Socrates:: Shall I add further, with respect to stillness of the air, and calms and things of that kind, that rest corrupts and destroys, but the contrary preserves. And besides this shall I put the finishing stroke to my argument by compelling you to admit, that by the golden chain Homer meant nothing else than the sun, and intimated that as long as the universe and the sun are moved, all things exist, and are preserved, both amongst gods and amongst men; but if they were to stand still, as it were bound, all things would be destroyed, and, as the saying is, turned upside down.

Theaetetus:: He appears to me too, Socrates, to intimate what you say.

Socrates:: Then put the argument thus, my excellent friend: first with respect to the eyes, suppose that what you call white color is not any thing different, external to your eyes, nor in your eyes; nor can you assign it any place; for then it would have a fixed position, and would continue, and not be liable to production.

Theaetetus:: But how?

Socrates:: Let us follow our late principle, and lay it down that there is nothing which is of itself one thing; and thus black and white, and every other color, will appear to us to be produced by the application of the eyes to a corresponding movement, and each thing that we say is color, will neither be that which is applied, nor that to which it is applied, but some intermediate production peculiar to each. Would you positively maintain, that what each color appears to you, such it also appears to a dog, and every other animal?

Theaetetus:: Not I, by Jupiter.

Socrates:: But what? Does any thing appear similar to another man and to you? are you positive about this, or rather that it does not appear the same even to you, because you are never identical with yourself?

Theaetetus:: The latter seems to me to be the case rather than the former.

Socrates:: If, therefore, that which we measure by comparison, or which we touch, were great, or white, or warm, it would never, by coming in contact with any thing else, become different, for it would not be in any respect changed. But if that which measures or touches were some one of these things, it could not, in consequence of something else approaching it or being affected in any way, become any thing else, because it would not itself be in any respect affected. For now, my friend, we are in a manner compelled to assert things altogether wonderful and ridiculous, as Protagoras would acknowledge, and every one who supports his opinions.

Theaetetus:: How and what do you mean?

Socrates:: Take a trifling example, and you will understand all that I wish. Six dice for instance, if you should put four by them, we say are more than the four and half as many again, but if twelve we say they are fewer, and the half; nor would it be allowable to say otherwise. Would you allow it?

Theaetetus:: Not I, indeed.

Socrates:: What then? If Protagoras or any one else should ask, "Theætetus, is it possible for any thing to become greater or more otherwise than by being increased?" What would you answer?

Theaetetus:: If, Socrates, I should answer what appears to me to be the case with reference to the present question, I should say that it is not possible; but if with reference to the former question, to avoid contradicting myself, I should say that it is possible.

Socrates:: By Juno, well and divinely said, my friend. But, as it seems, if you should answer that it is possible, something like that saying of Euripides will happen; for the tongue will be blameless, but the mind not blameless.

Theaetetus:: True.

Socrates:: If, therefore, you and I were skilful and wise, after we had thoroughly examined our minds, we should then, out of mere wantonness, make trial of each other's strength, and engaging in such a contest after the manner of the sophists, should mutually parry argument with argument: but now, as being novices, we shall desire first of all, to examine what the things themselves are which we have in our minds, whether they accord with each other, or not at all.

Theaetetus:: I should certainly desire this.

Socrates:: And so do I. But since this is the case, shall we not quietly, seeing we have abundance of leisure, again consider, not feeling any annoyance, but really examining ourselves, in order to see what those appearances in us are. And on considering them, we shall say in the first place, I think, that nothing ever becomes greater or less, either in bulk, or number, as long as it continues equal to itself. Is it not so?

Theaetetus:: Yes.

Socrates:: And, in the second place, that a thing to which nothing is either added and from which nothing is taken away, will neither be ever increased or diminished, but always be equal.

Theaetetus:: Just so.

Socrates:: And shall we not say, in the third place, that it is impossible for a thing which did not before exist, to exist afterwards, without it has been produced and is produced.

Theaetetus:: It seems so, indeed.

Socrates:: These three admissions, I think, contend with each other in our soul, when we speak about dice, or when we say that I, being of the size I am, having neither increased, nor suffered diminution in the space of a year, am now larger than you, who are a young man, but afterwards less, though in bulk has not been diminished, but yours has been increased. For I am afterwards, what I was not before, without having been made so.

For it is impossible for a thing to have been made, without being made, and having lost nothing of my bulk, I cannot have been made less. And the case is the same with ten thousand other things with reference to ten thousand others, if we admit this. You doubtless follow me, Theætetus; for you appear to me not to be a novice in things of this kind.

Theaetetus:: By the gods, Socrates, I wonder extremely what these things can be, and, truly, sometimes when I look at them, I become dizzy.

Socrates:: Theodorus, my friend, appears not to have formed an erroneous estimate of your disposition; for wonder is very much the affection of a philosopher; for there is no other beginning of philosophy than this, and he who said that Iris was the daughter of Thaumas, seems not to have described her genealogy badly. But do you understand now, why these things are so, from what we say Protagoras maintains, or not yet?

Theaetetus:: I don't think I do yet.

Socrates:: Shall you not, then, be obliged to me, if I assist you in searching out the true, but concealed opinion of a man, or rather of men of celebrity?

Theaetetus:: How should I not be, and indeed exceedingly obliged to you?

Socrates:: Look round, then, and see that no profane person hears us. But they are so who think that nothing else exists except what they can grasp with their hands, but do not admit that actions, and productions, and whatever is invisible, are to be reckoned in the number of things that exist.

Theaetetus:: Indeed, Socrates, you speak of hard and obstinate men.

Socrates:: For they are very ignorant, my boy. But there are others far more refined than these, whose mysteries I am about to reveal to you. Their principle, on which all the things, that we have just now mentioned, depend, is this: That the universe is motion, and nothing else besides, but that there are two species of motion, each infinite in amount, and that one has an active, the other a passive power. That from the intercourse and friction of these with one another are formed productions infinite in number, but of two kinds, one that is perceivable, the other perception, which always coincides and is engendered together with that which is perceivable. Now to the perceptions we give the following names, seeing, hearing, smelling, cold and heat, and moreover pleasures, pains, desires, and fears are so called, and there are innumerable others which have no name, and vast multitudes that have been named: again there is a class of perceivable things akin to each of these, all kinds of colors to all kinds of vision, and in like manner voices to hearing, and other perceivable things are produced corresponding to the other perceptions. What then is the meaning of this discourse, Theætetus, in reference to the former? Do you understand what it is?

Theaetetus:: Not very well, Socrates.

Socrates:: But observe if by any means it can be brought to a conclusion. For it means to say that all these things are, as we said, moved, and that there is swiftness and slowness in their motion. Whatever then is slow is moved in the same place and towards things near it, and so produces, and the things which are produced are accordingly slower; and on the contrary, whatever is swift moves towards things at a distance, and so produces, and the things which are produced are accordingly swifter, for they are impelled, and their motion consists in impulse. When, therefore, the eye and any of the things that correspond to it meet together and produce whiteness, and the perception connate to this, which would never have been produced had each of them approached something else, then they being in the meanwhile impelled, *that is to say*, sight from the eyes, and whiteness from that which together with it generates color, the eye becomes filled with vision, and then sees, and becomes not vision, but a seeing eye; but that which together with it generates color is filled with whiteness, and becomes not whiteness, but white, whether it is wood or stone, or whatever may happen to be tinted with a color of this kind. And so with the rest, hard and warm, and every thing, we must in the same manner conceive that none of these is any thing of itself, as we have, observed before that all things and of all kinds are produced by their intercourse with each other, from motion, for, as they say, we cannot determine positively with regard to any one thing, that that which is active really exists, nor again that which is passive; for neither is the active any thing before it meets with the passive, nor the passive before it meets with the active; and that which, meeting with any thing, is active, when it falls upon something else, is found to be passive. So that it results from all this, as we said at the beginning, that nothing is essentially one, but is always being produced by something, and the word “being” must be entirely done away with, although we have already been compelled by custom and ignorance to use it frequently; but, as the sages say, we ought not to allow any thing, either of any other, or of me, or this, or that, or any other name which designates permanency, but that according to nature, things ought to be said to be produced and made, to perish and be changed: so, if any one asserts permanency of any thing, he who does so may easily be confuted. Thus then we ought to speak of things individually, and of many collectively, to which collection are given the names of man, stone, animal, and each several species. Do not these things, Theætetus, appear pleasant to you, and have you not found them agreeable to your taste?

Theaetetus:: I don’t know, Socrates; for I can’t make you out; whether you are giving your own opinions or are trying me.

Socrates:: You do not remember, my friend, that I neither know nor claim as my own any of these things, but that I am barren of them, but I act the midwife towards you, and for this purpose I enchant you, and put before you the opinions of the several wise men, that you may taste them, until I bring your own opinion to light: but when it is brought forth, I will then examine whether it shall prove to be empty or productive. Be therefore confident and bold, and answer in an honest and manly way, what you think of the questions I put to you.

Theaetetus:: Ask then.

Socrates:: Tell me then again, whether it is your opinion that the good, and the beautiful, and every thing that we just now mentioned, have an actual existence or are constantly being produced?

Theaetetus:: To me indeed, when I hear you thus explaining the matter, it is wonderful how far you appear to have reason on your side, and I think that your statements must be admitted.

Socrates:: Let us not, then, omit what remains of it. But it remains that we should speak of dreams, diseases, and, besides other things, of madness; and whatever else is called error of hearing or seeing, or of any other perception. For you know, without doubt, that in all these cases the doctrine which we have just now described, is considered to be completely confuted, since the sensations produced in these instances are utterly false, and so far are the things that appear to each person from existing, that quite contrariwise none of the things that appear have any real existence.

Theaetetus:: You speak most truly, Socrates.

Socrates:: What argument, then, remains for him, who asserts that perception is science, and that things which appear to every one are to that person what they appear to be?

Theaetetus:: I am afraid to say, Socrates, that I have no answer to give, because you just now blamed me for having said so: but in truth I cannot controvert the fact, that those who are mad or dreaming, form false opinions, since some of the former think they are gods, and the latter that they are winged and fancy that they are flying in their sleep.

Socrates:: Do you not know, then, the controversy that is raised on these points, especially about dreaming and being awake?

Theaetetus:: What is that?

Socrates:: That which I think you have often heard, when people ask, what proof one could give, if any one should ask us now at the present moment, whether we are asleep, and all our thoughts are dreams, or whether we are awake, and really conversing with each other.

Theaetetus:: And indeed, Socrates, it is difficult to say what proof one ought to give: for in both states all things in a manner correspond with each other. For, with respect to our present conversation, nothing hinders our fancying that we converse with each other in a dream: and when in sleep we fancy we are telling our dreams, the similarity of one with the other is surprising.

Socrates:: You see, then, that it is not difficult to raise a controversy, since it is even controverted whether a state is that of being awake or dreaming; moreover since the time during which we sleep is equal to that when we are awake, in each of these states our soul persists that the opinions that are present for the time are most certainly true, so that for an equal space of time we say that these are real, and for an equal space that those are, and we are equally positive for each of them.

Theaetetus:: Most assuredly.

Socrates:: May not, then, the same argument be used with respect to diseases and madness, except with regard to time, that it is not equal.

Theaetetus:: Right.

Socrates:: What then? Shall truth be defined by length and brevity of time?

Theaetetus:: That, indeed, would be ridiculous in many ways.

Socrates:: Have you, then, any other clear mark by which you can show which of these opinions is true?

Theaetetus:: I think not.

Socrates:: Hear, therefore, from me, what will be said about these things by those who maintain that appearances are always real to the person to whom they appear. They will question you thus, I think: “Theætetus, can a thing which is totally different from another, have the same power as that other?” And we are not to suppose that the thing we ask about is partly the same, and partly different, but altogether different.

Theaetetus:: It is impossible that it should possess any thing the same, either in power, or in any other respect, since it is entirely different.

Socrates:: Must we not, then, necessarily confess, that a thing of this kind is dissimilar?

Theaetetus:: It seems so to me.

Socrates:: If, therefore, any thing happens to become similar or dissimilar to any thing, whether to itself or to another, so far as it becomes similar we shall say it is the same, but, so far as dissimilar, different.

Theaetetus:: Necessarily so.

Socrates:: Have we not said before, that there are many, and indeed innumerable things, which are active, and likewise passive?

Theaetetus:: Yes.

Socrates:: And moreover, that one thing commingled first with one thing and then with another, will produce not the same, but different things.

Theaetetus:: Certainly.

Socrates:: Let us speak, then, of you and me and other things in the same manner, of Socrates in health, and again of Socrates ill. Whether shall we say that the latter is similar to the former or dissimilar?

Theaetetus:: By Socrates ill, do you mean the whole of the latter opposed to the whole of the former, Socrates in health?

Socrates:: You understand me perfectly; that is the very thing I mean.

Theaetetus:: Dissimilar, surely.

Socrates:: And is it not different inasmuch as it is dissimilar?

Theaetetus:: Necessarily so.

Socrates:: And should you not speak in the same way of Socrates asleep, and in the several states we just now described?

Theaetetus:: I should.

Socrates:: But will not each of those things whose nature it is to make any thing something else, when it lights upon Socrates in health, treat me as one thing, and when ill, as a different thing?

Theaetetus:: How should it not?

Socrates:: And shall we not produce different things in each case, both I the patient, and that the agent?

Theaetetus:: How not?

Socrates:: Now when I drink wine, being in health, it appears to me pleasant and sweet.

Theaetetus:: Yes.

Socrates:: For, from what has been already granted, the agent and the patient produce sweetness and perception, both being put in motion together; and the perception proceeding from the patient causes the tongue to perceive, but the sweetness proceeding from the wine and set in motion about it, causes the wine both to be and to appear sweet to a healthy tongue.

Theaetetus:: Certainly, what was granted before comes to this.

Socrates:: But when it lights on me, being ill, first of all does not a different thing in reality light on one who is not the same person? for it approaches one who is dissimilar.

Theaetetus:: Yes.

Socrates:: But Socrates in this state, and the wine drunk, again generate different things, with regard to the tongue a perception of bitterness, and with regard to the wine bitterness produced and set in motion, and that, indeed, not bitterness, but bitter, and me not perception, but perceiving.

Theaetetus:: Exactly so.

Socrates:: Therefore I shall never become any thing else while I perceive thus; for a different perception of a different thing causes the percipient to be changed and different: nor will that, which thus affects me, by coming in contact with another, though it produces the same effect, ever become such as it was to me; for by generating a different thing from a different thing it will become changed.

Theaetetus:: Such is the case.

Socrates:: Neither, then, shall I become such by myself, nor will it become such by itself.

Theaetetus:: Certainly not.

Socrates:: But it is necessary that I, when I become percipient, should become so in relation to something: for it is impossible to become percipient, and yet percipient of nothing: and it is likewise necessary, when any thing becomes sweet or bitter, or any thing of the kind, that it should become so in relation to some one; for it is impossible for a thing to become sweet, and yet sweet to no one.

Theaetetus:: Assuredly.

Socrates:: It remains, I think, that we, if we are, should be, or if we are produced, should be produced, by relation to each other; since necessity unites our existence together, and unites it to no other thing, nor even to ourselves. It remains, therefore, that we are united to each other. So that, if any one says that any thing exists, he must say that it exists for something, or of something, or in relation to something, and in like manner of any thing said to be produced: but he must not say, nor must he allow any one else to say, that any thing exists or is produced of itself, as the argument we have deduced clearly proves.

Theaetetus:: Assuredly, Socrates.

Socrates:: Since, then, that which affects me is relative to me and not to another, do not I perceive it, and another not perceive it?

Theaetetus:: How not?

Socrates:: My perception, therefore, is true to me; for it always belongs to my existence. And I, according to Protagoras, am a judge of things that exist in relation to me, that they do exist, and of things that do not so exist, that they do not exist.

Theaetetus:: It seems so.

Socrates:: How then, since I am not deceived and do not falter in my mind about things that exist or are produced, can I fail to have a scientific knowledge of things which I perceive?

Theaetetus:: It cannot fail to be so.

Socrates:: It was, therefore, very finely said by you, that science is nothing else than perception; and all come to the same result, the doctrine of Homer and Heraclitus and all that tribe, that all things are in motion like streams, and that of the very wise Protagoras, that man is the measure of all things, and that of Theætetus, that, if this is the case, perception must be science. Is it not so, Theætetus? Shall we say that this is your new-born infant as it were, delivered by my midwifery? How say you?

Theaetetus:: It is necessary to say so, Socrates.

Socrates:: This, then, as it appears, we have with much difficulty produced, whatever it may turn out to be. But after the birth, we must, in truth, perform the ceremony of running round in argument, and consider whether, without our perceiving it, that which is produced is not unworthy of being reared, but empty and false. Do you think that we ought by all means to rear your offspring, and not expose it? and will you endure to see it refuted, and not be very much offended if any one should take it away from you, as having been delivered for the first time?

Theodorus:: Theætetus will endure this, Socrates, for he is not at all morose. But, by the gods, say whether it is not so.

Socrates:: You are really very fond of discussion, Theodorus, and pleasant, in thinking that I am a sack full of arguments, and that I can easily pick one out and prove that these things are not so. But you do not observe how the case stands, that no argument proceeds from me, but always from the person who is conversing with me, and that I know nothing but a very little, just enough to apprehend and examine moderately well an argument advanced by another who is wise. And now I will endeavor to do this from him, without saying any thing of myself.

Theodorus:: You say well, Socrates; then do so.

Socrates:: Do you know, Theodorus, what I wonder at in your friend Protagoras?

Theodorus:: What?

Socrates:: In other respects I thought what he said was very acceptable, that what appears to each person, really exists, but I wondered at the beginning of his essay, that he did not say at the commencement of his book on Truth that a pig or a cynocephalus or some other more monstrous creature that possesses perception, is the measure of all things, in order that he might begin by speaking grandly and very contemptuously to us, showing that we indeed admire him as if he were a god, for his wisdom, whereas with respect to understanding, he is no better than a tadpole, let alone any other man. What are we to say, Theodorus? For if that opinion which is formed from perception will be true to each person, and no one will be able to decide better on the way in which another is affected, nor one more competent to examine the opinion of another, whether it is true or false, but, as we have often said, each person by himself alone will form opinions for himself, and all these are right and true, why in the world, my friend, should Protagoras be so wise as to be thought-justly worthy to teach others for high pay, while we are more ignorant and must have recourse to him, though each person is to himself the measure of his own wisdom? How can we avoid saying that Protagoras speaks thus out of joke? As to myself and my art of midwifery, I say nothing of the ridicule we should be exposed to, and I think, so would the whole study of reasoning; for will it not be great and signal vanity to examine and endeavor to confute the fancies and opinions of others, each person's being true, if the Truth of Protagoras is true, and he has not uttered his oracles in sport from the sanctuary of his book?

Theodorus:: Socrates, he is my friend, as you just now said; I cannot, therefore, allow Protagoras to be confuted by my concessions, nor yet can I oppose you contrary to my own opinion. Again, therefore, take Theætetus; for he certainly appears to have listened to you just now very attentively.

Socrates:: If you went to Lacedaemon, Theodorus, to the wrestling grounds, and were to see others naked, some of them mean, should you hesitate to strip yourself and show your own form in turn?

Theodorus:: Why do you think I should not, at least if they would permit me and be persuaded by me? as I think I shall now persuade you to allow me to be a spectator, and not drag me to the gymnasium, now that my limbs are stiff, but for you to wrestle with one who is younger and more supple.

Socrates:: But if this is agreeable to you, Theodorus, it is not disagreeable to me, as the vulgar saying goes. I must have recourse again, therefore, to the wise Theætetus. Tell me, then, Theætetus, first of all as to what we just now discussed, do you not wonder with me, that you have so suddenly discovered yourself to be not inferior in wisdom to any man or god? or do you think that the measure of Protagoras has less to do with gods than men?

Theaetetus:: Not I, by Jupiter: and I very much wonder at your question. For when we discussed in what manner they said, that what appears to each person is true to him to whom it appears, it seemed to me to be well said, but now the very contrary has speedily occurred to me.

Socrates:: For you are young, my dear boy, and quickly give ear to and are persuaded by plausible speeches. For to these things Protagoras or some one on his behalf would say: “Noble boys and old men, you here sit and converse together, dragging gods into the question, of whom, whether they exist or not, I do not think proper either to speak or write, and what the multitude hear and admit, this you assert, as if it were strange if every man did not excel any beast whatever in wisdom, but you do not adduce any proof, or conclusive argument, but have recourse to likelihood, which if Theodorus or any other geometrician were to employ in geometry, he would be deemed unworthy of notice.” Do you, therefore, and Theodorus, consider, whether on such matters you will admit of arguments deduced from probability and likelihood.

Theaetetus:: But, Socrates, neither would you nor we say that this is right.

Socrates:: We must therefore consider it in another way, as it appears, according to what you and Theodorus says.

Theaetetus:: In another way, certainly.

Socrates:: Let us, then, consider it thus, whether science and perception are the same or different: for to this surely our whole discourse tends, and for the sake of this we have mooted these many absurd points; have we not?

Theaetetus:: Assuredly.

Socrates:: Shall we allow then that whatever we perceive by sight or hearing, this we at the same time know? for instance, before we have learnt the language of barbarians, whether shall we deny that we hear them when they speak, or that we both hear and know what they say? And again, when unacquainted with letters, on looking at them, whether shall we insist that we do not see, or know them, though we do see them?

Theaetetus:: Whichever of them, Socrates, we see and hear, we shall say that we know, for that of the latter we see and know the form and color, and of the former, that we both hear and know the sharpness and flatness of the sounds; but that what grammarians and interpreters teach about them, we neither perceive by sight or hearing, nor know.

Socrates:: Admirable, Theætetus, and it is not worth while to dispute with you about these things, in order that you may make a greater proficiency. But observe also this other difficulty that stands in our way, and consider how we can repel it.

Theaetetus:: What is that?

Socrates:: This: if any one should ask, whether it is possible for a person who still possesses and retains the memory of a thing which he once knew, at the very time when he remembers it, not to know the very thing that he remembers. But I am becoming prolix, as it seems, through a wish to ask whether a person who has learnt any thing and remembers it, does not know it.

Theaetetus:: How should he not, Socrates? for, otherwise, what you say would be a prodigy.

Socrates:: Am I then trifling? Consider. Do you not then say that to see is to perceive, and that sight is perception?

Theaetetus:: I do.

Socrates:: Has not he, then, who sees any thing, obtained a scientific knowledge of that which he sees, according to our late argument?

Theaetetus:: Yes.

Socrates:: What then? do you not say that memory is something?

Theaetetus:: Yes.

Socrates:: Whether of nothing or something?

Theaetetus:: Of something, surely.

Socrates:: Is it not, then, of the things which he learns and perceives, of some such things as these?

Theaetetus:: What else?

Socrates:: And what a person sees, does he not sometimes remember?

Theaetetus:: He does remember.

Socrates:: When he shuts his eyes too? or, when he does this, does he forget?

Theaetetus:: It would be strange to say that, Socrates.

Socrates:: We must say it though, if we would keep to our former argument, otherwise it is gone.

Theaetetus:: And I suspect so, by Jupiter, though I do not clearly understand it; but tell me how.

Socrates:: Thus. We say that a person who sees has obtained a scientific knowledge of that which he sees; for sight and perception and science are allowed to be the same.

Theaetetus:: Certainly.

Socrates:: But he who sees, and has obtained a scientific knowledge of that which he sees, if he shuts his eyes, remembers it indeed, but does not see it. Is it not so?

Theaetetus:: Yes.

Socrates:: But to say that he does not see is as much as to say he does not know, since to see is the same thing as to know.

Theaetetus:: True.

Socrates:: It follows, therefore, that a person who still remembers a thing of which he had a scientific knowledge, does not know it, because he does not see it; which we have said would be a prodigy, if it happened.

Theaetetus:: You say most truly.

Socrates:: An impossibility, then, appears to result, if any one should say that science and perception are the same.

Theaetetus:: It seems so.

Socrates:: Each, then, must be confessed to be different.

Theaetetus:: So it seems.

Socrates:: What then is science? must again, as it appears, be enquired from the beginning. What however shall we do, Theætetus?

Theaetetus:: About what?

Socrates:: We appear to me, like a dunghill cock, to have jumped from our argument and begun to crow, before we have gained the victory.

Theaetetus:: How so?

Socrates:: Like disputants we seem to have come to an agreement about the allowed meaning of words, and, having got the better thus far in the discussion, to be content, and though we say we are not wranglers but lovers of wisdom, we do the same as those shrewd men.

Theaetetus:: I do not yet understand what you mean.

Socrates:: But I will endeavor to explain what I mean on this point. We enquired whether a person who has learnt and remembers any thing, does not know it, and having shown that a person who has seen a thing and then shut his eyes, remembers it, but does not see it, we proved that he does not know it and remembers it at the same time; but that this is impossible. And so the Protagorean fable is destroyed, and yours at the same time of science and perception, that they are the same.

Theaetetus:: It appears so.

Socrates:: It would not be so, my friend, I think, if the father of the other fable were alive, but he would defend it stoutly: but now, as it is an orphan, we have insulted it. For not even the guardians, whom Protagoras left, are willing to assist it, in the number of whom is Theodorus here. We ourselves, however, for justice sake, will venture to assist it.

Theodorus:: It is not I, Socrates, but rather Callias son of Hipponicus who is guardian of his doctrine; for I very quickly turn aside from mere disputations to geometry. Nevertheless, I shall be obliged to you if you will assist him.

Socrates:: You say well, Theodorus. Observe, then, what assistance I give. For any one would make more strange admissions than those just now, if he did not attend carefully to the meaning of words, in what way we are generally accustomed to employ them in affirming and denying. Shall I tell you or Theætetus, in what way?

Theodorus:: Tell us both together, but let the younger answer. For if he makes a mistake, it will be less disgraceful.

Socrates:: I am going to propose then a very strange question; it is, I think, something of this kind: Is it possible that he who knows any thing should not know the thing that he knows?

Theodorus:: What shall we answer, Theætetus?

Theaetetus:: Impossible without doubt, I think.

Socrates:: Not so, if you maintain that to see is to know. For how will you deal with this inexplicable question, as the saying is, you will be caught in a well, if an imperturbable opponent should ask you, closing one of your eyes with his hand, whether you see his dress with the closed eye?

Theaetetus:: I should say, I think, Not with this, but I do with the other.

Socrates:: Would you not, therefore, see, and not see the same thing at the same time?

Theaetetus:: In some respects.

Socrates:: I do not require this, he will say, nor did I ask in what respect, but whether, what you know, this you also do not know. But now what you do not see, you are found to see: and you have already admitted, that to see is to know, and not to see, not to know. Infer then, what conclusion follows from this.

Theaetetus:: I infer the very contrary to what I supposed.

Socrates:: But perhaps, my admirable youth, many things of this kind would happen to you, if any one should further ask you whether it is possible to know sharply and dully, and near, but not at a distance, intensely and slightly as well, and ten thousand other questions, which a cunning mercenary light-armed combatant would put to you in discussion, when you asserted science and perception to be the same, attacking the hearing, smelling, and such other channels of perception, and he would confute you, keeping you to it and not letting you off, until through admiration of his exquisite wisdom you are completely caught in his toils, from whence, after he had conquered and bound you, he would at length set you free on payment of such a ransom as you and he could agree on. What argument, should you probably say, would Protagoras adduce in support of his own opinions? Shall we endeavor to say?

Theaetetus:: By all means.

Socrates:: He will, then, both say all that we have said in his defense, and besides, I think, he will come to the encounter, despising us and saying; “This fine fellow Socrates, because a boy, when asked by him, whether it were possible for the same person to remember the same thing, and at the same time not to know it, was frightened, and being frightened, answered in the negative, through being unable to look on to results, has made me appear ridiculous by his arguments. But, most stupid Socrates, the case is thus, when you examine any of my opinions by questioning, if he to whom the questions are put gives the same answers that I should give and is proved wrong, I am confuted, but if he gives different answers, then he that is questioned is confuted. For, to the point, do you think that any one would grant you, that memory is present to any one, of the things by which he has been affected, as if memory were such an affection as he then experienced, though now he experiences it no longer? Far from it. Do you think, again, that he would hesitate to allow, that it is possible for the same person to know and not to know the same thing? or if he should be afraid to say this, do you think he would ever grant that a person who has become changed is the same as he was before he was changed? but rather that he is one person, and not several, and those infinite in number, since change is constantly going on, for we must beware of catching at one another’s words. But my good sir,” he will say, “attack my system in a more generous spirit, confute what I say, if you can, and show that we have not perceptions peculiar to each of us, or that, if they are peculiar, it does not follow that what appears to any one becomes, or if we must use the word existence, exists to him alone to whom it appears. But when you speak of pigs and cynocephali, you not only act like a pig yourself, but you persuade those that hear you to treat my writings in the same way, herein not doing well. For I affirm that the truth is, as I have written; for that each of us is the measure both of things that do and do not exist; though there is an infinite difference between one man and another, in this very circumstance, that they are and appear different to one person from what they are and do to another. And I am far from denying that there is such a thing as wisdom and a wise man, but I call that man wise, who, changing the aspect of objects to any of us, to whom they appear and are evil, causes them to appear and to be good. But do not, again, follow out my arguments, attending to the words only, but thus in a still clearer manner understand what I mean. For call to mind what was said in a former part of the discussion, that to a sick man what he eats appears and is bitter, but to a man in health it is and appears the contrary. But there is no need to make either of them wiser than the other; for that is not possible; nor must we allege that the sick man is ignorant, because he is of a different opinion, and that he who is in health is wise, because he thinks differently; but we must endeavor to make him change over to the other side; for the other habit is better. In like manner, in education, we should endeavor to make a man change from one habit to a better. But the physician effects a change by medicines, and the sophist by arguments. For no one ever makes one who entertains false opinions, afterwards entertain true ones; for it is not possible or a man to have an opinion on things that do not exist, or on any others than those by which he is affected, and these are always true. And I think that a man, who from a depraved habit of soul forms opinions corresponding to it, a good habit causes to form different opinions of the same character, but these appearances some people, through ignorance, call true, but I say that some things are better than others, but not at all more true. Moreover, my dear Socrates, I am far from calling the wise, frogs, but as regards bodies, I call them physicians, and as regards plants, husbandmen. For I say that these last produce in plants, when they are at all diseased, instead of depraved perceptions, good and wholesome perceptions and truths, and that wise and good orators cause good instead of depraved things to appear to be just to states. For whatever things appear just and honorable to each city, these are so to that city, so long as it thinks them so; but a wise man, instead of the several depraved things that they have, makes good things to be and to appear. By the same reason a sophist, who is thus able to instruct his pupils, is wise, and deserves large pay from those whom he instructs. And thus some are wiser than others, and yet no one entertains false opinions, and you must admit, whether you will or not, that you are the measure of things; for this principle is maintained throughout, if then you are able to controvert this from the beginning, do so, by answering it in a consecutive speech, or if you had rather by questioning, do it by questioning; for neither is this to be avoided, but most of all pursued by a man of sense. However do it thus; don't act unfairly in your questions. For it is a great inconsistency for one who pretends to be a lover of virtue, to persevere in doing nothing else but act unfairly in argument. But it is to act unfairly in a matter of this kind, when a man does not make a difference between disputation and discussion, and in the former jests and leads into error as far as he can, but in the latter speaks seriously, and sets the person with whom he is conversing right, pointing out to him those errors only into which he has been led by himself and his former conversations. If, then, you act thus, those who converse with you will have to blame themselves for their own confusion and perplexity, but not you, and they will follow and love you, but hate themselves, and fly from themselves to philosophy, that, becoming different, they may be changed from what they formerly were: but if you act the contrary to this, as most men do, the very contrary will befall you, and you will make those who associate with you, instead of being philosophers, hate this pursuit, when they are more advanced in life. If, then, you will be persuaded by me, as I said before, applying yourself to it not hostilely or pugnaciously, but in a favorable spirit, you will truly consider what I have said, in maintaining that all things are moved, and that whatever appears to every one, also exists, both to an individual and a city; and from hence you will further consider, whether science and perception are the same or different, and you will not, as just now, depart from the usual meaning of words and names, which most men forcing wherever it suits them, occasion one another all kinds of perplexity." These things, Theodorus, I have advanced by way of assistance to your friend, according to my ability, trifling from trifling means; but, if he were alive, he would defend his own opinions in a more noble manner.

Theodorus:: You are joking, Socrates: for you have defended the man very vigorously.

Socrates:: You say well, my friend. But tell me: did you observe that Protagoras said just now and reproached us, that in arguing with a boy, we took advantage of the boy's fear to oppose his principles, and giving it the contemptuous name of caviling, and vaunting his measure of all things, he exhorted us to be serious in examining his doctrine?

Theodorus:: How should I not have observed it, Socrates?

Socrates:: What then? Do you require us to obey him?

Theodorus:: By all means.

Socrates:: Do you see, then, that all these, except you, are boys? If then we are to obey him, it is requisite that you and I, questioning and answering each other, should be serious in examining his doctrine, that he may not have this to object to us that we have discussed this question again jesting with youths.

Theodorus:: But what? Would not Theætetus follow this investigation much better than many who have long beards?

Socrates:: But not better than you, Theodorus. Do not, therefore, think that I ought in every way to defend your deceased friend, but you not at all. But come, my good sir, follow me a little, just so far as to enable us to see whether it is right that you should be the measure of diagrams, or whether all men equally with you are sufficient for themselves in astronomy, and the other things in which you have the reputation of excelling.

Theodorus:: It is not easy, Socrates, for one who is sitting by you, to refuse to answer you. But I was just now trifling when I said that you would permit me not to strip myself, and that you would not compel me like the Lacedaemonians. But you appear to me to resemble Sciron rather. For the Lacedæmonians bid us either depart or strip; but you seem to me to act rather like Antæus, for you do not let any one go who approaches you until you have compelled him to strip and wrestle with you in argument.

Socrates:: You have found out an admirable comparison for my disease, Theodorus, though I am stronger than they were; for an innumerable multitude of Herculeses and Theseuses, who were powerful in argument, have met with me and beaten me heartily, but I do not desist any the more, such a strange passion for this kind of exercise has got possession of me. Do not you, therefore, refuse to have a fall with me, and to benefit yourself and me at the same time.

Theodorus:: I hold out no longer, but lead me wherever you please: I must needs submit to the destiny that you weave for me, and be confuted. However I shall not be able to give myself up to you further than you proposed.

Socrates:: So far will be sufficient. And I beg of you observe this very closely, that we do not, unawares, get into a puerile mode of talking, and so let any one reproach us again for that.

Theodorus:: I will endeavor, as far as I can.

Socrates:: First of all, then, let us impugn the argument which we did before, and see whether we correctly or incorrectly find fault with and reprobate the assertion, that every one is sufficient to himself with respect to wisdom. Now Protagoras has conceded to us that some men excel others with respect to better or worse, and those too who are wise: has he not?

Theodorus:: Yes.

Socrates:: If he then being present in person had agreed to this, and we in assisting him had not made this concession in his behalf, there would be no need to recur to it in order to confirm it; but now, perhaps, some one may consider us incompetent to assent on his behalf, wherefore it will be better to come to a more clear understanding on this point; for it makes no small difference whether it is so or otherwise.

Theodorus:: You say truly.

Socrates:: Not from others, then, but from his own statements, we may in very few words get his assent.

Theodorus:: How so?

Socrates:: Thus. Does he not say that what appears to each person exists to him to whom it appears?

Theodorus:: He does say so.

Socrates:: Now, Protagoras, we speak the opinions of a man, or rather of all men, and say that there is no one who does not think himself in some respects wiser than others, and in other respects others wiser than himself, and in the greatest dangers, when men are in peril, in wars, or diseases, or storms at sea, they behave towards those who have power in each several case as towards gods, looking up to them as their saviors, though they excel them in nothing else than in knowledge; and the whole world is almost full of men seeking for masters and governors of themselves and other animals and works, and again of men who think themselves competent to teach and competent to rule. And in all these cases what else shall we say, than that men themselves think that there is wisdom and ignorance among themselves?

Theodorus:: Nothing else.

Socrates:: Do they not, then, think that wisdom is true opinion, and ignorance false opinion?

Theodorus:: How should they not?

Socrates:: How then, Protagoras, shall we deal with the assertion? Whether shall we say that men always form true opinions, or sometimes true and sometimes false? For in either way the result is that they do not always form true opinions, but both true and false. For consider, Theodorus, whether any one of the followers of Protagoras, or you yourself, would contend that no one thinks that there is another who is ignorant, and forms false opinions.

Theodorus:: That is incredible, Socrates.

Socrates:: Yet the assertion, that man is the measure of all things, of necessity comes to this?

Theodorus:: How so?

Socrates:: When you have determined any thing within yourself, and make known your opinion to me on any point, then, according to his statement, your opinion must be true to you; but may not the rest become judges of your judgment, or must we determine that you always form true opinions? Will not myriads, who form contrary opinions to yours, continually oppose you, deeming that you judge and think falsely?

Theodorus:: By Jupiter, Socrates, there are myriads, as Homer says, who give me a vast deal of trouble.

Socrates:: What then? Will you allow us to say that you then form opinions that are true to yourself, but false to innumerable others?

Theodorus:: This seems to me necessary, from the assertion.

Socrates:: But what with respect to Protagoras himself? If neither he thought that man is the measure of all things, nor the multitude, as indeed they do not, does it not necessarily follow that this truth which he has described exists to no one? But if he himself thought so, but the multitude do not agree with him, you must be aware that, in the first place, by how many more they are to whom it does not appear so, than those to whom it does so appear, by so much the more it is not than it is?

Theodorus:: Necessarily so, since, according to each several opinion, it will be or will not be.

Socrates:: In the next place, this is very pleasant; for he, with respect to his own opinion, admits, that the opinion of those who differ from him, in that they think he is in error, is true, since he allows that all men form opinions of things that exist.

Theodorus:: Certainly.

Socrates:: Must he not, therefore, admit that his own opinion is false, if he allows that the opinion of those who think he is in error is true?

Theodorus:: Necessarily so.

Socrates:: The others however do not admit that they are in error?

Theodorus:: Surely not.

Socrates:: He however, from what he has written, allows that this opinion also is true.

Theodorus:: It appears so.

Socrates:: It will therefore be controverted by all men, Protagoras not excepted, or rather will be allowed by him, that when he admits to one who differs from him, that he forms a true opinion, then even Protagoras himself will admit that neither a dog, nor any man whatever, is the measure of a thing that he has not learnt. Is it not so?

Theodorus:: It is.

Socrates:: Therefore, since this is controverted by all men, Protagoras's truth will not be true to any one, neither to any one else, nor to himself.

Theodorus:: We run down my friend too severely, Socrates.

Socrates:: But, moreover, my friend, it is uncertain whether we have not also exceeded the bounds of propriety.

For it is probable that he being older is wiser than we are: and if he should suddenly rise up as far as his neck, having reproved me much for trifling, as is probable, and you for assenting, he would sink down again and hurry away. But it is necessary for us, I think, to make use of our own abilities such as they are, and to say whatever appears to us to be true. Well then, shall we now say that any one will grant this, that one man is wiser than another, and another also more ignorant?

Theodorus:: It appears so to me.

Socrates:: Shall we say too that our argument holds good as we have laid it down in our endeavors to assist Protagoras, that most things are as they appear to every one, warm, dry, sweet, and all other things of this kind; but that if in some things he shall admit that one man excels another, he would say with regard to things wholesome and unwholesome, that not every silly woman, boy and brute, is competent to cure itself by knowing what is wholesome for itself, but that here, if any where, one excels another?

Theodorus:: So it appears to me.

Socrates:: And with respect to political matters, he will admit that things honorable and base, just and unjust, holy and unholy, as each city thinks right to enact laws for itself, are in truth such to each city, and yet that in these things one individual is not at all wiser than another, nor one city than another; but in enacting what is expedient for itself or not expedient, here again, if any where, he will allow that one counselor excels another, and the opinion of one city that of another with regard to truth; nor will he by any means venture to affirm, that the laws which a city enacts, thinking them to be expedient for itself, must certainly be so. But here in the matter I am speaking about, with respect to what is just and unjust, holy and unholy, men will persist that none of these have by nature an essence of their own, but that what appears to the community to be true, that becomes true at the time when it so appears, and so long as it appears. And those who do not altogether hold the doctrine of Protagoras, deal with philosophy in some such manner as this. But one topic of conversation, Theodorus, springs from another, a greater from a less.

Theodorus:: Have we not leisure, Socrates?

Socrates:: We appear to have. And I have often at other times observed, my excellent friend, and especially now, with what good reason those who have spent much time in philosophical studies, are found to be ridiculous orators when they enter courts of justice.

Theodorus:: What mean you by this?

Socrates:: They that have been from their youth in courts of justice, and places of that kind, when compared with those who have been nurtured in philosophy and such-like studies, appear to have been educated like slaves compared with freemen.

Theodorus:: In what respect?

Socrates:: In this, that these, as you said, have always leisure, and converse in peace at their leisure, just as we now are taking up our third topic in succession, so they too, if any question occurs to them that pleases them better than the one in hand, as is the case with us, are not at all concerned whether they speak at length or briefly, if they can but arrive at the truth. But the others always speak in a hurry, for the running water presses them on, nor are they allowed to speak on whatever subject they wish, but their opponent stands by them with this instrument of compulsion, and the record which they call the pleadings read aloud, out of which they must not travel; and their speeches are always about a fellow slave before the master who is seated holding the scales of justice in his hand, their contests too, are never unrestrained, but are always to the point before them, and oftentimes it is a race for life. So that, from all these causes they become vehement and keen, knowing how to flatter the master by words, and to conciliate him by actions, being mean and not upright in soul. For slavery from childhood has taken away their growth, and rectitude, and freedom, compelling them to do crooked actions, by exposing their yet tender souls to great dangers and fears, which not being able to bear up against with justice and truth, they immediately have recourse to lying and injuring one another, and become so bent and distorted, that they pass from youth to manhood without having any solidity in their minds, but have become clever and wise, as they think. Such then are these, Theodorus. But are you willing that I should describe the men of our band, or that, passing them by, we should return again to our subject, lest we abuse too much our liberty and powers of digression, which we just now spoke of.

Theodorus:: By no means, Socrates, but describe them. For you observed very well, that we who are members of this band, are not the servants of topics of discussion, but they are our servants as it were, and each of them must wait for its completion until we think proper. For neither does a judge nor a spectator preside over us, to rebuke and keep us in order, as is the case with the poets.

Socrates:: Let us speak then, as we ought, since it is agreeable to you, about the chiefs; for why should any one speak of those who spend their time in philosophy to but little purpose? These then from early youth do not know the way to the forum, nor where the law-court, or senate house, or any other public place of assemblage in the city is situated; and they neither see nor hear laws or decrees, proclaimed or written. And canvassing of partisans for magistracies, and meetings, and banquets, and revelry with flute-players, they never think of even in a dream. Whether any one in a city is well or ill born, or what evil has befallen any one from his ancestors, whether men or women, is as little known to him as how many measures of water there are in the sea, as the saying is. And he does not know that he is ignorant of all this; for he does not keep aloof from them for vanity's sake, but in reality his body only is situated and dwells in the city, but his mind, considering all these things as trifling and of no consequence, holds them in contempt, and is borne every where, according to the expression of Pindar, measuring things beneath the earth and upon its surface, contemplating the stars in heaven above, and searching thoroughly into the entire nature of every thing in the universe, and not stooping to any thing that is near.

Theodorus:: What mean you by this, Socrates?

Socrates:: Just, Theodorus, as a smart and witty Thracian servant-girl is related to have joked Thales, when, contemplating the stars and looking upwards, he fell into a well, that he was anxious to know what was going on in heaven, but forgot to notice what was before him, and at his feet. The same joke is applicable to all who devote themselves to philosophy; for, in reality, such a one is ignorant about his near neighbor, not only what he is doing but almost whether he is a man or some other animal. But what man is, and what such a nature ought to do or suffer beyond others, he enquires and takes pains to investigate. You understand me surely, Theodorus; do you not?

Theodorus:: I do: and you say truly.

Socrates:: Therefore, my friend, a man of this kind dealing privately with each person, or publicly, as I said at the outset, when he is compelled, in a court of justice or any where else, to speak about things at his feet and before his view, affords laughter not only to Thracian damsels, but to the rest of the crowd, by falling into wells and all kinds of perplexities through inexperience, and his strange awkwardness gives him a character of stupidity. For when he is reviled he has nothing personal to retort against any one, as he does not know any evil of any one from not having troubled himself about such matters; therefore, not having any thing to say, he appears to be ridiculous: and when he hears others praise and boast of themselves, being seen to laugh not feignedly but really he is considered to be a simpleton. For when encomiums are passed on a tyrant or king, he thinks that he hears a herdsman, a swineherd for instance, or a shepherd, or a cow-keeper pronounced happy for milking abundantly: but he thinks that they feed and milk an animal that is more hard to manage and more cunning than the others do; and that such a one must necessarily, from their occupations, be not at all less rustic and uneducated than herdsmen, being shut up within walls as in a mountain pen. But when he hears that any one who possesses ten thousand acres of land or even more, is possessed of vast property, it appears to him very trifling, as he has been accustomed to survey the whole earth. And when they extol nobility of birth, accounting any one noble from being able to show seven rich ancestors, he thinks that this praise proceeds from men of dull minds, and who look at trifles, being unable through want of education to look at the succession of ages and compute that every man has had innumerable myriads of grandsires and ancestors, amongst whom there must have been an innumerable multitude of rich and poor, kings and slaves, barbarians and Greeks; but when they pride themselves in a catalogue of five-and-twenty ancestors, and refer their origin to Hercules son of Amphitryon, it appears to him absurd from its littleness; and he laughs at their being unable to compute and so rid themselves of the vaunting of a silly mind, that the five-and-twentieth ancestor from Amphitryon and the fiftieth from him was such as fortune happened to make him. In all these things, therefore, such a man is ridiculed by the multitude, partly from bearing himself haughtily, as it seems, and partly from not knowing what is at his feet, and being on all occasions embarrassed.

Theodorus:: You say exactly what takes place, Socrates.

Socrates:: But when he is able, my friend, to draw any one upwards, and any one is willing to leave those questions, of “What injury do I do you?” or “What injury do you do me?” for the consideration of justice and injustice themselves, what each of them is, and in what respect they differ from all other things, or from each other, or the inquiry, Whether a king is happy, and again, he who possesses abundance of gold, for the consideration of royalty and human happiness and misery in general; what they both are, and in what way it is proper for the nature of man to seek the one and shun the other,—when, therefore, it is requisite for that little-minded, sharp, and pettifogging fellow to give an account of all these things, he then shows the opposite side of the picture; becoming dizzy through being suspended aloft and looking so high up, from want of use, and becoming stupified, and perplexed, and stammering, he does not, indeed, afford laughter to the Thracian damsels or any other uneducated person, for they do not perceive any thing, but to all who have been brought up otherwise than as slaves. This, then, is the character of each of them, Theodorus, the one, that of him who is truly brought up in liberty and leisure, whom you call a philosopher, to whom it is no disgrace to be thought simple and to be good for nothing, when he has to attend to servile offices, for instance, that he does not know how to pack and tie up luggage, or season viands or make flattering speeches; the other, that of him who is able to perform all such offices dexterously and quickly, but knows not how to gather up his cloak with his right hand like a well-bred person, nor perceiving harmony of language to celebrate the life of gods and happy men such as it really is.

Theodorus:: If, Socrates, you could persuade all men of what you say, as you have me, there would be more peace and less evil among men.

Socrates:: But it is not possible, Theodorus, that evil should be destroyed; for it is necessary that there should be always something contrary to good; nor can it be seated among the gods, but of necessity moves round this mortal nature and this region. Wherefore we ought to endeavor to fly hence thither as quickly as possible. But this flight consists in resembling God as much as possible, and this resemblance is the becoming just and holy with wisdom. But, my excellent friend, it is not very easy to persuade men, that not for the reasons for which most men say we ought to flee from vice and pursue virtue, ought we to study the one and not the other, namely, that a man may not seem to be vicious, but may seem to be good; for these are, as the saying is, the driveling of old women, as it appears to me. But let us describe the truth as follows. God is never in any respect unjust, but as just as possible, and there is not any thing that resembles him more than the man amongst us who has likewise become as just as possible. And on this depends the true excellence of a man, and his nothingness and worthlessness. For the knowledge of this is wisdom and true virtue, but the not knowing it is manifest ignorance and vice, but all other seeming excellencies and wisdoms, when they are found in political government, are abject, but in arts sordid. It is therefore by far the best not to allow him who acts unjustly, and who speaks or acts impiously, to excel by reason of his wickedness; for they delight in this reproach, and think they hear that they are not valueless, mere burdens on the earth, but men such as they ought to be who will be safe in a city. The truth, therefore, must be spoken, that they are so much the more what they think they are not, from not thinking that they are such. For they are ignorant of the punishment of injustice, of which they ought to be least of all ignorant: for it does not consist in what they imagine, stripes and death, which they sometimes suffer who do not commit injustice, but in that which it is impossible to avoid.

Theodorus:: What do you mean?

Socrates:: Since, my friend, there are two models in the nature of things, one divine and most happy, the other ungodly and most miserable, they, not perceiving that this is the case, through stupidity and extreme folly, unknown to themselves become similar to the one by unjust actions, and dissimilar to the other. Wherefore they are punished, by leading a life suited to that to which they are assimilated. But if we should tell them, that unless they abandon this excellence, that place which is free from all evil will not receive them when dead, but here they will always lead a life resembling themselves, and there will associate with evil, these things, as being altogether shrewd and crafty, they will listen to as the extravagances of foolish men.

Theodorus:: Assuredly, Socrates.

Socrates:: I know it, my friend. One thing, however, happens to them; it is, that if they have to give and listen to reasons privately respecting the things that they blame, and if they are willing to persevere manfully for a length of time, and not fly like cowards, then at length, my excellent friend, they are very absurdly displeased with themselves for what they have said, and that rhetoric of theirs becomes somehow so weak that they appear to be no better than boys. However, let us quit this subject, since what we have been saying was only a digression; if we do not, more topics constantly flowing in will shut out the subject with which we began. Let us, then, return to our former subject, if it is agreeable to you.

Theodorus:: Such things, Socrates, are not at all unpleasing to me to hear; for it is easier for one of my age to follow them; if you please, however, let us return to our subject.

Socrates:: If I mistake not, then, we were at that part of our discussion in which we said that those who maintain motion to be essence, and that whatever appears to each person exists also to him to whom it appears, would in other things persist, and especially with regard to justice, that on every account what a city enacts as appearing just to itself, this also is just to the city that enacts it, so long as it continues in force: but that with respect to what is good, no one is so hardy as to venture to contend that whatever things a city has enacted, thinking that they are advantageous to itself, are also advantageous so long as they continue in force, except one should speak only of the name: but this would be a mere mockery on such a subject as we are speaking on; would it not?

Theodorus:: Certainly.

Socrates:: Let him not, then, speak of the name, but of the thing designated by it.

Theodorus:: Just so.

Socrates:: But the thing that the name designates is doubtless that which the city aims at in enacting laws, and enacts all laws, as far as it thinks and is able, to be as advantageous to itself as possible. Does it look to any thing else in enacting laws?

Theodorus:: By no means.

Socrates:: Does it, then, always accomplish its purpose, or is every city often mistaken?

Theodorus:: I think it is often mistaken.

Socrates:: Still more then would every one allow this very thing, if the question should be asked with reference to the whole genus, to which the advantageous belongs: but surely it regards also the future; for, when we enact laws, we enact them that they may be advantageous for the time to come; and this we should correctly call the future.

Theodorus:: Certainly.

Socrates:: Come then, let us thus question Protagoras, or some one else who holds the same opinions with him, Man, as you say, Protagoras, is the measure of all things, white, heavy, light, and every thing of that kind: for, as he contains the criterion of them within himself, in thinking they are such as he feels them to be, he thinks what is true to himself, and really is? Is it not so?

Theodorus:: It is.

Socrates:: Shall we also say, Protagoras, that he contains within himself the criterion of things about to happen, and that such things as he thinks will happen, do become such to him who thinks so? For instance, with regard to heat, when any particular person thinks that he shall catch a fever, and that this kind of heat will happen to him, and another, a physician, thinks differently, according to the opinion of which of the two shall we say will the result prove? or will it be according to the opinion of both of them, and to the physician will he be neither hot nor feverish, but to himself both?

Theodorus:: That, indeed, would be ridiculous.

Socrates:: And I think the opinion of the husbandman, and not that of the harper, respecting the future sweetness or roughness of wine, would prevail.

Theodorus:: How not?

Socrates:: Nor again would a teacher of gymnastics form a better opinion than a musician respecting what will be inharmonious and harmonious, and what will afterwards appear to the teacher of gymnastics himself to be harmonious.

Theodorus:: By no means.

Socrates:: Therefore also, when a banquet is prepared, the judgment of one who, not being skilled in cookery is about to feast on it, is less sound than that of the cook, respecting the pleasure that will ensue. For we are not arguing at all about that which now is or has been pleasant to each person, but about that which will hereafter both appear and be so, whether every one is the best judge for himself? Could not you, Protagoras, judge beforehand better than any private person what arguments are likely to be available for us in a court of justice?

Theodorus:: Indeed, Socrates, in this he himself professes to excel all men by far.

Socrates:: By Jupiter, he does, my friend; otherwise no one would pay him large sums for his instructions, if he had not persuaded his pupils that no prophet or other person would be able to judge better than he could for himself, as to what in future would both be and appear to be.

Theodorus:: Most true.

Socrates:: But do not legislation and the useful regard the future, and would not every one acknowledge, that a city, in enacting laws, of necessity often misses that which is most useful?

Theodorus:: Assuredly.

Socrates:: We have, therefore, rightly urged against your master, that he must needs confess, that one man is wiser than another, and that such a one is the true measure, but that there is no necessity at all for me who am ignorant, to become a measure, as the argument advanced on his behalf just now compelled me to be, whether I would or not.

Theodorus:: In that way, Socrates, his argument appears to me to be effectually refuted, and it was also refuted by this, that he makes the opinions of others sound; and these were found to consider his arguments as by no means to be true.

Socrates:: In many other ways, too, Theodorus, this may be demonstrated, that not every opinion of every man is true. But, with respect to the manner in which each person is affected, whence perceptions and corresponding opinions are produced, it is more difficult to demonstrate that they are not true. But perhaps I should say, it is quite impossible: for probably they cannot be refuted, and those who say that they are certain and sciences, may possibly say the truth, and in that case Theætetus here did not speak amiss in asserting that perception and science are the same. Let us, then, approach nearer to it, as the argument advanced in behalf of Protagoras enjoined us, and examine this essence, that is said to consist in motion, by knocking it, and see whether it sounds whole or cracked. For the contest about it is neither mean nor among a few.

Theodorus:: It is very far from being mean, but is spreading very much throughout Ionia. For the partisans of Heraclitus advocate this doctrine very strenuously.

Socrates:: Therefore, my dear Theodorus, we should the rather examine it from the beginning, as they propound it.

Theodorus:: Assuredly. For, Socrates, with respect to these Heraclitian, or, as you say, Homeric, and even older doctrines, it is no more possible to converse about them with the people of Ephesus who pretend to be acquainted with them, than with persons who are raving mad. For, just as their written doctrines, they are truly in constant motion, but to keep to an argument and a question, and quietly to answer and ask in turn, is less in their power than any thing; or rather the power of rest in these men is infinitely less than nothing. But if you ask any one of them a question, they draw out, as from a quiver, certain dark enigmatical words, and shoot them off, and if you wish to get from him a reason for what he has said, you will be forthwith stricken with another newly coined word, but will never come to any conclusion with any one of them; nor do they with one another, but they take very good care not to allow any thing to be fixed, either in their discourse, or in their souls, thinking, as it appears to me, that this very thing is stationary; and they make constant war upon it, and as far as they are able, expel it from every where.

Socrates:: Perhaps, Theodorus, you have seen these men contending, but have never been in their company when peaceable, for they are no friends of yours. But I think they say such things when at leisure, to their disciples, whom they wish to render like themselves.

Theodorus:: What disciples, my good friend? Amongst such men, one is not the disciple of another, but they spring up spontaneously, from whatever place each of them happens to be seized with a frenzy, and each thinks that the other knows nothing. From these, therefore, as I was just now saying, you will never get a reason either willingly or unwillingly: but we must take the matter up as if it were a problem and examine it ourselves.

Socrates:: You say right. But have we not received this problem from the ancients, who by the aid of poetry concealed it from the multitude, that Ocean and Tethys, the origin of all things, are streams, and that nothing is at rest, and from the moderns, as being wise, who have declared openly, so that even cobblers on hearing them learn wisdom, and give up their foolish opinion, that some things are at rest and others in motion, and learning that all things are in motion, they pay great respect to their teachers. But I had almost forgotten, Theodorus, that others have declared the very contrary to this, that "that which is called the universe is immoveable," and every thing else that the followers of Melissus and Parmenides maintain in opposition to all this, as, that all things are one, and that this is at rest in itself, and has no place in which it can be moved. What then shall we do with all these people, my friend? For advancing by little and little, we have unawares fallen between both of them, and if we do not defend ourselves and escape, we shall be punished like those who in the wrestling grounds play on the line, who, when they are caught by both parties, are dragged in contrary directions. It appears therefore to me, that we should first of all consider those with whom we set out, the advocates of perpetual motion, and, if they shall prove to speak to the purpose, we will join with them, and endeavor to escape from the others; but if those who say that the universe is at rest appear to speak more truly, we will on the other hand fly to them from those who move even things immoveable. And if both shall be found to speak nothing right, we shall be ridiculous for thinking that we, mean as we are, can say any thing to the purpose, after we have condemned men of great antiquity and wisdom. Consider therefore, Theodorus, whether it is for our interest to venture on so great a danger.

Theodorus:: It would be unpardonable, Socrates, not thoroughly to examine what each of these men say.

Socrates:: We must examine it, since you are so anxious to do so. It appears to me then, that the first thing to be done in an enquiry about motion, is to find out what they mean by saying that all things are in motion. I mean this: whether they say that there is one species of motion, or, as it appears to me, two. Nor should it appear to me only, but do you also join with me, that we may both fall into the same error, if we must err. Tell me, therefore, do you call it being in motion, when a thing passes from one place to another, or is turned round in the same place?

Theodorus:: I do.

Socrates:: Let this, therefore, be one species. But when it remains in the same place, and grows old, and either becomes black from white or hard from soft, or undergoes any other change, is it not right to say that this is another species of motion?

Theodorus:: It appears so to me.

Socrates:: It must be so: I say, then, that there are these two species of motion, change and removal.

Theodorus:: You say right.

Socrates:: Having, therefore, made this distinction, let us now address ourselves to those who say that all things are in motion, and ask them: Whether do you say that every thing undergoes both kinds of motion, and is both removed and changed, or that one thing is moved both ways, and another only in one way?

Theodorus:: By Jupiter, I know not what to answer; but I think they would say, both ways.

Socrates:: Otherwise, my friend, the same things would appear to them to be both in motion and at rest, and it would not be at all more correct to say that all things are in motion, than that they are at rest.

Theodorus:: You speak most truly.

Socrates:: Since, therefore, it is necessary that every thing should be in motion, and that the absence of motion should be in nothing, all things must always be moved with every kind of motion.

Theodorus:: Necessarily so.

Socrates:: Consider this, then, I beg: did we not say that they explain the generation of heat, or whiteness, or any thing else pretty much in this manner, that each of them is impelled, together with perception, between the agent and the patient, and that the patient becomes affected by perception, but is not yet perception itself, and that the agent becomes affected by a certain quality, but is not quality itself? Perhaps, however, quality may appear to you to be a strange word, and you may not understand it when used in this collective sense. Hear me, then, explain it in detail. For the agent becomes neither heat nor whiteness, but hot and white, and so with respect to other things. For you surely remember that we said before, that no one thing exists of itself, neither that which is an agent nor that which is a patient, but that, from the meeting together of each with the other, perceptions and objects of perception being produced cause the one to be of a certain quality, and the other percipient.

Theodorus:: I recollect. How should I not.

Socrates:: Let us then dismiss the rest of their system, whether they speak this way or that way; and let us keep to that point alone which concerns our discussion and ask, Are all things in motion and in a state of flux, as you say? Is it not so?

Theodorus:: Yes.

Socrates:: And by both those kinds of motion which we have distinguished, removal and change?

Theodorus:: Undoubtedly; if they are to be perfectly moved.

Socrates:: If, therefore, they were only removed, but not changed, we should surely be able to say what kind of things are removed. Must we not say so?

Theodorus:: Just so.

Socrates:: But since not even this continues in the same state, namely, that that which flows continues to flow white, but it changes so that there is also a flux of this very thing, whiteness, and a transition into another color, in order that it may not be found continuing in the same state, will it ever be possible to call any thing a color, so as to designate it correctly?

Theodorus:: How is it possible, Socrates? or any thing else of the kind, since, while we are speaking about it, it is constantly escaping, as being in a state of flux?

Socrates:: But what shall we say of any kind of perception, for instance of seeing or hearing? Does it ever continue in the state of seeing or hearing?

Theodorus:: It ought not, since all things are in motion.

Socrates:: We must not affirm then, that any one sees rather than not sees, or has any other perception rather than not, since all things are in constant motion.

Theodorus:: Surely not.

Socrates:: Yet perception is science, as Theætetus and I said.

Theodorus:: That is the case.

Socrates:: On being asked, therefore, what science is, we answered, that it is not at all science rather than not science.

Theodorus:: You appear to have done so.

Socrates:: A fine correction of our answer it would be, if we endeavor to prove that all things are in motion, in order that our former answer may appear correct. But this, as it seems, is the result, if all things are in motion, every answer on whatever subject it may be given, will be equally correct, whether we say that a thing is so or is not so, or, if you will, becomes so, that we may not fix them by a definite expression.

Theodorus:: You say rightly.

Socrates:: Except, Theodorus, that I said “so and not so.” But we ought not to use this word “so,” for in this way it will no longer be in motion; nor again must we use the expression “not so,” for neither does this express motion; but they who maintain this doctrine must find out some other term, since at present they have not words suited to their hypothesis, except perhaps, this, “not in any manner.” This would suit them best, as having an indefinite meaning.

Theodorus:: This manner of speaking would indeed be most proper for them.

Socrates:: We have done then with your friend, Theodorus, nor can we by any means concede to him, that any man is the measure of all things, except he is wise: nor can we concede to him that science is perception, at least according to the doctrine that all things are in motion; unless Theætetus here says otherwise.

Theodorus:: You say admirably well, Socrates; for since these things are brought to a conclusion, it is right that I too should have done with answering according to our agreement, now that our discussion about the doctrine of Protagoras has come to end.

Theaetetus:: Not so, Theodorus, until you and Socrates have discussed the doctrine of those who say that the universe is at rest, as you just now proposed to do.

Theodorus:: Do you who are so young, Theætetus, teach old men to act unjustly, by violating their compacts. But prepare to give account to Socrates of what remains to be discussed.

Theaetetus:: If he wishes it, though I should be very glad to hear you on the subject I mentioned.

Theodorus:: You are challenging riders to a race in challenging Socrates to a discussion. Ask therefore and you will hear.

Socrates:: But I think, Theodorus, I shall not comply with the request of Theætetus.

Theodorus:: Why not comply?

Socrates:: Though I am ashamed of examining with too much freedom Melissus and others, who say that the universe is one and immoveable, yet I am less ashamed to do so with respect to them than Parmenides alone. For Parmenides appears to me, that I may use the words of Homer, “both venerable and formidable.” For I was acquainted with him when I was very young and he was very old, and he appeared to me to possess a depth of wisdom altogether extraordinary. I am afraid, therefore, that we should not understand his words, and that we should be much less able to discover the meaning of what he said, and above all, I fear lest with respect to the main subject of our discussion, science, what it is, should be left unconsidered by reason of the digressions that will rush across us, if we listen to them. Besides, the question which we have now raised is of immense extent, and if one should consider it only by the way, it would be treated unworthily, but if as it deserves, the discussion, being extended to too great length, will put out of sight the subject of science. But neither of these things ought to happen; but we ought to endeavor, by the midwife's art, to deliver Theætetus of his conceptions respecting science.

Theaetetus:: It is proper to do so, if you think well.

Socrates:: Again, therefore, Theætetus, consider this with respect to what has been said. You answered that perception is science; did you not.

Theaetetus:: Yes.

Socrates:: If then any one should ask you, with what a man sees things white and black, and with what he hears sounds sharp and flat, you would say, I think, with the eyes and ears.

Theaetetus:: I should.

Socrates:: The free use of names and words and without excessive precision, is for the most part not unbecoming a person of education, but rather the contrary to this is illiberal, though sometimes it is necessary; as in the present case it is necessary to find fault with your answer, so far as it is not correct. For consider, which answer is more correct, that it is the eyes with which we see or by which we see, and the ears with which we hear, or by which we hear?

Theaetetus:: By which we receive each perception, it seems to me, Socrates, rather than with which.

Socrates:: For surely it would be strange, my boy, if many senses were seated in us, as in wooden horses, and they did not all tend to one certain form, whether it is soul, or whatever it is proper to call it, with which, by means of these as instruments, we perceive all objects of perception.

Theaetetus:: The case appears to me to be rather in this way than in that.

Socrates:: But why do I require so much accuracy from you on this point? For this reason, that we may discover whether by some one and the same part in us we, by means of the eyes, attain to things white and black, and again other things by means of the other senses, and whether, when questioned, you will be able to refer all such things to the bodily organs. But perhaps it will be better that you should say this by answering my questions, than that I should take all this trouble for you. Tell me, then; the things by which you perceive things hot and dry, and light and sweet, do you refer each of them to the body, or to any thing else?

Theaetetus:: To nothing else.

Socrates:: Are you also willing to allow, that such things as you perceive by means of one faculty it is impossible for you to perceive by means of another, for instance, that what you perceive by means of hearing you cannot perceive by means of sight, and what you perceive by means of sight, you cannot perceive by means of hearing?

Theaetetus:: How should I not be willing to allow it?

Socrates:: If, then, you form a notion of them both together, you cannot receive this perception of both together by means of one organ or the other.

Theaetetus:: Surely not.

Socrates:: Now with respect to sound and color, is not this the very first notion that you have of them both, that they both exist.

Theaetetus:: It is.

Socrates:: Is it not also, that each is different from the other, and the same with itself?

Theaetetus:: How not?

Socrates:: And that both are two, but each one?

Theaetetus:: And this also.

Socrates:: Are you not also able to consider whether they are like or unlike each other?

Theaetetus:: Probably.

Socrates:: By means of what, then, do you acquire all these notions about them? For it is not possible by means either of hearing or sight to apprehend that which is common between them. Moreover, this too is a proof of what we say. For, if it were possible to examine respecting them both, whether they are salt or not, you know you would be able to say with what you would make this examination, and this proves to be neither sight nor hearing, but something else.

Theaetetus:: How not, and that the faculty of taste by means of the tongue?

Socrates:: You say well. But in what does the faculty consist which shows you that which is common to all things, and to these two, to which you give the name of existence and non-existence, and those other names about which we were just now asking? what organs will you attribute to all these, by means of which our perceptive faculty perceives these several things?

Theaetetus:: You speak of existence and non-existence, similitude and dissimilitude, identity and difference, and moreover of unity and other numbers: and it is evident that you ask about the even and odd and whatever else depends on them, by which of the organs of the body we perceive these things in our soul.

Socrates:: You follow me exceedingly well, and these, Theætetus, are the very things about which I ask.

Theaetetus:: But by Jupiter, Socrates, I know not what to say, except that it seems to me that there is no organ at all peculiar to these things as there is to the others, but the soul of itself appears to me to examine that which is common in all things.

Socrates:: You are beautiful, Theætetus, and not ugly, as Theodorus said; for he who speaks beautifully is beautiful and good. But, besides being beautiful, you have done well in having released me from a very long discussion, if it appears to you that the soul beholds some things by itself, and others by the faculties of the body. For this was the very thing that seemed to me, and I wished it might likewise seem so to you.

Theaetetus:: And indeed it does appear so to me.

Socrates:: To which of the two classes, then, do you refer existence? For this especially attaches to all things.

Theaetetus:: I refer it to those things which the soul of itself reaches after.

Socrates:: Is it the same with similarity and dissimilarity, identity and difference?

Theaetetus:: Yes.

Socrates:: What then? with the beautiful and the ugly, good and evil?

Theaetetus:: It appears to me that the soul especially considers the essence of these in reference to each other, comparing within itself things past and present with the future.

Socrates:: Stay: will it not perceive the hardness of that which is hard by the touch, and the softness of that which is soft in like manner?

Theaetetus:: Yes.

Socrates:: But their essence, both what they are, and their opposition to each other, and the nature of this opposition, the soul itself, examining them repeatedly and comparing them with each other, endeavors to determine for us.

Theaetetus:: Certainly.

Socrates:: Are not, then, both men and beasts by nature able to perceive as soon as they are born those things that pass by means of the bodily organs to the soul, but comparisons of these with reference to their essence and use they arrive at with difficulty, and after a long time, by means of much labor and study, if ever they do arrive at it?

Theaetetus:: Most assuredly.

Socrates:: For is it possible to apprehend the truth of that of which we cannot apprehend the existence?

Theaetetus:: Impossible.

Socrates:: But can any one possess a scientific knowledge of a thing, of which he cannot apprehend the truth?

Theaetetus:: How can he, Socrates?

Socrates:: There is, therefore, no science in sensations, but in reasoning on them; for in this way, as it seems, it is possible to touch upon essence and truth, but in that way impossible.

Theaetetus:: It appears so.

Socrates:: Can you, therefore, call that and this the same, when there is so great a difference between them?

Theaetetus:: It would not be right to do so.

Socrates:: What name, then, do you give to that, to sight, hearing, smelling, tasting, being hot, and being cold?

Theaetetus:: Perceiving; for what other name can be given?

Socrates:: Do you, therefore, call the whole of this perception?

Theaetetus:: Necessarily so.

Socrates:: To which, as we said, it does not appertain to touch upon truth, for it does not ever touch upon essence.

Theaetetus:: Certainly not.

Socrates:: Nor, therefore, upon science?

Theaetetus:: No.

Socrates:: Perception, therefore, and science, Theætetus, can never be the same?

Theaetetus:: It appears not, Socrates.

Socrates:: And now it has been made perfectly clear that science is something different from perception. But we did not commence this conversation with this view, that we might find out what science is not, but what it is. However, we have advanced so far as not to seek it at all in perception, but in that name, whatever it is, which the soul possesses when it employs itself about things that exist.

Theaetetus:: But this, I think, Socrates, is called, to judge.

Socrates:: You think rightly, my friend. And now consider again from the beginning, having obliterated all that has been said before, if you see at all more clearly, now that you have come to this point. And tell me again what science is.

Theaetetus:: It is impossible, Socrates, to say that it is every judgment, because there is also false judgment. But it appears that true judgment is science, and let this be my answer. For if, as we proceed, it shall not appear to be so, as it does at present, we will endeavor to say something else.

Socrates:: Thus, then, Theætetus, you must speak more promptly, and not, as at first, hesitate to answer. For if we do so, one of two things will happen; we shall either find that which we are in search of, or we shall in a less degree think that we know what we do not know at all; though this would be no despicable reward. Now, then, what do you say? Since there are two species of judgment, one true, and the other false, do you define science to be true judgment?

Theaetetus:: I do; for this at present appears to me to be the case.

Socrates:: Is it, then, worth while again to resume the discussion respecting judgment?

Theaetetus:: What do you mean?

Socrates:: Somehow this matter troubles me just now, and has often done so at other times, so that I have had great doubt with respect to myself and others, from not being able to say what this affection in us is, and in what way it is produced.

Theaetetus:: What affection?

Socrates:: This, that any one forms false judgments; and I even now still consider and am in doubt whether we shall let this alone, or examine it in a different manner than we did just now.

Theaetetus:: How not, Socrates? at least if it appears necessary to be done in some way or other? For you and Theodorus just now remarked, not badly, respecting leisure, that there is no urgency in matters of this kind.

Socrates:: You have reminded me very properly. For perhaps it will not be foreign to our purpose in a manner to retrace our steps. For it is better to finish a little well than much insufficiently.

Theaetetus:: Why not?

Socrates:: How then? what do we say? do we not affirm that sometimes judgments are false? or that one of us forms false judgments and another true ones, as if this was naturally the case?

Theaetetus:: We doubtless do affirm this.

Socrates:: Does not this happen to us with regard to things in general and each particular, that we either know it or do not know it? For learning and forgetting, as being between these, I pass by for the present, for now they have nothing to do with our discussion.

Theaetetus:: However, Socrates, there is no other alternative with respect to each particular, except knowing or not knowing it.

Socrates:: Then, is it not necessary, that he who judges should judge either what he does know, or does not know?

Theaetetus:: It is necessary.

Socrates:: But that a person who knows should not know the same thing, or that he who does not know it should know it, is impossible.

Theaetetus:: How not?

Socrates:: Does not he, then, who forms a false judgment about what he knows, think that these are not the same, but different from what he knows, and thus while he knows both, he is at the same time ignorant of both?

Theaetetus:: But this is impossible, Socrates.

Socrates:: Does he, then, think that things which he does not know are certain other things that he does not know, and is it possible for one who knows neither Theætetus nor Socrates, to imagine that Socrates is Theætetus, or Theætetus Socrates?

Theaetetus:: How could that be?

Socrates:: Neither, surely, does any one think that the things which he knows are the same as those that he does not know, nor again that the things which he does not know, are the same as those that he does know.

Theaetetus:: For that would be monstrous.

Socrates:: How then can any one form false judgments? For it is impossible to form judgments in any other way than this, since we either know or do not know all things, and in these it appears to be by no means possible to form false judgments.

Theaetetus:: Most true.

Socrates:: Ought we, then, to consider the object of our enquiry, not by proceeding according to knowing and not knowing, but according to being and not being?

Theaetetus:: How do you mean?

Socrates:: Whether it is not universally true, that he who thinks things that are not, with respect to any thing whatever, must unavoidably form a false judgment, however intelligent he may be in other respects.

Theaetetus:: That s reasonable, Socrates.

Socrates:: How then? what shall we say, Theætetus, if any one should ask us, "Is it possible for any one to do what you say, and can any man think that which is not, whether respecting any real object or abstract essence?" And we, it seems, shall say to this, "When he who thinks does not think what is true." What else can we say?

Theaetetus:: Nothing else.

Socrates:: Does a thing of this kind happen also in other cases?

Theaetetus:: Of what kind?

Socrates:: If a person sees something, and yet sees nothing.

Theaetetus:: But how can that be?

Socrates:: But if he sees some one thing, he sees something that exists; and do you think that one thing is ever among things that do not exist?

Theaetetus:: I do not.

Socrates:: He, therefore, who sees some one thing sees that which exists.

Theaetetus:: It appears so.

Socrates:: And, therefore, he who hears something, both hears some one thing, and hears that which exists.

Theaetetus:: Yes.

Socrates:: And doubtless he who touches both touches some one thing, and that which exists, since it is one thing?

Theaetetus:: And this too.

Socrates:: Does not he then who judges, judge some one thing?

Theaetetus:: Of necessity.

Socrates:: And does not he who judges some, one thing, judge something that exists?

Theaetetus:: I grant it.

Socrates:: He therefore who judges what does not exist, judges nothing.

Theaetetus:: It appears not.

Socrates:: But he who judges nothing, does not judge at all.

Theaetetus:: That is evident, as it seems.

Socrates:: It is impossible, therefore, to judge that which is not, either with respect to real objects or abstract essences.

Theaetetus:: It appears not.

Socrates:: To form false judgments, therefore, is different from judging things that do not exist.

Theaetetus:: It seems to be different.

Socrates:: Neither then in this way nor in the way we considered a little before, is false judgment formed in us.

Theaetetus:: On no account.

Socrates:: Do we then give that name to what takes place as follows.

Theaetetus:: How?

Socrates:: We say that a mistaken judgment is a false judgment, when any one says that any real object is another real object, changing one for the other in his thoughts. For thus he always judges that which exists, but one thing instead of another, and erring in that which he was considering, he may be justly said to form a false judgment.

Theaetetus:: You now appear to me to have spoken most correctly: for, when any one forms a judgment that a thing is ugly instead of beautiful, or beautiful instead of ugly, then he truly forms a false judgment.

Socrates:: It is evident, Theætetus, that you esteem me lightly and have no fear of me.

Theaetetus:: How so?

Socrates:: I do not seem to you, I imagine, likely to lay hold of your “truly false,” by asking whether it is possible for swift to take place slowly or light heavily, or any other contrary, not according to its own nature, but according to the nature of its contrary, contrariwise to itself. This, however, I dismiss, that your confidence may not be in vain. But are you satisfied, as you say, that to form false judgments is to form mistaken judgments?

Theaetetus:: I am.

Socrates:: It is possible, then, according to your opinion, for one thing to be comprehended in the mind as another, and not as it is.

Theaetetus:: It is possible.

Socrates:: When, therefore, any one's mind does this, is it not necessary that it should think about both objects, or one of them?

Theaetetus:: Quite necessary.

Socrates:: Either together or in turns?

Theaetetus:: Very well.

Socrates:: But by thinking do you mean the same that I do?

Theaetetus:: What do you mean by it?

Socrates:: The discourse which the soul holds with itself about the objects that it considers. I explain this to you as a person who does not know what he says. For the soul, when it thinks, appears to me to do nothing else than discourse with itself, asking itself questions and answering them, affirming and denying; but when it has decided, whether it has come to its decision more slowly or more rapidly, and now asserts and does not doubt, this we call judgment. So that to form a judgment I call to speak, and judgment a sentence spoken, not indeed to another person nor with the voice but in silence to itself. But what do you call it?

Theaetetus:: The same.

Socrates:: When any one, therefore, forms a judgment that one thing is another, he says to himself, as it seems, that one thing is another.

Theaetetus:: How not?

Socrates:: Recollect, then, whether you have ever said to yourself, that the beautiful is certainly ugly, or the unjust,

just, or even, chief of all, consider whether you have ever attempted to persuade yourself, that one thing is certainly another, or, quite contrariwise, whether you have ever ventured even in sleep to say to yourself, that undoubtedly odd is even, or any thing else of the kind.

Theaetetus:: You say truly.

Socrates:: But do you think that any one else in his senses or even mad would venture to say seriously to himself, being himself persuaded, that an ox must needs be a horse, or two one?

Theaetetus:: Not I, by Jupiter.

Socrates:: If, therefore, to speak to one's-self is to form judgments, no one, who speaks and forms judgments of both objects, and touches upon both with his soul, would say and judge that one is another. You must therefore give up what you said about the other. For I assert this, that no one thinks that the ugly is beautiful, or any thing else of the kind.

Theaetetus:: I give it up then, Socrates, and it appears to me as you say.

Socrates:: It is impossible, then, for one who forms judgments about both, to think that the one is the other.

Theaetetus:: It seems so.

Socrates:: He, however, who judges one thing only, but the other in no respect, will never judge that the one is the other.

Theaetetus:: You say truly: for he would be compelled to touch upon that also of which he does not judge.

Socrates:: It is not possible then for a person who judges both or one of the two, to judge that one is the other: so that if any one should define false judgment to be the judgment of one thing instead of another, he would say nothing to the purpose; for neither in this way, nor in those before mentioned, does it appear that false judgment pertains to us.

Theaetetus:: It seems not.

Socrates:: However, Theætetus, if this should appear not to be so, we shall be compelled to admit many absurdities.

Theaetetus:: What are they?

Socrates:: I will not tell you, until I have endeavored to consider the matter in- every point of view; for I should be ashamed for both of us, if, while we are in the difficulty we are, we should be compelled to admit what I now say. But if we discover the object of our search and become free, then we will speak of others, as subject to this, being ourselves placed beyond the reach of ridicule: but if we shall continue still involved in difficulties, we must humble ourselves, I imagine, and give ourselves up to discussion, like those who are seasick, to be trampled on and treated as it pleases. Hear, then, how I still find a way out of our enquiry.

Theaetetus:: Only speak.

Socrates:: I shall deny that we made a correct admission, when we admitted that it is impossible for a person to judge that what he knows is what he does not know and be thus deceived; but in some respect it is possible.

Theaetetus:: Do you mean that which I suspected at the time when we said this, might be the case, that sometimes I knowing Socrates, and seeing another person at a distance whom I do not know, have thought it was Socrates, whom I do know? For what you mention happens in a case of this kind.

Socrates:: Are we not, then, driven from that position, because it made us, while we know, not know the things that we do know?

Theaetetus:: Certainly.

Socrates:: Let us not, then, make our assumption in this way but as follows; and perhaps it will in some respect succeed for us, and perhaps it will oppose us. For we are in a condition in which it is necessary to examine our whole argument in every point of view. Consider, therefore, whether I say any thing to the purpose. Is it possible for a person who did not know something before, afterwards to learn it?

Theaetetus:: It is indeed.

Socrates:: And can he not also learn another thing after another?

Theaetetus:: Why not?

Socrates:: Suppose, then, I beg, for the sake of argument, that we have in our souls a waxen tablet, in one larger, in another smaller, in one of purer wax, in another of impurer, in some of harder, and in others again of softer, but in some of a moderate quality.

Theaetetus:: I do suppose it.

Socrates:: Let us say, then, that this is a gift of Mnemosyne the mother of the Muses; and that, whatever we wish to remember of things that we have seen, or heard, or have ourselves thought of, we impress in this, by placing it under our perceptions and thoughts, as if we were taking off the impressions from rings: and that whatever is imprinted, this we remember and know, as long as its image remains; but when it is effaced, or can be no longer imprinted, we forget and do not know it.

Theaetetus:: Be it so.

Socrates:: When, therefore, a person knows these things and considers any of the things that he sees or hears, consider whether in this way he can judge falsely?

Theaetetus:: In what way?

Socrates:: By thinking with respect to what he knows, that they are at one time the things that he knows, and at another the things that he does not know. For in a former part of our discussion we made an improper admission in admitting that this was impossible.

Theaetetus:: But how do you mean now?

Socrates:: We must speak thus on this subject, defining it from the beginning: It is impossible that he who knows any thing, and has a remembrance of it in his soul, but does not actually perceive it, can think that it is some other thing that he knows, of which he has the impression, though he does not perceive it: and again, it is impossible that any one can think that what he knows is that which he does not know, and of which he has not the seal: or that what he does not know is that which he does not know: or that what he does not know is that which he does know: or think that what he perceives is some other thing that he perceives: or that what he perceives is something that he does not perceive: or that what he does not perceive is some other thing that he does not perceive: or that what he does not perceive is something that he does perceive.

And again it is still more impossible, if that can be, that a person should think that what he knows and perceives, and of which he has an impression by means of perception, is something else that he knows and perceives, and of which in like manner he has an impression by means of perception. And it is impossible that what he knows and perceives, and of which he has a correct remembrance, he can think is something else that he knows: or that what he knows and perceives, and in like manner retains in his remembrance, is something else that he perceives: or again, that what he neither knows nor perceives is something else that he neither knows nor perceives: or that what he neither knows nor perceives is something else that he does not know; or that what he neither knows nor perceives is something else that he does not perceive. In all these cases it is utterly impossible for any one to judge falsely. It remains, therefore, that it must take place, if anywhere, in the following cases.

Theaetetus:: In what cases? perhaps I shall understand you better from them; for at present I do not follow you.

Socrates:: In things which a person knows, he may think that they are different from the things that he knows and perceives; or from those which he does not know, but perceives; or that the things which he knows and perceives are some of the things which he likewise knows and perceives.

Theaetetus:: Now I am left much further behind than I was.

Socrates:: Listen again, then, as follows: I, knowing Theodorus, and remembering within myself what kind of a person he is, and in like manner, Theætetus, do I not sometimes see them, and sometimes not, and sometimes touch them, and sometimes not, and hear or perceive them by some other sense, but sometimes have I no perception of you at all, yet nevertheless do I remember you, and know you within myself?

Theaetetus:: Certainly.

Socrates:: Understand this, then, the first of the things that I wish to prove, that it is possible for a man not to perceive what he knows, and that it is possible for him to perceive it.

Theaetetus:: True.

Socrates:: And does it not often happen that a man does not perceive what he does not know, and often that he perceives it only?

Theaetetus:: This also is true.

Socrates:: Consider then, whether you can now follow me better. Socrates knows Theodorus and Theætetus, but he sees neither of them, nor has he any other perception respecting them, now he can never form this judgment within himself, that Theætetus is Theodorus? Do I say any thing to the purpose or not?

Theaetetus:: Yes, quite true.

Socrates:: This then was the first of the cases that I mentioned.

Theaetetus:: It was.

Socrates:: But the second was this, that I knowing one of you, but not knowing the other, and perceiving neither, should never think that he whom I know is the person whom I do not know.

Theaetetus:: Right.

Socrates:: The third was this, that I neither knowing nor perceiving either of them, should not think that he whom I do not know is some other person of those whom I do not know: and consider that you again hear in succession all the instances before put, in which I shall never form a false judgment respecting you and Theodorus, neither while knowing nor ignorant of you both, nor while knowing one, and not the other; and in the same way with regard to perceptions, if you follow me.

Theaetetus:: I do follow you.

Socrates:: It remains, therefore, that I may form a false judgment in this case, when knowing you and Theodorus, and having the impression of both of you in that waxen tablet made by a seal ring as it were, seeing you both from a distance and not sufficiently distinguishing you, I endeavor, by attributing the peculiar impression of each to his peculiar aspect, applying it so as to adapt it to its own form in order that I may recognize it, then failing in this, and changing them like those that put their shoes on the wrong feet, I fit the aspect of each to the impression of the other, as happens in looking into mirrors, where the sight passes from the right to the left, so I fall into the same error; then mistaken opinion and false judgment take place.

Theaetetus:: What happens with regard to judgment, Socrates, seems wonderfully like what you describe.

Socrates:: Still further, when, knowing both of you, in addition to knowing I perceive one, but not the other, I have a knowledge of the other not according to perception, which I thus described before, but you did not then understand me.

Theaetetus:: I did not.

Socrates:: I said this however, that a person who knows and perceives one and has a knowledge of him according to perception, will never think that he is some other person whom he knows and perceives, and of whom he has a knowledge according to perception. Was not this what I said?

Theaetetus:: Yes.

Socrates:: There remained then the case that was just now mentioned, in which we said that false judgment takes place, when a person knowing you both and seeing you both, or having some other perception of you both, has not the impression of each according to the perception of each, but, like an unskillful archer, shoots beside the mark and misses, this then is called a falsehood.

Theaetetus:: And very properly so.

Socrates:: When, therefore, perception is present to one of the impressions, and not to the other, and the one applies the impression of the absent perception to that which is present, in this case the mind is altogether deceived: and, in a word, with respect to things that a person has neither known nor ever perceived, it is not possible, as it seems, either to be deceived, or to form a false judgment, if there is any soundness in what we now say: but with respect to things that we know and perceive, in these very things judgment is conversant and turns round, becoming both false and true, by collecting together in a direct and straight line the copies and marks proper to each, it is true, but sideways and obliquely, false.

Theaetetus:: Is it not well described, Socrates?

Socrates:: You will say so still more, when you hear what follows. For to judge truly is beautiful, but to be deceived is base.

Theaetetus:: How not?

Socrates:: They say, then, that these things proceed from hence. When the wax in any one's soul is deep, abundant, smooth, and properly molded, objects entering by means of the perceptions and impressing themselves on this heart of the soul, as Homer calls it, obscurely intimating its resemblance to wax, then pure and sufficiently deep impressions being made in these, become lasting, and such men are first of all easily taught, next have retentive memories, and lastly do not change the impressions of the perceptions, but form true judgments, for, as these impressions are clear, and in a wide space, they quickly distribute to their proper images each of the things that are called beings; and such men are called wise. Does it not appear so to you?

Theaetetus:: Entirely so.

Socrates:: When, therefore, any one’s heart is covered with hair, which the very wise poet has celebrated, or when it is muddy, and not of pure wax, or very soft, or hard, those in whom it is soft are easily taught, but are forgetful, and those in whom it is hard, the contrary; but those who have it hairy and rough, and stony or full of earth or mixed mud, have indistinct impressions; they are also indistinct in those that are hard, for there is no depth in them; they are likewise indistinct in those that are soft, for by being confused they soon become obscure; but if, in addition to all this, they fall one upon another by reason of narrowness of space, if any one’s soul is little, they are still more indistinct than the others. All these, therefore, are such as form false judgments. For when they see, or hear, or think about any thing, not being able at once to attribute each object to its impression, they are slow, and attributing different objects to different impressions, they for the most part see wrongly, and hear wrongly, and think wrongly; and these are said to be deceived in objects and ignorant.

Theaetetus:: You speak as correctly as man can do, Socrates.

Socrates:: Shall we say, then, that there are false judgments in us?

Theaetetus:: By all means.

Socrates:: And true judgments also?

Theaetetus:: And true.

Socrates:: Do we, then, consider it to have been sufficiently established that these two judgments do without doubt exist?

Theaetetus:: Most assuredly.

Socrates:: A talkative man, Theætetus, appears to be really troublesome and disagreeable.

Theaetetus:: How so? Why do you say this?

Socrates:: Because I am angry at my own ignorance, and, in truth, talkativeness. For what other name can any one give it when a man drags the conversation upwards and downwards, and cannot be persuaded through his dullness, and is with difficulty torn from each several topic?

Theaetetus:: But why are you angry?

Socrates:: I am not only angry, but I am afraid that I should not know what to answer, if any one should ask me, “Socrates, have you found that false judgment is neither in the perceptions compared with each other, nor in the thoughts, but in the conjunction of perception with thought?” I think I shall say, I have, priding myself as if we had made a very fine discovery.

Theaetetus:: What has just now been proved appears to me, Socrates, to be by no means despicable.

Socrates:: Do you therefore assert, he will say, that we can never suppose that a man whom we think of only, but do not see, is a horse, which we neither see nor touch, but think of only, and do not perceive in any other way? I believe I should say, that I do assert this.

Theaetetus:: And rightly.

Socrates:: What then? he will say, according to this mode of reasoning, can the number eleven, which one thinks of only, ever be supposed to be twelve, which also one thinks of only? Come then, do you answer?

Theaetetus:: I should answer, that a person seeing or touching might suppose that eleven are twelve, but that he would never think thus respecting numbers which he embraces only in thought.

Socrates:: What then? do you suppose that any one has ever proposed to consider within himself of five and seven, I do not mean seven and five men, or any thing else of the kind, but the numbers five and seven themselves, which we said were in his soul like impressions in wax, and that it is impossible to judge falsely respecting them,—has any man at any time considered these very things, speaking to himself and asking how many they are, and answered, one that he supposes they are eleven, and another that they are twelve, or do all men say and suppose that they are twelve?

Theaetetus:: No, by Jupiter, but many suppose that they are eleven. And if a person considers about a greater number, he is still more mistaken; for I suppose that you rather speak about every number.

Socrates:: You suppose rightly, but consider whether any thing else ever happens than this, that he supposes that the number twelve impressed in his soul is eleven?

Theaetetus:: It seems so.

Socrates:: Does it not then come back to our former statements? For he who is in this condition supposes that what he knows is something else that he also knows, which we said was impossible, and from which very circumstance we demonstrated that there is no such thing as false judgment, in order that the same person might not be compelled to know and not to know the same thing at the same time.

Theaetetus:: Most true.

Socrates:: Therefore we must show that false judgment is something else than an interchange of mind with perception. For, if this were so, we could never be deceived in the thoughts themselves: but now there is either no such thing as false judgment, or it is possible for a person not to know what he knows: and which of these two do you choose?

Theaetetus:: You offer me a difficult choice, Socrates.

Socrates:: Our argument however appears as if it would not allow both these to take place: though for we must venture on every thing, what if we should determine to lay aside all shame?

Theaetetus:: How?

Socrates:: By taking upon ourselves to declare what it is to know.

Theaetetus:: But why would this be shameless?

Socrates:: You do not seem to consider that the whole of our discussion from the beginning has been an investigation respecting science, as if we did not know what it is.

Theaetetus:: I do consider it.

Socrates:: Does it not, then, appear to be a shameless thing, to explain what it is to know, when we are ignorant of what science is? But, Theætetus, our conversation has been all along full of defects. For we have over and over again used the expressions, We know, and We do not know, We have a scientific knowledge, and We have not a scientific knowledge, as if we both of us understood something about it, whereas we are still ignorant of what science is. But if you please, we will still at the present moment use the terms, to be ignorant, and to understand, as if we could properly use them, though we are destitute of science.

Theaetetus:: But how will you converse, Socrates, if you abstain from the use of these expressions?

Socrates:: Not at all, while I am what I am. If however I were contentious, or if a person of that kind were now present, he would say that I must abstain from them, and would strongly object to what I say. But as we are poor creatures, do you wish I should venture to say what it is to know? For it appears to me that it would be worth while to do so.

Theaetetus:: Venture then, by Jupiter; for you will be readily pardoned for not abstaining from these expressions.

Socrates:: Have you heard, then, what they now say it is to know?

Theaetetus:: Perhaps so; but at present I do not remember.

Socrates:: They say, I believe, that it is to have science.

Theaetetus:: True.

Socrates:: Let us, then, change it a little, and say that it is to possess science.

Theaetetus:: But in what will you say this differs from that?

Socrates:: Perhaps in nothing: but whether it seems to differ or not, listen and examine with me.

Theaetetus:: I will, if I am able.

Socrates:: To possess, therefore, does not appear to me to be the same as to have: for instance, if any one having bought a garment, and having it in his power, should not wear it, we should not say that he has it, but that he possesses it.

Theaetetus:: And very properly.

Socrates:: See then whether it is possible thus to possess science without having it: just as if any one having caught some wild birds, as doves or any others, and having constructed a dovecote at home, should feed them; we should probably say that in some respects he always has them, because he possesses them: should we not?

Theaetetus:: Yes.

Socrates:: But in another respect we should say that he has none of them, but that he has acquired a power over them, since he has brought them under his control, in an enclosure of his own, so as to take and have them when he pleases, by catching whichever he wishes, and again of letting them go: and this he is at liberty to do as often as he thinks fit.

Theaetetus:: Such is the case.

Socrates:: Again, therefore, as in a former part of our discussion we constructed I know not what kind of waxen figment in the soul, so now let us make in each soul a kind of aviary of all sorts of birds, some being in flocks, apart from others, and others few together, and others alone, flying amongst all the rest wherever it may chance.

Theaetetus:: Suppose it to be made: but what next?

Socrates:: While we are children, we must say, that this receptacle is empty, and instead of birds we must understand sciences; whatever science, then, one has become possessed of and shut up in this enclosure, one must say that he has learnt or discovered the thing of which this is the science, and that this is to know.

Theaetetus:: Be it so.

Socrates:: Again, therefore, when any one wishes to catch any one of these sciences, and, when he has taken it, to have it, and again to let it go, consider what words he requires, whether the same as before, when he possessed them, or different ones. But from what follows you will more clearly understand what I mean. Do you call arithmetic an art?

Theaetetus:: Yes.

Socrates:: Suppose this to be a catching of the sciences of every even and odd number.

Theaetetus:: I do suppose it.

Socrates:: By this art, then, I think, he has the sciences of numbers under his control, and, if he pleases, transfers them to others.

Theaetetus:: Yes.

Socrates:: And we say that he who transfers them teaches, and that he who receives them learns, but that having them, by possessing them in that aviary, he knows them.

Theaetetus:: Certainly.

Socrates:: Attend now to what follows. Does not he who is a perfect arithmetician know all numbers? for the sciences of all numbers are in his soul.

Theaetetus:: How not?

Socrates:: Does not then such a person sometimes calculate either something within himself, or something else that is external, that is capable of being calculated.

Theaetetus:: Undoubtedly.

Socrates:: But to calculate we shall say is nothing else than to examine what is the quantity of any number.

Theaetetus:: Just so.

Socrates:: What therefore he knows, be appears to examine, as if he did not know, though we admitted that he knows all number. You surely hear such questions as these.

Theaetetus:: I do.

Socrates:: We, therefore, carrying on our comparison with the possession and catching of doves, will say that this catching is of two kinds, one before possessing for the sake of possessing, the other when one has already obtained possession, for the purpose of taking and having in the hands what was already possessed. So with respect to the things of which a person has already acquired the science by learning, and which he knew, he may learn these same things again, and recover and retain the science of each, which he formerly possessed, but had not ready in his mind.

Theaetetus:: True.

Socrates:: On this account, I just now asked, what words it is proper to use in speaking of these things, when an arithmetician sets about calculating, or a grammarian reading any thing. Shall we say that knowing such a subject he again applies himself to learn from himself what he knows?

Theaetetus:: This would be absurd, Socrates.

Socrates:: Shall we say, then, that he is going to read or calculate what he does not know, though we have granted him that he knows all letters and all numbers?

Theaetetus:: This too would be unreasonable.

Socrates:: Will you, then, that we say, that we care nothing at all about words, in what way any one chooses to employ the words knowing and learning, but, since we have settled that it is one thing to possess a science, and another to have it, we maintain that it is impossible for a person not to possess what he does possess, so that it never happens that any one does not know what he knows, though it is possible for him to form a false judgment respecting it? For it is possible for him not to have the science of this particular thing, but another instead of it, when hunting after some one of the sciences that he possesses as they are flying about, he may by mistake take one instead of another; accordingly when he thinks that eleven is twelve, he takes the science of eleven instead of that of twelve, as it were taking a pigeon that he possessed instead of a dove.

Theaetetus:: It is reasonable to suppose so.

Socrates:: But when he takes that which he endeavors to take, then he is not deceived, and judges truly: and thus we will say that false and true judgment subsist, and none of the things which occasioned difficulty before will any longer stand in our way. Perhaps you agree with me, or what will you do?

Theaetetus:: Agree with you.

Socrates:: We are freed then, from the dilemma of a man's not knowing what he knows: for it never happens that we do not possess what we do possess, whether we are deceived respecting any thing or not. However, another much worse inconvenience appears to me to present itself.

Theaetetus:: What is that?

Socrates:: If the interchange of sciences can ever become false judgment.

Theaetetus:: But how?

Socrates:: In the first place, that having the science of any thing one should be ignorant of that thing, not through ignorance, but through the science of the thing itself, and in the next place, that one should judge this thing to be another thing and another thing this, how is it not a great piece of absurdity, that when science is present the soul should know nothing, but be ignorant of all things? For, from this mode of reasoning, nothing hinders but that ignorance when present should make us know something, and blindness should make us see, if science will ever make a man ignorant.

Theaetetus:: Perhaps, Socrates, we have done wrong in making sciences only take the place of the birds, and we ought to have supposed that various kinds of ignorance were flying about in the soul with them, and that the sportsman at one time taking science, and at another time ignorance, with respect to the same thing, judges falsely through ignorance, but truly through science.

Socrates:: It is not by any means easy, Theætetus, to forbear praising you: however, examine again what you have just said. For suppose it to be as you say. He who takes ignorance, will judge falsely you say; is it not so?

Theaetetus:: Yes.

Socrates:: Yet surely he will not think that he judges falsely.

Theaetetus:: How should he?

Socrates:: But truly, and he will fancy that he knows the things about which he is deceived.

Theaetetus:: Assuredly.

Socrates:: He will therefore judge that by sporting he has taken science, and not ignorance.

Theaetetus:: Clearly.

Socrates:: Having therefore made a long circuit, we have come back again to our first doubt. For that critic will laugh at us and say, "Can any one, my excellent friends, who knows both, science as well as ignorance, think that what he knows is some other thing that he knows? or, knowing neither of them, can judge that what he does not know, is some other thing that he does not know? or, knowing one, and not the other, can he suppose that what he knows is what he does not know, or what he does not know is what he does know? Will you tell me again, that there are sciences of sciences and ignorances, which their possessor having enclosed in some other ridiculous aviaries, or waxen figments, knows as long as he possesses them, though he has them not ready in his soul? And will you be thus compelled to revolve perpetually round the same circle, without making any progress?" What answer shall we give to this, Theætetus?

Theaetetus:: By Jupiter, Socrates, I have no notion what ought to be said.

Socrates:: Does not the argument, then, my boy, reprove us very properly, and show that we did wrong in searching for false judgment before science, and neglecting that? But it is impossible to know this until we have sufficiently discovered what science is.

Theaetetus:: It is necessary, Socrates, at present to think as you say.

Socrates:: Again therefore, what shall one say from the beginning about science? For we surely must not give it up yet.

Theaetetus:: By no means, unless you refuse to persevere.

Socrates:: Tell me, then, how can we best speak concerning science so as not to contradict ourselves.

Theaetetus:: As we attempted to do before, Socrates, for I know of no other plan.

Socrates:: What is that?

Theaetetus:: That true judgment is science. For to judge truly is surely free from error, and whatever results from it is beautiful and good.

Socrates:: He who acted as guide in fording a river, Theætetus, said that it would show its own depth; so if we go on in our enquiries, perhaps the impediment that we meet with will show us what we are in search of, but if we stop nothing will be clear.

Theaetetus:: You say well; let us go on then and examine it.

Socrates:: This then requires but a brief examination, for one whole art shows that it is not science.

Theaetetus:: How so? and what art is it?

Socrates:: That which belongs to those who are most renowned for wisdom, whom they call orators and lawyers. For they, in fact, persuade, not by teaching, but by making men form such judgments as they please. Do you think that there are any teachers so clever as, when persons have not been present while others were robbed of their money, or treated with some other violence, to be able, while a little water is running, to teach those persons sufficiently of the truth of what took place?

Theaetetus:: I by no means think so, but that they can persuade.

Socrates:: But do you not say that to persuade is to make a person form a judgment?

Theaetetus:: How otherwise?

Socrates:: When, therefore, judges are justly persuaded about things which can only be known by seeing and in no other way, then judging these things from hearsay, do they not, when they form a true opinion, judge without science, being persuaded properly, since they decide correctly?

Theaetetus:: Assuredly.

Socrates:: But, my friend, if true judgment and science are the same, a perfect judge could never form a correct judgment without science; but now each appears to be different from the other.

Theaetetus:: I had forgotten, Socrates, what I heard some one say, but now I remember it: he said that true judgment in conjunction with reason is science, but that without reason it is out of the pale of science, and that things for which a reason cannot be given cannot be known; these were his very words; and that things for which a reason can be given are known.

Socrates:: You speak admirably well. But how do you distinguish the things that can be known from those that cannot? tell me, for perhaps you and I have heard the same thing.

Theaetetus:: I know not whether I can explain it; but I could follow another person describing it, I think.

Socrates:: Hear, then, a dream for a dream. For I too seem to myself to have heard some people say, that the first elements, as it were, from which we and all other things are composed, cannot be explained by reason; for that each several element by itself can only be named, but that nothing else can be predicated of it, neither that it exists nor does not exist; for that this would be to attribute to it existence or non-existence, whereas nothing ought to be added to it, if one means to speak of the thing itself only; neither must we add to it the term the, or that, or each, or only, or this, or many others of the same kind; for these are constantly varying and are applied to all things, and are different from the things to which they are added. But we ought, if it were possible, to speak of the thing itself, and, if it has a definition peculiar to itself, to speak of it without the addition of any thing else. Now, however, it is impossible for any of the first elements to be explained by a definition, for it does not admit of any thing else than being named, for it has only a name; but the things that have been composed from these, as they are complex, so their names, when connected together, constitute a definition; for a connection of names is the essence of definition. Thus the elements themselves cannot be defined or known, but only perceived, but things compounded of them can be both known and defined, and apprehended by true judgment. When, therefore, any one forms a true judgment of any thing, without explanation, his soul indeed perceives the truth respecting it, but does not know it, for he who is not able to give and receive an explanation of a thing must be ignorant of that thing, but when he adds an explanation to it then he is capable of knowing all these things, and may be perfect in science. Is it thus that you have heard the dream, or in some other way?

Theaetetus:: In this way precisely.

Socrates:: Are you willing then that we should settle it thus, that science is true judgment in conjunction with reason?

Theaetetus:: Exactly so.

Socrates:: Have we, then, Theætetus, thus on this very day discovered what of old so many sages sought for and grew old before they found it?

Theaetetus:: For my part, Socrates, it appears to me that what has been now stated is well said.

Socrates:: And it is reasonable that this very thing should be the case; for what science could there be without reason and right judgment? However one of the things that were stated displeases me.

Theaetetus:: Which is that?

Socrates:: That which seems to be very forcibly said, that the elements are unknown, but that the natures of things compounded of them are known.

Theaetetus:: Is not that right?

Socrates:: We must see. For we have as sureties for this doctrine the examples which he used who said all these things.

Theaetetus:: What are they?

Socrates:: The elements of letters and syllables: do you think that he who said what we have mentioned had any thing else in view when he said it?

Theaetetus:: No, but these.

Socrates:: Let us, then, apply ourselves to these and examine them, or rather ourselves, whether we learnt letters in this way, or not. First of all then do syllables admit of a definition, but are the elements indefinable?

Theaetetus:: Probably.

Socrates:: It certainly appears so to me, too. If, then, any one should ask thus respecting the first syllable of the word Socrates, “Theætetus, tell me, what is So?” what would you answer?

Theaetetus:: That it is *S* and *o*.

Socrates:: Have you not, then, this definition of the syllable?

Theaetetus:: I have.

Socrates:: Come then, in the same way give me the definition of the letter *S*.

Theaetetus:: But how can any one speak of the elements of an element? For *S*, Socrates, is a consonant, only a sound, as of the tongue hissing; again the letter *B* has neither voice nor sound, nor have most of the elements. So that it is very right to say that they are indefinable, since the most distinct among them, to the number of seven, have only a sound, but do not admit of any definition.

Socrates:: Thus far, then, my friend, we have determined rightly with respect to science.

Theaetetus:: We appear to have done so.

Socrates:: What then? have we shown rightly that the element cannot be known, but that the syllable can?

Theaetetus:: It is probable.

Socrates:: Come then, do we say that a syllable is both the elements, and, if there are more than two, all of them, or some one form resulting from their conjunction?

Theaetetus:: All, we appear to me to say.

Socrates:: Observe, then, with respect to the two letters S and o; both of them together form the first syllable of my name, does not then he who knows this syllable know both of them?

Theaetetus:: How should he not?

Socrates:: He knows, therefore, *S* and *o*.

Theaetetus:: Yes.

Socrates:: But what? is he ignorant of each of them, and knowing neither, does he know both?

Theaetetus:: That would be strange and absurd, Socrates.

Socrates:: However, if it is necessary to know each, in order that he may know both, it is quite necessary for a person who is ever to know a syllable to know the elements first, and thus our former statement will escape us and be off.

Theaetetus:: And very suddenly too.

Socrates:: For we did not guard it well. For, perhaps, we ought to suppose that a syllable does not consist of the elements, but of some one species resulting from them, which has a form peculiar to itself, different from the elements.

Theaetetus:: Certainly; and perhaps the case is rather in this way than in the other.

Socrates:: We must examine it, and not so unmanfully abandon a weighty and venerable statement.

Theaetetus:: We ought not, indeed.

Socrates:: Let it be then as we just now said; let the syllable be one form resulting from the several elements, connected together, as well in letters as in all other things.

Theaetetus:: Just so.

Socrates:: It must, therefore, have no parts.

Theaetetus:: Why not?

Socrates:: Because where there are parts, the whole must necessarily be the same as all the parts: or do you say that a whole resulting from parts is one certain species different from all the parts?

Theaetetus:: I do.

Socrates:: Whether do you call all and the whole the same, or each different from the other?

Theaetetus:: I cannot say any thing for certain, but since you bid me answer boldly, I venture to say that they are different.

Socrates:: Your boldness, Theætetus, is right; but whether your answer is so, must be considered.

Theaetetus:: It must indeed.

Socrates:: Does not the whole, then, differ from all, according to your present statement?

Theaetetus:: Yes.

Socrates:: But what, is there any difference between all the parts, and the all? for instance when we say one, two, three, four, five, six, or twice three, or thrice two, or four and two, or three and two and one, or five and one, whether in all these cases do we say the same thing, or that which is different?

Theaetetus:: The same thing.

Socrates:: Do we say any thing else than six?

Theaetetus:: Nothing.

Socrates:: And in each mode of speaking did we not mention all the parts of six?

Theaetetus:: Yes.

Socrates:: Again, therefore, when we say all the parts do we say nothing?

Theaetetus:: We necessarily do say something.

Socrates:: Do we say any thing else than six?

Theaetetus:: Nothing.

Socrates:: In all things, then, that consist of number, do we not call the all and all the parts the same thing?

Theaetetus:: It appears so.

Socrates:: Thus then let us speak of them; the number of an acre and an acre are the same; is it not so?

Theaetetus:: Yes.

Socrates:: And the number of a stadium in like manner?

Theaetetus:: Yes.

Socrates:: And moreover the number of an army, and an army, and in like manner with respect to all other things of the kind? For all number is all that which each of them is.

Theaetetus:: Yes.

Socrates:: But is the number of each of them any thing else than its parts?

Theaetetus:: Nothing.

Socrates:: Such things, then, as have parts must consist of parts?

Theaetetus:: It appears so.

Socrates:: But it is admitted that all the parts are the all, since all number is the all.

Theaetetus:: Just so.

Socrates:: The whole, therefore, does not consist of parts; for it would be all, if it were all the parts.

Theaetetus:: It seems not.

Socrates:: But is a part a part of any thing else than a whole?

Theaetetus:: Yes, of the all.

Socrates:: You fight manfully, Theætetus. But is not this very all, the all when nothing is wanting to it?

Theaetetus:: Necessarily so.

Socrates:: And will not the whole be this very same thing when nothing is wanting to it? but when any thing is wanting, it is neither the whole, nor all, each becoming the same thing from the same cause?

Theaetetus:: It appears to me now, that the whole and the all in no respect differ from each other.

Socrates:: Did we not say, that where there are parts, the whole and the all will be all the parts?

Theaetetus:: Certainly.

Socrates:: Again, therefore, to return to what I just now attempted to prove, if a syllable is not the elements, does it not necessarily follow that it has not elements as parts of itself, or that, if it is the same with them, it must be equally known with them?

Theaetetus:: Just so.

Socrates:: In order that this might not follow, did we not suppose it to be different from them?

Theaetetus:: Yes.

Socrates:: What then? if the elements are not parts of a syllable, can you mention any other things that are parts of a syllable, and yet not its elements?

Theaetetus:: By no means; for if, Socrates, I should admit that it has parts, it would surely be ridiculous to reject the elements and search for other things.

Socrates:: From what you now say, therefore, Theætetus, a syllable must certainly be some one indivisible form.

Theaetetus:: So it seems.

Socrates:: Do you remember then, my friend, that we admitted a little before, and thought it was well said, that there cannot be a definition of first elements, of which other things are composed, because each considered by itself is uncompounded, and neither can the term “being” be correctly attributed to it nor the term “this,” because these things would be said as different and foreign to it, and indeed this very cause makes it indefinable and unknown.

Theaetetus:: I do remember.

Socrates:: Is there any other cause, then, than this of its being simple and indivisible? I for my part see no other.

Theaetetus:: There does not appear to be any.

Socrates:: Does not the syllable, then, fall under the same class as the elements, since it has not parts, and is one form?

Theaetetus:: Assuredly.

Socrates:: If, therefore, a syllable is many elements, and a whole, and these are its parts, syllables and elements may be equally known and defined, since all the parts have been found to be the same as the whole.

Theaetetus:: By all means.

Socrates:: But if it is one and indivisible, a syllable equally as an element must be indefinable and unknown; for the same cause will make them alike.

Theaetetus:: I cannot say otherwise.

Socrates:: We must not, therefore, allow this, if any one should say, that a syllable is known and definable, but an element the contrary.

Theaetetus:: We must not, if we admit this reasoning.

Socrates:: What then? should you pay any more attention to one who should assert the contrary of what you are conscious happened to yourself in learning your letters?

Theaetetus:: What is that?

Socrates:: That in learning you did nothing else than endeavor to distinguish the elements both by sight and hearing, each separated by itself, in order that their position when pronounced or written, might not confuse you.

Theaetetus:: You say most truly.

Socrates:: And at your music-master's was learning perfectly any thing else than the being able to follow each note, and distinguish to what chord it belonged, which every one would allow is called the elements of music.

Theaetetus:: Nothing else.

Socrates:: If, therefore, we may conjecture from the elements and syllables in which we are skilled, to others, we shall say that the class of elements are capable of a much more clear and distinct knowledge than that of syllables, in order to our acquiring each study in perfection; and if any one should say that a syllable is known, but that an element is by nature unknown, we shall think that he is jesting either intentionally or unintentionally.

Theaetetus:: Most assuredly.

Socrates:: Moreover, other proofs of this might still be found, as it appears to me; but let us not lose sight of the question before us by considering them, that is to say, what is meant by the statement, that reason united to true judgment is the most perfect science.

Theaetetus:: This, then, we must consider.

Socrates:: Come then, what is the signification of the word *logos*: for it appears to me to mean one of three things.

Theaetetus:: What are they?

Socrates:: The first would be to make one's thought clear by the voice, through the means of verbs and nouns, impressing one's judgment on what flows from the mouth, as it were on a mirror, or water; does not *logos* appear to you to be something of this kind?

Theaetetus:: It does: and we say that he who does this speaks.

Socrates:: Every one, therefore, is able to do this more quickly or slowly, that is, can show what he thinks about every thing, unless he is altogether dumb or deaf, and thus all who form right judgments on any matter, will be found to do so in conjunction with *logos*, and right judgment will never subsist without science.

Theaetetus:: True.

Socrates:: We must not, therefore, too readily condemn him as having spoken nothing to the purpose, who asserted that science is that which we are now examining. For perhaps he who said it did not mean that, but that a person, when asked what each thing is, should be able to give an answer to the questioner by means of each thing's element.

Theaetetus:: For instance, how do you mean, Socrates?

Socrates:: As Hesiod for instance says of a chariot, that it is made of a hundred pieces of wood, which I, for my part, could not enumerate, neither do I think could you, but we should be contented, if when asked what a chariot is, we could say wheels, axle, frame, rails, and yoke.

Theaetetus:: Certainly.

Socrates:: But he probably would think us ridiculous, just as if we, when asked concerning your name and having answered syllable by syllable, thereby judging and saying correctly what we do say, should think ourselves grammarians, and that we know and speak grammatically the definition of the name of Theætetus; whereas it is not possible to say any thing scientifically, before one has given a complete account of each thing by means of its elements, together with true judgment, as was observed before, if I mistake not.

Theaetetus:: It was observed.

Socrates:: So, too, we have a correct judgment respecting a chariot, but he who is able to describe its nature by means of those hundred pieces, by adding this, both adds *logos* to true judgment, and instead of forming a mere judgment becomes an artist and knowing in the nature of a chariot, in that he gives a complete account of the whole, by means of its elements.

Theaetetus:: Does not this appear to you, Socrates, to be well said?

Socrates:: If it appears to you, my friend, and you allow that the description of each thing by its element is *logos*, and that that made by syllables, or even larger parts is devoid of *logos*, tell me, that we may examine it.

Theaetetus:: I certainly do allow it.

Socrates:: Whether do you think that any one has a scientific knowledge of any thing, when the same thing appears to him at one time to belong to the same thing and at another to a different thing, or when he forms at one time one judgment and at another a different judgment about the same thing?

Theaetetus:: By Jupiter, not I.

Socrates:: Have you forgotten then, that in learning your letters at first both you and others did this?

Theaetetus:: Do you mean that we thought that at one time one letter, and at another time another, belonged to the same syllable, and that we placed the same letter at one time to its proper syllable, and at another time to another?

Socrates:: I do mean that.

Theaetetus:: By Jupiter, I do not forget, nor do I think that they have knowledge who are in this condition.

Socrates:: What then? when a person at that time of life writing the name Theætetus, thinks that he ought to write and does write *Th* and *e*, and again attempting to write Theodorus, thinks that he ought to write and does write *T* and *e*, shall we say that he knows the first syllable of your names?

Theaetetus:: We have just now admitted, that a person in this condition does not yet know.

Socrates:: Does any thing, then, hinder the same person from being in this condition with respect to the second, third, and fourth syllable?

Theaetetus:: Nothing.

Socrates:: Will he not then have the description by means: of the elements, and write Theætetus with correct judgment, when he writes it in its proper order?

Theaetetus:: Clearly.

Socrates:: Will he not still be void of science, though he judges correctly, as we said?

Theaetetus:: Yes.

Socrates:: And yet he has *logos* together with correct judgment; for he wrote it knowing the order of the elements, which we allowed to be *logos*.

Theaetetus:: True.

Socrates:: There is, therefore, my friend, correct judgment accompanied with *logos* which must not yet be called science.

Theaetetus:: It seems so.

Socrates:: We have been enriched then, as it appears, in a dream, in thinking that we possess the truest definition of science: or shall we not condemn it yet? For perhaps some one may not define *logos* in this manner, but may consider it to be the remaining species of the three, one of which we said would be adopted by him who defined science to be correct judgment accompanied with *logos*.

Theaetetus:: You have rightly reminded me; for there is still one left. For the first was an image of the thought as it were expressed by the voice: and that just now mentioned was a proceeding to the whole by means of the elements: but what do you say the third is?

Socrates:: That which most men would say it is, the being able to mention some mark by which the object of enquiry differs from all other things.

Theaetetus:: Can you give me a *logos* of any thing by way of example?

Socrates:: For instance, if you please, with respect to the sun, I think it would be sufficient for you to admit, that it is the most luminous of the heavenly bodies that move round the earth.

Theaetetus:: Certainly.

Socrates:: Observe then why this was said. It is that which we just now mentioned, that when you find the difference of each thing, by which it differs from all others, you will find, as some say, the *logos*; but as long as you lay hold of some common quality, you will have the *logos* of those things to which this common quality belongs.

Theaetetus:: I understand; and it appears to me very proper to call such a thing *logos*.

Socrates:: He, therefore, who together with correct judgment respecting any thing whatever can find out its difference from all other things, will have arrived at the knowledge of that of which he before only formed a judgment.

Theaetetus:: We say it certainly is so.

Socrates:: Now, however, Theætetus, since I have come near what has been said, as if it were a picture in perspective, I find that I do not understand it in the least, but while I stood at a distance it appeared to me to have some meaning.

Theaetetus:: How is this?

Socrates:: I will tell you, if I can. If, when I have a correct judgment respecting you, I likewise find your *logos*, then I know you, but if not, I only form a judgment.

Theaetetus:: Yes.

Socrates:: But *logos* was the explanation of your difference.

Theaetetus:: It was.

Socrates:: When, therefore, I formed a judgment only, is it not true that I reached by my thought none of those things by which you differ from others?

Theaetetus:: It seems that you did not.

Socrates:: I, therefore, thought of some common qualities, none of which belong to you more than to any one else.

Theaetetus:: Necessarily so.

Socrates:: Come, then, by Jupiter, how in such a case did I form a judgment of you rather than of any one else? For suppose me to be thinking that this is Theætetus, who is a man, and has nose, eyes, a mouth, and so on with each several member. Will this thought cause me to think of Theætetus rather than of Theodorus, or, as the saying is, the last of the Mysians?

Theaetetus:: How should it?

Socrates:: But if I not only think of one who has nose and eyes, but also of one who has a snub nose and prominent eyes, shall I in that case think of you rather than of myself, or any other persons of that description?

Theaetetus:: Not at all.

Socrates:: But I think I shall not form the image of Theætetus in my mind, until his snubbiness shall have impressed on me and left with me some mark different from all other instances of snubbiness that I have seen, and so with respect to the other parts of which you are made up; which, if I should meet you to-morrow, would recall you to my mind, and make me form a correct judgment respecting you.

Theaetetus:: Most true.

Socrates:: Right judgment, therefore, respecting each object has to do with difference.

Theaetetus:: It appears so.

Socrates:: What then will become of adding *logos* to correct judgment? For if it means that we should moreover form a judgment of the manner in which any thing differs from others, the injunction will be very ridiculous.

Theaetetus:: How so?

Socrates:: It bids us add a right judgment of the manner in which things differ from others, when we have a right judgment of the manner in which they differ from others. And thus the turning round of a scytala, or a pestle, or any other proverb of the kind, would be nothing compared with this injunction, though it might more properly be called the advice of a blind man; for to bid us add those things that we already have, in order that we may learn what we already have formed judgments about, seems remarkably suited to one who is utterly blind.

Theaetetus:: Tell me, then, what did you mean by asking me just now?

Socrates:: If, O boy, in bidding us add *logos* it bids us know, but not form a judgment of the difference, this most beautiful of all the definitions of science would be a delightful thing: for to know, surely, is to acquire science. Is it not?

Theaetetus:: Yes.

Socrates:: When asked, therefore, as it appears, what science is, he will answer, that it is correct judgment with the science of difference. For, according to him, this will be the addition of *logos*.

Theaetetus:: It seems so.

Socrates:: But it is altogether foolish, when we are searching for science, to say that it is correct judgment with science, either of difference or any thing else. Neither perception, therefore, Theætetus, nor true judgment, nor *logos* united with true judgment, can be science.

Theaetetus:: It seems not.

Socrates:: Are we, then, still pregnant and in labor, my friend, with reference to science, or have we brought forth every thing?

Theaetetus:: And by Jupiter, with your help, I have said more than I had in myself.

Socrates:: Does not, then, our midwife's art pronounce that all these things are empty, and not worth rearing?

Theaetetus:: Assuredly.

Socrates:: If, therefore, after this you should wish to become pregnant with other things, Theætetus, and if you do become so, you will be full of better things by means of the present discussion; but if you should be empty, you will be less troublesome to your companions, and more meek through modesty, in not thinking that you know what you do not know. For thus much only my art is able to accomplish, but nothing more, nor do I know any of the things which others do who are and have been great and wonderful men. But this midwife's art I and my mother received from the deity; she about women, and I for young and noble men and such as are beautiful. Now, however, I must go to the king's porch, to answer the indictment which Melitus has preferred against me: to-morrow, Theodorus, let us meet here again.

# Theaetetus.

Translated by F. M. Cornford.

Socrates, Theodorus, Theaetetus, Euclid, Terpsion

Euclid:: Have you only just come to town, Terpsion?

Terpsion:: No, some time ago. What is more, I was looking for you in the market place and surprised that I could not find you.

Euclid:: I was not in the city.

Terpsion:: Where were you, then?

Euclid:: On my way down to the harbor I met them carrying Theaetetus to Athens from the camp at Corinth.

Terpsion:: Alive or dead?

Euclid:: Only just alive. He is suffering from severe wounds, and still more from having caught the sickness that has broken out in the army.

Terpsion:: The dysentery?

Euclid:: Yes.

Terpsion:: How sad that such a man should be so near death!

Euclid:: An admirable man, Terpsion, and a brave one. Indeed, only just now I was hearing warm praise of his conduct in the battle.

Terpsion:: There is nothing strange in that; it would have been much more surprising if he had behaved otherwise. But why did he not stay here at Megara?

Euclid:: He was eager to get home. I begged him to stay, but he would not listen to my advice. I went some way with him, and then, as I was coming back, I recalled what Socrates had said about him, and was filled with wonder at this signal instance of his prophetic insight. Socrates must have met him shortly before his own death, when Theaetetus was little more than a boy. They had some talk together, and Socrates was delighted with the promise he showed. When I visited Athens he repeated to me their conversation, which was well worth the hearing, and he added that Theaetetus could not fail to become a remarkable man if he lived.

Terpsion:: And apparently he was right. But what was this conversation? Could you repeat it?

Euclid:: Certainly not, just from memory. But I made some notes at the time, as soon as I got home, and later on I wrote out what I could recall at my leisure. Then, every time I went to Athens, I questioned Socrates upon any point where my memory had failed and made corrections on my return. In this way I have pretty well the whole conversation written down.

Terpsion:: True. I have heard you mention it before, and indeed I have always meant to ask you to show it to me; only I have let the matter slip till this moment. Why should we not go through it now? In any case I am in need of a rest after my walk to town.

Euclid:: For that matter, I should be glad of a rest myself, for I went as far as Erineum with Theaetetus. Let us go indoors, and, while we are resting, my servant shall read to us.

Terpsion:: Very well.

Euclid:: This is the book, Terpsion. You see how I wrote the conversation—not in narrative form, as I heard it from Socrates, but as a dialogue between him and the other persons he told me had taken part. These were Theodorus the geometer and Theaetetus. I wanted to avoid in the written account the tiresome effect of bits of narrative interrupting the dialogue, such as ‘and I said' or ‘and I remarked' wherever Socrates was speaking of himself, and 'he assented' or 'he did not agree,' where he reported the answer. So I left out everything of that sort, and wrote it as a direct conversation between the actual speakers.

Terpsion:: That was quite a good notion, Euclides.

Euclid:: Well, boy, take the book and read.

Socrates:: If I took more interest in the affairs of Cyrene, Theodorus, I should ask you for the news from those parts and whether any of the young men there are devoting themselves to geometry or to any other sort of liberal study. But really I care more for our young men here and I am anxious rather to know which of them are thought likely to distinguish themselves. That is what I am always on the lookout for myself, to the best of my powers, and I make inquiries of anyone whose society I see the young men ready to seek. Now you attract a large following, as you deserve for your skill in geometry, not to mention your other merits. So, if you have met with anyone worthy of mention, I should be glad to hear of it.

Theodorus:: Yes, Socrates, I have met with a youth of this city who certainly deserves mention, and you will find it worth while to hear me describe him. If he were handsome, I should be afraid to use strong terms, lest I should be suspected of being in love with him. However, he is not handsome, but—forgive my saying so—he resembles you in being snub-nosed and having prominent eyes, though these features are less marked in him. So I can speak without fear. I assure you that, among all the young men I have met with—and I have had to do with a good many—I have never found such admirable gifts. The combination of a rare quickness of intelligence with exceptional gentleness and of an incomparably virile spirit with both, is a thing that I should hardly have believed could exist, and I have never seen it before. In general, people who have such keen and ready wits and such good memories as he are also quick-tempered and passionate; they dart about like ships without ballast, and their temperament is rather enthusiastic than strong, whereas the steadier sort are somewhat dull when they come to face study, and they forget everything. But his approach to learning and inquiry, with the perfect quietness of its smooth and sure progress, is like the noiseless flow of a stream of oil. It is wonderful how he achieves all this at his age.

Socrates:: That is good news. Who is his father?

Theodorus:: I have heard the name, but I do not remember it. However, there he is, the middle one of those three who are coming toward us. He and these friends of his have been rubbing themselves with oil in the portico outside, and, now they have finished, they seem to be coming this way. See if you recognize him.

Socrates:: Yes, I do; his father was Euphronius of Sunium, just such another as his son is by your account. He was a man of good standing, and I believe he left a considerable fortune. But I don't know the lad's name.

Theodorus:: His name is Theaetetus, Socrates, but I fancy the property has been squandered by trustees. Nonetheless, liberality with his money is another of his admirable traits.

Socrates:: You give him a noble character. Please ask him to come and sit down with us.

Theodorus:: I will. Theaetetus, come this way and sit by Socrates.

Socrates:: Yes, do, Theaetetus, so that I may study the character of my own countenance, for Theodorus tells me it is like yours. Now, suppose we each had a lyre, and

Theodorus said they were both tuned to the same pitch, should we take his word at once, or should we try to find out whether he was a musician?

Theaetetus:: We should try to find that out.

Socrates:: And believe him, if we discovered that he was musical, but not otherwise?

Theaetetus:: True.

Socrates:: And now, if this alleged likeness of our faces is a matter of any interest to us, we must ask whether it is a skilled draftsman who informs us of it.

Theaetetus:: I agree.

Socrates:: Well, is Theodorus a painter?

Theaetetus:: Not so far as I know.

Socrates:: Nor an expert in geometry either?

Theaetetus:: Of course he is, Socrates, very much so.

Socrates:: And also in astronomy and calculation and music and in all the liberal arts?

Theaetetus:: I am sure he is.

Socrates:: Then, if, in the way of compliment or otherwise, he tells us of some physical likeness between us, there is no special reason why we should attend to him.

Theaetetus:: Possibly not.

Socrates:: But suppose he should praise the mind of either of us for its virtue and intelligence. Would there not be good reason why the one who heard the other praised should be eager to examine him, and he should be equally eager to show his quality?

Theaetetus:: Certainly, Socrates.

Socrates:: Now is the time, then, my dear Theaetetus, for you to show your qualities and for me to examine them. I can assure you that, often as Theodorus has spoken to me in praise of citizen or stranger, he has never praised anyone as he was praising you just now.

Theaetetus:: That is good hearing, Socrates. But perhaps he was not speaking seriously.

Socrates:: No, that would not be like Theodorus. Do not try to slip out of your bargain on the pretext that he was not serious. We don't want him to have to give evidence on oath. In any case no one is going to indict him for perjury; so do not be afraid to abide by your agreement.

Theaetetus:: Well, so it shall be, if you wish it.

Socrates:: Tell me, then, you are learning some geometry from Theodorus?

Theaetetus:: Yes.

Socrates:: And astronomy and harmonics and arithmetic?

Theaetetus:: I certainly do my best to learn.

Socrates:: So do I, from him and from anyone else who seems to understand these things. I do moderately well in general, but all the same I am puzzled about one small matter which you and our friends must help me to think out. Tell me, is it not true that learning about something means becoming wiser in that matter?

Theaetetus:: Of course.

Socrates:: And what makes people wise is wisdom, I suppose.

Theaetetus:: Yes.

Socrates:: And is that in any way different from knowledge?

Theaetetus:: Is what different?

Socrates:: Wisdom. Are not people wise in the things of which they have knowledge?

Theaetetus:: Certainly.

Socrates:: Then knowledge and wisdom are the same thing?

Theaetetus:: Yes.

Socrates:: Well, that is precisely what I am puzzled about. I cannot make out to my own satisfaction what knowledge is. Can we answer that question? What do you all say? Which of us will speak first? Everyone who misses shall ‘sit down and be donkey,' as children say when they are playing at ball; anyone who gets through without missing shall be king and have the right to make us answer any question he likes. Why are you all silent? I hope, Theodorus, that my passion for argument is not making me ill-mannered, in my eagerness to start a conversation and set us all at ease with one another like friends?

Theodorus:: Not at all, Socrates; there is nothing ill-mannered in that. But please ask one of these young people to answer your questions; I am not at home in an abstract discussion of this sort, nor likely to become so at my age. But it is just the thing for them, and they have a far better prospect of improvement; youth, indeed, is capable of improving at anything. So do not let Theaetetus off; go on putting your questions to him.

Socrates:: You hear what Theodorus says, Theaetetus. I do not think you will want to disobey him, and it would be wrong for you not to do what an older and wiser man bids you. So tell me, in a generous spirit, what you think knowledge is.

Theaetetus:: Well, Socrates, I cannot refuse, since you and Theodorus ask me. Anyhow, if I do make a mistake, you will set me right.

Socrates:: By all means, if we can.

Theaetetus:: Then I think the things one can learn from Theodorus are knowledge—geometry and all the sciences you mentioned just now, and then there are the crafts of the cobbler and other workmen. Each and all of these are knowledge and nothing else.

Socrates:: You are generous indeed, my dear Theaetetus—so openhanded that, when you are asked for one simple thing, you offer a whole variety.

Theaetetus:: What do you mean, Socrates?

Socrates:: There may be nothing in it, but I will explain what my notion is. When you speak of cobbling, you mean by that word precisely a knowledge of shoemaking?

Theaetetus:: Precisely.

Socrates:: And when you speak of carpentry, you mean just a knowledge of how to make wooden furniture?

Theaetetus:: Yes.

Socrates:: In both cases, then, you are defining what the craft is a knowledge of?

Theaetetus:: Yes.

Socrates:: But the question you were asked, Theaetetus, was not, what are the objects of knowledge, nor yet how many sorts of knowledge there are. We did not want to count them, but to find out what the thing itself—knowledge—is. Is there nothing in that?

Theaetetus:: No, you are quite right.

Socrates:: Take another example. Suppose we were asked about some obvious common thing, for instance, what clay is; it would be absurd to answer: potter's clay, and oven-maker's clay, and brick-maker's clay.

Theaetetus:: No doubt.

Socrates:: To begin with, it is absurd to imagine that our answer conveys any meaning to the questioner, when we use the word ‘clay,' no matter whose clay we call it—the doll-maker's or any other craftsman's. You do not suppose a man can understand the name of a thing, when he does not know what the thing is?

Theaetetus:: Certainly not.

Socrates:: Then, if he has no idea of knowledge, ‘knowledge about shoes' conveys nothing to him?

Theaetetus:: No.

Socrates:: ‘Cobblery,' in fact, or the name of any other art has no meaning for anyone who has no conception of knowledge.

Theaetetus:: That is so.

Socrates:: Then, when we are asked what knowledge is, it is absurd to reply by giving the name of some art. The answer is ‘knowledge of so-and-so,' but that was not what the question called for.

Theaetetus:: So it seems.

Socrates:: And besides, we are going an interminable way round, when our answer might be quite short and simple. In this question about clay, for instance, the simple and ordinary thing to say is that clay is earth mixed with moisture, never mind whose clay it may be.

Theaetetus:: It appears easy now, Socrates, when you put it like that. The meaning of your question seems to be the same sort of thing as a point that came up when your namesake, Socrates here, and I were talking not long ago.

Socrates:: What was that, Theaetetus?

Theaetetus:: Theodorus here was proving to us something about square roots, namely, that the sides [or roots] of squares representing three square feet and five square feet are not commensurable in length with the line representing one foot, and he went on in this way, taking all the separate cases up to the root of seventeen square feet. There for some reason he stopped. The idea occurred to us, seeing that these square roots were evidently infinite in number, to try to arrive at a single collective term by which we could designate all these roots.

Socrates:: And did you find one?

Theaetetus:: I think so, but I should like your opinion.

Socrates:: Go on.

Theaetetus:: We divided number in general into two classes. Any number which is the product of a number multiplied by itself we likened to the square figure, and we called such a number ‘square' or ‘equilateral.'

Socrates:: Well done!

Theaetetus:: Any intermediate number, such as three or five or any number that cannot be obtained by multiplying a number by itself, but has one factor either greater or less than the other, so that the sides containing the corresponding figure are always unequal, we likened to the oblong figure, and we called it an oblong number.

Socrates:: Excellent. And what next?

Theaetetus:: All the lines which form the four equal sides of the plane figure representing the equilateral number we defined as length, while those which form the sides of squares equal in area to the oblongs we called roots [surds], as not being commensurable with the others in length, but only in the plane areas to which their squares are equal. And there is another distinction of the same sort in the case of solids.

Socrates:: Nothing could be better, my young friends; I am sure there will be no prosecuting Theodorus for false witness.

Theaetetus:: But, Socrates, I cannot answer your question about knowledge as we answered the question about the length and the root. And yet you seem to want something of that kind; so, on the contrary, it does appear that Theodorus was not speaking the truth.

Socrates:: Why, if he had praised your powers of running and declared that he had never met with a young man who was so good a runner, and then you had been beaten in a race by the greatest of runners at the height of his powers, do you think that his praise would have been any the less truthful?

Theaetetus:: No, I don't.

Socrates:: Well, as I said just now, do you fancy it is a small matter to discover the nature of knowledge? Is it not one of the hardest questions?

Theaetetus:: One of the very hardest, I should say.

Socrates:: You may be reassured, then, about Theodorus' account of you, and set your mind on finding a definition of knowledge, as of anything else, with all the zeal at your command.

Theaetetus:: If it depends on my zeal, Socrates, the truth will come to light.

Socrates:: Forward, then, on the way you have just shown so well. Take as a model your answer about the roots. Just as you found a single character to embrace all that multitude, so now try to find a single formula that applies to the many kinds of knowledge.

Theaetetus:: But I assure you, Socrates, I have often set my self to study that problem, when I heard reports of the questions you ask. But I cannot persuade myself that I can give any satisfactory solution or that anyone has ever stated in my hearing the sort of answer you require. And yet I cannot get the question out of my mind.

Socrates:: My dear Theaetetus, that is because your mind is not empty or barren. You are suffering the pains of travail.

Theaetetus:: I don't know about that, Socrates. I am only telling you how I feel.

Socrates:: How absurd of you, never to have heard that I am the son of a midwife, a fine buxom woman called Phaenarete.

Theaetetus:: I have heard that.

Socrates:: Have you also been told that I practice the same art?

Theaetetus:: NO, never.

Socrates:: It is true, though; only don't give away my secret. It is not known that I possess this skill; so the ignorant world describes me in other terms as an eccentric person who reduces people to hopeless perplexity. Have you been told that too?

Theaetetus:: I have.

Socrates:: Shall I tell you the reason?

Theaetetus:: Please do.

Socrates:: Consider, then, how it is with all midwives; that will help you to understand what I mean. I dare say you know that they never attend other women in childbirth so long as they themselves can conceive and bear children, but only when they are too old for that.

Theaetetus:: Of course.

Socrates:: They say that is because Artemis, the patroness of childbirth, is herself childless, and so, while she did not allow barren women to be midwives, because it is beyond the power of human nature to achieve skill without any experience, she assigned the privilege to women who were past childbearing, out of respect to their likeness to herself.

Theaetetus:: That sounds likely.

Socrates:: And it is more than likely, is it not, that no one can tell so well as a midwife whether women are pregnant or not?

Theaetetus:: Assuredly.

Socrates:: Moreover, with the drugs and incantations they administer, midwives can either bring on the pains of travail or allay them at their will, make a difficult labor easy, and at an early stage cause a miscarriage if they so decide.

Theaetetus:: True.

Socrates:: Have you also observed that they are the cleverest matchmakers, having an unerring skill in selecting a pair whose marriage will produce the best children?

Theaetetus:: I was not aware of that.

Socrates:: Well, you may be sure they pride themselves on that more than on cutting the umbilical cord. Consider the knowledge of the sort of plant or seed that should be sown in any given soil. Does not that go together with skill in tending and harvesting the fruits of the earth? They are not two different arts?

Theaetetus:: No, the same.

Socrates:: And so with a woman; skill in the sowing is not to be separated from skill in the harvesting?

Theaetetus:: Probably not.

Socrates:: No. Only, because there is that wrong and ignorant way of bringing together man and woman which they call pandering, midwives, out of self-respect, are shy even of matchmaking, for fear of falling under the accusation of pandering. Yet the genuine midwife is the only successful matchmaker.

Theaetetus:: That is clear.

Socrates:: All this, then, lies within the midwife's province, but her performance falls short of mine. It is not the way of women sometimes to bring forth real children, sometimes mere phantoms, such that it is hard to tell the one from the other. If it were so, the highest and noblest task of the midwife would be to discern the real from the unreal, would it not?

Theaetetus:: I agree.

Socrates:: My art of midwifery is in general like theirs; the only difference is that my patients are men, not women, and my concern is not with the body but with the soul that is in travail of birth. And the highest point of my art is the power to prove by every test whether the offspring of a young man's thought is a false phantom or instinct with life and truth. I am so far like the midwife that I cannot myself give birth to wisdom, and the common reproach is true, that, though I question others, I can myself bring nothing to light because there is no wisdom in me. The reason is this. Heaven constrains me to serve as a midwife, but has debarred me from giving birth. So of my self I have no sort of wisdom, nor has any discovery ever been born to me as the child of my soul. Those who frequent my company at first appear, some of them, quite unintelligent, but, as we go further with our discussions, all who are favored by heaven make progress at a rate that seems surprising to others as well as to themselves, although it is clear that they have never learned anything from me. The many admirable truths they bring to birth have been discovered by themselves from within. But the delivery is heaven's work and mine.

The proof of this is that many who have not been conscious of my assistance but have made light of me, thinking it was all their own doing, have left me sooner than they should, whether under others' influence or of their own motion, and thenceforward suffered miscarriage of their thoughts through falling into bad company, and they have lost the children of whom I had delivered them by bringing them up badly, caring more for false phantoms than for the true. And so at last their lack of understanding has become apparent to themselves and to everyone else. Such a one was Aristides, son of Lysimachus, and there have been many more. When they come back and beg for a renewal of our intercourse with extravagant protestations, sometimes the divine warning that comes to me forbids it; with others it is permitted, and these begin again to make progress. In yet another way those who seek my company have the same experience as a woman with child; they suffer the pains of labor and, by night and day, are full of distress far greater than a woman's, and my art has power to bring on these pangs or to allay them. So it fares with these, but there are some, Theaetetus, whose minds, as I judge, have never conceived at all. I see that they have no need of me and with all good will I seek a match for them. Without boasting unduly, I can guess pretty well whose society will profit them. I have arranged many of these matches with Prodicus, and with other men of inspired sagacity.

And now for the upshot of this long discourse of mine. I suspect that, as you yourself believe, your mind is in labor with some thought it has conceived. Accept, then, the ministration of a midwife's son who himself practices his mother's art, and do the best you can to answer the questions I ask. Perhaps when I examine your statements I may judge one or another of them to be an unreal phantom. If I then take the abortion from you and cast it away, do not be savage with me like a woman robbed of her first child. People have often felt like that toward me and been positively ready to bite me for taking away some foolish notion they have conceived. They do not see that I am doing them a kindness. They have not learned that no divinity is ever ill-disposed toward man, nor is such action on my part due to unkindness; it is only that I am not permitted to acquiesce in falsehood and suppress the truth.

So, Theaetetus, start again and try to explain what knowledge is. Never say it is beyond your power; it will not be so, if heaven wills and you take courage.

Theaetetus:: Well, Socrates, with such encouragement from a person like you, it would be a shame not to do one's best to say what one can. It seems to me that one who knows something is perceiving the thing he knows, and, so far as I can see at present, knowledge is nothing but perception.

Socrates:: Good. That is the right spirit in which to express one's opinion. But now suppose we examine your offspring together, and see whether it is a mere wind egg or has some life in it. Perception, you say, is knowledge?

Theaetetus:: Yes.

Socrates:: The account you give of the nature of knowledge is not, by any means, to be despised. It is the same that was given by Protagoras, though he stated it in a somewhat different way. He says, you will remember, that ‘man is the measure of all things—alike of the being of things that are and of the not-being of things that are not.' No doubt you have read that.

Theaetetus:: Yes, often.

Socrates:: He puts it in this sort of way, doesn't he, that any given thing ‘is to me such as it appears to me, and is to you such as it appears to you,' you and I being men?

Theaetetus:: Yes, that is how he puts it.

Socrates:: Well, what a wise man says is not likely to be nonsense. So let us follow up his meaning. Sometimes, when the same wind is blowing, one of us feels chilly, the other does not, or one may feel slightly chilly, the other quite cold.

Theaetetus:: Certainly.

Socrates:: Well, in that case are we to say that the wind in itself is cold or not cold? Or shall we agree with Protagoras that it is cold to the one who feels chilly, and not to the other?

Theaetetus:: That seems reasonable.

Socrates:: And further that it so ‘appears' to each of us?

Theaetetus:: Yes.

Socrates:: And ‘appears' means that he ‘perceives' it so?

Theaetetus:: True.

Socrates:: ‘Appearing,' then, is the same thing as ‘perceiving,' in the case of what is hot or anything of that kind. They are to each man such as he perceives them.

Theaetetus:: So it seems.

Socrates:: Perception, then, is always of something that is, and, as being knowledge, it is infallible.

Theaetetus:: That is clear.

Socrates:: Can it be, then, that Protagoras was a very ingenious person who threw out this dark saying for the benefit of the common herd like ourselves, and reserved the truth as a secret doctrine to be revealed to his disciples?

Theaetetus:: What do you mean by that, Socrates?

Socrates:: I will tell you, and indeed the doctrine is a remarkable one. It declares that nothing is one thing just by itself, nor can you rightly call it by some definite name, nor even say it is of any definite sort. On the contrary, if you call it ‘large,' it will be found to be also small, if ‘heavy,' to be also light, and so on all through, because nothing is one thing or some thing or of any definite sort. All the things we are pleased to say ‘are,' really are in process of becoming, as a result of movement and change and of blending one with another. We are wrong to speak of them as ‘being,' for none of them ever is; they are always becoming. In this matter let us take it that, with the exception of Parmenides, the whole series of philosophers agree—Protagoras, Heraclitus, Empedocles—and among the poets the greatest masters in both kinds, Epicharmus in comedy, Homer in tragedy. When Homer speaks of ‘Oceanus, source of the gods, and mother Tethys,' he means that all things are the offspring of a flowing stream of change. Don't you understand him so?

Theaetetus:: Certainly.

Socrates:: Who, then, could challenge so great an array, with Homer for its captain, and not make himself a laughingstock?

Theaetetus:: That would be no light undertaking, Socrates.

Socrates:: It would not, Theaetetus. Their doctrine that ‘being,' so called, and ‘becoming' are produced by motion, ‘not-being' and perishing by rest, is well supported by such proofs as these. The hot or fire, which generates and controls all other things, is itself generated by movement and friction—both forms of change. These are ways of producing fire, aren't they?

Theaetetus:: Yes.

Socrates:: And further, all living things are born by the same processes?

Theaetetus:: Assuredly.

Socrates:: Again, the healthy condition of the body is undermined by inactivity and indolence, and to a great extent preserved by exercise and motion, isn't it?

Theaetetus:: Yes.

Socrates:: And so with the condition of the soul. The soul acquires knowledge and is kept going and improved by learning and practice, which are of the nature of movements. By inactivity, dullness, and neglect of exercise, it learns nothing and forgets what it has learned.

Theaetetus:: True.

Socrates:: So, of the two, motion is a good thing for both soul arid body, and immobility is bad.

Theaetetus:: So it appears.

Socrates:: Need I speak further of such things as stagnation in air or water, where stillness causes corruption and decay, when motion would keep things fresh, or, to complete the argument, press into its service that ‘golden rope' in Homer, proving that he means by it nothing more nor less than the sun, and signifies that so long as the heavens and the sun continue to move round, all things in heaven and earth are kept going, whereas if they were bound down and brought to a stand, all things would be destroyed and the world, as they say, turned upside down?

Theaetetus:: I agree with your interpretation, Socrates.

Socrates:: Think of it, then, in this way. First, to take the case of the eyes, you must conceive that what you call white color has no being as a distinct thing outside your eyes nor yet inside them, nor must you assign it any fixed place. Otherwise, of course, it would have its being in an assigned place and abide there, instead of arising in a process of becoming.

Theaetetus:: Well, but how am I to think of it?

Socrates:: Let us follow out our recent statement and lay it down that there is no single thing that is in and by itself. On that showing we shall see that black or white or any color you choose is a thing that has arisen out of the meeting of our eyes with the appropriate motion. What we say ‘is' this or that color will be neither the eye which encounters the motion nor the motion which is encountered, but something which has arisen between the two and is peculiar to each several percipient. Or would you be prepared to maintain that every color appears to a dog or any other creature just such as it appears to you?

Theaetetus:: Certainly not.

Socrates:: Or to another man? Does anything you please appear to him such as it appears to you? Are you quite sure of that? Are you not much rather sure that it does not even appear the same to yourself, because you never remain in the same condition?

Theaetetus:: I think that is much nearer the mark.

Socrates:: So then, if the thing that we measure ourselves against or the thing we touch really were large or white or hot, it would never become different the moment it encountered a different person, supposing it to undergo no change in itself. And again, if the thing which measures itself against the object or touches it were any one of these things, [large, white, etc.] then, when a different thing came into contact with it or were somehow modified, it, on its side, if it were not affected in itself, would not become different. For as things are, we are too easily led into making statements which Protagoras and anyone who maintains the same position would call strange and absurd.

Theaetetus:: How so? What statements do you mean?

Socrates:: Take a simple example, which will make my meaning quite clear. When you compare six dice with four, we say that the six are more than the four or half as many again, while if you compare them with twelve, the six are fewer—only half as many—and one cannot say anything else. Or do you think one can?

Theaetetus:: Certainly not.

Socrates:: Well then, suppose Protagoras or somebody else asks you, Can anything become larger or more otherwise than by being increased? What will you answer?

Theaetetus:: I should answer no, if I were to speak my mind with reference to this last question, but having regard to your previous one, I might reply yes, to guard against contradicting myself.

Socrates:: An excellent answer; really, you might be inspired. But apparently, if you say yes, it will be like the situation in Euripides; the tongue will be incontrovertible, but not the heart.

Theaetetus:: True.

Socrates:: Now, if you and I were like those clever persons who have canvassed all the thoughts of the heart, we might allow ourselves the luxury of trying one another's strength in a regular sophistical set-to, with a great clashing of arguments. But being only ordinary people, we shall prefer first to study the notions we have in our own minds and find out what they are and whether, when we compare them, they agree or are altogether inconsistent.

Theaetetus:: I should certainly prefer that.

Socrates:: So do I, and, that being so, suppose we look at the question again in a quiet and leisurely spirit, not with any impatience but genuinely examining ourselves to see what we can make of these apparitions that present themselves to our minds. Looking at the first of them, I suppose we shall assert that nothing can become greater or less, either in size or in number, so long as it remains equal to itself. Is it not so?

Theaetetus:: Yes.

Socrates:: And secondly, that a thing to which nothing is added and from which nothing is taken away is neither increased nor diminished, but always remains the same in amount.

Theaetetus:: Undoubtedly.

Socrates:: And must we not say, thirdly, that a thing which was not at an earlier moment cannot be at a later moment without becoming and being in process of becoming?

Theaetetus:: It certainly seems so.

Socrates:: Now these three admissions, I fancy, fight among themselves in our minds when we make those statements about the dice, or when we say that I, being of the height you see, without gaining or losing in size, may within a year be taller, as I am now, than a youth like you, and later on be shorter, not because I have lost anything in bulk, but because you have grown. For apparently I am later what I was not before, and yet have not become so, for without the process of becoming the result is impossible, and I could not be in process of becoming shorter without losing some of my bulk. I could give you countless other examples, if we are to accept these. For I think you follow me, Theaetetus; I fancy, at any rate, such puzzles are not altogether strange to you.

Theaetetus:: No, indeed it is extraordinary how they set me wondering whatever they can mean. Sometimes I get quite dizzy with thinking of them.

Socrates:: That shows that Theodorus was not wrong in his estimate of your nature. This sense of wonder is the mark of the philosopher. Philosophy indeed has no other origin, and he was a good genealogist who made Iris the daughter of Thaumas.

Do you now begin to see the explanation of all this which follows from the theory we are attributing to Protagoras? Or is it not yet clear?

Theaetetus:: I can't say it is yet.

Socrates:: Then perhaps you will be grateful if I help you to penetrate to the truth concealed in the thoughts of a man—or, I should say, of men—of such distinction.

Theaetetus:: Of course I shall be very grateful.

Socrates:: Then just take a look round and make sure that none of the uninitiate overhears us. I mean by the uninitiate the people who believe that nothing is real save what they can grasp with their hands and do not admit that actions or processes or anything invisible can count as real.

Theaetetus:: They sound like a very hard and repellent sort of people.

Socrates:: It is true, they are remarkably crude. The others, into whose secrets I am going to initiate you, are much more refined and subtle. Their first principle, on which all that we said just now depends, is that the universe really is motion and nothing else. And there are two kinds of motion. Of each kind there are any number of instances, but they differ in that the one kind has the power of acting, the other of being acted upon. From the intercourse and friction of these with one another arise offspring, endless in number, but in pairs of twins. One of each pair is something perceived, the other a perception, whose birth always coincides with that of the thing perceived. Now, for the perceptions we have names like ‘seeing, “hearing, “smelling, “feeling cold,' ‘feeling hot,' and again pleasures and pains and desires and fears, as they are called, and so on. There are any number that are nameless, though names have been found for a whole multitude. On the other side, the brood of things perceived always comes to birth at the same moment with one or another of these—with instances of seeing, colors of corresponding variety, with instances of hearing, sounds in the same way, and with all the other perceptions, the other things perceived that are akin to them. Now, what light does this story throw on what has gone before, Theaetetus? Do you see?

Theaetetus:: Not very clearly, Socrates.

Socrates:: Well, consider whether we can round it off. The point is that all these things are, as we were saying, in motion, but there is a quickness or slowness in their motion. The slow sort has its motion without change of place and with respect to what comes within range of it, and that is how it generates offspring, but the offspring generated are quicker, inasmuch as they move from place to place and their motion consists in change of place. As soon, then, as an eye and something else whose structure is adjusted to the eye come within range and give birth to the whiteness together with its cognate perception—things that would never have come into existence if either of the two had approached anything else—then it is that, as the vision from the eyes and the whiteness from the thing that joins in giving birth to the color pass in the space between, the eye becomes filled with vision and now sees, and becomes, not vision, but a seeing eye, while the other parent of the color is saturated with whiteness and becomes, on its side, not whiteness, but a white thing, be it stock or stone or whatever else may chance to be so colored.

And so, too, we must think in the same way of the rest—'hard,' ‘hot,' and all of them—that no one of them has any being just by itself, as indeed we said before, but that it is in their intercourse with one another that all arise in all their variety as a result of their motion, since it is impossible to have any ‘firm notion,' as they say, of either what is active or what is passive in them, in any single case, as having any being. For there is no such thing as an agent until it meets with a patient, nor any patient until it meets with its agent. Also what meets with something and behaves as agent, if it encounters something different at another time, shows itself as patient.

The conclusion from all this is, as we said at the outset, that nothing is one thing just by itself, but is always in process of becoming for someone, and being is to be ruled out altogether, though, needless to say, we have been betrayed by habit and inobservance into using the word more than once only just now. But that was wrong, these wise men tell us, and we must not admit the expressions ‘something' or ‘somebody's' or ‘mine' or ‘this' or ‘that' or any other word that brings things to a standstill, but rather speak, in accordance with nature, of what is ‘becoming,' ‘being produced,' ‘perishing,' ‘changing.' For anyone who talks so as to bring things to a standstill is easily refuted. So we must express ourselves in each individual case and in speaking of an assemblage of many—to which assemblage people give the name of ‘man' or ‘stone' or of any living creature or kind.

Does all this please you, Theaetetus? Will you accept it as palatable to your taste?

Theaetetus:: Really, I am not sure, Socrates. I cannot even make out about you, whether you are stating this as something you believe or merely putting me to the test.

Socrates:: You forget, my friend, that I know nothing of such matters and cannot claim to be producing any offspring of my own. I am only trying to deliver yours, and to that end uttering charms over you and tempting your appetite with a variety of delicacies from the table of wisdom, until by my aid your own belief shall be brought to light. Once that is done, I shall see whether it proves to have some life in it or not. Meanwhile, have courage and patience, and answer my questions bravely in accordance with your convictions.

Theaetetus:: Go on with your questioning.

Socrates:: Once more, then, tell me whether you like this notion that nothing is, but is always becoming, good or beautiful or any of the other things we mentioned?

Theaetetus:: Well, when I hear you explaining it as you have, it strikes me as extraordinarily reasonable, and to be accepted as you have stated it.

Socrates:: Then let us not leave it incomplete. There remains the question of dreams and disorders, especially madness and all the mistakes madness is said to make in seeing or hearing or otherwise misperceiving. You know, of course, that in all these cases the theory we have just stated is supposed to be admittedly disproved, on the ground that in these conditions we certainly have false perceptions, and that so far from its being true that what appears to any man also is, on the contrary none of these appearances is real.

Theaetetus:: That is quite true, Socrates.

Socrates:: What argument, then, is left for one who maintains that perception is knowledge, and that what appears to each man also ‘is' for him to whom it appears?

Theaetetus:: I hesitate to say that I have no reply, Socrates, because just now you rebuked me for saying that. Really, I cannot undertake to deny that madmen and dreamers believe what is false, when madmen imagine they are gods or dreamers think they have wings and are flying in their sleep.

Socrates:: Have you not taken note of another doubt that is raised in these cases, especially about sleeping and waking?

Theaetetus:: What is that?

Socrates:: The question I imagine you have often heard asked—what evidence could be appealed to, supposing we were asked at this very moment whether we are asleep or awake, dreaming all that passes through our minds or talking to one another in the waking state?

Theaetetus:: Indeed, Socrates, I do not see by what evidence it is to be proved, for the two conditions correspond in every circumstance like exact counterparts. The conversation we have just had might equally well be one that we merely think we are carrying on in our sleep, and when it comes to thinking in a dream that we are telling other dreams, the two states are extraordinarily alike.

Socrates:: You see, then, that there is plenty of room for doubt, when we even doubt whether we are asleep or awake. And in fact, our time being equally divided between waking and sleeping, in each condition our mind strenuously contends that the convictions of the moment are certainly true, so that for equal times we affirm the reality of the one world and of the other, and are just as confident of both.

Theaetetus:: Certainly.

Socrates:: And the same holds true of disorders and madness, except that the times are not equal.

Theaetetus:: That is so.

Socrates:: Well, is the truth to be decided by length or shortness of time?

Theaetetus:: No, that would be absurd in many ways.

Socrates:: Have you any other certain test to show which of these beliefs is true?

Theaetetus:: I don't think I have.

Socrates:: Then let me tell you what sort of account would be given of these cases by those who lay it down that whatever at any time seems to anyone is true to him. I imagine they would ask this question, Tell us, Theaetetus, when one thing is entirely different from another, it cannot be in any respect capable of behaving in the same way as that other, can it? We are not to understand that the thing we speak of is in some respects the same though different in others, but that it is entirely different.'

Theaetetus:: If so, it can have nothing in common, either in its capabilities of behavior or in any other respect, when it is altogether different.

Socrates:: Must we not admit, then, that such a thing is unlike the other?

Theaetetus:: I agree.

Socrates:: So if it happens that something comes to be like or unlike either itself or something else, we shall say that when it is made like it becomes the same, when unlike, different.

Theaetetus:: Necessarily.

Socrates:: And we said earlier that there was no limit to the number of things that are active or of things that are acted upon by them.

Theaetetus:: Yes.

Socrates:: And further, that when one of these is married to a succession of different partners, the offspring produced will be not the same but different.

Theaetetus:: Certainly.

Socrates:: Now let us take you or me or any other instance to which the principle applies—Socrates in health and Socrates ill. Are we to call one of these like the other or unlike?

Theaetetus:: You mean, is the ill Socrates taken as a whole like Socrates in health taken as a whole?

Socrates:: You understand me perfectly; that is just what I mean.

Theaetetus:: Then of course he is unlike.

Socrates:: And consequently, inasmuch as he is unlike, a different thing?

Theaetetus:: Necessarily.

Socrates:: And you would say the same of Socrates asleep or in any other of the conditions we mentioned?

Theaetetus:: Yes.

Socrates:: Then any one of the objects whose nature it is to act upon something will, according as it finds Socrates well or ill, treat me as a different thing?

Theaetetus:: Of course it will.

Socrates:: And consequently the pair of us—I who am acted upon and the thing that acts on me—will have different offspring in the two cases?

Theaetetus:: Naturally.

Socrates:: Now when I am in health and drink wine, it seems pleasant to me and sweet.

Theaetetus:: Yes.

Socrates:: Because, in accordance with the account we accepted earlier, agent and patient give birth to sweetness and a sensation, both movements that pass simultaneously. The sensation, on the patient's side, makes the tongue percipient, while, on the side of the wine, the sweetness, moving in the region of the wine, causes it both to be and to appear sweet to the healthy tongue.

Theaetetus:: Certainly that was what we agreed upon.

Socrates:: But when it finds me in ill-health, to begin with, the person it finds is not really the same, for the one it now meets with is unlike the other.

Theaetetus:: Yes.

Socrates:: And so this pair—Socrates in this condition and the drinking of the wine—produce a different offspring, in the region of the tongue a sensation of sourness, and in the region of the wine a sourness that arises as a movement there. The wine becomes, not sourness, but sour, while I become, not a sensation, but sentient.

Theaetetus:: Undoubtedly.

Socrates:: It follows, then, that, on my side, I shall never become percipient in just this way of any other thing, for to a different object belongs a different perception, and in acting on its percipient it is acting on a person who is in a different condition and so a different person. Also on its side, the thing which acts on me can never meet with someone else and generate the same offspring and come to be of just this quality, for when it brings to birth another thing from another person, it will itself come to be of another quality.

Theaetetus:: That is so.

Socrates:: Further, I shall not come to have this sensation for myself, nor will the object come to be of such a quality for itself.

Theaetetus:: No.

Socrates:: Rather, when I become percipient, I must become percipient of something, for I cannot have a perception and have it of nothing, and equally the object, when it becomes sweet or sour and so on, must become so to someone—it cannot become sweet and yet sweet to nobody.

Theaetetus:: Quite so.

Socrates:: Nothing remains, then, I suppose, but that it and I should be or become—whichever expression we are to use—for each other. Necessity binds together our existence, but binds neither of us to anything else, nor each of us to himself; so we can only be bound to one another. Accordingly, whether we speak of something ‘being' or of its ‘becoming,' we must speak of it as being or becoming for someone, or of something, or toward something, but we must not speak, or allow others to speak, of a thing as either being or becoming any thing just in and by itself. That is the conclusion to which our argument points.

Theaetetus:: Certainly, Socrates.

Socrates:: And so, since what acts upon me is for me and for no one else, I, and no one else, am actually perceiving it.

Theaetetus:: Of course.

Socrates:: Then my perception is true for me, for its object at any moment is my reality, and I am, as Protagoras says, a judge of what is for me, that it is, and of what is not, that it is not.

Theaetetus:: So it appears.

Socrates:: If, then, I am infallible and make no mistake in my state of mind about what is or becomes, how can I fail to have knowledge of the things of which I have perception?

Theaetetus:: You cannot possibly fail.

Socrates:: So you were perfectly right in saying that knowledge is nothing but perception. And it has turned out that these three doctrines coincide—the doctrine of Homer and Heraclitus and all their tribe that all things move like flowing streams, the doctrine of Protagoras, wisest of men, that man is the measure of all things, and Theaetetus' conclusion that, on these grounds, it results that perception is knowledge.

Is it not so, Theaetetus? May we say that this is your newborn child which I have brought to birth? What do you say?

Theaetetus:: I can only agree, Socrates.

Socrates:: Here at last, then, after our somewhat painful labor, is the child we have brought to birth, whatever sort of creature it may be. His birth should be followed by the ceremony of carrying him round the hearth; we must look at our offspring from every angle to make sure we are not taken in by a lifeless phantom not worth the rearing. Or do you think an infant of yours must be reared in any case and not exposed? Will you bear to see him put to the proof, and not be in a passion if your first-born should be taken away?

Theodorus:: Theaetetus will bear it, Socrates; he is thoroughly good-tempered. But do explain what is wrong with the conclusion.

Socrates:: You have an absolute passion for discussion, Theodorus. I like the way you take me for a sort of bag full of arguments, and imagine I can easily pull out a proof to show that our conclusion is wrong. You don't see what is happening. The arguments never come out of me; they always come from the person I am talking with. I am only at a slight advantage in having the skill to get some account of the matter from another's wisdom and entertain it with fair treatment. So now, I shall not give any explanation myself, but try to get it out of our friend.

Theodorus:: That is better, Socrates; do as you say.

Socrates:: Well then, Theodorus, shall I tell you a thing that surprises me in your friend Protagoras?

Theodorus:: What is that?

Socrates:: The opening words of his treatise. In general, I am delighted with his statement that what seems to anyone also is, but I am surprised that he did not begin his Truth with the words, The measure of all things is the pig, or the baboon, or some sentient creature still more uncouth. There would have been something magnificent in so disdainful an opening, telling us that all the time, while we were admiring him for a wisdom more than mortal, he was in fact no wiser than a tadpole, to say nothing of any other human being. What else can we say, Theodorus? If what every man believes as a result of perception is indeed to be true for him; if, just as no one is to be a better judge of what another experiences, so no one is better entitled to consider whether what another thinks is true or false, and, as we have said more than once, every man is to have his own beliefs for himself alone and they are all right and true—then, my friend, where is the wisdom of Protagoras, to justify his setting up to teach others and to be handsomely paid for it, and where is our comparative ignorance or the need for us to go and sit at his feet, when each of us is himself the measure of his own wisdom? Must we not suppose that Protagoras speaks in this way to flatter the ears of the public? I say nothing of my own case or of the ludicrous predicament to which my art of midwifery is brought, and, for that matter, this whole business of philosophical conversation, for to set about overhauling and testing one another's notions and opinions when those of each and every one are right, is a tedious and monstrous display of folly, if the Truth of Protagoras is really truthful and not amusing herself with oracles delivered from the unapproachable shrine of his book.

Theodorus:: Protagoras was my friend, Socrates, as you were saying, and I would rather he were not refuted by means of any admissions of mine. On the other hand, I cannot resist you against my convictions; so you had better go back to Theaetetus, whose answers have shown, in any case, how well he can follow your meaning.

Socrates:: If you went to a wrestling school at Sparta, Theodorus, would you expect to look on at the naked wrestlers, some of them making a poor show, and not strip so as to let them compare your own figure?

Theodorus:: Why not, if they were likely to listen to me and not insist, just as I believe I shall persuade you to let me look on now? The limbs are stiff at my age, and instead of dragging me into your exercises, you will try a fall with a more supple youth.

Socrates:: Well, Theodorus, as the proverb says, 'What likes you mislikes not me.' So I will have recourse to the wisdom of Theaetetus.

Tell me, then, first, Theaetetus, about the point we have just made. Are not you surprised that you should turn out, all of a sudden, to be every bit as wise as any other man and even as any god? Or would you say that Protagoras' maxim about the measure does not apply to gods just as much as to men?

Theaetetus:: Certainly I think it does, and, to answer your question, I am very much surprised. When we were discussing what they mean by saying that what seems to anyone really is to him who a thinks it so, that appeared to me quite satisfactory, but now, all in a moment, it has taken on a very different complexion.

Socrates:: That, my friend, is because you are young; so you lend a ready ear to claptrap and it convinces you. Protagoras or his representative will have an answer to this. He will say, 'You good people sitting there, boys and old men together, this is all claptrap. You drag in the gods, whose existence or nonexistence I expressly refuse to discuss in my speeches and writings, and you count upon appeals to the vulgar such as this. How strange that any human individual is to be no wiser than the lowest of the brutes! You go entirely by what looks probable, without a word of argument or proof. If a mathematician like Theodorus elected to argue from probability in geometry, he wouldn't be worth an ace. So you and Theodorus might consider whether you are going to allow questions of this importance to be settled by plausible appeals to mere likelihood.'

Theaetetus:: Well, you would not think that right, Socrates, any more than we should.

Socrates:: It seems, then, we must attack the question in another way. That is what you and Theodorus think?

Theaetetus:: Certainly we must.

Socrates:: Let us look at it in this way, then—this question whether knowledge and perception are, after all, the same thing or not. For that, you remember, was the point to which our whole discussion was directed, and it was for its sake that we stirred up all this swarm of queer doctrines, wasn't it?

Theaetetus:: Quite true.

Socrates:: Well, are we going to agree that, whenever we perceive something by sight or hearing, we also at the same time know it? Take the case of a foreign language we have not learned. Are we to say that we do not hear the sounds that foreigners utter, or that we both hear and know what they are saying? Or again, when we don't know our letters, are we to maintain that we don't see them when we look at them, or that, since we see them, we do know them?

Theaetetus:: We shall say, Socrates, that we know just so much of them as we do see or hear. The shape and color of the letters we both see and know; we hear and at the same time know the rising and falling accents of the voice. But we neither perceive by sight and hearing nor yet know what a schoolmaster or an interpreter could tell us about them.

Socrates:: Well done, Theaetetus. I had better not raise objections to that, for fear of checking your growth. But look, here is another objection threatening. How are we going to parry it?

Theaetetus:: What is that?

Socrates:: It is this. Suppose someone to ask, ‘Is it possible for a man who has once come to know something and still preserves a memory of it, not to know just that thing that he remembers at the moment when he remembers it?' This is, perhaps, rather a longwinded way of putting the question. I mean, can a man who has become acquainted with something and remembers it, not know it?

Theaetetus:: Of course not, Socrates, the supposition is monstrous.

Socrates:: Perhaps I am talking nonsense, then. But consider, you call seeing ‘perceiving,' and sight ‘perception,' don't you?

Theaetetus:: I do.

Socrates:: Then, according to our earlier statement, a man who sees something acquires from that moment knowledge of the thing he sees?

Theaetetus:: Yes.

Socrates:: Again, you recognize such a thing as memory?

Theaetetus:: Yes.

Socrates:: Memory of nothing, or of something?

Theaetetus:: Of something, surely.

Socrates:: Of what one has become acquainted with and perceived—that sort of thing?

Theaetetus:: Of course.

Socrates:: So a man sometimes remembers what he has seen?

Theaetetus:: He does.

Socrates:: Even when he shuts his eyes? Or does he forget when he shuts them?

Theaetetus:: No, Socrates, that would be a monstrous thing to say.

Socrates:: All the same, we shall have to say it, if we are to save our former statement. Otherwise, it goes by the board.

Theaetetus:: I certainly have a suspicion that you are right, but I don't quite see how. You must tell me.

Socrates:: In this way. One who sees, we say, acquires knowledge of what he sees, because it is agreed that sight or perception and knowledge are the same thing.

Theaetetus:: Certainly.

Socrates:: But suppose this man who sees and acquires knowledge of what he has seen, shuts his eyes; then he remembers the thing, but does not see it. Isn't that so?

Theaetetus:: Yes.

Socrates:: But ‘does not see it' means ‘does not know it,' since ‘sees' and ‘knows' mean the same.

Theaetetus:: True.

Socrates:: Then the conclusion is that a man who has come to know a thing and still remembers it does not know it, since he does not see it, and we said that would be a monstrous conclusion.

Theaetetus:: Quite true.

Socrates:: Apparently, then, if you say that knowledge and perception are the same thing, it leads to an impossibility.

Theaetetus:: So it seems.

Socrates:: Then we shall have to say they are different.

Theaetetus:: I suppose so.

Socrates:: What, then, can knowledge be? Apparently we must begin all over again. But wait a moment, Theaetetus. What are we doing?

Theaetetus:: Doing about what?

Socrates:: It seems to me we are behaving toward our theory like an ill-bred gamecock who springs away from his adversary and starts crowing over him before he is beaten.

Theaetetus:: How so?

Socrates:: It looks as if we were content to have reached an agreement resting on mere verbal consistency and to have got the better of the theory by the methods of a professional controversialist. We profess to be seeking wisdom, not competing for victory, but we are unconsciously behaving just like one of those redoubtable disputants.

Theaetetus:: I Still don't understand what you mean.

Socrates:: Well, I will try to make the point clear, so far as I can see it. We were asking whether one who had become acquainted with something and remembered it could fail to know it. Then we pointed out that a man who shuts his eyes after seeing something, remembers but does not see, and so concluded that at the same moment he both remembers the thing and does not know it. That, we said, was impossible. And so no one was left to tell Protagoras' tale, or yours either, about knowledge and perception being the same thing.

Theaetetus:: So it appears.

Socrates:: I fancy it would be very different if the author of the first story were still alive. He would have put up a good fight for his offspring. But he is dead, and here are we trampling on the orphan. Even its appointed guardians, like Theodorus here, will not come to the rescue. However, we will step into the breach ourselves and see that it has fair play.

Theodorus:: In point of fact, Socrates, it is rather Callias, son of Hipponicus, who is Protagoras' trustee. My own inclinations diverted me at rather an early age from abstract discussions to geometry. All the same, I shall be grateful for any succor you can give him.

Socrates:: Very good, Theodorus. You shall see what my help will amount to. For one might commit oneself to even stranger conclusions, if one were as careless in the use of language as we commonly are in our assertions and denials. Am I to enlarge upon this to you or to Theaetetus?

Theodorus:: To the company in general, but let the younger man answer your questions. It will not be such a disgrace to him to be caught tripping.

Socrates:: Let me put, then, the most formidable poser of all, which I take to be this. Can the same person know something and also not know that which he knows?

Theodorus:: Well, Theaetetus, what are we to answer?

Theaetetus:: That it is impossible, I suppose.

Socrates:: Not if you say that seeing is knowing. How are you going to deal with a question that leaves no loophole, when you are trapped like a beast in a pit and an imperturbable gentleman puts his hand over one of your eyes and asks if you can see his coat with the eye that is covered?

Theaetetus:: I suppose I should say, No, not with that one, but I can with the other.

Socrates:: So you both see and do not see the same thing at the same time?

Theaetetus:: Yes, in a sort of way.

Socrates:: Never mind about the sort of way, he will reply. That was not the question I set you, but whether, when you know a thing, you also do not know it. In this instance you are obviously seeing something you don't see, and you have agreed that seeing is knowing and not-seeing is not-knowing. Now draw your conclusion. What is the consequence?

Theaetetus:: Well, I conclude that the consequence contradicts my thesis.

Socrates:: Yes, and you might have been reduced to the same condition by a number of further questions—whether knowing can be keen or dim, whether you can know from close at hand what you cannot know from a distance, or know the same thing with more or less intensity. A mercenary skirmisher in the war of words might lie in wait for you armed with a thousand such questions, once you have identified knowledge and perception. He would make his assaults upon hearing and smelling and suchlike senses and put you to confusion, sustaining his attack until your admiration of his in estimable skill betrayed you into his toils, and thereupon, leading you captive and bound, he would hold you to ransom for such a sum as you and he might agree upon.

And now, perhaps, you may wonder what argument Protagoras will find to defend his position. Shall we try to put it into words?

Theaetetus:: By all means.

Socrates:: No doubt, then, Protagoras will make all the points we have put forward in our attempt to defend him, and at the same time will come to close quarters with the assailant, dismissing us with contempt. Your admirable Socrates, he will say, finds a little boy who is scared at being asked whether one and the same person can remember and at the same time not know one and the same thing. When the child is frightened into saying no, because he cannot foresee the consequence, Socrates turns the conversation so as to make a figure of fun of my unfortunate self. You take things much too easily, Socrates. The truth of the matter is this. When you ask someone questions in order to canvass some opinion of mine and he is found tripping, then I am refuted only if his answers are such as I should have given; if they are different, it is he who is refuted, not I. For instance, do you think you will find anyone to admit that one's present memory of a past impression is an impression of the same character as one had during the original experience, which is now over? It is nothing of the sort. Or again, will anyone shrink from admitting that it is possible for the same person to know and not to know the same thing? Or, if he is frightened of saying that, will he ever allow that a person who is changed is the same as he was before the change occurred, or rather, that he is one person at all, and not several, indeed an infinite succession of persons, provided change goes on happening—if we are really to be on the watch against one another's attempts to catch at words?

No, he will say, show a more generous spirit by attacking what I actually say, and prove, if you can, that we have not, each one of us, his peculiar perceptions, or that, granting them to be peculiar, it would not follow that what appears to each becomes—or is, if we may use the word ‘is'—for him alone to whom it appears. With this talk of pigs and baboons, you are behaving like a pig yourself, and, what is more, you tempt your hearers to treat my writings in the same way, which is not fair. For I do indeed assert that the truth is as I have written. Each one of us is a measure of what is and of what is not, but there is all the difference in the world between one man and another just in the very fact that what is and appears to one is different from what is and appears to the other. And as for wisdom and the wise man, I am very far from saying they do not exist. By a wise man I mean precisely a man who can change any one of us, when what is bad appears and is to him, and make what is good appear and be to him. In this statement, again, don't set off in chase of words, but let me explain still more clearly what I mean. Remember how it was put earlier in the conversation. To the sick man his food appears sour and is so; to the healthy man it is and appears the opposite. Now there is no call to represent either of the two as wiser—that cannot be—nor is the sick man to be pronounced unwise because he thinks as he does, or the healthy man wise because he thinks differently. What is wanted is a change to the opposite condition, because the other state is better.

And so too in education a change has to be effected from the worse condition to the better; only, whereas the physician produces a change by means of drugs, the Sophist does it by discourse. It is not that a man makes someone who previously thought what is false think what is true, for it is not possible either to think the thing that is not or to think anything but what one experiences, and all experiences are true. Rather, I should say, when someone by reason of a depraved condition of mind has thoughts of a like character, one makes him, by reason of a sound condition, think other and sound thoughts, which some people ignorantly call true, whereas I should say that one set of thoughts is better than the other, but not in any way truer. And as for the wise, my dear Socrates, so far from calling them frogs, I call them, when they have to do with the body, physicians, and when they have to do with plants, husbandmen. For I assert that husbandmen too, when plants are sickly and have depraved sensations, substitute for these sensations that are sound and healthy, and moreover that wise and honest public speakers substitute in the community sound for unsound views of what is right. For I hold that whatever practices seem right and laudable to any particular state are so, for that state, so long as it holds by them. Only, when the practices are, in any particular case, unsound for them, the wise man substitutes others that are and appear sound. On the same principle the Sophist, since he can in the same manner guide his pupils in the way they should go, is wise and worth a considerable fee to them when their education is completed. In this way it is true both that some men are wiser than others and that no one thinks falsely, and you, whether you like it or not, must put up with being a measure, since by these considerations my doctrine is saved from shipwreck.

Now if you can dispute this doctrine in principle, do so by argument stating the case on the other side, or by asking questions, if you prefer that method, which has no terrors for a man of sense; on the contrary it ought to be specially agreeable to him. Only there is this rule to be observed. Do not conduct your questioning unfairly. It is very unreasonable that one who professes a concern for virtue should be constantly guilty of unfairness in argument. Unfairness here consists in not observing the distinction between a debate and a conversation. A debate need not be taken seriously and one may trip up an opponent to the best of one's power, but a conversation should be taken in earnest; one should help out the other party and bring home to him only those slips and fallacies that are due to himself or to his earlier instructors. If you follow this rule, your associates will lay the blame for their confusions and perplexities on themselves and not on you; they will like you and court your society, and disgusted with themselves, will turn to philosophy, hoping to escape from their former selves and become different men. But if, like so many, you take the opposite course, you will reach the opposite result; instead of turning your companions to philosophy, you will make them hate the whole business when they get older. So, if you will take my advice, you will meet us in the candid spirit I spoke of, without hostility or contentiousness, and honestly consider what we mean when we say that all things are in motion and that what seems also is, to any individual or community. The further question whether knowledge is, or is not, the same thing as perception, you will consider as a consequence of these principles, not, as you did just now, basing your argument on the common use of words and phrases, which the vulgar twist into any sense they please and so perplex one another in all sorts of ways.

Such, Theodorus, is my contribution to the defense of your friend—the best I can make from my small means. Were he alive to speak for himself, it would be a much more impressive affair.

Theodorus:: You are not serious, Socrates; your defense was most spirited.

Socrates:: Thank you, my friend. And now, did you notice how Protagoras was reproaching us for taking a child to argue with and using the boy's timidity to get the better of his own position in what he called a mere play of wit, in contrast to the solemnity of his measure of all things, and how he exhorted us to be serious about his doctrine?

Theodorus:: Of course I did, Socrates.

Socrates:: What then? Do you think we should do as he says?

Theodorus:: Most certainly.

Socrates:: Well, the company, as you see, are all children, except yourself. If we are to treat his doctrine seriously, as he enjoins, you and I must question one another. So we shall at any rate escape the charge of making light of it by discussing it with boys.

Theodorus:: Why, surely Theaetetus can follow up such an investigation better than a great many men with long beards.

Socrates:: But not better than you, Theodorus. So don't imagine that you have no duty to your departed friend, but can leave it to me to make the best defense for him. Please come with us a little of the way at any rate—just until we know whether, in the matter of mathematical demonstrations, you cannot help being a measure, or everybody is just as competent as you in geometry and astronomy and all the other subjects you are supposed to excel in.

Theodorus:: It is no easy matter to escape questioning in your company, Socrates. I was deluded when I said you would leave me in peace and not force me into the ring like the Spartans; you seem to be as unrelenting as Sciron. The Spartans tell you to go away if you will not wrestle, but Antaeus is more in your line; you will let no one who comes near you go until you have stripped him by force for a trial of strength.

Socrates:: Your comparisons exactly fit what is wrong with me, Theodorus, but my capacity for endurance is even greater. I have encountered many heroes in debate, and times without number a Hercules or a Theseus has broken my head, but I have so deep a passion for exercise of this sort that I stick to it all the same. So don't deny me the pleasure of a trial, for your own benefit as well as mine.

Theodorus:: I have no more to say; lead me where you will. You are like Fate. No one can elude the toils of argument you spin for him. But I shall not be able to oblige you beyond the point you have proposed.

Socrates:: Enough, if you will go so far. And please be on the watch for fear we should be betrayed into arguing frivolously and be blamed for that again.

Theodorus:: I will try as well as I can.

Socrates:: Let us begin, then, by coming to grips with the doctrine at the same point as before. Let us see whether or not our discontent was justified, when we criticized it as making every individual self-sufficient in wisdom. Protagoras then conceded that some people were superior in the matter of what is better or worse, and these, he said, were wise. Didn't he?

Theodorus:: Yes.

Socrates:: If he were here himself to make that admission, instead of our conceding it for him in our defense, there would be no need to reopen the question and make sure of our ground, but, as things are, we might be said to have no authority to make the admission on his behalf. So it will be more satisfactory to come to a more complete and clear agreement on this particular point, for it makes a considerable difference, whether this is so or not.

Theodorus:: That is true.

Socrates:: Let us, then, as briefly as possible, obtain his agreement, not through any third person, but from his own statement.

Theodorus:: How?

Socrates:: In this way. He says, doesn't he, that what seems true to anyone is true for him to whom it seems so?

Theodorus:: He does.

Socrates:: Well now, Protagoras, we are expressing what seems true to a man, or rather to all men, when we say that everyone without exception holds that in some respects he is wiser than his neighbors and in others they are wiser than he. For instance, in moments of great danger and distress, whether in war or in sickness or at sea, men regard as a god anyone who can take control of the situation and look to him as a savior, when his only point of superiority is his knowledge. Indeed, the world is full of people looking for those who can instruct and govern men and animals and direct their doings, and on the other hand of people who think themselves quite competent to undertake the teaching and governing. In all these cases what can we say, if not that men do hold that wisdom and ignorance exist among them?

Theodorus:: We must say that.

Socrates:: And they hold that wisdom lies in thinking truly, and ignorance in false belief?

Theodorus:: Of course.

Socrates:: In that case, Protagoras, what are we to make of your doctrine? Are we to say that what men think is always true, or that it is sometimes true and sometimes false? From either supposition it results that their thoughts are not always true, but both true and false. For consider, Theodorus. Are you, or is any Protagorean, prepared to maintain that no one regards anyone else as ignorant or as making false judgments?

Theodorus:: That is incredible, Socrates.

Socrates:: That, however, is the inevitable consequence of the doctrine which makes man the measure of all things.

Theodorus:: How so?

Socrates:: When you have formed a judgment on some matter in your own mind and express an opinion about it to me, let us grant that, as Protagoras' theory says, it is true for you, but are we to understand that it is impossible for us, the rest of the company, to pronounce any judgment upon your judgment, or, if we can, that we always pronounce your opinion to be true? Do you not rather find thousands of opponents who set their opinion against yours on every occasion and hold that your judgment and belief are false?

Theodorus:: I should just think so, Socrates—thousands and tens of thousands, as Homer says, and they give me all the trouble in the world.

Socrates:: And what then? Would you have us say that in such a case the opinion you hold is true for yourself and false for these tens of thousands?

Theodorus:: The doctrine certainly seems to imply that.

Socrates:: And what is the consequence for Protagoras himself? Is it not this? Supposing that not even he believed in man being the measure and the world in general did not believe it either—as in fact it doesn't—then this Truth which he wrote would not be true for anyone. If, on the other hand, he did believe it, but the mass of mankind does not agree with him, then, you see, it is more false than true by just so much as the unbelievers outnumber the believers.

Theodorus:: That follows, if its truth or falsity varies with each individual opinion.

Socrates:: Yes, and besides that it involves a really exquisite conclusion. Protagoras, for his part, admitting as he does that everybody's opinion is true, must acknowledge the truth of his opponents' belief about his own belief, where they think he is wrong.

Theodorus:: Certainly.

Socrates:: That is to say, he would acknowledge his own belief to be false, if he admits that the belief of those who think him wrong is true?

Theodorus:: Necessarily.

Socrates:: But the others, on their side, do not admit to themselves that they are wrong.

Theodorus:: No.

Socrates:: Whereas Protagoras, once more, according to what he has written, admits that this opinion of theirs is as true as any other.

Theodorus:: Evidently.

Socrates:: On all hands, then, Protagoras included, his opinion will be disputed, or rather Protagoras will join in the general consent—when he admits to an opponent the truth of his contrary opinion, from that moment Protagoras himself will be admitting that a dog or the man in the street is not a measure of anything whatever that he does not understand. Isn't that so?

Theodorus:: Yes.

Socrates:: Then, since it is disputed by everyone, the Truth of Protagoras is true to nobody—to himself no more than to anyone else.

Theodorus:: We are running my old friend too hard, Socrates.

Socrates:: But it is not clear that we are outrunning the truth, my friend. Of course it is likely that, as an older man, he was wiser than we are, and if at this moment he could pop his head up through the ground there as far as to the neck, very probably he would expose me thoroughly for talking such nonsense and you for agreeing to it, before he sank out of sight and took to his heels. However, we must do our best with such lights as we have and continue to say what we think. Now, for instance, must we not say that everyone would agree at least to this, that one man can be wiser or more ignorant than another?

Theodorus:: I certainly think so.

Socrates:: And further, shall we say that the doctrine would find its firmest footing in the position we traced out in our defense of Protagoras, that most things—hot, dry, sweet, everything of that sort—are to each person as they appear to him? Whereas, if there is any case in which the theory would concede that one man is superior to another, it might consent to admit that, in the matter of good or bad health, not any woman or child—or animal, for that matter—knows what is wholesome for it and is capable of curing itself, but that here, if anywhere, one person is superior to another.

Theodorus:: I should certainly say so.

Socrates:: And again in social matters, the theory will say that, so far as good and bad customs or rights and wrongs or matters of religion are concerned, whatever any state makes up its mind to enact as lawful for itself, really is lawful for it, and in this field no individual or state is wiser than another. But where it is a question of laying down what is for its advantage or disadvantage, once more there, if anywhere, the theory will admit a difference between two advisers or between the decisions of two different states in respect of truth, and would hardly venture to assert that any enactment which a state supposes to be for its advantage will quite certainly be so.

But, in that field I am speaking of—in right and wrong and matters of religion—people are ready to affirm that none of these things is natural, with a reality of its own, but rather that the public decision becomes true at the moment when it is made and remains true so long as the decision stands, and those who do not argue altogether as Protagoras does carry on their philosophy on these lines.

But one theory after another is coming upon us, Theodorus, and the last is more important than the one before.

Theodorus:: Well, Socrates, we have time at our disposal.

Socrates:: Evidently. And it strikes me now, as often before, how natural it is that men who have spent much time in philosophical studies should look ridiculous when they appear as speakers in a court of law.

Theodorus:: How do you mean?

Socrates:: When you compare men who have knocked about from their youth up in law courts and such places with others bred in philosophical pursuits, the one set seem to have been trained as slaves, the others as free men.

Theodorus:: In what way?

Socrates:: In the way you spoke of. The free man always has time at his disposal to converse in peace at his leisure. He will pass, as we are doing now, from one argument to another—we have just reached the third. Like us, he will leave the old for a fresh one which takes his fancy more, and he does not care how long or short the discussion may be, if only it attains the truth. The orator is always talking against time, hurried on by the clock; there is no space to enlarge upon any subject he chooses, but the adversary stands over him ready to recite a schedule of the points to which he must confine himself. He is a slave disputing about a fellow slave before a master sitting in judgment with some definite plea in his hand, and the issue is never indifferent, but his personal concerns are always at stake, sometimes even his life. Hence he acquires a tense and bitter shrewdness; he knows how to flatter his master and earn his good graces, but his mind is narrow and crooked. An apprenticeship in slavery has dwarfed and twisted his growth and robbed him of his free spirit, driving him into devious ways, threatening him with fears and dangers which the tenderness of youth could not face with truth and honesty; so, turning from the first to lies and the requital of wrong with wrong, warped and stunted, he passes from youth to manhood with no soundness in him and turns out, in the end, a man of formidable intellect—as he imagines.

So much for the orator, Theodorus. Shall I now describe the philosophical choir to which we belong, or would you rather leave that and go back to our discussion? We must not abuse that freedom we claimed of ranging from one subject to another.

Theodorus:: No, Socrates, let us have your description first. As you said quite rightly, we are not the servants of the argument, which must stand and wait for the moment when we choose to pursue this or that topic to a conclusion. We are not in a court under the judge's eye, nor in the theater with an audience to criticize our philosophical evolutions.

Socrates:: Then, if that is your wish, let us speak of the leaders in philosophy, for the weaker members may be neglected. From their youth up they have never known the way to market place or law court or Council Chamber or any other place of public assembly; they never hear a decree read out or look at the text of a law. To take any interest in the rivalries of political cliques, in meetings, dinners, and merrymakings with flute girls, never occurs to them even in dreams. Whether any fellow citizen is well- or ill-born or has inherited some defect from his ancestors on either side, the philosopher knows no more than how many pints of water there are in the sea. He is not even aware that he knows nothing of all this, for if he holds aloof, it is not for reputation's sake, but because it is really only his body that sojourns in his city, while his thought, disdaining all such things as worthless, takes wings, as Pindar says, ‘beyond the sky, beneath the earth,' searching the heavens and measuring the plains, everywhere seeking the true nature of everything as a whole, never sinking to what lies close at hand.

Theodorus:: What do you mean, Socrates?

Socrates:: The same thing as the story about the Thracian maidservant who exercised her wit at the expense of Thales, when he was looking up to study the stars and tumbled down a well. She scoffed at him for being so eager to know what was happening in the sky that he could not see what lay at his feet. Anyone who gives his life to philosophy is open to such mockery. It is true that he is unaware what his next-door neighbor is doing, hardly knows, indeed, whether the creature is a man at all; he spends all his pains on the question, what man is, and what powers and properties distinguish such a nature from any other. You see what I mean, Theodorus?

Theodorus:: Yes, and it is true.

Socrates:: And so, my friend, as I said at first, on a public occasion or in private company, in a law court or anywhere else, when he is forced to talk about what lies at his feet or is before his eyes, the whole rabble will join the maidservants in laughing at him, as from inexperience he walks blindly and stumbles into every pitfall. His terrible clumsiness makes him seem so stupid. He cannot engage in an exchange of abuse, for, never having made a study of anyone's peculiar weaknesses, he has no personal scandals to bring up; so in his helplessness he looks a fool. When people vaunt their own or other men's merits, his unaffected laughter makes him conspicuous and they think he is frivolous. When a despot or king is eulogized, he fancies he is hearing some keeper of swine or sheep or cows being congratulated on the quantity of milk he has squeezed out of his flock; only he reflects that the animal that princes tend and milk is more given than sheep or cows to nurse a sullen grievance, and that a herdsman of this sort, penned up in his castle, is doomed by sheer press of work to be as rude and uncultivated as the shepherd in his mountain fold. He hears of the marvelous wealth of some landlord who owns ten thousand acres or more, but that seems a small matter to one accustomed to think of the earth as a whole. When they harp upon birth—some gentleman who can point to seven generations of wealthy ancestors—he thinks that such commendation must come from men of purblind vision, too uneducated to keep their eyes fixed on the whole or to reflect that any man has had countless myriads of ancestors and among them any number of rich men and beggars, kings and slaves, Greeks and barbarians. To pride oneself on a catalogue of twenty-five progenitors going back to Heracles, son of Amphitryon, strikes him as showing a strange pettiness of outlook. He laughs at a man who cannot rid his mind of foolish vanity by reckoning that before Amphitryon there was a twenty-fifth ancestor, and before him a fiftieth, whose fortunes were as luck would have it. But in all these matters the world has the laugh of the philosopher, partly because he seems arrogant, partly because of his helpless ignorance in matters of daily life.

Theodorus:: Yes, Socrates, that is exactly what happens.

Socrates:: On the other hand, my friend, when the philosopher drags the other upward to a height at which he may consent to drop the question, 'What injustice have I done to you or you to me?' and to think about justice and injustice in themselves, what each is, and how they differ from one another and from anything else, or to stop quoting poetry about the happiness of kings or of men with gold in store and think about the meaning of kingship and the whole question of human happiness and misery, what their nature is, and how humanity can gain the one and escape the other—in all this field, when that small, shrewd, legal mind has to render an account, then the situation is reversed. Now it is he who is dizzy from hanging at such an unaccustomed height and looking down from mid-air. Lost and dismayed and stammering, he will be laughed at, not by maidservants or the uneducated—they will not see what is happening—but by everyone whose breeding has been the antithesis of a slave's.

Such are the two characters, Theodorus. The one is nursed in freedom and leisure, the philosopher, as you call him. He may be excused if he looks foolish or useless when faced with some menial task, if he cannot tie up bedclothes into a neat bundle or flavor a dish with spices and a speech with flattery. The other is smart in the dispatch of all such services, but has not learned to wear his cloak like a gentleman, or caught the accent of discourse that will rightly celebrate the true life of happiness for gods and men.

Theodorus:: If you could convince everyone, Socrates, as you convince me, there would be more peace and fewer evils in the world.

Socrates:: Evils, Theodorus, can never be done away with, for the good must always have its contrary; nor have they any place in the divine world, but they must needs haunt this region of our mortal nature. That is why we should make all speed to take flight from this world to the other, and that means becoming like the divine so far as we can, and that again is to become righteous with the help of wisdom. But it is no such easy matter to convince men that the reasons for avoiding wickedness and seeking after goodness are not those which the world gives. The right motive is not that one should seem innocent and good—that is no better, to my thinking, than an old wives' tale—but let us state the truth in this way. In the divine there is no shadow of unrighteousness, only the perfection of righteousness, and nothing is more like the divine than any one of us who becomes as righteous as possible. It is here that a man shows his true spirit and power or lack of spirit and nothingness. For to know this is wisdom and excellence of the genuine sort; not to know it is to be manifestly blind and base. All other forms of seeming power and intelligence in the rulers of society are as mean and vulgar as the mechanic's skill in handicraft. If a man's words and deeds are unrighteous and profane, he had best not persuade himself that he is a great man because he sticks at nothing, glorying in his shame as such men do when they fancy that others say of them, They are no fools, no useless burdens to the earth, but men of the right sort to weather the storms of public life.

Let the truth be told. They are what they fancy they are not, all the more for deceiving themselves, for they are ignorant of the very thing it most concerns them to know—the penalty of injustice. This is not, as they imagine, stripes and death, which do not always fall on the wrongdoer, but a penalty that cannot be escaped.

Theodorus:: What penalty is that?

Socrates:: There are two patterns, my friend, in the unchangeable nature of things, one of divine happiness, the other of godless misery—a truth to which their folly makes them utterly blind, unaware that in doing injustice they are growing less like one of these patterns and more like the other. The penalty they pay is the life they lead, answering to the pattern they resemble. But if we tell them that, unless they rid themselves of their superior cunning, that other region which is free from all evil will not receive them after death, but here on earth they will dwell for all time in some form of life resembling their own and in the society of things as evil as themselves, all this will sound like foolishness to such strong and unscrupulous minds.

Theodorus:: So it will, Socrates.

Socrates:: I have good reason to know it, my friend. But there is one thing about them; when you get them alone and make them explain their objections to philosophy, then, if they are men enough to face a long examination without running away, it is odd how they end by finding their own arguments unsatisfying. Somehow their flow of eloquence runs dry, and they become as speechless as an infant. All this, however, is a digression. We must stop now, and dam the flood of topics that threatens to break in and drown our original argument. With your leave, let us go back to where we were before.

Theodorus:: For my part, I rather prefer listening to your digressions, Socrates; they are easier to follow at my time of life. However, let us go back, if you like.

Socrates:: Very well. I think the point we had reached was this. We were saying that the believers in a perpetually changing reality and in the doctrine that what seems to an individual at any time also is for him would, in most matters, strongly insist upon their principle, and not least in the case of what is right they would maintain that any enactments a state may decide on certainly are right for that state so long as they remain in force. But when it comes to what is good, we said that the boldest would not go to the length of contending that whatever a state may believe and declare to be advantageous for itself is in fact advantageous for so long as it is declared to be so—unless he meant that the name ‘advantageous' would continue to be so applied, but that would be turning our subject into a joke.

Theodorus:: Certainly.

Socrates:: We will suppose, then, that he does not mean the name, but has in view the thing that bears it.

Theodorus:: We will.

Socrates:: Whatever name the state may give it, advantage is surely the aim of its legislation, and all its laws, to the full extent of its belief and power, are laid down as being for its own best profit. Or has it any other object in view when it makes laws?

Theodorus:: None.

Socrates:: Then does it also hit the mark every time? Or does every state often miss its aim completely?

Theodorus:: I should say that mistakes are often made.

Socrates:: We may have a still better chance of getting everyone to assent to that, if we start from a question covering the whole class of things which includes the advantageous. It is, I suggest, a thing that has to do with future time. When we legislate, we make our laws with the idea that they will be advantageous in time to come. We may call this class 'what is going to be.'

Theodorus:: Certainly.

Socrates:: Here, then, is a question for Protagoras or anyone else who agrees with him. According to you and your friends, Protagoras, man is the measure of all things—of white and heavy and light and everything of that sort. He possesses in himself the test of these things, and believing them to be such as he experiences them, he believes what is true and real for him. Is that right?

Theodorus:: Yes.

Socrates:: Is it also true, Protagoras, we shall continue, that he possesses within himself the test of what is going to be in the future, and that whatever a man believes will be, actually comes to pass for him who believes it? Take heat, for example. When some layman believes that he is going to catch a fever and that this hotness is going to exist, and another, who is a physician, believes the contrary, are we to suppose that the future event will turn out in accordance with one of the two opinions, or in accordance with both opinions, so that to the physician the patient will not be hot or in a fever, while he will be both these things to himself?

Theodorus:: That would be absurd.

Socrates:: And on the question whether a wine is going to be sweet or dry, I imagine the vine-grower's judgment is authoritative, not a flute player's.

Theodorus:: Of course.

Socrates:: Or again, on the question whether a piece of music is going to be in tune or not, a gymnastic trainer would not have a better opinion than a musician as to what the trainer himself will later judge to be in good tune.

Theodorus:: By no means.

Socrates:: And when a feast is being prepared, the guest who is to be invited, supposing him not to be an expert in cookery, will have a less authoritative opinion than the confectioner upon the pleasure that will result. We will not dispute yet about what already is or has been pleasant to any individual, but about what will in the future seem and be to anyone, is every man the best judge for himself, or would you, Protagoras—at least in the matter of the arguments that any one of us would find convincing for a court of law—have a better opinion beforehand than any untrained person?

Theodorus:: Certainly, Socrates, in that matter he did emphatically profess to be superior to everybody.

Socrates:: Bless your soul, I should think he did. No one would have paid huge sums to talk with him, if he had not convinced the people who came to him that no one whatever, not even a prophet, could judge better than he what was going to be and appear in the future.

Theodorus:: Quite true.

Socrates:: And legislation, too, and the question of advantageousness are matters concerned with the future, and everyone would agree that a state, when it makes its laws, must often fail to hit upon its own greatest advantage?

Theodorus:: Assuredly.

Socrates:: Then we may quite reasonably put it to your master that he must admit that one man is wiser than another and that the wiser man is the measure, whereas an ignorant person like myself is not in any way bound to be a measure, as our defense of Protagoras tried to make me, whether I liked it or not.

Theodorus:: I think that is the weakest point in the theory, Socrates, though it is also assailable in that it makes other people's opinions valid when, as it turns out, they hold Protagoras' assertions to be quite untrue.

Socrates:: There are many other ways, Theodorus, of assailing such a position and proving that not every opinion of every person is true. But with regard to what the individual experiences at the moment—the source of his sensations and the judgments in accordance with them—it is harder to assail the truth of these. Perhaps it is wrong to say ‘harder' maybe they are unassailable, and those who assert that they are transparently clear and are instances of knowledge may be in the right, and Theaetetus was not beside the mark when he said that perception and knowledge were the same thing.

We must, then, look more closely into the matter, as our defense of Protagoras enjoined, and study this moving reality, ringing its metal to hear if it sounds true or cracked. However that may be, there has been no inconsiderable battle over it, and not a few combatants.

Theodorus:: Anything but inconsiderable; in Ionia, indeed, it is actually growing in violence. The followers of Heraclitus lead the choir of this persuasion with the greatest vigor.

Socrates:: All the more reason, my dear Theodorus, to look into it carefully and to follow their lead by tracing it to its source.

Theodorus:: By all means. For there is no discussing these principles of Heraclitus—or, as you say, of Homer or still more ancient sages—with the Ephesians themselves, who profess to be familiar with them; you might as well talk to a maniac. Faithful to their own treatises they are literally in perpetual motion; their capacity for staying still to attend to an argument or a question or for a quiet interchange of question and answer amounts to less than nothing, or rather even a minus quantity is too strong an expression for the absence of the least modicum of repose in these gentry. When you put a question, they pluck from their quiver little oracular aphorisms to let fly at you, and if you try to obtain some account of their meaning, you will be instantly transfixed by another, barbed with some newly forged metaphor. You will never get anywhere with any of them; for that matter they cannot get anywhere with one another, but they take very good care to leave nothing settled either in discourse or in their own minds. I suppose they think that would be something stationary—a thing they will fight against to the last and do their utmost to banish from the universe.

Socrates:: Perhaps, Theodorus, you have seen these gentlemen in the fray and never met them in their peaceable moments; indeed they are no friends of yours. I dare say they keep such matters to be explained at leisure to their pupils whom they want to make like themselves.

Theodorus:: Pupils indeed! My good friend, there is no such thing as a master or pupil among them; they spring up like mush rooms. Each one gets his inspiration wherever he can, and not one of them thinks that another understands anything. So, as I was going to say, you can never bring them to book, either with or without their consent. We must take over the question ourselves and try to solve it like a problem.

Socrates:: That is a reasonable proposal. As to this problem, then, have we not here a tradition from the ancients, who hid their meaning from the common herd in poetical figures, that Oceanus and Tethys, the source of all things, are flowing streams and nothing is at rest? And do not the moderns, in their superior wisdom, declare the same quite openly, in order that the very cobblers may hear and understand their wisdom and, abandoning their simple faith that some things stand still while others move, may reverence those who teach them that everything is in motion?

But I had almost forgotten, Theodorus, another school which teaches just the opposite—that reality ‘is one, immovable, being is the name of the all,' and much else that men like Melissus and Parmenides maintain in opposition to all those people, telling us that all things are a unity which stays still within itself, having no room to move in. How are we to deal with all these combatants? For, little by little, our advance has brought us, without our knowing it, between the two lines, and, unless we can somehow fend them off and slip through, we shall suffer for it, as in that game they play in the wrestling schools, where the players are caught by both sides and dragged both ways at once across the line. The best plan, I think, will be to begin by taking a look at the party whom we first approached, the men of flux, and if there seems to be anything in what they say, we will help them to pull us over to their side and try to elude the others. But if we find more truth in the partisans of the immovable whole, we will desert to them from these revolutionaries who leave no landmark unremoved. If both sides turn out to be quite unreasonable, we shall merely look foolish if we suppose that nobodies like ourselves can make any contribution after rejecting such paragons of ancient wisdom. Do you think it worth while to go further in the teeth of such danger, Theodorus?

Theodorus:: Certainly, Socrates. I could not bear to stop before we have found out what each of the two parties means.

Socrates:: Well, if you feel so strongly about it, we must look into the matter. I think our study of change should begin with the question, What after all do they mean when they say all things are in change? What I mean is this. Do they recognize one kind of change or two? I think there are two, but I must not be alone in my opinion; you must take your share in the risk, so that we may meet together whatever fate shall befall us. Tell me, do you call it change when something removes from place to place or revolves in the same place?

Theodorus:: Yes.

Socrates:: Let that be one kind, then. Now suppose a thing stays in the same place but grows old or turns black instead of white or hard instead of soft or alters in some other way, isn't it proper to call that a different kind of change?

Theodorus:: Yes, it must be.

Socrates:: So I should recognize these as two kinds of change—alteration and local movement.

Theodorus:: And you are right.

Socrates:: Having made that distinction, then, let us now begin our talk with these people who say that everything is in change and ask them, Do you say everything is in both sorts of change—both moving in place and altering—or that part changes in both ways, part in only one of the two?

Theodorus:: I really cannot tell, but I think they would say ‘in both ways.'

Socrates:: Yes, my friend; otherwise they will find things at rest as well as things in change, and it will be no more correct to say that everything is changing than to say that everything is at rest.

Theodorus:: Quite true.

Socrates:: So, since they are to be in change and unchangingness must be impossible anywhere, all things are always in every kind of change.

Theodorus:: That follows.

Socrates:: Now consider this point in their theory. The account they gave of the genesis of hotness or whiteness or whatever it may be, we stated, didn't we, in this sort of way—that any one of these things is something that moves in place, simultaneously with a perception, between agent and patient, and that the patient becomes perceptive, not a perception, while the agent comes to have a quality, rather than to be a quality? Perhaps this word ‘quality' strikes you as queer and uncouth and you don't understand it as a general expression; so let me give particular instances. The agent does not become hotness or whiteness, but hot or white, and so on with all the rest. No doubt you remember how we put this earlier—that nothing has any being as one thing just by itself, no more has the agent or patient, but, as a consequence of their intercourse with one another, in giving birth to the perceptions and the things perceived, the agents come to be of such and such a quality, and the patients come to be percipient.

Theodorus:: I remember, of course.

Socrates:: Very well, then, we will not inquire into other parts of their theory, whether they mean this or that, but keep to the point we have in view and ask them this. All things, by your account, are in a perpetual stream of change. Is that so?

Theodorus:: Yes.

Socrates:: With both the kinds of change we distinguished—both moving in place and altering?

Theodorus:: Certainly, if they are to be completely in change.

Socrates:: Well now, if they only moved in place without altering in quality, we should be able to say what qualities they have as they move in this stream, shouldn't we?

Theodorus:: Yes.

Socrates:: Since, however, there is nothing constant here either—the flowing thing does not flow white but changes, so that the very whiteness itself flows and shifts into another color, in order that the thing may escape the charge of constancy in that respect—can we ever give it the name of any color and be sure that we are naming it rightly?

Theodorus:: How can that be done, Socrates? Or how can anything else of the kind you mean be called by its right name, if, while we are speaking, it is all the time slipping away from us in this stream?

Socrates:: And again, what are we to say of a perception of any sort—for instance, the perception of seeing or hearing? Are we to say that it ever abides in its own nature as seeing or hearing?

Theodorus:: It certainly ought not, if all things are in change.

Socrates:: Then it has no right to be called seeing, any more than not-seeing, nor is any other perception entitled to be called perception rather than not-perception, if everything is changing in every kind of way.

Theodorus:: No, it hasn't.

Socrates:: And moreover perception is knowledge, according to Theaetetus and me.

Theodorus:: Yes, you did say so.

Socrates:: In that case, our answer to the question, what knowledge is, did not mean knowledge any more than not-knowledge.

Theodorus:: So it appears.

Socrates:: That would be a pretty result of the improvement we made upon that first answer, when we were so eager to prove it right by showing that everything is in change. Now it seems that what has in fact come to light is that, if all things are in change, any answer that can be given to any question is equally right; you may say it is so and it is not so—or ‘becomes,' if you prefer to avoid any term that would bring these people to a standstill.

Theodorus:: You are right.

Socrates:: Except, Theodorus, that I used the words ‘so' and ‘not so,' whereas we have no right to use this word ‘so'—what is ‘so' would cease to be in change—nor yet ‘not so'; there is no change in that either. Some new dialect will have to be instituted for the exponents of this theory, since, as it is, they have no phrases to fit their fundamental proposition—unless indeed it were ‘not even no how.' That might be an expression indefinite enough to suit them.

Theodorus:: A most appropriate idiom.

Socrates:: So, Theodorus, we are quit of your old friend, and not yet ready to concede to him that every man is the measure of all things, if he is not a wise man. Also, we shall not admit that knowledge is perception, at least on the basis of the theory that all things are in change, unless Theaetetus has some objection.

Theodorus:: That is excellent, Socrates. For now these questions are disposed of, it was agreed that I should be quit of answering your questions, as soon as the discussion of Protagoras' theory should come to an end.

Theaetetus:: No, Theodorus, you must not be released until you and Socrates, as you proposed just now, have discussed those others who assert that the whole of things is at rest.

Theodorus:: Would you teach your elders, Theaetetus, to dishonor their agreements? No, for what remains you must prepare yourself to carry on the argument with Socrates.

Theaetetus:: Yes, if he wishes, though I would much rather have been a listener while this subject is discussed.

Theodorus:: To invite Socrates to an argument is like inviting cavalry to fight on level ground. You will have something to listen to, if you question him.

Socrates:: Well, but, Theodorus, I think I shall not comply with Theaetetus' request.

Theodorus:: Not comply? What do you mean?

Socrates:: A feeling of respect keeps me from treating in an unworthy spirit Melissus and the others who say the universe is one and at rest, but there is one being whom I respect above all. Parmenides himself is in my eyes, as Homer says, a ‘reverend and awful' figure. I met him when I was quite young and he quite elderly, and I thought there was a sort of depth in him that was altogether noble. I am afraid we might not understand his words and still less follow the thought they express. Above all, the original purpose of our discussion—the nature of knowledge—might be thrust out of sight, if we attend to these importunate topics that keep breaking in upon us. In particular, this subject we are raising now is of vast extent. It cannot be fairly treated as a side issue, and an adequate handling would take so long that we should lose sight of our question about knowledge.

Either course would be wrong. My business is rather to try, by means of my midwife's art, to deliver Theaetetus of his conceptions about knowledge.

Theodorus:: Well, do so, if you think that best.

Socrates:: Well then, Theaetetus, here is a point for you to consider. The answer you gave was that knowledge is perception, wasn't it?

Theaetetus:: Yes.

Socrates:: Now suppose you were asked, When a man sees white or black things or hears high or low tones, what does he see or hear with? I suppose you would say with eyes and ears.

Theaetetus:: Yes, I should.

Socrates:: To use words and phrases in an easygoing way without scrutinizing them too curiously is not, in general, a mark of ill breeding; on the contrary there is something lowbred in being too precise. But sometimes there is no help for it, and this is a case in which I must take exception to the form of your answer. Consider. Is it more correct to say that we see and hear with our eyes and ears or through them?

Theaetetus:: I should say we always perceive through them, rather than with them.

Socrates:: Yes, it would surely be strange that there should be a number of senses ensconced inside us, like the warriors in the Trojan horse, and all these things should not converge and meet in some single nature—a mind, or whatever it is to be called—with which we perceive all the objects of perception through the senses as instruments.

Theaetetus:: Yes, I think that is a better description.

Socrates:: My object in being so precise is to know whether there is some part of ourselves, the same in all cases, with which we apprehend black or white through the eyes, and objects of other kinds through the other senses. Can you, if the question is put to you, refer all such acts of apprehension to the body? Perhaps, however, it would be better you should speak for yourself in reply to questions, instead of my taking the words out of your mouth. Tell me, all these instruments through which you perceive what is warm or hard or light or sweet are parts of the body, aren't they, not of anything else?

Theaetetus:: Of nothing else.

Socrates:: Now will you also agree that the objects you perceive through one faculty cannot be perceived through another—objects of hearing, for instance, through sight, or objects of sight through hearing?

Theaetetus:: Of course I will.

Socrates:: Then, if you have some thought about both objects at once, you cannot be having a perception including both at once through either the one or the other organ.

Theaetetus:: No.

Socrates:: Now take sound and color. Have you not, to begin with, this thought which includes both at once—that they both exist?

Theaetetus:: I have.

Socrates:: And, further, that each of the two is different from the other and the same as itself?

Theaetetus:: Naturally.

Socrates:: And again, that both together are two, and each of them is one?

Theaetetus:: Yes.

Socrates:: And also you can ask yourself whether they are unlike each other or alike?

Theaetetus:: No doubt.

Socrates:: Then through what organ do you think all this about them both? What is common to them both cannot be apprehended either through hearing or through sight. Besides, here is further evidence for my point. Suppose it were possible to inquire whether sound and color were both brackish or not; no doubt you could tell me what faculty you would use—obviously not sight or hearing, but some other.

Theaetetus:: Of course, the faculty that works through the tongue.

Socrates:: Very good. But now, through what organ does that faculty work, which tells you what is common not only to these objects but to all things—what you mean by the words ‘exists' and ‘does not exist' and the other terms applied to them in the questions I put a moment ago? What sort of organs can you mention, corresponding to all these terms, through which the perceiving part of us perceives each one of them?

Theaetetus:: You mean existence and nonexistence, likeness and unlikeness, sameness and difference, and also unity and numbers in general as applied to them, and clearly your question covers ‘even' and ‘odd' and all that kind of notions. You are asking through what part of the body our mind perceives these?

Socrates:: You follow me most admirably, Theaetetus; that is exactly my question.

Theaetetus:: Really, Socrates, I could not say, except that I think there is no special organ at all for these things, as there is for the others. It is clear to me that the mind in itself is its own instrument for contemplating the common terms that apply to everything.

Socrates:: In fact, Theaetetus, you are handsome, not ugly as Theodorus said you were, for in a discussion handsome is that handsome does. And you have treated me more than handsomely in saving me the trouble of a very long argument, if it is clear to you that the mind contemplates some things through its own instrumentality, others through the bodily faculties. That was indeed what I thought myself, but I wanted you to agree.

Theaetetus:: Well, it is clear to me.

Socrates:: Under which head, then, do you place existence? For that is, above all, a thing that belongs to everything.

Theaetetus:: I should put it among the things that the mind apprehends by itself.

Socrates:: And also likeness and unlikeness and sameness and difference?

Theaetetus:: Yes.

Socrates:: And how about ‘honorable' and ‘dishonorable' and ‘good' and ‘bad'?

Theaetetus:: Those again seem to me, above all, to be things whose being is considered, one in comparison with another, by the mind, when it reflects within itself upon the past and the present with an eye to the future.

Socrates:: Wait a moment. The hardness of something hard and the softness of something soft will be perceived by the mind through touch, will they not?

Theaetetus:: Yes.

Socrates:: But their existence and the fact that they both exist, and their contrariety to one another and again the existence of this contrariety are things which the mind itself undertakes to judge for us, when it reflects upon them and compares one with another.

Theaetetus:: Certainly.

Socrates:: Is it not true, then, that whereas all the impressions which penetrate to the mind through the body are things which men and animals alike are naturally constituted to perceive from the moment of birth, reflections about them with respect to their existence and usefulness only come, if they come at all, with difficulty through a long and troublesome process of education?

Theaetetus:: Assuredly.

Socrates:: Is it possible, then, to reach truth when one cannot reach existence?

Theaetetus:: It is impossible.

Socrates:: But if a man cannot reach the truth of a thing, can he possibly know that thing?

Theaetetus:: No, Socrates, how could he?

Socrates:: If that is so, knowledge does not reside in the impressions, but in our reflection upon them. It is there, seemingly, and not in the impressions, that it is possible to grasp existence and truth.

Theaetetus:: Evidently.

Socrates:: Then are you going to give the same name to two things which differ so widely?

Theaetetus:: Surely that would not be right.

Socrates:: Well then, what name do you give to the first one—to seeing, hearing, smelling, feeling cold and feeling warm?

Theaetetus:: Perceiving. What other name is there for it?

Socrates:: Taking it all together, then, you call this perception?

Theaetetus:: Necessarily.

Socrates:: A thing which, we agree, has no part in apprehending truth, since it has none in apprehending existence.

Theaetetus:: No, it has none.

Socrates:: Nor, consequently, in knowledge either.

Theaetetus:: No.

Socrates:: Then, Theaetetus, perception and knowledge cannot possibly be the same thing.

Theaetetus:: Evidently not, Socrates. Indeed, it is now perfectly plain that knowledge is something different from perception.

Socrates:: But when we began our talk it was certainly not our object to find out what knowledge is not, but what it is. Still, we have advanced so far as to see that we must not look for it in sense perception at all, but in what goes on when the mind is occupied with things by itself, whatever name you give to that.

Theaetetus:: Well, Socrates, the name for that, I imagine, is ‘making judgments.'

Socrates:: You are right, my friend. Now begin all over again. Blot out all we have been saying, and see if you can get a clearer view from the position you have now reached. Tell us once more what knowledge is.

Theaetetus:: I cannot say it is judgment as a whole, because there is false judgment, but perhaps true judgment is knowledge. You may take that as my answer. If, as we go further, it turns out to be less convincing than it seems now, I will try to find another.

Socrates:: Good, Theaetetus. This promptness is much better than hanging back as you did at first. If we go on like this, either we shall find what we are after, or we shall be less inclined to imagine we know something of which we know nothing whatever, and that surely is a reward not to be despised. And now, what is this you say—that there are two sorts of judgment, one true, the other false, and you define knowledge as judgment that is true?

Theaetetus:: Yes, that is the view I have come to now.

Socrates:: Then, had we better go back to a point that came up about judgment?

Theaetetus:: What point do you mean?

Socrates:: A question that worries me now, as often before, and has much perplexed me in my own mind and also in talking to others. I cannot explain the nature of this experience we have, or how it can arise in our minds.

Theaetetus:: What experience?

Socrates:: Making a false judgment. At this moment I am still in doubt and wondering whether to let that question alone or to follow it further, not as we did a while ago, but in a new way.

Theaetetus:: Why not, Socrates, if it seems to be in the least necessary? Only just now, when you and Theodorus were speaking of leisure, you said very rightly that there is no pressing hurry in a discussion of this sort.

Socrates:: A good reminder, for this may be the right moment to go back upon our track. It is better to carry through a small task well than make a bad job of a big one.

Theaetetus:: Certainly it is.

Socrates:: How shall we set about it, then? What is it that we do mean? Do we assert that there is in every case a false judgment, and that one of us thinks what is false, another what is true, such being the nature of things?

Theaetetus:: Certainly we do.

Socrates:: And, in each and all cases, it is possible for us either to know a thing or not to know it? I leave out of account for the moment becoming acquainted with things and forgetting, considered as falling between the two. Our argument is not concerned with them just now.

Theaetetus:: Well then, Socrates, there is no third alternative left in any case, besides knowing and not-knowing.

Socrates:: And it follows at once that when one is thinking he must be thinking either of something he knows or of something he does not know?

Theaetetus:: Necessarily.

Socrates:: And further, if you know a thing, you cannot also not know it, and if you do not know it, you cannot also know it?

Theaetetus:: Of course.

Socrates:: Then is the man who thinks what is false supposing that things he knows are not those things but other things he knows, so that, while he knows both, he fails to recognize either?

Theaetetus:: No, that is impossible, Socrates.

Socrates:: Well then, is he supposing that things he does not know are other things he does not know? Is this possible—that a man who knows neither Theaetetus nor Socrates should take it into his head that Socrates is Theaetetus or Theaetetus Socrates?

Theaetetus:: No. How could he?

Socrates:: But surely a man does not imagine that things he does know are things he does not know, or that things he does not know are things he knows?

Theaetetus:: No, that would be a miracle.

Socrates:: What other way is there, then, of judging falsely?

There is, presumably, no possibility of judging outside these alternatives, granted that everything is either known by us or not known, and inside them there seems to be no room for a false judgment.

Theaetetus:: Quite true.

Socrates:: Perhaps, then, we had better approach what we are looking for by way of another alternative. Instead of ‘knowing or not-knowing,' let us take ‘being or not-being.'

Theaetetus:: How do you mean?

Socrates:: May it not simply be that one who thinks what is not about anything cannot but be thinking what is false, whatever his state of mind may be in other respects?

Theaetetus:: There is some likelihood in that, Socrates.

Socrates:: Then what shall we say, Theaetetus, if we are asked, ‘But is what you describe possible for anyone? Can any man think what is not, either about something that is or absolutely?' I suppose we must answer to that, ‘Yes, when he believes something and what he believes is not true.' Or what are we to say?

Theaetetus:: We must say that.

Socrates:: Then is the same sort of thing possible in any other case?

Theaetetus:: What sort of thing?

Socrates:: That a man should see something, and yet what he sees should be nothing.

Theaetetus:: No. How could that be?

Socrates:: Yet surely if what he sees is something, it must be a thing that is. Or do you suppose that ‘something' can be reckoned among things that have no being at all?

Theaetetus:: No, I don't.

Socrates:: Then, if he sees something, he sees a thing that is.

Theaetetus:: Evidently.

Socrates:: And if he hears a thing, he hears something and hears a thing that is.

Theaetetus:: Yes.

Socrates:: And if he touches a thing, he touches something, and if something, then a thing that is.

Theaetetus:: That also is true.

Socrates:: And if he thinks, he thinks something, doesn't he?

Theaetetus:: Necessarily.

Socrates:: And when he thinks something, he thinks a thing that is?

Theaetetus:: I agree.

Socrates:: So to think what is not is to think nothing.

Theaetetus:: Clearly.

Socrates:: But surely to think nothing is the same as not to think at all.

Theaetetus:: That seems plain.

Socrates:: If so, it is impossible to think what is not, either about anything that is, or absolutely.

Theaetetus:: Evidently.

Socrates:: Then thinking falsely must be something different from thinking what is not.

Theaetetus:: So it seems.

Socrates:: False judgment, then, is no more possible for us on these lines than on those we were following just now.

Theaetetus:: No, it certainly is not.

Socrates:: Well, does the thing we call false judgment arise in this way?

Theaetetus:: How?

Socrates:: We do recognize the existence of false judgment as a sort of misjudgment that occurs when a person interchanges in his mind two things, both of which are, and asserts that the one is the other. In this way he is always thinking of something which is, but of one thing in place of another, and since he misses the mark he may fairly be said to be judging falsely.

Theaetetus:: I believe you have got it quite right now. When a person thinks ‘ugly' in place of ‘beautiful' or ‘beautiful' in place of ‘ugly,' he is really and truly thinking what is false.

Socrates:: I can see that you are no longer in awe of me, Theaetetus, but beginning to despise me.

Theaetetus:: Why, precisely?

Socrates:: I believe you think I shall miss the opening you give me by speaking of ‘truly thinking what is false,' and not ask you whether a thing can be slowly quick or heavily light or whether any contrary can desert its own nature and behave like its opposite. However, I will justify your boldness by letting that pass. So you like this notion that false judgment is mistaking.

Theaetetus:: I do.

Socrates:: According to you, then, it is possible for the mind to take one thing for another, and not for itself.

Theaetetus:: Yes, it is.

Socrates:: And when the mind does that, must it not be thinking either of both things or of one of the two?

Theaetetus:: Certainly it must, either at the same time or one after the other.

Socrates:: Excellent. And do you accept my description of the process of thinking?

Theaetetus:: How do you describe it?

Socrates:: As a discourse that the mind carries on with itself about any subject it is considering. You must take this explanation as coming from an ignoramus, but I have a notion that, when the mind is thinking, it is simply talking to itself, asking questions and answering them, and saying yes or no. When it reaches a decision—which may come slowly or in a sudden rush—when doubt is over and the two voices affirm the same thing, then we call that its 'judgment.' So I should describe thinking as discourse, and judgment as a statement pronounced, not aloud to someone else, but silently to oneself.

Theaetetus:: I agree.

Socrates:: It seems, then, that when a person thinks of one thing as another, he is affirming to himself that the one is the other.

Theaetetus:: Of course.

Socrates:: Now search your memory and see if you have ever said to yourself, 'Certainly, what is beautiful is ugly,' or 'What is unjust is just.' To put it generally, consider if you have ever set about convincing yourself that any one thing is certainly another thing, or whether, on the contrary, you have never, even in a dream, gone so far as to say to yourself that odd numbers must be even, or anything of that sort.

Theaetetus:: That is true.

Socrates:: Do you suppose anyone else, mad or sane, ever goes so far as to talk himself over, in his own mind, into stating seriously that an ox must be a horse or that two must be one?

Theaetetus:: Certainly not.

Socrates:: So, if making a statement to oneself is the same as judging, then, so long as a man is making a statement or judgment about both things at once and his mind has hold of both, he cannot say or judge that one of them is the other. You, in your turn, must not cavil at my language; I mean it in the sense that no one thinks ‘the ugly is beautiful' or anything of that kind.

Theaetetus:: I will not cavil, Socrates. I agree with you.

Socrates:: So long, then, as a person is thinking of both, he cannot think of the one as the other.

Theaetetus:: So it appears.

Socrates:: On the other hand, if he is thinking of one only and not of the other at all, he will never think that the one is the other.

Theaetetus:: True, for then he would have to have before his mind the thing he was not thinking of.

Socrates:: It follows, then, that ‘mistaking' is impossible, whether he thinks of both things or of one only. So there will be no sense in defining false judgment as ‘misjudgment.' It does not appear that false judgment exists in us in this form any more than in those we dismissed earlier.

Theaetetus:: So it seems.

Socrates:: And yet, Theaetetus, if we cannot show that false judgment does exist, we shall be driven into admitting all sorts of absurdities.

Theaetetus:: For instance?

Socrates:: I will not mention them until I have tried to look at the question from every quarter. So long as we cannot see our way, I should feel some shame at our being forced into such admissions.

But if we find the way out, then, as soon as we are clear, it will be time to speak of others as caught in the ludicrous position we shall have ourselves escaped; though, if we are completely baffled, then, I suppose, we must be humble and let the argument do with us what it will, like a sailor trampling over seasick passengers. So let me tell you where I still see an avenue open for us to follow.

Theaetetus:: Do tell me.

Socrates:: I shall say we were wrong to agree that a man cannot think that things he knows are things he does not know and so be deceived. In a way it is possible.

Theaetetus:: Do you mean something that crossed my mind at the moment when we said that was impossible? It occurred to me that sometimes I, who am acquainted with Socrates, imagine that a stranger whom I see at a distance is the Socrates whom I know. In a case like that a mistake of the kind you describe does occur.

Socrates:: And we were shy of saying that, because it would have made us out as both knowing and not knowing what we know?

Theaetetus:: Exactly.

Socrates:: We must, in fact, put the case in a different way. Perhaps the barrier will yield somewhere, though it may defy our efforts. Anyhow, we are in such straits that we must turn every argument over and put it to the test. Now, is there anything in this? Is it possible to become acquainted with something one did not know before?

Theaetetus:: Surely.

Socrates:: And the process can be repeated with one thing after another?

Theaetetus:: Of course.

Socrates:: Imagine, then, for the sake of argument, that our minds contain a block of wax, which in this or that individual may be larger or smaller, and composed of wax that is comparatively pure or muddy, and harder in some, softer in others, and sometimes of just the right consistency.

Theaetetus:: Very well.

Socrates:: Let us call it the gift of the Muses' mother, Memory, and say that whenever we wish to remember something we see or hear or conceive in our own minds, we hold this wax under the perceptions or ideas and imprint them on it as we might stamp the impression of a seal ring. Whatever is so imprinted we remember and know so long as the image remains; whatever is rubbed out or has not succeeded in leaving an impression we have forgotten and do not know.

Theaetetus:: So be it.

Socrates:: Now take a man who knows things in this way, and is attending to something that he sees or hears. Is there not here a possibility of his making a false judgment?

Theaetetus:: How?

Socrates:: By thinking that things he knows are other things he knows, or sometimes things he does not know. We were wrong when we agreed earlier that this was impossible.

Theaetetus:: What do you think about it now?

Socrates:: Mistake is impossible in the following cases.

No one can think one thing to be another when he does not perceive either of them, but has the memorial or seal of both of them in his mind; nor can any mistaking of one thing for another occur, when he only knows one, and does not know, and has no impression of the other; nor can he think that one thing which he does not know is another thing which he does not know, or that what he does not know is what he knows; nor that one thing which he perceives is another thing which he perceives, or that something which he perceives is something which he does not perceive; or that something which he does not perceive is something else which he does not perceive; or that something which he does not perceive is something which he perceives; nor again can he think that something which he knows and perceives, and of which he has the impression coinciding with sense, is something else which he knows and perceives, and of which he has the impression coinciding with sense;—this last case, if possible, is still more inconceivable than the others; nor can he think that something which he knows and perceives, and of which he has the memorial coinciding with sense, is something else which he knows; nor so long as these agree, can he think that a thing which he knows and perceives is another thing which he perceives; or that a thing which he does not know and does not perceive, is the same as another thing which he does not know and does not perceive;—nor again, can he suppose that a thing which he does not know and does not perceive is the same as another thing which he does not know; or that a thing which he does not know and does not perceive is another thing which he does not perceive:—All these utterly and absolutely exclude the possibility of false opinion.

There remain, then, the following cases in which, if anywhere, false judgment can occur.

Theaetetus:: What are they? Perhaps they may help me to understand better. At present I cannot follow.

Socrates:: Take things you know. You can suppose them to be other things which you both know and perceive, or to be things you do not know, but do perceive, or you can confuse two things which you both know and perceive.

Theaetetus:: Now I am more in the dark than ever.

Socrates:: Let me start again, then, and put it in this way. I know Theodorus and have a memory in my mind of what he is like, and the same with Theaetetus. At certain moments I see or touch or hear or otherwise perceive them; at other times, though I have no perception of you and Theodorus, I nevertheless remember you both and have you before my mind. Isn't that so?

Theaetetus:: Certainly.

Socrates:: That, then, is the first point I want to make clear—that it is possible either to perceive or not to perceive something one is acquainted with.

Theaetetus:: True.

Socrates:: And it is also possible, when one is not acquainted with a thing, sometimes not to perceive it either, sometimes merely to perceive it and nothing more.

Theaetetus:: That is possible too.

Socrates:: Then see if you can follow me better now. If Socrates knows Theodorus and Theaetetus, but sees neither and has no sort of present perception of them, he can never think in his own mind that Theaetetus is Theodorus. Is that good sense?

Theaetetus:: Yes, that is true.

Socrates:: Well, that was the first of the cases I mentioned.

Theaetetus:: Yes.

Socrates:: And the second was this. If I know one of you but not the other and perceive neither, once more I could never think that the one I know is the other whom I do not know.

Theaetetus:: True.

Socrates:: And thirdly, if I neither know nor perceive either of you, I cannot think that one unknown person is another unknown person. And now take it as if I had gone over the whole list of cases again, in which I shall never judge falsely about you and Theodorus, whether I know both or neither or only one of you. And the same applies to perceiving, if you follow me.

Theaetetus:: I follow now.

Socrates:: It remains, then, that false judgment should occur in a case like this—when I, who know you and Theodorus and possess imprints of you both like seal impressions in the waxen block, see you both at a distance indistinctly and am in a hurry to assign the proper imprint of each to the proper visual perception, like fitting a foot into its own footmark to effect a recognition, and then make the mistake of interchanging them, like a man who thrusts his feet into the wrong shoes, and apply the perception of each to the imprint of the other. Or my mistake might be illustrated by the sort of thing that happens in a mirror when the visual current transposes right to left. In that case mistaking or false judgment does result.

Theaetetus:: I think it does, Socrates. That is an admirable description of what happens to judgment.

Socrates:: Then there is also the case where I know both and perceive only one, and do not get the knowledge I have of that one to correspond with my perception. That is the expression I used before, which you did not understand.

Theaetetus:: No, I did not.

Socrates:: Well, that is what I was saying. If you know one of two people and also perceive him and if you get the knowledge you have to correspond with the perception of him, you will never think he is another person whom you both know and perceive, if your knowledge of him likewise is got to correspond with the perception. That was so, wasn't it?

Theaetetus:: Yes.

Socrates:: But there was leftover the case I have been describing now, in which we say false judgment does occur—the possibility that you may know both and see or otherwise perceive both, but not get the two imprints to correspond each with its proper perception. Like a bad archer, you may shoot to one side and miss the mark—which is indeed another phrase we use for error.

Theaetetus:: With good reason.

Socrates:: Also, when a perception is present which belongs to one of the imprints, but none which belongs to the other, and the mind fits to the present perception the imprint belonging to the absent one, in all such cases it is in error. To sum up, in the case of objects one does not know and has never perceived, there is, it seems, no possibility of error or false judgment, if our present account is sound, but it is precisely in the field of objects both known and perceived that judgment turns and twists about and proves false or true—true when it brings impressions straight to their proper imprints, false when it misdirects them crosswise to the wrong imprint.

Theaetetus:: Surely that is a satisfactory account, isn't it, Socrates?

Socrates:: You will think still better of it when you hear the rest. To judge truly is a fine thing and there is something discreditable in error.

Theaetetus:: Of course.

Socrates:: Well, they say the differences arise in this way. When a man has in his mind a good thick slab of wax, smooth and kneaded to the right consistency, and the impressions that come through the senses are stamped on these tables of the ‘heart' —Homer's word hints at the mind's likeness to wax—then the imprints are clear and deep enough to last a long time. Such people are quick to learn and also have good memories, and besides they do not interchange the imprints of their perceptions but think truly. These imprints being distinct and well spaced are quickly assigned to their several stamps—the ‘real things' as they are called—and such men are said to be clever. Do you agree?

Theaetetus:: Most emphatically.

Socrates:: When a person has what the poet's wisdom commends as a ‘shaggy heart,' or when the block is muddy or made of impure wax, or over-soft or hard, the people with soft wax are quick to learn, but forgetful, those with hard wax the reverse. Where it is shaggy or rough, a gritty kind of stuff containing a lot of earth or dirt, the impressions obtained are indistinct; so are they too when the stuff is hard, for they have no depth. Impressions in soft wax also are indistinct, because they melt together and soon become blurred. And if, besides this, they overlap through being crowded together into some wretched little narrow mind, they are still more indistinct. All these types, then, are likely to judge falsely. When they see or hear or think of something, they cannot quickly assign things to their several imprints. Because they are so slow and sort things into the wrong places, they constantly see and hear and think amiss, and we say they are mistaken about things and stupid.

Theaetetus:: Your description could not be better, Socrates.

Socrates:: We are to conclude, then, that false judgments do exist in us?

Theaetetus:: Most certainly.

Socrates:: And true ones also, I suppose?

Theaetetus:: True ones also.

Socrates:: At last, then, we believe we have reached a satisfactory agreement that both these kinds of judgments certainly exist?

Theaetetus:: Most emphatically.

Socrates:: It really does seem to be true, Theaetetus, that a garrulous person is a strange and disagreeable creature.

Theaetetus:: Why, what makes you say that?

Socrates:: Disgust at my own stupidity. I am indeed garrulous—what else can you call a man who goes on bandying arguments to and fro because he is such a dolt that he cannot make up his mind and is loath to surrender any one of them?

Theaetetus:: But why are you disgusted with yourself?

Socrates:: I am not merely disgusted but anxious about the answer I shall make if someone asks, So, Socrates, you have made a discovery—that false judgment resides, not in our perceptions among themselves nor yet in our thoughts, but in the fitting together of perception and thought? I suppose I shall say yes, and plume myself on this brilliant discovery of ours.

Theaetetus:: I don't see anything to be ashamed of in what you have just pointed out, Socrates.

Socrates:: On the other hand, he will continue, you also say that we can never imagine that a man whom we merely think of and do not see is a horse which again we do not see or touch but merely think of without perceiving it in any way? I suppose I shall say yes to that.

Theaetetus:: And rightly.

Socrates:: On that showing, he will say, a man could never imagine that eleven, which he merely thinks of, is twelve, which again he merely thinks of.

Come, you must find the answer now.

Theaetetus:: Well, I shall answer that, if he saw or handled eleven things, he might suppose they were twelve, but he will never make that judgment about the eleven and the twelve he has in his thoughts.

Socrates:: Well now, does a man ever consider in his own mind five and seven—I don't mean five men and seven men or anything of that sort, but just five and seven themselves, which we describe as records in that waxen block of ours, among which there can be no false judgment—does anyone ever take these into consideration and ask himself in his inward conversation how much they amount to, and does one man believe and state that they make eleven, another that they make twelve, or does everybody agree they make twelve?

Theaetetus:: Far from it. Many people say eleven, and if larger numbers are involved, the more room there is for mistakes, for you are speaking generally of any numbers, I suppose.

Socrates:: Yes, that is right. Now consider what happens in this case. Is it not thinking that the twelve itself that is stamped on the waxen block is eleven?

Theaetetus:: It seems so.

Socrates:: Then haven't we come round again to our first argument? For when this happens to someone, he is thinking that one thing he knows is another thing he knows, and that, we said, was impossible. That was the very ground on which we were led to make out that there could be no such thing as false judgment; it was in order to avoid the conclusion that the same man must at the same time know and not know the same thing.

Theaetetus:: Quite true.

Socrates:: If so, we must account for false judgment in some other way than as the misfitting of thought to perception. If it were that, we should never make mistakes among our thoughts themselves. As the case stands now, either there is no such thing as false judgment, or it is possible not to know what one does know. Which alternative do you choose?

Theaetetus:: I see no possible choice, Socrates.

Socrates:: But the argument is not going to allow both alternatives. However, we must stick at nothing; suppose we try being quite shameless.

Theaetetus:: In what way?

Socrates:: By making up our minds to describe what knowing is like.

Theaetetus:: How is that shameless?

Socrates:: You seem to be unaware that our whole conversation from the outset has been an inquiry after the nature of knowledge on the supposition that we did not know what it was.

Theaetetus:: No, I am quite aware of that.

Socrates:: Then, doesn't it strike you as shameless to explain what knowing is like, when we don't know what knowledge is? The truth is, Theaetetus, that for some time past there has been a vicious taint in our discussion. Times out of number we have said, 'we know,' 'we do not know,' 'we have knowledge,' 'we have no knowledge,' as if we could understand each other while we still know nothing about knowledge. At this very moment, if you please, we have once more used the words 'know nothing' and 'understand,' as if we had a right to use them while we are still destitute of knowledge.

Theaetetus:: Well, but how are you going to carry on a discussion, Socrates, if you keep clear of those words?

Socrates:: I cannot, being the man I am, though I might if I were an expert in debate. If such a person were here now, he would profess to keep clear of them and rebuke us severely for my use of language. As we are such bunglers, then, shall I be so bold as to describe what knowing is like? I think it might help us.

Theaetetus:: Do so, then, by all means. And if you cannot avoid those words, you shall not be blamed.

Socrates:: Well, you have heard what ‘knowing' is commonly said to be?

Theaetetus:: Possibly, but I don't remember at the moment.

Socrates:: They say it is ‘having knowledge.'

Theaetetus:: True.

Socrates:: Let us make a slight amendment and say, ‘possessing knowledge.'

Theaetetus:: What difference would you say that makes?

Socrates:: None, perhaps, but let me tell you my idea and you shall help me test it.

Theaetetus:: I will if I can.

Socrates:: ‘Having' seems to me different from ‘possessing.' If a man has bought a coat and owns it, but is not wearing it, we should say he possesses it without having it about him.

Theaetetus:: True.

Socrates:: Now consider whether knowledge is a thing you can possess in that way without having it about you, like a man who has caught some wild birds—pigeons or what not—and keeps them in an aviary he has made for them at home. In a sense, of course, we might say he ‘has' them all the time inasmuch as he possesses them, mightn't we?

Theaetetus:: Yes.

Socrates:: But in another sense he ‘has' none of them, though he has got control of them, now that he has made them captive in an enclosure of his own; he can take and have hold of them whenever he likes by catching any bird he chooses, and let them go again, and it is open to him to do that as often as he pleases.

Theaetetus:: That is so.

Socrates:: Once more then, just as a while ago we imagined a sort of waxen block in our minds, so now let us suppose that every mind contains a kind of aviary stocked with birds of every sort, some in flocks apart from the rest, some in small groups, and some solitary, flying in any direction among them all.

Theaetetus:: Be it so. What follows?

Socrates:: When we are babies we must suppose this receptacle empty, and take the birds to stand for pieces of knowledge. Whenever a person acquires any piece of knowledge and shuts it up in his enclosure, we must say he has learned or discovered the thing of which this is the knowledge, and that is what ‘knowing' means.

Theaetetus:: Be it so.

Socrates:: Now think of him hunting once more for any piece of knowledge that he wants, catching and holding it, and letting it go again. In what terms are we to describe that—the same that we used of the original process of acquisition, or different ones? An illustration may help you to see what I mean. There is a science you call ‘arithmetic.'

Theaetetus:: Yes.

Socrates:: Conceive that, then, as a chase after pieces of knowledge about all the numbers, odd or even.

Theaetetus:: I will.

Socrates:: That, I take it, is the science in virtue of which a man has in his control pieces of knowledge about numbers and can hand them over to someone else.

Theaetetus:: Yes.

Socrates:: And when he hands them over, we call it ‘teaching,' and when the other takes them from him, that is ‘learning,' and when he has them in the sense of possessing them in that aviary of his, that is ‘knowing.'

Theaetetus:: Certainly.

Socrates:: Now observe what follows. The finished arithmetician knows all numbers, doesn't he? There is no number the knowledge of which is not in his mind.

Theaetetus:: Naturally.

Socrates:: And such a person may sometimes count either the numbers themselves in his own head or some set of external things that have a number.

Theaetetus:: Of course.

Socrates:: And by counting we shall mean simply trying to find out what some particular number amounts to?

Theaetetus:: Yes.

Socrates:: It appears, then, that the man who, as we admitted, knows every number, is trying to find out what he knows as if he had no knowledge of it. No doubt you sometimes hear puzzles of that sort debated.

Theaetetus:: Indeed I do.

Socrates:: Well, our illustration from hunting pigeons and getting possession of them will enable us to explain that the hunting occurs in two ways—first, before you possess your pigeon in order to have possession of it; secondly, after getting possession of it, in order to catch and hold in your hand what you have already possessed for some time. In the same way, if you have long possessed pieces of knowledge about things you have learned and know, it is still possible to get to know the same things again, by the process of recovering the knowledge of some particular thing and getting hold of it. It is knowledge you have possessed for some time, but you had not got it handy in your mind.

Theaetetus:: True.

Socrates:: That, then, was the drift of my question—what terms should be used to describe the arithmetician who sets about counting or the literate person who sets about reading—because it seemed as if, in such a case, the man was setting about learning again from himself what he already knew.

Theaetetus:: That sounds odd, Socrates.

Socrates:: Well, but can we say he is going to read or count something he does not know, when we have already granted that he knows all the letters or all the numbers?

Theaetetus:: No, that is absurd too.

Socrates:: Shall we say, then, that we care nothing about words, if it amuses anyone to turn and twist the expressions ‘knowing' and ‘learning'? Having drawn a distinction between possessing knowledge and having it about one, we agree that it is impossible not to possess what one does possess, and so we avoid the result that a man should not know what he does know, but we say that it is possible for him to get hold of a false judgment about it. For he may not have about him the knowledge of that thing, but a different piece of knowledge instead, if it so happens that, in hunting for some particular piece of knowledge, among those that are fluttering about, he misses it and catches hold of a different one. In that case, you see, he mistakes eleven for twelve, because he has caught hold of the knowledge of eleven that is inside him, instead of his knowledge of twelve, as he might catch a dove in place of a pigeon.

Theaetetus:: That seems reasonable.

Socrates:: Whereas, when he catches the piece of knowledge he is trying to catch, he is not mistaken but thinks what is true. In this way both true and false judgments can exist, and the obstacles that were troubling us are removed. You will agree to this, perhaps? Or will you not?

Theaetetus:: I will.

Socrates:: Yes, for now we are rid of the contradiction about people not knowing what they do know. That no longer implies our not possessing what we do possess, whether we are mistaken about something or not. But it strikes me that a still stranger consequence is coming in sight.

Theaetetus:: What is that?

Socrates:: That the interchange of pieces of knowledge should ever result in a judgment that is false.

Theaetetus:: How do you mean?

Socrates:: In the first place, that a man should have knowledge of something and at the same time fail to recognize that very thing, not for want of knowing it but by reason of his own knowledge, and next that he should judge that thing to be something else and vice versa—isn't that very unreasonable, that when a piece of knowledge presents itself, the mind should fail to recognize anything and know nothing? On this showing, the presence of ignorance might just as well make us know something, or the presence of blindness make us see—if knowledge can ever make us fail to know.

Theaetetus:: Perhaps, Socrates, we were wrong in making the birds stand for pieces of knowledge only, and we ought to have imagined pieces of ignorance flying about with them in the mind. Then, in chasing them, our man would lay hold sometimes of a piece of knowledge, sometimes of a piece of ignorance, and the ignorance would make him judge falsely, the knowledge truly, about the same thing.

Socrates:: It is not easy to disapprove of anything you say, Theaetetus, but think again about your suggestion. Suppose it is as you say; then the man who lays hold of the piece of ignorance will judge falsely. Is that right?

Theaetetus:: Yes.

Socrates:: But of course he will not think he is judging falsely.

Theaetetus:: Of course not.

Socrates:: No, he will think he is judging truly, and his attitude of mind will be the same as if he knew the thing he is mistaken about.

Theaetetus:: Naturally.

Socrates:: So he will imagine that, as a result of his chase, he has got hold of a piece of knowledge, not a piece of ignorance.

Theaetetus:: Clearly.

Socrates:: Then we have gone a long way round only to find ourselves confronted once more with our original difficulty. Our destructive critic will laugh at us. You wonderful people, he will say, are we to understand that a man knows both a piece of knowledge and a piece of ignorance, and then supposes that one of these things he knows is the other which he also knows? Or does he know neither, and then judge that one of these unknown things is the other? Or does he know only one, and identify this known thing with the unknown one, or the unknown one with the known? Or are you going to tell me that there are yet further pieces of knowledge about your pieces of knowledge and ignorance, and that their owner keeps these shut up in yet another of your ridiculous aviaries or waxen blocks, knowing them so long as he possesses them, although he may not have them at hand in his mind? On that showing you will find yourselves perpetually driven round in a circle and never getting any further.

What are we to reply to that, Theaetetus?

Theaetetus:: Really, Socrates, I don't know what we are to say.

Socrates:: Maybe, my young friend, we have deserved this rebuke, and the argument shows that we were wrong to leave knowledge on one side and look first for an explanation of false judgment. That cannot be understood until we have a satisfactory account of the nature of knowledge.

Theaetetus:: As things now stand, Socrates, one cannot avoid that conclusion.

Socrates:: To start all over again, then, what is one to say that knowledge is? For surely we are not going to give up yet.

Theaetetus:: Not unless you do so.

Socrates:: Then tell me, what definition can we give with the least risk of contradicting ourselves?

Theaetetus:: The one we tried before, Socrates. I have nothing else to suggest.

Socrates:: What was that?

Theaetetus:: That true belief is knowledge. Surely there can at least be no mistake in believing what is true and the consequences are always satisfactory.

Socrates:: Try, and you will see, Theaetetus, as the man said when he was asked if the river was too deep to ford. So here, if we go forward on our search, we may stumble upon something that will reveal the thing we are looking for. We shall make nothing out, if we stay where we are.

Theaetetus:: True. Let us go forward and see.

Socrates:: Well, we need not go far to see this much. You will find a whole profession to prove that true belief is not knowledge.

Theaetetus:: How so? What profession?

Socrates:: The profession of those paragons of intellect known as orators and lawyers. There you have men who use their skill to produce conviction, not by instruction, but by making people believe whatever they want them to believe. You can hardly imagine teachers so clever as to be able, in the short time allowed by the clock, to instruct their hearers thoroughly in the true facts of a case of robbery or other violence which those hearers had not witnessed.

Theaetetus:: No, I cannot imagine that, but they can convince them.

Socrates:: And by convincing you mean making them believe something.

Theaetetus:: Of course.

Socrates:: And when a jury is rightly convinced of facts which can be known only by an eyewitness, then, judging by hearsay and accepting a true belief, they are judging without knowledge, although, if they find the right verdict, their conviction is correct?

Theaetetus:: Certainly.

Socrates:: But if true belief and knowledge were the same thing, the best of jurymen could never have a correct belief without knowledge. It now appears that they must be different things.

Theaetetus:: Yes, Socrates, I have heard someone make the distinction. I had forgotten, but now it comes back to me. He said that a true belief with the addition of an account (λόγος) was knowledge, while belief without an account was outside its range. Where no account could be given of a thing, it was not ‘knowable'—that was the word he used—where it could, it was knowable.

Socrates:: A good suggestion. But tell me how he distinguished these knowable things from the unknowable. It may turn out that what you were told tallies with something I have heard said.

Theaetetus:: I am not sure if I can recall that, but I think I should recognize it if I heard it stated.

Socrates:: If you have had a dream, let me tell you mine in return. I seem to have heard some people say that what might be called the first elements of which we and all other things consist are such that no account can be given of them. Each of them just by itself can only be named; we cannot attribute to it anything further or say that it exists or does not exist, for we should at once be attaching to it existence or nonexistence, whereas we ought to add nothing if we are to express just it alone. We ought not even to add ‘just' or It' or ‘each' or ‘alone' or ‘this,' or any other of a host of such terms. These terms, running loose about the place, are attached to everything, and they are distinct from the things to which they are applied. If it were possible for an element to be expressed in any formula exclusively belonging to it, no other terms ought to enter into that expression. But in fact there is no formula in which any element can be expressed; it can only be named, for a name is all there is that belongs to it. But when we come to things composed of these elements, then, just as these things are complex, so the names are combined to make a description (λόγος), a description being precisely a combination of names. Accordingly, elements are inexplicable and unknowable, but they can be perceived, while complexes (‘syllables') are knowable and explicable, and you can have a true notion of them. So when a man gets hold of the true notion of something without an account, his mind does think truly of it, but he does not know it, for if one cannot give and receive an account of a thing, one has no knowledge of that thing. But when he has also got hold of an account, all this becomes possible to him and he is fully equipped with knowledge.

Does that version represent the dream as you heard it, or not?

Theaetetus:: Perfectly.

Socrates:: So this dream finds favor and you hold that a true notion with the addition of an account is knowledge?

Theaetetus:: Precisely.

Socrates:: Can it be, Theaetetus, that, all in a moment, we have found out today what so many wise men have grown old in seeking and have not found?

Theaetetus:: I, at any rate, am satisfied with our present statement, Socrates.

Socrates:: Yes, the statement just in itself may well be satisfactory, for how can there ever be knowledge without an account and right belief? But there is one point in the theory as stated that does not find favor with me.

Theaetetus:: What is that?

Socrates:: What might be considered its most ingenious feature. It says that the elements are unknowable, but whatever is complex (‘syllables') can be known.

Theaetetus:: Is not that right?

Socrates:: We must find out. We hold as a sort of hostage for the theory the illustration in terms of which it was stated.

Theaetetus:: Namely?

Socrates:: Letters—the elements of writing—and syllables. That and nothing else was the prototype the author of this theory had in mind, don't you think?

Theaetetus:: Yes, it was.

Socrates:: Let us take up that illustration, then, and put it to the question, or rather put the question to ourselves. Did we learn our letters on that principle or not? To begin with, is it true that an account can be given of syllables, but not of letters?

Theaetetus:: It may be so.

Socrates:: I agree, decidedly. Suppose you are asked about the first syllable of 'Socrates.' Explain, Theaetetus, what is So? How will you answer?

Theaetetus:: S and O.

Socrates:: And you have there an account of the syllable?

Theaetetus:: Yes.

Socrates:: Go on, then, give me a similar account of S.

Theaetetus:: But how can one state the elements of an element? The fact is, of course, Socrates, that S is one of the consonants, nothing but a noise, like a hissing of the tongue, while not only has no articulate sound but is not even a noise, and the same is true of most of the letters. So they may well be said to be inexplicable, when the clearest of them, the seven vowels themselves, have only a sound, and no sort of account can be given of them.

Socrates:: So far, then, we have reached a right conclusion about knowledge.

Theaetetus:: Apparently.

Socrates:: But now, have we been right in declaring that the letter cannot be known, though the syllable can?

Theaetetus:: That seems all right.

Socrates:: Take the syllable then. Do we mean by that both the two letters or, if there are more than two, all the letters? Or do we mean a single entity that comes into existence from the moment when they are put together?

Theaetetus:: I should say we mean all the letters.

Socrates:: Then take the case of the two letters S and O. The two together are the first syllable of my name. Anyone who knows that syllable knows both the letters, doesn't he?

Theaetetus:: Naturally.

Socrates:: So he knows the S and the O.

Theaetetus:: Yes.

Socrates:: But has he, then, no knowledge of each letter, so that he knows both without knowing either?

Theaetetus:: That is a monstrous absurdity, Socrates.

Socrates:: And yet, if it is necessary to know each of two things before one can know both, he simply must know the letters first, if he is ever to know the syllable, and so our fine theory will vanish and leave us in the lurch.

Theaetetus:: With a startling suddenness.

Socrates:: Yes, because we are not keeping a good watch upon it. Perhaps we ought to have assumed that the syllable was not the letters but a single entity that arises out of them with a unitary character of its own and different from the letters.

Theaetetus:: By all means. Indeed, it may well be so rather than the other way.

Socrates:: Let us consider that. We ought not to abandon an imposing theory in this poor-spirited manner.

Theaetetus:: Certainly not.

Socrates:: Suppose, then, it is as we say now. The syllable arises as a single entity from any set of letters which can be combined, and that holds of every complex, not only in the case of letters.

Theaetetus:: By all means.

Socrates:: In that case, it must have no parts.

Theaetetus:: Why?

Socrates:: Because, if a thing has parts, the whole thing must be the same as all the parts. Or do you say that a whole likewise is a single entity that arises out of the parts and is different from the aggregate of the parts?

Theaetetus:: Yes, I do.

Socrates:: Then do you regard the sum (τὸ πᾶν) as the same thing as the whole, or are they different?

Theaetetus:: I am not at all clear, but you tell me to answer boldly, so I will take the risk of saying they are different.

Socrates:: Your boldness, Theaetetus, is right; whether your answer is so, we shall have to consider.

Theaetetus:: Yes, certainly.

Socrates:: Well, then, the whole will be different from the sum, according to our present view.

Theaetetus:: Yes.

Socrates:: Well but now, is there any difference between the sum and all the things it includes? For instance, when we say, ‘one, two, three, four, five, six,' or ‘twice three' or ‘three times two' or ‘four and two' or ‘three and two and one,' are we in all these cases expressing the same thing or different things?

Theaetetus:: The same.

Socrates:: Just six, and nothing else?

Theaetetus:: Yes.

Socrates:: In fact, in each form of expression we have expressed all the six.

Theaetetus:: Yes.

Socrates:: But when we express them all, is there no sum that we express?

Theaetetus:: There must be.

Socrates:: And is that sum anything else than ‘six'?

Theaetetus:: No.

Socrates:: Then, at any rate in the case of things that consist

of a number, the words ‘sum' and ‘all the things' denote the same thing.

Theaetetus:: So it seems.

Socrates:: Let us put our argument, then, in this way. The number of [square feet in] an acre, and the acre are the same thing, aren't they?

Theaetetus:: Yes.

Socrates:: And so too with the number of [feet in] a mile?

Theaetetus:: Yes.

Socrates:: And again with the number of [soldiers in] an army and the army, and so on, in all cases. The total number is the same as the total thing in each case.

Theaetetus:: Yes.

Socrates:: But the number of [units in] any collection of things cannot be anything but parts of that collection?

Theaetetus:: No.

Socrates:: Now, anything that has parts consists of parts.

Theaetetus:: Evidently.

Socrates:: But all the parts, we have agreed, are the same as the sum, if the total number is to be the same as the total thing.

Theaetetus:: Yes.

Socrates:: The whole, then, does not consist of parts, for if it were all the parts it would be a sum.

Theaetetus:: Apparently not.

Socrates:: But can a part be a part of anything but its whole?

Theaetetus:: Yes, of the sum.

Socrates:: You make a gallant fight of it, Theaetetus. But does not ‘the sum' mean precisely something from which nothing is missing?

Theaetetus:: Necessarily.

Socrates:: And is not a whole exactly the same thing—that from which nothing whatever is missing? Whereas, when something is removed, the thing becomes neither a whole nor a sum; it changes at the same moment from being both to being neither.

Theaetetus:: I think now that there is no difference between a sum and a whole.

Socrates:: Well, we were saying, were we not, that when a thing has parts, the whole or sum will be the same thing as all the parts?

Theaetetus:: Certainly.

Socrates:: To go back, then, to the point I was trying to make just now, if the syllable is not the same thing as the letters, does it not follow that it cannot have the letters as parts of itself; otherwise, being the same thing as the letters, it would be neither more nor less knowable than they are?

Theaetetus:: Yes.

Socrates:: And it was to avoid that consequence that we supposed the syllable to be different from the letters.

Theaetetus:: Yes.

Socrates:: Well, if the letters are not parts of the syllable, can you name any things, other than its letters, that are parts of a syllable?

Theaetetus:: Certainly not, Socrates. If I admitted that it had any parts, it would surely be absurd to set aside the letters and look for parts of any other kind.

Socrates:: Then, on the present showing, a syllable will be a thing that is absolutely one and cannot be divided into parts of any sort?

Theaetetus:: Apparently.

Socrates:: Do you remember then, my dear Theaetetus, our accepting a short while ago a statement that we thought satisfactory—that no account could be given of the primary things of which other things are composed, because each of them, taken just by itself, was incomposite, and that it was not correct to attribute even ‘existence' to it, or to call it ‘this,' on the ground that these words expressed different things that were extraneous to it, and this was the ground for making the primary thing inexplicable and unknowable?

Theaetetus:: I remember.

Socrates:: Then is not exactly this, and nothing else, the ground of its being simple in nature and indivisible into parts? I can see no other.

Theaetetus:: Evidently there is no other.

Socrates:: Then has not the syllable now turned out to be a thing of the same sort, if it has no parts and is a unitary thing?

Theaetetus:: Certainly.

Socrates:: To conclude, then, if, on the one hand, the syllable is the same thing as a number of letters and is a whole with the letters as its parts, then the letters must be neither more nor less knowable and explicable than syllables, since we made out that all the parts are the same thing as the whole.

Theaetetus:: True.

Socrates:: But if, on the other hand, the syllable is a unity without parts, syllable and letter likewise are equally incapable of explanation and unknowable. The same reason will make them so.

Theaetetus:: I see no way out of that.

Socrates:: If so, we must not accept this statement—that the syllable can be known and explained, the letter cannot.

Theaetetus:: No, not if we hold by our argument.

Socrates:: And again, would not your own experience in learning your letters rather incline you to accept the opposite view?

Theaetetus:: What view do you mean?

Socrates:: This—that all the time you were learning you were doing nothing else but trying to distinguish by sight or hearing each letter by itself, so as not to be confused by any arrangement of them in spoken or written words.

Theaetetus:: That is quite true.

Socrates:: And in the music school the height of accomplishment lay precisely in being able to follow each several note and tell which string it belonged to, and notes, as everyone would agree, are the elements of music.

Theaetetus:: Precisely.

Socrates:: Then, if we are to argue from our own experience of elements and complexes to other cases, we shall conclude that elements in general yield knowledge that is much clearer than knowledge of the complex and more effective for a complete grasp of anything we seek to know. If anyone tells us that the complex is by its nature knowable, while the element is unknowable, we shall suppose that, whether he intends it or not, he is playing with us.

Theaetetus:: Certainly.

Socrates:: Indeed we might, I think, find other arguments to prove that point. But we must not allow them to distract our attention from the question before us, namely, what can really be meant by saying that an account added to true belief yields knowledge in its most perfect form.

Theaetetus:: Yes, we must see what that means.

Socrates:: Well then, what is this term ‘account' intended to convey to us? I think it must mean one of three things.

Theaetetus:: What are they?

Socrates:: The first will be giving overt expression to one's thought by means of vocal sound with names and verbs, casting an image of one's notion on the stream that flows through the lips, like a reflection in a mirror or in water. Do you agree that expression of that sort is an ‘account'?

Theaetetus:: I do. We certainly call that expressing ourselves in speech (λέγειν).

Socrates:: On the other hand, that is a thing that anyone can do more or less readily. If a man is not born deaf or dumb, he can signify what he thinks on any subject. So in this sense anyone whatever who has a correct notion evidently will have it ‘with an account,' and there will be no place left anywhere for a correct notion apart from knowledge.

Theaetetus:: True.

Socrates:: Then we must not be too ready to charge the author of the definition of knowledge now before us with talking nonsense. Perhaps that is not what he meant. He may have meant being able to reply to the question, what any given thing is, by enumerating its elements.

Theaetetus:: For example, Socrates?

Socrates:: For example, Hesiod says about a wagon, 'In a wagon are a hundred pieces of wood.' I could not name them all; no more, I imagine, could you. If we were asked what a wagon is, we should be content if we could mention wheels, axle, body, rails, yoke.

Theaetetus:: Certainly.

Socrates:: But I dare say he would think us just as ridiculous as if we replied to the question about your own name by telling the syllables. We might think and express ourselves correctly, but we should be absurd if we fancied ourselves to be grammarians and able to give such an account of the name Theaetetus as a grammarian would offer. He would say it is impossible to give a scientific account of anything, short of adding to your true notion a complete catalogue of the elements, as, I think, was said earlier.

Theaetetus:: Yes, it was.

Socrates:: In the same way, he would say, we may have a correct notion of the wagon, but the man who can give a complete statement of its nature by going through those hundred parts has thereby added an account to his correct notion and, in place of mere belief, has arrived at a technical knowledge of the wagon's nature, by going through all the elements in the whole.

Theaetetus:: Don't you approve, Socrates?

Socrates:: Tell me if you approve, my friend, and whether you accept the view that the complete enumeration of elements is an account of any given thing, whereas description in terms of syllables or of any larger unit still leaves it unaccounted for. Then we can look into the matter further.

Theaetetus:: Well, I do accept that.

Socrates:: Do you think, then, that anyone has knowledge of whatever it may be, when he thinks that one and the same thing is a part sometimes of one thing, sometimes of a different thing, or again when he believes now one and now another thing to be part of one and the same thing?

Theaetetus:: Certainly not.

Socrates:: Have you forgotten, then, that when you first began learning to read and write, that was what you and your schoolfellows did?

Theaetetus:: Do you mean, when we thought that now one letter and now another was part of the same syllable, and when we put the same letter sometimes into the proper syllable, sometimes into another?

Socrates:: That is what I mean.

Theaetetus:: Then I have certainly not forgotten, and I do not think that one has reached knowledge so long as one is in that condition.

Socrates:: Well then, if at that stage you are writing 'Theaetetus' and you think you ought to write T and H and E and do so, and again when you are trying to write 'Theodorus,' you think you ought to write T and E and do so, can we say that you know the first syllable of your two names?

Theaetetus:: No, we have just agreed that one has not knowledge so long as one is in that condition.

Socrates:: And there is no reason why a person should not be in the same condition with respect to the second, third, and fourth syllables as well?

Theaetetus:: None whatever.

Socrates:: Can we, then, say that whenever in writing ‘Theaetetus' he puts down all the letters in order, then he is in possession of the complete catalogue of elements together with correct belief?

Theaetetus:: Obviously.

Socrates:: Being still, as we agree, without knowledge, though his beliefs are correct?

Theaetetus:: Yes.

Socrates:: Although he possesses the ‘account' in addition to right belief. For when he wrote he was in possession of the catalogue of the elements, which we agreed was the ‘account.'

Theaetetus:: True.

Socrates:: So, my friend, there is such a thing as right belief together with an account, which is not yet entitled to be called knowledge.

Theaetetus:: I am afraid so.

Socrates:: Then, apparently, our idea that we had found the perfectly true definition of knowledge was no better than a golden dream. Or shall we not condemn the theory yet? Perhaps the meaning to be given to ‘account' is not this, but the remaining one of the three, one of which we said must be intended by anyone who defines knowledge as correct belief together with an account.

Theaetetus:: A good reminder. There is still one meaning left. The first was what might be called the image of thought in spoken sound, and the one we have just discussed was going all through the elements to arrive at the whole. What is the third?

Socrates:: The meaning most people would give—being able to name some mark by which the thing one is asked about differs from everything else.

Theaetetus:: Could you give me an example of such an account of a thing?

Socrates:: Take the sun as an example. I dare say you will be satisfied with the account of it as the brightest of the heavenly bodies that go round the earth.

Theaetetus:: Certainly.

Socrates:: Let me explain the point of this example. It is to illustrate what we were just saying—that if you get hold of the difference distinguishing any given thing from all others, then, so some people say, you will have an ‘account' of it, whereas, so long as you fix upon something common to other things, your account will embrace all the things that share it.

Theaetetus:: I understand. I agree that what you describe may fairly be called an ‘account.'

Socrates:: And if, besides a right notion about a thing, whatever it may be, you also grasp its difference from all other things, you will have arrived at knowledge of what, till then, you had only a notion of.

Theaetetus:: We do say that, certainly.

Socrates:: Really, Theaetetus, now I come to look at this statement at close quarters, it is like a scene painting. I cannot make it out at all, though, so long as I kept at a distance, there seemed to be some sense in it.

Theaetetus:: What do you mean? Why so?

Socrates:: I will explain, if I can. Suppose I have a correct notion about you; if I add to that the account of you, then, we are to understand, I know you. Otherwise I have only a notion.

Theaetetus:: Yes.

Socrates:: And ‘account' means putting your differentness into words.

Theaetetus:: Yes.

Socrates:: So, at the time when I had only a notion, my mind did not grasp any of the points in which you differ from others?

Theaetetus:: Apparently not.

Socrates:: Then I must have had before my mind one of those common things which belong to another person as much as to you.

Theaetetus:: That follows.

Socrates:: But look here! If that was so, how could I possibly be having a notion of you rather than of anyone else? Suppose I was thinking, Theaetetus is one who is a man and has a nose and eyes and a mouth and so forth, enumerating every part of the body. Will thinking in that way result in my thinking of Theaetetus rather than of Theodorus or, as they say, of the man in the street?

Theaetetus:: How should it?

Socrates:: Well, now suppose I think not merely of a man with a nose and eyes, but of one with a snub nose and prominent eyes. Once more shall I be having a notion of you any more than of myself or anyone else of that description?

Theaetetus:: No.

Socrates:: In fact, there will be no notion of Theaetetus in my mind, I suppose, until this particular snubness has stamped and registered within me a record distinct from all the other cases of snubness that I have seen, and so with every other part of you. Then, if I meet you tomorrow, that trait will revive my memory and give me a correct notion about you.

Theaetetus:: Quite true.

Socrates:: If that is so, the correct notion of anything must itself include the differentness of that thing.

Theaetetus:: Evidently.

Socrates:: Then what meaning is left for getting hold of an ‘account' in addition to the correct notion? If, on the one hand, it means adding the notion of how a thing differs from other things, such an injunction is simply absurd.

Theaetetus:: How so?

Socrates:: When we have a correct notion of the way in which certain things differ from other things, it tells us to add a correct notion of the way in which they differ from other things. On this showing, the most vicious of circles would be nothing to this injunction. It might better deserve to be called the sort of direction a blind man might give. To tell us to get hold of something we already have, in order to get to know something we are already thinking of, suggests a state of the most absolute darkness.

Theaetetus:: Whereas, if— ? The supposition you made just now implied that you would state some alternative. What was it?

Socrates:: If the direction to add an ‘account' means that we are to get to know the differentness, as opposed to merely having a notion of it, this most admirable of all definitions of knowledge will be a pretty business, because ‘getting to know' means acquiring knowledge, doesn't it?

Theaetetus:: Yes.

Socrates:: So, apparently, to the question, ‘What is knowledge?' our definition will reply, ‘Correct belief together with knowledge of a differentness,' for, according to it, ‘adding an account' will come to that.

Theaetetus:: So it seems.

Socrates:: Yes, and when we are inquiring after the nature of knowledge, nothing could be sillier than to say that it is correct belief together with a knowledge of differentness or of anything whatever.

So, Theaetetus, neither perception, nor true belief, nor the addition of an ‘account' to true belief can be knowledge.

Theaetetus:: Apparently not.

Socrates:: Are we in labor, then, with any further child, my friend, or have we brought to birth all we have to say about knowledge?

Theaetetus:: Indeed we have, and for my part, I have already, thanks to you, given utterance to more than I had in me.

Socrates:: All of which our midwife's skill pronounces to be mere wind eggs and not worth the rearing?

Theaetetus:: Undoubtedly.

Socrates:: Then supposing you should ever henceforth try to conceive afresh, Theaetetus, if you succeed, your embryo thoughts will be the better as a consequence of today's scrutiny, and if you remain barren, you will be gentler and more agreeable to your companions, having the good sense not to fancy you know what you do not know. For that, and no more, is all that my art can effect; nor have I any of that knowledge possessed by all the great and admirable men of our own day or of the past. But this midwife's art is a gift from heaven; my mother had it for women, and I for young men of a generous spirit and for all in whom beauty dwells.

Now I must go to the portico of the King-Archon to meet the indictment which Meletus has drawn up against me. But tomorrow morning, Theodorus, let us meet here again.

# Theaetetus.

[OR ON KNOWLEDGE, TENTATIVE]

Translated by Fowler, Harold North.

CHARACTERS: Eucleides, Terpsion,
Socrates, Theodorus,
Theaetetus.

Euclid:: Just in from the country, Terpsion, or did you come some time ago?

Terpsion:: Quite a while ago; and I was looking for you in the market-place and wondering that I could not find you.

Euclid:: Well, you see, I was not in the city.

Terpsion:: Where then?

Euclid:: As I was going down to the harbor I met Theaetetus being carried to Athens from the camp at Corinth.

Terpsion:: Alive or dead?

Euclid:: Just barely alive; for he is suffering severely from wounds, and, worse than that, he has been taken with the sickness that has broken out in the army.

Terpsion:: You mean the dysentery?

Euclid:: Yes.

Terpsion:: What a man he is who you say is in danger!

Euclid:: A noble man, Terpsion, and indeed just now I heard some people praising him highly for his conduct in the battle.

Terpsion:: That is not at all strange; it would have been much more remarkable if he had not so conducted himself. But why did he not stop here in Megara?

Euclid:: He was in a hurry to get home; for I begged and advised him to stop, but he would not. So I went along with him, and as I was coming back I thought of Socrates and wondered at his prophetic gift, especially in what he said about him. For I think he met him a little before his own death, when Theaetetus was a mere boy, and as a result of acquaintance and conversation with him, he greatly admired his qualities. When I went to Athens he related to me the conversation he had with him, which was well worth hearing, and he said he would surely become a notable man if he lived.

Terpsion:: And he was right, apparently. But what was the talk? Could you relate it?

Euclid:: No, by Zeus, at least not offhand. But I made notes at the time as soon as I reached home, then afterwards at my leisure, as I recalled things, I wrote them down, and whenever I went to Athens I used to ask Socrates about what I could not remember, and then I came here and made corrections; so that I have pretty much the whole talk written down.

Terpsion:: That is true. I heard you say so before; and really I have been waiting about here all along intending to ask you to show it to me. What hinders us from reading it now? Certainly I need to rest, since I have come from the country.

Euclid:: And I myself went with Theaetetus as far as Erineum, so I also should not be sorry to take a rest. Come, let us go, and while we. are resting, the boy shall read to us.

Terpsion:: Very well.

Euclid:: Here is the book, Terpsion. Now this is the way I wrote the conversation; I did not represent Socrates relating it to me, as he did, but conversing with those with whom he told me he conversed. And he told me they were the geometrician Theodorus and Theaetetus. Now in order that the explanatory words between the speeches might not be annoying in the written account, such as and I said or and I remarked, whenever Socrates spoke, or he agreed or he did not agree, in the case of the interlocutor, I omitted all that sort of thing and represented Socrates himself as talking with them.

Terpsion:: That is quite fitting, Eucleides.

Euclid:: Come, boy, take the book and read.

Socrates:: If I cared more for Cyrene and its affairs, Theodorus, I should ask you about things there and about the people, whether any of the young men there are devoting themselves to geometry or any other form of philosophy; but as it is, since I care less for those people than for the people here, I am more eager to know which of our own young men are likely to gain reputation. These are the things I myself investigate, so far as I can, and about which I question those others with whom I see that the young men like to associate. Now a great many of them come to you, and rightly, for you deserve it on account of your geometry, not to speak of other reasons. So if you have met with any young man who is worth mentioning, I should like to hear about him.

Theodorus:: Truly, Socrates, it is well worth while for me to talk and for you to hear about a splendid young fellow, one of your fellow-citizens, whom I have met. Now if he were handsome, I should be very much afraid to speak, lest someone should think I was in love with him. But the fact is—now don’t be angry with me—he is not handsome, but is like you in his snub nose and protruding eyes, only those features are less marked in him than in you. You see I speak fearlessly. But I assure you that among all the young men I have ever met—and I have had to do with a great many—I never yet found one of such marvelously fine qualities. He is quick to learn, beyond almost anyone else, yet exceptionally gentle, and moreover brave beyond any other; I should not have supposed such a combination existed, and I do not see it elsewhere. On the contrary, those who, like him, have quick, sharp minds and good memories, have usually also quick tempers; they dart off and are swept away, like ships without ballast; they are excitable rather than courageous; those, on the other hand, who are steadier are somewhat dull when brought face to face with learning, and are very forgetful. But this boy advances toward learning and investigation smoothly and surely and successfully, with perfect gentleness, like a stream of oil that flows without a sound, so that one marvels how he accomplishes all this at his age.

Socrates:: That is good news; but which of our citizens is his father?

Theodorus:: I have heard the name, but do not remember it. However, it does not matter, for the youth is the middle one of those who are now coming toward us. He and those friends of his were anointing themselves in the outer course and now they seem to have finished and to be coming here. See if you recognize him.

Socrates:: Yes, I do. He is the son of Euphronius of Suniuni, who is a man of just the sort you describe, and of good repute in other respects; moreover he left a very large property. But the youths name I do not know.

Theodorus:: Theaetetus is his name, Socrates; but I believe the property was squandered by trustees. Nevertheless, Socrates, he is remarkably liberal with his money, too.

Socrates:: It is a noble man that you describe. Now please tell him to come here and sit by us.

Theodorus:: I will. Theaetetus, come here to Socrates.

Socrates:: Yes, do so, Theaetetus, that I may look at myself and see what sort of a face I have; for Theodorus says it is like yours. Now if we each had a lyre, and he said we had tuned them to the same key, should we take his word for it without more ado, or should we inquire first whether he who said it was a musician?

Theaetetus:: We should inquire.

Socrates:: Then if we found that he was a musician, we should believe him, but if not, we should refuse to take his word?

Theaetetus:: Yes.

Socrates:: But now, if we are concerned about the likeness of our faces, we must consider whether he who speaks is a painter, or not.

Theaetetus:: I think we must.

Socrates:: Well, is Theodorus a painter?

Theaetetus:: Not so far as I know.

Socrates:: Nor a geometrician, either?

Theaetetus:: Oh yes, decidedly, Socrates.

Socrates:: And an astronomer, and an arithmetician, and a musician, and in general an educated man?

Theaetetus:: I think so.

Socrates:: Well then, if he says, either in praise or blame, that we have some physical resemblance, it is not especially worth while to pay attention to him.

Theaetetus:: Perhaps not.

Socrates:: But what if he should praise the soul of one of us for virtue and wisdom? Is it not worth while for the one who hears to examine eagerly the one who is praised, and for that one to exhibit his qualities with eagerness?

Theaetetus:: Certainly, Socrates.

Socrates:: Then, my dear Theaetetus, this is just the time for you to exhibit your qualities and for me to examine them; for I assure you that Theodorus, though he has praised many foreigners and citizens to me, never praised anyone as he praised you just now.

Theaetetus:: A good idea, Socrates; but make sure that he was not speaking in jest.

Socrates:: That is not Theodorus’s way. But do not seek to draw back from your agreement on the pretext that he is jesting, or he will be forced to testify under oath; for certainly no one will accuse him of perjury. Come, be courageous and hold to the agreement.

Theaetetus:: I suppose I must, if you say so.

Socrates:: Now tell me; I suppose you learn some geometry from Theodorus?

Theaetetus:: Yes.

Socrates:: And astronomy and harmony and arithmetic?

Theaetetus:: I try hard to do so.

Socrates:: And so do I, my boy, from him and from any others who think know anything about these things. But nevertheless, although in other respects I get on fairly well in them, yet I am in doubt about one little matter, which should be investigated with your help and that of these others. Tell me, is not learning growing wiser about that which one learns?

Theaetetus:: Of course.

Socrates:: And the wise, I suppose, are wise by wisdom.

Theaetetus:: Yes.

Socrates:: And does this differ at all from knowledge?

Theaetetus:: Does what differ?

Socrates:: Wisdom. Or are not people wise in that of which they have knowledge?

Theaetetus:: Of course.

Socrates:: Then knowledge and wisdom are the same thing?

Theaetetus:: Yes.

Socrates:: Well, it is just this that I am in doubt about and cannot fully grasp by my own efforts—what knowledge really is. Can we tell that? What do you say? Who of us will speak first? And he who fails, and whoever fails in turn, shall go and sit down and be donkey, as the children say when they play ball; and whoever gets through without failing shall be our king and shall order us to answer any questions he pleases. Why are you silent? I hope, Theodorus, I am not rude, through my love of discussion and my eagerness to make us converse and show ourselves friends and ready to talk to one another.

Theodorus:: That sort of thing would not be at all rude, Socrates; but tell one of the youths to answer your questions; for I am unused to such conversation and, moreover, I am not of an age to accustom myself to it. But that would be fitting for these young men, and they would improve much more than I; for the fact is, youth admits of improvement in every way. Come, question Theaetetus as you began to do, and do not let him off.

Socrates:: Well, Theaetetus, you hear what Theodorus says, and I think you will not wish to disobey him, nor is it right for a young person to disobey a wise man when he gives instructions about such matters. Come, speak up well and nobly. What do you think knowledge is?

Theaetetus:: Well, Socrates, I must, since you bid me. For if I make a mistake, you are sure to set me right.

Socrates:: Certainly, if we can.

Theaetetus:: Well then, I think the things one might learn from Theodorus are knowledge—geometry and all the things you spoke of just now—and also cobblery and the other craftsmen's arts; each and all of these are nothing else but knowledge.

Socrates:: You are noble and generous, my friend, for when you are asked for one thing you give many, and a variety of things instead of a simple answer.

Theaetetus:: What do you mean by that, Socrates?

Socrates:: Nothing, perhaps; but I will tell you what I think I mean. When you say cobblery you speak of nothing else than the art of making shoes, do you?

Theaetetus:: Nothing else.

Socrates:: And when you say carpentry? Do you mean anything else than the art of making wooden furnishings?

Theaetetus:: Nothing else by that, either.

Socrates:: Then in both cases you define that to which each form of knowledge belongs?

Theaetetus:: Yes.

Socrates:: But the question, Theaetetus, was not to what knowledge belongs, nor how many the forms of knowledge are; for we did not wish to number them, but to find out what knowledge itself really is. Or is there nothing in what I say?

Theaetetus:: Nay, you are quite right.

Socrates:: Take this example. If anyone should ask us about some common everyday thing, for instance, what clay is, and we should reply that it is the potters clay and the oven-makers clay and the brick-maker's clay, should we not be ridiculous?

Theaetetus:: Perhaps.

Socrates:: Yes; in the first place for assuming that the questioner can understand from our answer what clay is, when we say clay, no matter whether we add the image-makers or any other craftsmen. Or does anyone, do you think, understand the name of anything when he does not know what the thing is?

Theaetetus:: By no means.

Socrates:: Then he does not understand knowledge of shoes if he does not know knowledge.

Theaetetus:: No.

Socrates:: Then he who is ignorant of knowledge does not understand cobblery or any other art.

Theaetetus:: That is true.

Socrates:: Then it is a ridiculous answer to the question what is knowledge? when we give the name of some art; for we give in our answer something that knowledge belongs to, when that was not what we were asked.

Theaetetus:: So it seems.

Socrates:: Secondly, when we might have given a short, everyday answer, we go an interminable distance round; for instance, in the question about clay, the everyday, simple thing would be to say “clay is earth mixed with moisture” without regard to whose clay it is.

Theaetetus:: It seems easy just now, Socrates, as you put it; but you are probably asking the kind of thing that came up among us lately when your namesake, Socrates here, and I were talking together.

Socrates:: What kind of thing was that, Theaetetus?

Theaetetus:: Theodorus here was drawing some figures for us in illustration of roots, showing that squares containing three square feet and five square feet are not commensurable in length with the unit of the foot, and so, selecting each one in its turn up to the square containing seventeen square feet; and at that he stopped. Now it occurred to us, since the number of roots appeared to be infinite, to try to collect them under one name, by which we could henceforth call all the roots.

Socrates:: And did you find such a name?

Theaetetus:: I think we did. But see if you agree.

Socrates:: Speak on.

Theaetetus:: We divided all number into two classes. The one, the numbers which can be formed by multiplying equal factors, we represented by the shape of the square and called square or equilateral numbers.

Socrates:: Well done!

Theaetetus:: The numbers between these, such as three and five and all numbers which cannot be formed by multiplying equal factors, but only by multiplying a greater by a less or a less by a greater, and are therefore always contained in unequal sides, we represented by the shape of the oblong rectangle and called oblong numbers.

Socrates:: Very good; and what next?

Theaetetus:: All the lines which form the four sides of the equilateral or square numbers we called lengths, and those which form the oblong numbers we called surds, because they are not commensurable with the others in length, but only in the areas of the planes which they have the power to form. And similarly in the case of solids.

Socrates:: Most excellent, my boys! I think Theodorus will not be found liable to an action for false witness.

Theaetetus:: But really, Socrates, I cannot answer that question of yours about knowledge, as we answered the question about length and square roots. And yet you seem to me to want something of that kind. So Theodorus appears to be a false witness after all.

Socrates:: Nonsense! If he were praising your running and said he had never met any young man who was so good a runner, and then you were beaten in a race by a full grown man who held the record, do you think his praise would be any less truthful?

Theaetetus:: Why, no.

Socrates:: And do you think that the discovery of knowledge, as I was just now saying, is a small matter and not a task for the very ablest men?

Theaetetus:: By Zeus, I think it is a task for the very ablest.

Socrates:: Then you must have confidence in yourself, and believe that Theodorus is right, and try earnestly in every way to gain an understanding of the nature of knowledge as well as of other things.

Theaetetus:: If it is a question of earnestness, Socrates, the truth will come to light.

Socrates:: Well then—for you pointed out the way admirably just now—take your answer about the roots as a model, and just as you embraced them all in one class, though they were many, try to designate the many forms of knowledge by one definition.

Theaetetus:: But I assure you, Socrates, I have often tried to work that out, when I heard reports of the questions that you asked, but I can neither persuade myself that I have any satisfactory answer, nor can I find anyone else who gives the kind of answer you insist upon; and yet, on the other hand, cannot get rid of a feeling of concern about the matter.

Socrates:: Yes, you are suffering the pangs of labor, Theaetetus, because you are not empty, but pregnant.

Theaetetus:: I do not know, Socrates; I merely tell you what I feel.

Socrates:: Have you then not heard, you absurd boy, that I am the son of a noble and burly midwife, Phaenarete?

Theaetetus:: Yes, I have heard that.

Socrates:: And have you also heard that I practice the same art?

Theaetetus:: No, never.

Socrates:: But I assure you it is true; only do not tell on me to the others; for it is not known that I possess this art. But other people, since they do not know it, do not say this of me, but say that I am a most eccentric person and drive men to distraction. Have you heard that also?

Theaetetus:: Yes, I have.

Socrates:: Shall I tell you the reason then?

Theaetetus:: Oh yes, do.

Socrates:: Just take into consideration the whole business of the midwives, and you will understand more easily what I mean. For you know, I suppose, that no one of them attends other women while she is still capable of conceiving and bearing, but only those do so who have become too old to bear.

Theaetetus:: Yes, certainly.

Socrates:: They say the cause of this is Artemis, because she, a childless goddess, has had childbirth allotted to her as her special province. Now it would seem she did not allow barren women to be midwives, because human nature is too weak to acquire an art which deals with matters of which it has no experience, but she gave the office to those who on account of age were not bearing children, honoring them for their likeness to herself.

Theaetetus:: Very likely.

Socrates:: Is it not, then, also likely and even necessary, that midwives should know better than anyone else who are pregnant and who are not?

Theaetetus:: Certainly.

Socrates:: And furthermore, the midwives, by means of drugs and incantations, are able to arouse the pangs of labor and, if they wish, to make them milder, and to cause those to bear who have difficulty in bearing; and they cause miscarriages if they think them desirable.

Theaetetus:: That is true.

Socrates:: Well, have you noticed this also about them, that they are the most skilful of matchmakers, since they are very wise in knowing what union of man and woman will produce the best possible children?

Theaetetus:: I do not know that at all.

Socrates:: But be assured that they are prouder of this than of their skill in cutting the umbilical cord. Just consider. Do you think the knowledge of what soil is best for each plant or seed belongs to the same art as the tending and harvesting of the fruits of the earth, or to another?

Theaetetus:: To the same art.
